White House Correspondents' Dinner

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, March 17, 1941

ADDRESS BY THE PRESIDENT

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD a very outstanding address delivered by the President of the United States at the White House correspondents' annual dinner at the Willard Hotel on Saturday evening, March 15, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The PRESIDENT. This dinner of the White House Correspondents' Association is unique. It is the first one at which I have made a speech in all these 8 years. It differs from the press conferences that you and I hold twice a week. You cannot ask me any questions; and everything I have to say is word-for-word on the record.

For 8 years you and I have been helping each other. I have been trying to keep you informed of the news of Washington, and of the Nation, and of the world, from the point of view of the Presidency. You, more than you realize it, have been giving me a great deal of information about what the people of this country are thinking.

In our press conferences, as at this dinner tonight, we include reporters representing papers and news agencies of many other lands. To most of them it is a matter of constant amazement that press conferences such as ours can exist in any nation in the world.

That is especially true in those lands where freedoms do not exist—where the purposes of our democracy and the characteristics of our country and of our people have been seriously distorted.

Such misunderstandings are not new. I remember that in the early days of the first World War the German Government received solemn assurances from their representatives in the United States that the people of America were disunited; that they cared more for peace at any price than for the preservation of ideals and freedom; that there would even be riots and revolutions in the United States if this Nation ever asserted its own interests.

Let not dictators of Europe and Asia doubt our unanimity now.

Before the present war broke out on September 1, 1939, I was more worried about the future than many people—most people. The record shows I was not worried enough.

That, however, is water over the dam. Do not let us waste time reviewing the past, or fixing or dodging the blame for it. History cannot be rewritten by wishful thinking. We, the American people, are writing new history today.

The big news story of this week is this: The world has been told that we, as a united Nation, realize the danger which confronts us—and that to meet that danger our democracy has gone into action.

We know that although Prussian autocracy was bad enough, nazi-ism is far worse.

Nazi forces are not seeking mere modifications in colonial maps or in minor European boundaries. They openly seek the destruction of all elective systems of government on every continent—including our own; they seek to establish systems of government based on the regimentation of all human beings by a handful of individual rulers who have seized power by force.

These men and their hypnotized followers call this a new order. It is not new. It is not order. For order among nations presupposes something enduring—some system of justice under which individuals, over a long period of time, are willing to live. Humanity will never permanently accept a system imposed by conquest and based on slavery.

These modern tyrants find it necessary to their plans to eliminate all democracies—eliminate them one by one. The nations of Europe, and indeed we ourselves, did not appreciate that purpose. We do now. The process of the elimination of the European nations proceeded according to plan through 1939 and 1940, until the schedule was shot to pieces by the unbeatable defenders of Britain.

The enemies of democracy were wrong in their calculations for a very simple reason. They were wrong because they believed that democracy could not adjust itself to the terrible reality of a world at war.

They believed that democracy, because of its profound respect for the rights of men, would never arm itself to fight.

They believed that democracy, because of its will to live at peace with its neighbors, could not mobilize its energies even in its own defense.

They know now that democracy can still remain democracy and speak and reach conclusions and arm itself adequately for defense.

From the bureaus of propaganda of the Axis Powers came the confident prophecy that the conquest of our country would be "an inside job"—a job accomplished not by overpowering invasion from without, but by disrupting confusion and disunion and moral disintegration from within.

Those who believed that knew little of our history. America is not a country which can be confounded by the appeasers, the defeatists, the backstairs manufacturers of panic. It is a country which talks out its problems in the open, where any man can hear them.

We have just now engaged in a great debate. It was not limited to the Halls of Congress. It was argued in every newspaper, on every wave length, over every cracker barrel in the land. It was finally settled and decided by the American people themselves.

The decisions of our democracy may be slowly arrived at. But when that decision is made it is proclaimed not with the voice of any one man but with the voice of 130,000,000. It is binding on all of us. And the world is no longer left in doubt.

This decision is the end of any attempts at appeasement in our land, the end of urging us to get along with the dictators, the end of compromise with tyranny and the forces of oppression.

The urgency is now.

We believe firmly that when our production output is in full swing the democracies of the world will be able to prove that dictatorships cannot win.

But now the time element is of supreme importance. Every plane, every other instrument of war, old and new, which we can spare now we will send overseas. That is common-sense strategy.

The great task of this day, the deep duty which rests upon us is to move products from the assembly lines of our factories to the battle lines of democracy now.

We can have speed and effectiveness if we maintain our existing unity. We do not have and never will have the false unity of a people browbeaten by threats and misled by propaganda. Ours is a unity which is possible only among free men and women who recognize the truth and face reality with intelligence and courage.

Today, at last, ours is not a partial effort. It is a total effort; and that is the only way to guarantee ultimate safety.

Beginning a year ago, we started the erection of hundreds of plants and we started the training of millions of men.

Then, at the moment the aid-to-democracies bill was passed, we were ready to recommend the $7,000,000,000 appropriation on the basis of capacity production as now planned.

The articles themselves cover the whole range of munitions of war and of the facilities for transporting them.

The aid-to-democracies bill was agreed to by both Houses of the Congress last Tuesday afternoon. I signed it one-half hour later. Five minutes later I approved a list of articles for immediate shipment. Many of them are on their way. On Wednesday I recommended an appropriation for new material to the extent of $7,000,000,000; and the Congress is making patriotic speed in making the appropriation available.

Here in Washington we are thinking in terms of speed, and speed now. And I hope that that watchword will find its way into every home in the Nation.

We shall have to make sacrifices—every one of us. The final extent of those sacrifices will depend upon the speed with which we act now.

I must tell you tonight in plain language what this undertaking means to you—to your daily life.

Whether you are in the armed services; whether you are a steel worker or a stevedore, a machinist, or a housewife, a farmer or a banker, a storekeeper or a manufacturer—to all of you it will mean sacrifice in behalf of country and your liberties. You will feel the impact of this gigantic effort in your daily lives. You will feel it in a way which will cause many inconveniences.

You will have to be content with lower profits from business because obviously your taxes will be higher.

You will have to work longer at your bench, or your plow or your machine.

Let me make it clear that the Nation is calling for the sacrifice of some privileges, but not for the sacrifice of fundamental rights. Most of us will do that willingly. That kind of sacrifice is for the common national protection and welfare; for our defense against the most ruthless brutality in history; for the ultimate victory of a way of life now so violently menaced.

A half-hearted effort on our part will lead to failure. This is no part-time job. The concepts of "business as usual" and "normalcy" must be forgotten until the task is finished. This is an all-out effort—nothing short of all-out effort will win.

We are now dedicated from here on to a constantly increasing tempo of production—a production greater than we now know or have ever known before—a production that does not stop and should not pause.

And so tonight I am appealing to the heart and to the mind of every man and every woman within our borders who love liberty. I ask you to consider the needs of our Nation at this hour and to put aside all personal differences until our victory is won.

The light of democracy must be kept burning. To the perpetuation of this light each must do his own share. The single effort of one individual may seem very small. But there are 130,000,000 individuals over here. There are many more millions in Britain and elsewhere bravely shielding the great flame of democracy from the black-out of barbarism. It is not enough for us merely to trim the wick or polish the glass. The time has come when we must provide the fuel in ever-increasing amounts to keep the flame alight.

There will be no divisions of party or section or race or nationality or religion. There is not one among us who does not have a stake in the outcome of the effort in which we are now engaged.

A few weeks ago I spoke of four freedoms—freedom of speech and expression, freedom of every person to worship God in his own way, freedom from want, freedom from fear. They are the ultimate stake. They may not be immediately attainable throughout the world but humanity does move toward those ideals through democratic processes. If we fail—if democracy is superseded by slavery—then those four freedoms, or even the mention of them, will become forbidden things. Centuries will pass before they can be revived.

By winning now, we strengthen their meaning, we increase the stature of mankind and the dignity of human life.

There is a vast difference between the word "loyalty" and the word "obedience." Obedience can be obtained and enforced in a dictatorship by the use of threat and extortion or it can be obtained by a failure on the part of government to tell the truth to its citizens.

Loyalty is different. It springs from the mind that is given the facts, that retains ancient ideals and proceeds without coercion to give support to its own government.

That is true in England and in Greece and in China and in the United States today. And in many other countries millions of men and women are praying for the return of a day when they can give that kind of loyalty.

Loyalty cannot be bought. Dollars alone will not win this war. Let us not delude ourselves as to that.

Today, nearly a million and a half American citizens are hard at work in our armed forces. The spirit and the determination of these men of our Army and Navy are worthy of the highest traditions of our country. No better men ever served under Washington, or John Paul Jones, or Grant, or Lee, or Pershing. That is a boast, I admit, but it is not an idle one.

Upon the national will to sacrifice and to work depends the output of our industry and our agriculture.

Upon that will depends the survival of the vital bridge across the ocean; the bridge of ships which carry the arms and food for those who are fighting the good fight.

Upon that will depends our ability to aid other nations which may determine to offer resistance.

Upon that will may depend practical assistance to people now living in nations which have been overrun should they find the opportunity to strike back in an effort to regain their liberties.

This will of the American people will not be frustrated either by threats from powerful enemies abroad or by small, selfish groups or individuals at home.

The determination of America must not be obstructed by war profiteering.

It must not be obstructed by unnecessary strikes of workers, by short-sighted management, or by deliberate sabotage.

For, unless we win, there will be no freedom for either management or labor.

Wise labor leaders and wise business managers will realize how necessary it is to their own existence to make common sacrifice for this great common cause.

There is no longer the slightest question or doubt that the American people recognize the extreme seriousness of the present situation. That is why they have demanded, and got, a policy of unqualified, immediate, all-out aid for Britain, Greece, China, and for all the governments in exile whose homelands are temporarily occupied by the aggressors.

From now on that aid will be increased—and yet again increased—until total victory has been won.

The British are stronger than ever in the magnificent morale which has enabled them to endure all the dark days and the shattered nights of the past 10 months. They have the full support and help of Canada, and the other Dominions, of the rest of their Empire, and non-British people throughout the world who still think in terms of the great freedoms.

The British people are braced for invasion whenever the attempt may come—tomorrow—next week—next month.

In this historic crisis, Britain is blessed with a brilliant and a great leader in Winston Churchill. But, no one knows better than Mr. Churchill himself, that it is not alone his stirring words and valiant deeds which give the British their superb morale. The essence of that morale is in the masses of plain people who are completely clear in their minds about the one essential fact—that they would rather die as free men than live as slaves.

These plain people—civilians as well as soldiers and sailors and airmen—women and girls as well as men and boys—are fighting in the front line of civilization, and they are holding that line with a fortitude which will forever be the pride and the inspiration of all free men on every continent and on every island of the sea.

The British people and their Grecian allies need ships. From America, they will get ships.

They need planes. From America they will get planes.

They need food. From America they will get food.

They need tanks and guns and ammunition and supplies of all kinds. From America they will get tanks and guns and ammunition and supplies of all kinds.

China likewise expresses the magnificent will of millions of plain people to resist the dismemberment of their nation. China, through the generalissimo, Chiang Kai-Shek, asks our help. America has said that China shall have our help.

Our country is going to be what our people have proclaimed it must be—the arsenal of democracy.

Our country is going to play its full part.

And when dictatorships disintegrate—and pray God that will be sooner than any of us now dares to hope—then our country must continue to play its great part in the period of world reconstruction.

We believe that the rallying cry of the dictators, their boasting about a master race, will prove to be pure stuff and nonsense. There never has been, there isn't now, and there never will be any race of people fit to serve as masters over their fellow men.

The world has no use for any nation which, because of size or because of military might, asserts the right to goose step to world power over other nations or other races. We believe that any nationality, no matter how small, has the inherent right to its own nationhood.

We believe that the men and women of such nations, no matter what size, can, through the processes of peace, serve themselves and serve the world by protecting the common man's security; improve the standards of healthful living; provide markets for manufacture and for agriculture. Through that kind of peaceful service every nation can increase its happiness, banish the terrors of war, and abandon man's inhumanity to man.

Never in all our history have Americans faced a job so well worth while. May it be said of us in the days to come that our children and our children's children rise up and call us blessed.

The Ohio Society of New York

EXTENSION OF REMARKS
OF
HON. CHAN GURNEY
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, March 17, 1941

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the senior Senator from Ohio [Mr. TAFT] before the Ohio Society of New York on Monday, March 10, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My good friends from Ohio, for 2 months the attention of the country has been directed almost exclusively to the subject of aid to Britain and the lease-lend bill. The building up of our own Army and Navy has gone steadily on, but the newspapers and the radio have paid little serious attention to our own defense. Now that the lease-lend bill is out of the way, there is no subject upon which we can achieve national unity so easily and so quickly as on that of national preparedness. Hardly a speech made for or against the lease-lend bill failed to assert with emphasis the speaker's belief that our primary concern was the defense of the United States. Aid to Britain itself was urged only as the best method of assisting our own preparedness program. The appropriation of billions for Great Britain was justified as a method of avoiding the appropriation of still more billions for ourselves.

The question of military preparedness is one of money and organization. Congress has appropriated the money without limitation as soon as it was asked for by the Executive. Sometimes I think the grants have been almost too liberal. But the organization of industry has been much more slowly brought about. Practically nothing was done before the German attack in May, 1940. Then for months we functioned under a Council of National Defense, without a chairman and without power. Finally, after the November election, a more effective organization was set up—the Office of Production Management—with two coordinate chiefs, but with considerably more power than the Council of National Defense. The theory of two bosses of equal authority is recognized as unsound by nearly everyone who analyzes the problem, but I am sincerely hopeful that it is working in spite of this handicap. Certainly production is rapidly increasing, and we should be soon in a position where we can be of some real assistance to Britain. Industrial production has always been a more important means of aiding England than the lease-lend bill.

SOUND FISCAL POLICY ESSENTIAL TO DEFENSE

But there is one field in which no progress whatever has been made, even in the determination of basic policy. That is the field of finance. After all, financial preparedness is just as necessary as military preparedness. We cannot organize successfully for production except on a sound financial foundation. We cannot obtain military and naval equipment and supplies unless we are prepared to pay for them. We cannot get men to work in industry without providing them with the means for a reasonable living for themselves and their families. Today, more than ever before, war is a matter of organization, and the whole structure of mechanized warfare and unlimited production must be built on a sound fiscal foundation. Disorganization in finance will disorganize production, perhaps at the very moment when that production is most essential to success in war.

It is peculiarly necessary that we place our finances on an absolutely sound basis, because we are up against an opponent whose organization in this field is nothing if not efficient. Hitler has not followed orthodox methods. He has not the slightest interest in maintaining free enterprise or a system of private investment. He has organized his country on a socialistic basis, and, according to some of his own supporters, he deals in work hours instead of in money. That is merely a method of saying that he compels his workmen to take what he can give them in the way of food and clothing and housing instead of paying them wages in real money. All of us are convinced that our own American system is the best in the long run, and absolutely essential to maintaining the liberty of our people, but if it is going to compete with Hitler's system, it must be administered with ability and courage and sympathy. If it is administered by incompetent hands, or by those who are more interested in changing the system than in making it work, Hitler's ruthless competence will have a big advantage. If we should be caught in the transition from a capitalistic economy to a socialistic economy, we would have all the disadvantages of both systems.

CONDITION OF THE BUDGET

Up to this time we have disregarded all the danger signs pointing toward a breakdown of our present system. We have seen it abused without effective protest. We have seen 10 years of completely unbalanced Budgets. We have steadily increased the debt from $20,000,000,000 to $45,000,000,000. The Budget just presented by the President indicates a deficit of $6,000,000,000 for the year ending July 1, and a deficit of $9,000,000,000 for the year ending July 1, 1942. But that is only the beginning. We have already received estimates for $4,220,000,000 of appropriations and a billion and a half dollars of contract authorizations, deficiency or supplemental, which were not included in the Budget. It is estimated that there will be at least another one and one-half billion dollars of similar estimates. The probable expense under the lease-lend bill is perhaps limited by the physical shipments which it is possible to make out of this country, but, as passed, we have authorized the Government to finance shipments to England from all over the world, and to advance unlimited sums to any nation in the world. An estimate of $4,000,000,000 for the next 12 months is probably reasonable. Altogether that indicates a deficit for the 2 years of at least $27,000,000,000 and a public debt on July 1, 1942, of more than $70,000,000,000. This is in spite of a considerable increase in taxes and estimated tax receipts for the next fiscal year of $8,900,000,000. The whole tax program has been a patch quilt, and no comprehensive study has been made to determine what our tax system should be, or how much of the defense program should be paid from taxes and how much from borrowing.

CONDITION OF THE BANKING SYSTEM

The condition of our banking and currency system is also extremely unsatisfactory. Of the outstanding Government bonds, approximately twenty billion are held by the banks, and represent money loaned by the banks to the Government rather than a permanent placing of such bonds with investors. The Treasury is apparently planning to sell at least a billion of bonds a month for the next 15 months. If it succeeds in placing three billion of these bonds with investors, I think it will have done a good job. That means that the Government is intending to call on the banks to lend them an additional $12,000,000,000, with almost a corresponding increase in deposits, and an artificial increase of purchasing power in this country. Of course such an increase will tend to raise prices and start an inflationary spiral, increasing in turn the expense of the defense program, and promising a fatal reaction after the war. Incidentally, it is likely to force the Government to adopt a complete price-control system and the planned economy which must accompany such a system. The volume of demand deposits and currency is already 50 percent greater than in any other period in our history. Excess reserves are huge and are constantly increasing. The last report shows that they amount to $7,000,000,000. Since the early part of 1934, $15,000,000,000 of gold have flowed into this country, and there is no immediate prospect that the direction of this flow can be reversed. The presence of these excess reserves removes to a large extent the control which the Federal Reserve Board and the Treasury can exercise over private lending if prosperity should develop.

The situation with regard to reserves is so serious that for the first time since the creation of the Federal Reserve System, the Board of Governors, the presidents of the 12 Federal Reserve banks, and the members of the Federal Advisory Council representing the 12 Federal Reserve banks, presented a joint report to Congress on January 1, 1941. They called attention to the dangerous financial condition, and made certain definite recommendations regarding the increase of statutory reserve requirements and the repeal of various powers given to the President looking toward further inflation of the currency. Since that report was presented, the administration has not made a single step toward its enactment into law. I, myself, introduced bills increasing the reserve requirements in accordance with the Federal Reserve recommendations putting an end to the President's power further to devalue the dollar, ending his power to issue $3,000,000,000 in greenbacks and one and a half billion dollars more silver certificates against the silver seigniorage, and stopping the purchase of foreign silver. The only comment from the administration has been a slighting remark about the Federal Reserve report from the Secretary of the Treasury at a press conference.

I do not think it is possible to exaggerate the danger in the present situation. Of course, no one can tell when the lid will blow off. But if anything is certain, it is that no nation, any more than an individual, can go on living indefinitely on borrowed money, and no nation can permit artificial purchasing power to increase indefinitely through the expansion of private credit without fatal consequences at some time. Sooner or later the end must be the bankruptcy court in one form or another. Inflation has so many meanings, and we have been threatened by it so often that most men have apparently lost their concern about its coming to pass. But if we pursue our present course, it must come to pass. Presumably it will be at the moment when our system is subjected to the greatest strain, and obviously that time is going to be in the midst of war if we get into war. War today is costing Britain $30,000,000,000 a year. It would undoubtedly cost this country $50,000,000,000 a year. Piled on top of the tremendous debt which already exists, it is certainly no mere pessimism which sees the possibility of a financial breakdown at the very time when we require the greatest war effort.

INFLATION AND ITS CONSEQUENCES

What is inflation and what are its consequences? Inflation really means a spending by the Nation as a whole of more money than is justified by what the Nation is producing, or by the normal production which can be maintained for any considerable length of time. It is made possible by the borrowing of money either by the Government, which is deficit spending, or too much borrowing by the people, sometimes politely called an expansion of credit. It may be in all degrees. We saw an inflation in the World War due to vast foreign purchases and the war expenditures of our own Government, which could not be maintained after the war. We saw an inflation in the twenties, brought on by loans to finance exports and loans to buy securities, loans which could not go on continually increasing, and some of which turned out to be bad from the beginning. The result is always a reaction to a level below normal. In 1932 the reaction was peculiarly violent, bringing on the depression, bankrupting many individuals and communities, and throwing millions out of work.

Many instances of still more violent results exist in the history of the world. As a rule, the worst are in connection with an inflation of the currency, but such an inflation has nearly always resulted from a continually unbalanced budget, that is, the continued borrowing of money by the Government itself. If the Government stops borrowing, it is likely to bring about depression. If it continues borrowing, the debt in time becomes so heavy that the people will not stand for the burden. The Government might frankly repudiate its obligations or impose a capital levy, but usually it has printed paper money with which to pay its debts, and finally that paper money has depreciated and sent prices sky-high.

Of course, no one suffers so much from inflation as the poor man. He is the one who is thrown out of work by the depression. In the first stages of currency inflation, prices increase much faster than wages, and, of course, that affects the poor families most. As men lose confidence in the Government's credit or in its sincere determination to maintain that credit, prices rise much faster. In Germany they got to a point where a pair of shoes cost $10,000, and then ultimately $100,000. Wages go up, but not quite so fast. Those who are most seriously affected are the groups on a fixed salary like employees of government and teachers of all kinds. Colleges and charitable institutions find their income destroyed. They have the dollars from their investments, but the dollars won't buy anything. A man who has saved all his life in the savings banks or by the purchase of life insurance finds that his widow may get the same amount in dollars, but the dollars she gets won't even pay the water bill. Inflation is just a form of Government repudiation, which benefits no one except the speculator and injures the poor man more than the wealthy. It is redistribution of wealth with a vengeance but without the vestige of any justice or equality.

The policy which we are pursuing is one which must lead ultimately to the destruction of the free-enterprise system. If we do bring about a depression greater than the one in 1932, or if we do bring about a currency inflation, my own judgment is that the Government will have to step in and reorganize the entire system. We will have to start again from scratch. If a system is put together by the Government, it is going to be some form of socialism. The free-enterprise system is like humpty-dumpty—if it is once broken, all the king's horses and all the king's men can't put it together again, except perhaps in the form of an omelet. And it doesn't make any difference that the system will have been wrecked by abuse and maltreatment without any fault of its own. It won't make any difference that its failure was brought about by those who wanted it to fail.

Already in England the debt has become so tremendous that we hear talk of a capital levy and complete socialism after the war. We have not yet the proportionate debt that England has, but a few years of war would take us there. We would at best face a redistribution of wealth and a system in which a supposed equality is maintained by the Government. That can't be done except under a totalitarian state. American totalitarianism might not take the form of fascism or communism, but it would be likely to leave just as little freedom to the individual.

Whether we get in the war or not, we face an exceedingly serious problem. No matter how we treat that problem, we are going into a period of some inflation which must inevitably bring about some kind of bad reaction. There is a proper demand that we commence to study now the measures that we should take after the war. But the best way to deal with the situation after the war is to pursue now the soundest and most intelligent policy. Our only hope can be to make the reaction as mild as possible.

The plans of the New Deal economists to deal with the after-war crisis are even more alarming than the crisis itself. In brief, they consist of more and greater Government spending for New Deal purposes as the spending for defense decreases. Priming the pump having failed, they have now evolved a theory that the people are saving too much money. First, they say thrift must be discouraged. Second, the Government must tax it away from the thrifty. Third, if the Government can't take it by taxation, at least it must borrow it and spend it on other less thrifty people. Of course, this theory leads to an indefinite expansion of the Government debt, to the discouragement of private investment, and the ultimate control of all investment by the Government. If you think I am exaggerating, just read the testimony of Mr. Mordecai Ezekiel before the T. N. E. C. on February 24. The way to cure the evils of excessive Government spending is more Government spending. If they are right, we must throw into the wastebasket all the lessons of arithmetic and experience combined.

Then there are plenty of people in Washington who actually desire to secure the kind of government which will administer planned economy. There are plenty of people in Washington who see in the wreck of our present financial system the possibility of bringing about the policy they have been promoting for many years. It is essential that the fiscal policy be worked out and administered by those who are real friends of the present American way of life, sincerely desiring to make the present system work. It is very discouraging that no policy has even been suggested. Up to date we have only had the makeshift bill to increase the national-debt limit so that borrowing may be made easier and easier.

A DEFINITE POLICY NEEDED

What should our policy be? How can inflation be checked? How can we avoid bankruptcy and post-war disaster? Obviously the best way is to cut down the Government deficit. That can be done by cutting expenses or by increasing taxes. The President and the Secretary of the Treasury have themselves stated that all non-defense expenditures must be cut to the bone. But when they present their own budgets we find that those expenses have not been cut in any degree, and I do not think they are going to be. Congress is always a poor body to accomplish economy, and when the Executive has once requested the money and has a majority to support him in both Houses of Congress a reduction of his estimates becomes almost impossible. It is very difficult to concentrate responsibility in Congress, and even an economy bloc often loses the votes of those Members whose constituents are directly benefited by the expense in question.

Furthermore, it is almost impossible to cut expenses without a radical change in many of the New Deal policies which the administration is carrying out. If we are going to have a Federal W. P. A. instead of assisting the States, then the billion dollars which is requested for next year is none too much. This is the time when the whole policy ought to be changed, and relief turned back to the States and local authorities with Federal grants to assist. This is the time when the agricultural policy ought to be changed and plans to benefit the farmer worked out which do not involve vast subsidies from the public purse. There are plenty of plans which will remove the need of a direct agricultural subsidy of a billion dollars a year. It is perfectly futile for the administration to talk about cutting domestic expenses at the same time that they advocate the very policies which require that those expenses continue.

NECESSITY FOR MORE TAXES

The alternative is the increase of taxation. After all, we may as well face the facts. If the people demand the continuance of the kind of government which is spending 25 percent of the national income on Federal, State, and local expenses—and apparently they do—then we must devise a tax system that will take 25 percent of their income away from the people and give it to the Government to pay for those expenses. Probably at the present time it is impossible completely to balance the Budget. We may perhaps legitimately say that a considerable part of the defense expenditures is extraordinary. The cost of the new ships necessary to make a two-ocean navy and the cost of training camps may well be shared with future generations, but the normal maintenance of these increased military establishments should be paid from taxation. As far as I can see, we are going to have a two-ocean navy no matter who wins the war. We are going to have an increased army and air force no matter who wins the war. I have estimated very roughly that the normal maintenance of Army and Navy is going to amount to $4,000,000,000 a year for many years to come, in place of the billion and a half which we spent the last year before the war. That is a permanent increase, and it ought to be met by permanent taxation. It means a normal Federal tax bill of $11,000,000,000, an increase of $2,000,000,000 a year over the taxes to be produced under existing law.

I have not studied the problem completely enough to advocate as yet any particular form of taxation. The Secretary of the Treasury has refused to do so, although he recommends that 60 percent of the expenses be paid from taxation, which would certainly mean a $2,000,000,000 increase in taxes. We might as well face the fact also that these taxes are going to fall on every man, woman, and child in the United States. If Government requires 25 percent of the national income to pay its expenses, then it is simply impossible to obtain anything like that amount from the wealthy directly or through corporation taxes. If we confiscated all income in excess of $10,000 apiece, we could only get about three and a half billion dollars, of which we already get 40 percent from existing law, and we would only get that for about a year. If we can get from the wealthy from 5 to 10 percent

of the national income, which would require very high rates indeed, we will have done a good job. So if we require 25 percent of that income for Government expense, all the rest of the people are going to have to contribute from 15 to 20 percent of their individual income toward the expense of government. This means more income taxes, sales taxes, and pay-roll taxes, for rich and poor alike. It is highly desirable that all of us know we are paying the taxes which we all inevitably pay even today, so that we can restore again some sense of responsibility about Government activities. We have been going on the theory that we can have something for nothing; that we can have all kinds of Government hand-outs without anybody paying the bill. If the present system is going to work at all, if we are going to avoid a worse depression than 1932, if we are going to secure financial preparedness, we must face the facts and pay the taxes that are necessary.

CHECKS ON CURRENCY INFLATION

The reduction of the President's powers to inflate the currency is also highly desirable, so that no one can take the first steps on the road to currency inflation. If those powers are removed, the pressure toward a sound policy of taxation becomes greater. The power to devalue the dollar would increase the price of gold, which is already far above its real value. The issue of greenbacks is inconceivable.

Some increased power over reserves is necessary to check inflation in case we should develop a real business boom in the United States. We have had a long psychology of pessimism about business activity, but public psychology sometimes changes overnight, and the time may easily come when demands for private loans meet the desire of the banks for increased profits. Whether the exact reserve plans of the Federal Reserve banks are the best, I do not pretend to know, but I do think that Senator WAGNER, as chairman of the Banking and Currency Committee of the Senate, should immediately proceed to obtain all the expert opinion possible and take some such action as the Federal Reserve authorities recommend. There must be some power somewhere to control the unlimited increase of private credit.

UNITY CAN BE SECURED

Above all, we must face the problem. It has been made even more acute by the passage of the lease-lend bill. It is the principal problem before Congress and the principal task of Congress between now and the 1st of July. In no field of activity has the administration been as reckless and uninterested as in the field of finance. For years it has been inspired by the belief that deficits are a blessing in disguise; that they promote prosperity; that debt can go on increasing forever. But now we are up against a situation where the Nation must insist on a sound policy. Now we are up against a situation where the financial soundness of the Nation is just as essential a part of national preparedness as battleships and soldiers and guns. If the administration will not recommend a policy, then Congress itself must develop that policy. I don't believe that there would be any serious difficulty in reaching an agreement on policy between the majority and minority leaders in Congress if the New Dealers don't interfere. Certainly the Republicans are willing to share the responsibility for whatever unpleasant realities are necessary to insure the sound financial preparedness of the United States. I trust they may be consulted in the preparation of a program.

Discussion of Farm Legislation by Clinton County (Ind.) Farmers' Guild

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, March 17, 1941

ARTICLE FROM THE FRANKFORT (IND.) MORNING TIMES OF MARCH 4, 1941

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Frankfort (Ind.) Morning Times of March 4, 1941, entitled "Farmer Guild in Discussion of Legislation."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Frankfort (Ind.) Morning Times of March 4, 1941]

FARMER GUILD IN DISCUSSION OF LEGISLATION—SAMUEL BOLLINGER PRINCIPAL SPEAKER AT REGULAR MEETING SATURDAY NIGHT

Farm legislation was the topic for discussion of the Clinton County Farmers Guild when they met Saturday evening in Dinwiddie Hall. Sam Bollinger led the discussion and gave an interesting talk concerning the efforts of the American farmer to secure the American markets at an American price. He traced the history of farm legislation and spoke of various farm bills now before Congress. He spoke substantially as follows:

The first society for the promotion of American agriculture was organized in 1785, having for its purpose the improvement of lands and crops. Many others followed. The United States Department of Agriculture was established in 1862 as a bureau for educational purposes under the direction of a commissioner. It was made an executive department in 1889 under President Cleveland, and became the only business to have direct representation in the President's Cabinet. The Land Grant Act was enacted in 1862 whereby 30,000 acres of land were set aside for each Congressman to permanently endow at least one college in each State for the teaching of agriculture and mechanical arts. The Hatch Act of 1887 provided an annual appropriation for each of these schools of $15,000, followed by the Adams Act of 1906 with an annual appropriation of $15,000 additional. Then came the Smith-Lever Act of 1914, the Clarke-McNary Act of 1924, the Purnell Act of 1925, and the Capper-Ketchum Act of 1928, all carrying appropriations for these colleges and their extension work. Some of these acts require appropriations by recipient States to match the Federal grants. The total grant to Indiana for 1935 was $225,000 and the State of Indiana raised $317,000 to match these funds, for cooperative extension work. The educational program was further extended by the Farmers Institute, the agricultural fairs, and the county-agent system. This program raised yields, improved livestock, and raised the standard of rural health, and took but little interest in marketing conditions. The world markets readily absorbed our surpluses, and newly married couples could embark in farming and in due season become landowners. Latin America was not much of a competitor, and no thought was given to an agricultural protective tariff.

The World War of 1914–18 suddenly changed the entire picture. Argentina, attracted by high farm prices, suddenly practiced intensive farming and became a competitor. European farm inventories were at low ebb after the war, and with the release of Army manpower the farmers of Europe set to rebuilding their own markets. The American farmer was thus deprived of his markets, and to add to his woes the Federal Reserve Board began the process of devaluation, starting the agricultural depression which is with us to this day.

The agricultural colleges, to which the farmer had turned for a solution of his problems for 60 years, at last failed him. Schooled only in production, they were helpless before the problem of economics. The solution was thrown back on the farmers themselves, and in 1925 the leaders of 46 distinct farm organizations met and formed the Corn Belt Committee. At this meeting were representatives of the National Grange, Farmers Union, Farm Bureau, the present officers of the National Farmers Guild, and many commodity cooperatives. Agriculture at least presented a united front, and through this Corn Belt Committee solidly endorsed the McNary-Haugen bill, which presupposed that the farmer was entitled to his costs of production. A subcommittee was appointed to ascertain production costs, which consisted of Milo Reno, Edward Kennedy, John Tromble, Thomas Cashman, and Henry A. Wallace, now Vice President of the United States. This committee established cost-of-production figures as follows: Milk, $2.76 per hundredweight; corn, 94 cents per bushel; hogs, $11.32 per hundredweight; wheat, $1.33 per bushel; cotton, 25 cents per pound; oats, 50 cents per bushel. However, at Mr. Wallace's insistence, his schedule was adopted, with milk, $4.04 per hundredweight; corn, $1.36 per bushel; hogs, $13.60 per hundredweight; wheat, $2.90 per bushel; cotton, 32 cents per pound; and oats, 75 cents per bushel.

The McNary-Haugen bill was passed by Congress only to be vetoed under influence of the industrial East, who could not see that $1 of farm income produced $5 turnover in national income. Following these vetoes there came the Thomas-Swank bill and the McNary-Woodruff cost-of-production bills, but the farmers were rebuffed as they awaited the new administration of 1933.

The Agricultural Adjustment Act was passed in 1933 calling for parity loans, which were to act as a ceiling over farm prices. The Norris-Simpson amendment to give cost of production was discarded. On July 12, 1933, Mr. WALLACE, then Secretary of Agriculture, issued a release to the press stating that cost-of-production prices in Iowa and Illinois was 34 cents for corn, 30 cents for oats, and 66 cents for wheat. Immediately following this release, corn dropped 17 cents per bushel, wheat dropped 35 cents per bushel, and oats dropped 14 cents per bushel in 3 days' time, and the grain market called for a close to prevent utter collapse.

Under the old A. A. A., the Secretary of Agriculture asked distillers to use only cereal grains bought at the market plus the processing tax, and, if this did not equal parity prices, to pay the difference into the Treasury to be used as a special fund to make parity payments to farmers. The distillers agreed, but this fund of over a million dollars still lies in the United States Treasury.

In 1934 was introduced the Thomas cost-of-production bill, but the tendency was to give the A. A. A. a trial. The Massingale-Eicher cost-of-production bill was introduced in 1936, but the Presidential campaign called for defense of the A. A. A. and it was forgotten. In 1937 the Massingale-Eicher-McAdoo cost-of-production bill was introduced and was defeated in the Senate. In 1939 there was introduced in Congress a bill entitled the "Agricultural Equality Act," sponsored by 18 Senators and 13 Representatives, which would have accomplished parity for agriculture without drawing parity loans from the Government. It would have placed a "floor" under farm incomes, but the A. A. A. seemed intent on placing a "ceiling" over farm incomes through the storage of huge surpluses, and the legislation died in committee.

The present Congress is already glutted with bills covering the farm problem, all sincere, no doubt, but many misdirected. The A. A. A., in asking a continuance for its policies, is asking full "parity-price loans" of 100 percent on cotton, wheat, tobacco, and rice and 85 percent on corn, although some agitation is being seen to include corn on a full parity basis. Just why the A. A. A. sponsors 100-percent loans instead of market parity I do not know. Full parity loans require costs of interest, handling, administration, etc., to be carried by the taxpayers as an unnecessary expense during the stress of national defense, when market parity is being offered, waiting only for the stroke of a pen. The Agricultural Equality Act of 1941 will establish full market parity and remove the "ceiling" from farm incomes without taking 1 cent from the Federal Treasury. It retains some of the worthy features of the A. A. A. Other proposals are the "income certificate," which is a refined processing-tax plan, and an outright processing tax as outlined in the pending Agricultural Commodities Parity Act.

Other pending farm legislation of interest to farmers is the Gilchrist hog processing-tax refund, to release to farmers invalidated processing taxes, the farmers refinance measure to finance farm indebtedness at rates accorded the Federal Treasury, proposals as yet to be introduced, for extension of Frazier-Lemke moratorium, refinancing of moratorium cases by the F. C. A. at 100 percent of appraised value, repeal of Reciprocal Trade Act, establishment of a Bank of the United States, and unlimited extension of the Dies committee.

General Pulaski

EXTENSION OF REMARKS

OF

HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, March 17, 1941

ARTICLE BY IGNATIUS K. WERWINSKI

Mr. WILLIS. Mr. President, I ask unanimous consent to have placed in the RECORD a tribute to Brig. Gen. Casimir Pulaski, Polish-American hero of the Revolutionary War, written by Ignatius K. Werwinski, United States Commissioner of Deeds for Indiana, who is one of many who have exerted their efforts to have October 11 established as General Pulaski's Memorial Day.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNDER OUR FLAG

(By Ignatius K. Werwinski, lieutenant, Officers' Reserve Corps; also former chairman of the United States Pulaski Sesquicentennial Commission)

Under our flag, purest, most potent emblem of law, order, Christian civilization, that ever saluted the dawn, during the Revolutionary War, gave a life to a hero of two hemispheres, Brig. Gen. Casimir Pulaski.

Under our flag, ne'er dropped in dust of defeat, fostered by revered father of the Revolution, the name of Brig. Gen. Casimir Pulaski, is imperishably written in letters of gold on the pages of American history, defying the ages.

Under our flag, floating in zephyrs of high heaven o'er the eternal capital of a republic, founded on the rock of righteousness, symbol of humanity's fondest, dearest hope, forever proclaiming justice, human brotherhood throughout the land, through the inspiration left us by Brig. Gen. Casimir Pulaski.

Under our flag, unstained, untarnished, bejeweled, gleaming in darkest night, her triumphal march across the centuries a path of light. Who dare touch with profaning hand, this sleepless majestic guardian of an ardent, strong, brave, free people, and under which flag Brig. Gen. Casimir Pulaski gave his life in Savannah, Ga., on October 11, 1779.

Under our flag, inspiration of a mighty race, mingling in sentiment of cherished children, native of her soil undefiled, and lovers of liberty from every clime, seeking naught but the common good, yearning to serve mankind 'neath sheltering aegis of the red, white, and blue, under which Brig. Gen. Casimir Pulaski fought.

Under our flag, immortalized by Washington, and under which flag fought Brig. Gen. Casimir Pulaski, her beauteous folds spread from Gulf to coast by Jefferson, borne aloft by Lincoln in strife of heroes that united as one a sisterhood of States and blended the blue and gray, in fires of patriotism, preserving every star in the shining standard of national sovereignty. May Old Glory, under which Brig. Gen. Casimir Pulaski fought and gave his life, in all the flood of time, wave with undimmed radiance and increasing splendor over the fairest expanse of God's earth.

Under our flag, precious, sublime inheritance, blessing of America's faith, power, unity, sanctified by patriot blood of our hero, Brig. Gen. Casimir Pulaski, we consecrate anew in o'erflowing measures our hearts, our eager, willing service of hand and brain to the defense and greater glory to our country for which Brig. Gen. Casimir Pulaski fought and gave his life.

Under our flag may the American people pay the due tribute to the memory of Brig. Gen. Casimir Pulaski on the one hundred and sixty-first anniversary of the death of Brig. Gen. Casimir Pulaski, Revolutionary War hero, by observing and commemorating the anniversary of his death.

Dedicated to the Sons of the Revolution.

October 11, 1940.

National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, March 17, 1941

ARTICLES BY DAVID LAWRENCE

Mr. BYRD. Mr. President, in view of the fact that insertions have been made in the CONGRESSIONAL RECORD of statements with respect to certain articles written by David Lawrence, I ask unanimous consent to insert in the RECORD the articles to which references have previously been made.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[March 3, 1941]

The National Labor Relations Board has just issued what may prove to be an invitation to labor unions in national-defense industries to use a new weapon of sabotage—the "slow down" strike.

Although the Supreme Court of the United States has denounced the "sit down" strike, the Labor Board now rules that because there is no seizure of property or damage to property in the "slow down" it is a legitimate vehicle of union activity.

The latest decision was rendered by Members Leiserson and Smith. The third member of the Board, Dr. Millis, did not participate because he was not in office when the hearings were held. But the decision stands because it is Mr. Leiserson's vote that is decisive.

The Board has once before, under the old regime, arrogated to itself the right to say that it may rule on whether union activities are defensible, but it was not believed that in view of the spirit, if not the letter of the Supreme Court's opinion in the so-called Fansteel case, the Labor Board would ever sanction plain weapons of sabotage.

The text of the new ruling, which came down in the Cudahy packers' case last week, says in part:

"During each of the three work stoppages staged by the P. W. O. C. (a C. I. O. union) that day the employees walked about the room, conversed in scattered groups, sharpened their knives, or stood or sat down at their stations of work. There was no violence or injury to persons or property nor any attempt to exclude officials of the company from the floor. The employees appear to have completed the slaughtering of the scheduled number of animals that day, and, inasmuch as the respondent deducted one-half hour from the time clocked by the employees in each department that day, it evidently sustained no financial loss from the stoppages. * * *

"DEFENSES REVIEWED

"It is clear, as the respondent (the company) virtually conceded, that the employees in the beef and sheep departments concertedly stopped work on February 25, 1939,

pursuant to a program planned and executed by the P. W. O. C. in support of its position in a dispute with the respondent (the company) respecting conditions of work. The stoppages were, in other words, instances of collective union activity. To discharge employees for leading participation in such activity necessarily discourages membership in a labor organization.

"In advancing the second asserted defense of the discharges the company assumes correctly that the stoppages of February 25 were a type of strike. However, the claim that an employer is privileged to discharge employees for striking is refuted by the express language of the act, which specifically safeguards the right to strike. Section 13 of the act provides: 'Nothing in this act shall be construed so as to interfere with or impede or diminish in any way the right to strike * * *.'

"Nor can we agree with its (the company's) contention that these stoppages were sit-down strikes or an 'outlaw enterprise.' The stoppages did not involve seizure or destruction of or damage to the respondent's property."

Now the Supreme Court may or may not uphold that decision, which is obviously an attempt to legalize "slow-down" strikes by introducing a narrow interpretation of the alleged difference between two types of sabotage. But Congress certainly did not intend to give the National Labor Relations Board plenary powers to legalize interferences with production on the ground that they are covered by the right to strike. The fact that the employees did not leave the plant, but occupied the work benches, and that conveyor belts were stopped so as to prevent work from going on is in itself a form of "sit-down" strike, different only from the Michigan strikes in that work is intermittently stopped and not over long periods of time. The interference with production is as plain in one case as in the other.

PRECEDENT ESTABLISHED

Although the employer is held to have deducted wages for the interruptions, and in this instance the same amount of work was done in a day as if work hadn't stopped, the Labor Board nevertheless establishes a precedent allowing employees to introduce work stoppages irrespective of what may happen to deliveries of the goods. Stoppages on airplane production could be compensated for in deductions of wages, but that would not bring planes to Britain on scheduled delivery dates.

The significance of the decision lies in the possibility of bringing labor relations in America closer and closer to the communistic concept of workers' committees which control production. The idea was conveyed by C. I. O. leaders in connection with "slow-down" strikes in the automobile industry a year or so ago and it was revived in another form in the so-called Reuther plan, supposedly for making 500 planes a day—an important feature of which was workers' participation in the management function.

If employers must now submit to work stoppages which are legally construed to be a proper union activity so that the employer is legally prevented from hiring new employees who will work continuously at the job, the transition from management control of production to workers' committees or unions may be said to be complete.

The surprise is that W. M. Leiserson, who has been hailed as an impartial labor expert, should join with the radical member, E. S. Smith, in writing such a destructive precedent. If Congress does not soon overhaul the Wagner Act so as to limit its operations insofar as defense industries are concerned, the number of work stoppages in America which are so pleasing to Herr Hitler are bound to multiply in the critical months of 1941.

[March 7, 1941]

To what extent is the National Labor Relations Board and its policies responsible for the encouragement of agitation which leads to strikes because of a refusal by the board to compel collective bargaining elections the moment there is a public claim of a majority or a dispute concerning the desires of a majority of the workers in a given plant?

This question is pertinent in view of the confession just made by the Labor Board itself of the various dilatory steps which its procedure permits before elections for collective bargaining are actually ordered.

The Board, of course, contends that it is the Wagner Act itself which permits such delays, but in truth the regulations of the Board and its discretionary power could cover the contingencies mentioned without legislation.

Thus, for example, the Board claims that it permits employers to petition for an election and this impression has been broadcast, but the truth is the board allows the employer to petition for an election only when there is a dispute between two rival unions. He is not allowed to petition if he has reason to doubt that a union has a majority of his employees signed up and if he thinks his employees want no union at all to represent them.

EXAMPLE IS CITED

In the last 24 hours an interesting example of the break-down of the Wagner Act's provision for collective bargaining as an alleged means of preventing strikes has been given to the public. John R. Steelman, director of the United States Conciliation Service, who is trying to bring the C. I. O. and the International Harvester Co. together so as to terminate a serious strike on a defense contract, said that the company urged that the strikers go back to work and petition for a National Labor Relations Board election to determine whether a majority were members of a C. I. O. union that called the strike. The head of the C. I. O. flatly refused the proposal and insisted that the grievances be settled at once.

It might be asked of what avail is a collective-bargaining machinery when it does not promptly establish in the public interest whether a union does or does not possess the majority power? The fact is that the Labor Board in many instances does not interject itself into the the situation and compel elections, but avails itself of all sorts of devices which prevent the election from being held, so that in many cases the unions themselves see no advantage in immediately using the machinery set up for them by the law.

The exact words of the Board's policy are given in a circular letter sent out by the Board's director of information a few days ago to the press in which this confession is made:

"If there is reasonable doubt as to the union's claim of a majority, or if the majority is contested by another organization, then the Board holds an election. There are still other cases in which a union may be sure of its own majority, but the employer may say that he has no knowledge of the majority. In such cases the union may insist on recognition by the employer and refuse to petition for an election. The law gives the union this right, and it takes the chance of proving its majority and a violation of the act at a hearing, when the employer is charged with refusing to bargain collectively. But in every case where a union asserts a claim of a majority to the Board the Board conducts an investigation; and if the claim is supported by a sufficient showing of membership or designation of the union by employees, or other designation by the employees of the union to represent them, and charges of unfair labor practice are disposed of, the Board orders an election."

EXPLANATION OF STRIKES

In the foregoing explanation by the Board itself can be seen why defense strikes are on the increase. The Board takes the view that a union can refuse to petition for an election but can file unfair labor-practice charges on the ground that an employer refuses to bargain. The employer may be in doubt as to whether a majority of his employees have designated the union as a bargaining agent, but he cannot find out the truth through any help from the Board; for the Board doesn't let him petition unless there are rival unions.

The union which claims the majority isn't compelled to show as against an unorganized group, whether it has a majority, nor can it be compelled to desist from raising the issue every few weeks. For, unless the Board steps in and orders an election—which is what this correspondent has been advocating as a means of making collective-bargaining machinery effective—there can be no immediate counting of noses in a shop and hence conditions can be kept upset indefinitely.

The Board's policy in insisting that unfair labor practice charges be disposed of before elections are ordered merely prolongs the agitation. For it takes a long while to handle these charges in hearings and through the courts, when the whole issue could have been resolved at the outset by a mandatory election which the Board really has power to effectuate now under the present act. If it be charged that this works against a union which hasn't attained at the time enough members for a majority rule, then the Board could specify that elections can be held every 6 months on a given date from the time the issue is resolved. The Board's present policy merely has the effect of collusion with labor organizers until a propitious moment for the holding of an election and then the Board freezes the situation for at least a year, and sometimes longer.

The fact remains that nothing of a truly effective nature is being done in the defense situation particularly, to compel collective bargaining so as to carry out the boasted preamble of the Wagner law, which is that establishment of collective bargaining will tend to promote labor peace.

[March 8, 1941]

The National Labor Relations Board maintains an office of information for the purpose of informing the press of its activities and policies, but lately the board has countenanced the sending of misleading statements to the newspapers in a manner prejudicial to the American Federation of Labor.

The chronology of the incident is as follows:

On February 2, William Green, president of the American Federation of Labor, issued a public statement which was widely printed in the newspapers of the country, declaring that the American Federation of Labor

claimed it had a majority of the workers in the three big Ford plants in Michigan.

On February 3 this correspondent referred in these dispatches to Mr. Green's statement as an evidence of a conflict of interest between the American Federation of Labor and the Congress of Industrial Organizations, which also claimed a majority and hence the right to sole bargaining power for all Ford workers.

On February 27 news came of the formal filing with the Michigan Mediation Board of an intention by the Congress of Industrial Organizations to call a strike in the Ford plants. This correspondent wrote on that date: "The Congress of Industrial Organizations claims a majority of workers in the big Ford plants and so does the American Federation of Labor," and added that it was up to the National Labor Relations Board to bring about an expeditious election.

ERROR CHARGED

On March 3 the Director of Information of the Labor Board wrote a circular letter to the newspapers in which he said: "Mr. Lawrence's statement that the American Federation of Labor 'claims a majority of the workers in the big Ford plants' is another error. We know of no such claim."

But it develops that on March 1 Harold A. Cranefield, regional director of the National Labor Relations Board, with offices in Detroit, Mich., addressed a letter to all American Federation of Labor unions having workers in the Ford plants and also to Mr. Green, formally notifying the latter that the C. I. O. had claimed a majority and asking if the A. F. of L. wished to dispute the claim in formal proceedings.

On March 6 Mr. Green wrote to the Labor Board declaring that the A. F. of L. did claim an interest in the election. He said: "We will gladly submit evidence in support of our claim of interest in the representation of the employees of the Ford Motor Co. at its Lincoln plant in collective bargaining." He added that he was inclosing a copy of a statement to the press, in which the A. F. of L. chieftain made this further comment:

"We will welcome this opportunity to intervene, and we sincerely hope that an election among the employees of the Ford Motor Co.'s Lincoln plant will be held at a very early date. The American Federation of Labor will steadfastly maintain the right of the American Federation of Labor Federal Union established at the Lincoln plant of the Ford Motor Co. to represent said employees as their collective bargaining agency. * * * ."

READY "AT ANY TIME"

"We are ready for an election at the Lincoln plant of the Ford Motor Co. at any time. We seek a determination of the issue raised by the representatives of the C. I. O. as quickly as possible."

It will be noted that the A. F. of L. does not ask that there be an adjudication of any alleged unfair labor practice charges pending against the Ford Co. before the election is held, but that the A. F. of L. is ready for the election now. Will the Labor Board delay the election, or will it follow the procedure it has often insisted upon; namely, that unfair labor practice charges must be disposed of first before there is an election? This procedure sometimes takes as much as 2 years.

Just why the National Labor Relations Board refused in its letter to the press on March 3 to take cognizance of the A. F. of L. claims is somewhat of a mystery. It might be that the Board doesn't consider a claim exists unless it formally is filed with the Board, but this writer on February 27 was discussing what was a widely known fact—namely, that the A. F. of L. and C. I. O. were each claiming the right to represent Ford workers as the sole bargaining agent.

SHOULD ACT SPEEDILY

The point was made that the Labor Board ought not wait for a lot of red tape to be unraveled, but should act the moment public claims of a majority were made by conflicting unions. Evidently the regional director of the Labord Board in Detroit knew on March 1 what the A. F. of L. claimed or he would not have written to all the A. F. of L. unions and Mr. Green on that date asking them to offer evidence to substantiate their claims. It may be, of course, that the office of information of the N. L. R. B. here did not know what was happening in its Detroit office or that it didn't read the front pages of the newspapers of February 2, when Mr. Green's first claim was published. It would appear that the letter sent out on March 3 by the Labor Board was a serious misstatement on a question of fact which could not but be regarded as publicity unfavorable to the A. F. of L.

In view of President Roosevelt's statement that the Nation would not countenance jurisdictional strikes called as a result of conflict between two unions working on defense contracts, it would be regrettable if the C. I. O. now went through with its announced intention of calling a strike at the three Ford plants involving some 95,000 workers without giving the Labor Board a chance to order an election. But it is, on the other hand, true that the Board does not feel compelled to order an election until unfair labor practice charges on other matters are disposed of, in which case the Nation will witness the collapse of the basic principle of the Wagner Act, namely, that if collective bargaining machinery is provided by law, labor peace will be promoted.

Mr. Mellon's Gift to the Nation

REMARKS

OF

HON. LOUIS E. GRAHAM

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

Mr. GRAHAM. Mr. Speaker, tonight at 10 p. m. the President will receive from Mr. Paul Mellon, of Pittsburgh, Pa., son of the late Hon. Andrew W. Mellon, LL. D., the National Gallery of Art on Constitution Avenue, together with the Mellon collection of art.

Mr. Mellon will present the gallery and collection to the President in behalf of his father and the trustees of the A. W. Mellon educational and charitable trust. Hon. Charles Evans Hughes, Chief Justice of the Supreme Court of the United States and ex officio chairman of the board of trustees of the gallery for the Federal Government, will preside.

The National Gallery of Art is a $50,000,000 gift to the Nation from the late Mr. Mellon. This magnificent gift will be dedicated to and accepted by the President in behalf of the Nation. At the same time the gift of the Samuel H. Kress collection of Italian paintings and sculpture, announced in 1939, will be made, and in this connection Mr. Joseph A. Widener has announced recently that he would give to the Gallery his collection of art works, which has been valued unofficially at $50,000,000.

At the time of announcing his gift Mr. Mellon had expressed the hope "that it may attract gifts from other citizens who may in the future desire to contribute works of art of the highest quality to form a great national collection," and to that end his gift provided for the $15,000,000 required for the construction of the building and a $5,000,000 endowment for acquisitions and other purposes.

The splendid gifts of Messrs. Kress and Widener bear witness to the fact that his appeal has been heard and most generously responded to on the part of these two gentlemen.

The structure which will house these collections is believed to be the largest marble building in the world, being 782 feet long and 303 feet wide, exclusive of steps and approaches, or slightly more than the length of the Capitol, including both House and Senate wings. Constructed principally of hard-surfaced pink Tennessee marble, the structure was designed in accordance with suggestions of Mr. Mellon by the late Russell John Pope. Ground was broken in June 1937, and on August 26 that year Mr. Mellon died, and Mr. Pope died the next day. The architect's associates, Otto B. Eggers and Daniel Paul Higgins, of the New York firm of Eggers & Higgins, carried the work to completion. Tennessee marble was chosen because it ages to a beautiful mellowness. The interior is finished in Italian marble, and has as its central unit a circular rotunda, 103 feet high and 101 feet in diameter. Around its rim are 24 massive columns of Verte Imperial marble, with caps and bases of Istrian Nuage. The Verte Imperial is a deep-green marble and the Istrian Nuage is a contrasting buff.

The gallery will be maintained by the Regents of the Smithsonian Institution and the Board of Trustees, which consists of Charles Evans Hughes, Chief Justice of the United States, chairman; Cordell Hull, Secretary of State; Henry Morgenthau, Jr., Secretary of the Treasury; Charles G. Abbot, Secretary of the Smithsonian Institution; David K. E. Bruce; Ferdinand Lammot Belin; Duncan Phillips; Samuel H. Kress; Joseph E. Widener.

The officers of the gallery will be: President, David K. E. Bruce; vice president, Ferdinand Lammot Belin; secretary-treasurer and general counsel, Donald D. Shepard; director, David E. Finley; administrator, Harry A. McBride; chief curator, John Walker; and assistant director, Macgill James.

In offering the gallery to the Nation in 1936, Mr. Mellon, with characteristic modesty, expressly stipulated that it should not bear his name, and the gift was accepted by Congress on March 24, 1937.

Andrew William Mellon was born in Pittsburgh, Pa., on March 24, 1855. His father, Thomas Mellon, had emigrated to this country from County Tyrone. His mother was Sarah Jane Negley. In 1869 he became a student at the Western University of Pennsylvania, now the Uni-

versity of Pittsburgh. He left the university in 1873 without graduation; in his own words he welcomed this because he escaped making his graduation speech. After successfully conducting a lumber business at Carnegie, Pa., he and his younger brother, Richard, were invited by their father to enter his bank. Mr. Mellon at that time was 18 years old.

The plan of the Mellons was this: First, find an honest man capable of managing his own business. Next loan him all the capital he needs, taking shares in the business and allowing him to run his business in his own way. When the loan is repaid, repeat the plan. This gives opportunity to men of special ability, and they in turn give employment to many others. In 1913 Mr. Mellon and his brother, Richard, founded the Mellon Institute of Industrial Research as a memorial to their father. Its purpose is to conduct skilled research and investigation into physical science and technology as an aid to industry. It is not a commercial enterprise. It is interesting to learn that the oldest fellowship at the institute is that of bread.

Mr. Mellon served under Presidents Harding, Coolidge, and Hoover as Secretary of the Treasury. His last public service was that of Ambassador Extraordinary and Plenipotentiary to Great Britain.

On June 15, 1921, the University of Pittsburgh conferred upon him the honorary degree of doctor of laws. Dartmouth College likewise on June 20, 1922; on June 12, 1923, Rutgers University; on June 19, Princeton University, and on June 20, 1923, the fifth honorary degree of doctor of laws was conferred on him by Pennsylvania Military College. On June 4, 1924, Columbia University conferred the same degree upon him and on June 16, 1925, Kenyon College at Gambier, Ohio, did likewise; on June 21, 1926, Amherst College was the eighth American college to confer this degree; then followed Harvard University on June 24, 1926; next was that by Trinity College, Hartford, Conn., on June 27, 1929, then came one from Yale University; and in 1931 Cambridge University also conferred upon him the degree of doctor of laws. Twelve in all.

Whether Mr. Mellon was the greatest Secretary of the Treasury since Alexander Hamilton is now immaterial. He has gone the way of all the earth and has been gathered to his fathers. As his memory recedes into the vista of time, the sharp political charges will be forgotten, his services to his country will be remembered and the beautiful building on Constitution Avenue will stand for many years as the silent yet lasting memorial of his munificence, his gratitude toward, and his love of his fellow citizens of the Nation.

May the National Gallery of Art long continue to inspire all those who love the beautiful in painting and sculpture.

I include as a part of my remarks the following address delivered by Mr. Mellon in Pittsburgh in 1929:

[Speech delivered by Hon. Andrew W. Mellon, LL. D., at the annual Founders' Day exercises of the Carnegie Institute of Technology, in Pittsburgh, Pa., October 1929]

DEVELOPING THE NATION'S CAPITAL

I am glad to be here for this occasion. For many years, in my capacity as a trustee of the Carnegie Institute, I have attended the Founder's Day exercises; and, since I have been in Washington, I have looked forward each year to returning home and joining with you in celebrating the founding of this institution, which is doing so much for the cause of education and in training the youth of the country in a knowledge of the arts and sciences.

It is because of your interest in such things that I want to speak to you on a subject somewhat different from those usually associated with the work of Government in Washington. It has to do with the carrying out of the original plan whereby the city of Washington shall become not only one of the most impressive capitals in the world, but one which shall be representaive of the best that is in America. The importance of the work was stressed by President Coolidge in his last annual message to Congress, in which he said:

"If our country wishes to compete with others, let it not be in the support of armaments, but in the making of a beautiful Capital City. Let is express the soil of America. Whenever an American is at the seat of his Government, however traveled and cultured he may be, he ought to find a city of stately proportions, symmetrically laid out and adorned with the best that there is in architecture, which would arouse his imagination and stir his patriotic pride."

Congress has made the necessary appropriation to initiate this work and to carry out the most important features of that long-neglected plan of Washington and L'Enfant for the development of the city. The responsibility for carrying out this plan, by the purchase of sites and the erection of buildings, was placed by Congress on the Secretary of the Treasury and has become, therefore, an integral part of Treasury activities.

Before entering upon a discussion of what is to be undertaken, it is necessary to have a clear understanding of the historic background against which this work must be done. Washington, as you know, was founded for the express purpose of being the Nation's Capital. There have been only two other world capitals so founded—the former Russian capital of Petrograd, and the newly created city of Canberra in Australia. To me there has always seemed something heroic about the early beginning of Washington. When we remember that at that time the entire country had a population of less than 6,000,000; that communication was difficult and the Government almost without financial resources, we marvel at the courage and vision of men who proceeded to build a city in a wilderness and to project it along lines so magnificent that even today we do not find it easy to carry their plans to completion.

The new capital was established in accordance with a provision inserted in the Constitution; and it thus became one of the first duties of the newly formed Government to carry this provision into effect. You remember how both the Northern and the Southern States desired that the Federal Capital should be located in their territory. The final decision was made in a way that settled another question then agitating the public mind. Alexander Hamilton, as Secretary of the Treasury, had succeeded in having the Federal Government assume the payment of all debts incurred by that Government in the prosecution of the Revolutionary War. But the assumption of the debts incurred by the States was another matter. The States with small debts felt that it was unfair to ask them to help discharge the larger debts incurred by other States, and proposed assumption by the Federal Government. As it happened, the States with small debts were mostly in the South, where it was ardently desired that the capital should be located. Hamilton felt that assumption of the debts was a vital part not only of his financial policy for establishing the public credit but of that larger purpose involved in tying the States together in a firm and indestructible Union. He determined, as someone has remarked, to resort to the expedient of "giving a civility in exchange for a loaf of bread." He asked Jefferson, who represented the southern party, to give a dinner. At this dinner-party it was arranged that the Capital City should be located in the South and in return the South agreed to support assumption of the State debts by the Federal Government.

Subsequently Congress authorized the Capital to be established on the Potomac River and that President Washington be allowed to select the exact spot. He did so, with the aid of Jefferson and Madison; and these two, with the three Commissioners appointed to prepare the new seat of Government, gave to the city the name of Washington and to the District the name of Columbia. * * *

The President's next step was to secure the services of a man who should design the city. He chose Maj. Pierre Charles L'Enfant, a young French engineer officer, who had served in the Army during the Revolutionary War. * * *

L'Enfant threw himself into the work with enthusiasm. With Washington and Jefferson he worked out a plan for a splendid city, with a system of streets running from north to south and from east to west. Superimposed upon this rectilinear arrangement were those diagonal avenues radiating from the Capitol and the White House, as do the spokes from the hub of a wheel. * * *

During its first hundred years, the city of Washington suffered many vicissitudes. It struggled into existence as best it could with little regard for the plan of L'Enfant or any other plan. On the removal of the Federal Government from Philadelphia in 1800, the new city was almost as much of a wilderness as it had been a little earlier when the Indians of the Powhatan Tribe held their councils at the foot of Capitol Hill. Fortunately the Capitol building and the White House had been started before the death of Washington, and so the main axes of the new city had been fixed. Both buildings were badly burned during the British raid on Washington in 1814, but were soon restored in accordance with the original designs; and, in the case of the Capitol, the wings and dome were added a few years later. During this same period of good taste, the Patent Office was built and also the present Treasury building, two of the architectural glories of Washington.

I would like to say a word about the Treasury. The building in which it was originally housed was destroyed by the British in 1814. The new building, erected in its place, was destroyed by fire in 1833; and finally, in 1836, the present building was begun on the site designated by President Jackson. It was commonly reported that, becoming wearied of the delay in selecting the location, General Jackson planted his cane one morning at the northeast corner of the present site and said, "Here, right here, I want the cornerstone laid." And it was laid there, notwithstanding the fact that, when finally completed in 1869, the south wing was interposed between the Capitol and the White

House and thus shut off the vista at that end of Pennsylvania Avenue. * * *

Later President Grant induced Congress to give the city a territorial form of government; and under Alexander R. Shepherd, a man of extraordinary energy, courage, and vision, who became Commissioner of Public Works, the city was transformed. * * * During this period, one great work, the half-built Washington Monument, was carried to completion in 1884. But the Mall, on which it was placed, had never been properly developed; and throughout the entire city the effect for which Washington and L'Enfant strove was entirely lacking.

Such was the condition of the Nation's Capital in 1900, when the one-hundredth anniversary of the establishment of the seat of government in the District of Columbia was celebrated. At the invitation of President McKinley a meeting was held in the White House, attended by many high officials of the Government and by the members of the American Institute of Architects, then meeting in Washington. Interest in the L'Enfant plan was revived, and shortly afterward Senator McMillan secured authority from Congress for appointment of a special commission of experts, who should recommend a plan for the beautification and development of Washington.

That commission included Daniel H. Burnham and Charles F. McKim, architects; Augustus Saint-Gaudens, sculptor; and Frederick Law Olmsted, landscape architect. It was a notable group, such as has seldom been brought together in one undertaking.

After a careful study of Washington and its possibilities, these men presented a report, known as the Plan of 1901. In it they recommended a return to the original plan of Washington and L'Enfant, with such extension of it as might be required to meet modern conditions and the city's growth. * * *

Now, I just ask you to return for a moment to a consideration of another vast project which will eventually realize L'Enfant's dream for a great avenue bordering the Mall and leading from the Capitol to the White House. You are familiar with the distressing spectacle which Pennsylvania Avenue presents today. It is perhaps our most important street and certainly there is no avenue of corresponding importance in any capital which can compare with it in sheer ugliness or lack of architectural dignity. It is the street over which our great processions pass in triumph to the Capitol. Yet never, in the days of either the ancient or the modern world, has anyone seen before a great triumphal way bordered, throughout much of its length, by gasoline stations, lodging houses, and Chinese laundries.

This state of affairs, I am glad to say, will soon be remedied. Congress has determined that the Capitol shall be approached by an avenue commensurate in dignity with its importance. * * * The amounts already appropriated will be used to initiate the most important features of the plans for Washington's development, with special regard for the Mall and for improving Pennsylvania Avenue.

The Secretary of the Treasury was authorized to use this money in the purchase or condemnation of land and the erection of public buildings. It is intended to carry through, as rapidly as possible, the most pressing needs as regards housing of Government departments and activities. These will include a new and larger building for the increased activities of the Department of Commerce, a Supreme Court building, a building for the Bureau of Internal Revenue, an Archives Building, a building for the Department of Agriculture, still another for the Department of Labor, and several others besides. * * *

Departmental buildings are to be placed along the south side of Pennsylvania Avenue from the Treasury to the Capitol. In addition to facing on Pennsylvania Avenue, these buildings will face also on a grand boulevard which is to be cut through the city bordering the Mall and stretching from the Capitol to the new Memorial Bridge on the Potomac near the base of the Lincoln Memorial. * * * It is intended that these buildings, while having each a separate and distinctive architectural treatment, shall be of harmonious design and grouped around two large interior courts or plazas somewhat after the arrangement of the Louvre in Paris. * * *

All of this will take time, of course. But Rome was not built in a day, nor for that matter was Paris. Paris has passed through many stages, each distinct from the other. The Gothic Paris is as different from the Paris of the Renaissance as the Paris of Louis XIV differs from that of Napoleon III. * * *

And yet Washington has many advantages insofar as its future development is concerned. Its life centers around the Government, as those who planned the city intended it should do. There is no manufacturing, and the engineering and industrial problems, which have to be met at such expense and effort in great industrial centers like Pittsburgh and Chicago, are entirely absent. Washington is still a city of moderate size, notwithstanding the fact that its population has grown from 75,000 at the time of the Civil War to about a half million today. But, so long as it remains chiefly a seat of Government, it will retain its unique character among the cities of the country. More and more it will be visited by people who will go to Washington because of its beauty and their feeling of pride and personal ownership in the Nation's Capital. * * *

But there are weightier reasons than that why we should give our support to the effort to rebuild our National Capital. Until recently America has been in the frontier stage as nations go. We were too busy about the hard realities of existence to have much time for the amenities. But now we have the opportunity and we have also the resources to raise the standard of taste in this country; and the extent to which this is being done has no parallel at present in any country in the world. * * *

It has been said that in evolving the skyscraper we have made the only original contribution to architecture since the Gothic. * * * Judged by that standard, the Woolworth Building is a work of art, both because it is beautiful in itself and because it expresses the needs and aspirations of a great people. If we can give to our office buildings something of the beauty of Gothic cathedrals, or model our banks and railroad stations after Greek temples, we shall, in time, provide a magnificent setting for the requirements of modern civilization.

But we must remember that, just as these things are architectural expressions of the Nation on its commercial side, so should the city of Washington, as President Coolidge has said, express the soul of America. We do well, therefore, to give to it that beauty and dignity to which it is entitled. In doing so we are not only carrying out those plans which Washington made so long ago for the city which he founded, but at the same time we are justifying that faith which he had from the beginning in the future greatness of America.

Private Flying Safety Record

REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

Mr. BRADLEY of Michigan. Mr. Speaker, the public has become concerned over the recent accidents on our domestic air lines. Some people have criticized directly or indirectly the Civil Aeronautics Administration because of these recent accidents.

I feel that the Civil Aeronautics Administration should receive public commendation on the decreased fatality rate in private flying operations since it has been charged with the administration of air safety under Reorganization Plan IV.

Under leave to extend my remarks in the RECORD, I want to include here at this point a table which I received from Col. Donald H. Connolly, Administrator of Civil Aeronautics, last Friday:

Private flying operations and accidents

[1940 figures are preliminary]

	January-June 1940	July-December 1940	1940	1939	1938	1937	1936	1935
Airplanes in operation	13,859	16,500	16,500	12,274	10,718	10,446	8,849	8,613
Miles flown	84,400,000	144,600,000	229,000,000	177,868,157	129,359,095	103,196,355	93,320,375	84,755,630
Number of fatal accidents	87	144	231	194	172	185	159	164
Miles flown per fatal accident	970,115	1,004,167	991,342	916,846	752,088	557,818	586,920	516,803
Total fatalities	135	221	[1] 356	314	275	283	272	252

[1] Includes 196 pilots, 13 dual pilots and students, 138 passengers, 9 ground-crew and third-party fatalities.

You will note that in the period from July to December 1940, private flying operations showed a splendid safety record of over 1,000,000 miles flown per fatal accident, which represents a commendable improvement in the safety of private flying over any preceding period in the history of aviation; and this was accomplished under the present Civil Aeronautics Administration.

It is noteworthy in passing that there was a tremendous increase in safety in private flying operations which followed the Civil Aeronautics Authority Act, which went into effect in 1938; because in 1937 you will note that there were approximately 560,000 miles flown per fatal accident; this jumped to 752,000 in 1938 and to 970,000 in the first half of 1940—prior to Reorganization Plan IV. But I want to emphasize the fact that this improvement continued during the last half of 1940 under the Civil Aeronautics Administration. It is true there was an increase in the total number of fatalities, but there was a tremendous increase, you will note, in private flying operations, much of which was brought about by the

civilian-pilot-training program, in which there were 30,000 students participating from July to December.

In connection with this program, I think Colonel Connolly and his associates, including Mr. Grove Webster, chief of this section, are to be complimented.

I quote from Colonel Connolly's letter, as follows:

It is indeed gratifying that with this large increase in instructional flying, there has been a decrease in the general accident rate. In recognition of the safety of the civilian-pilot-training program, the insurance underwriters, effective January 1, 1941, doubled the amount of hospitalization and medical reimbursement for C. P. T. students from $500 to $1,000 with no increase in premium. In September 1940 they reduced the premium to $9, from an original rate of $20 for the first C. A. A.-controlled course in 1939. This premium covers both the $1,000 for injury and $3,000 in case of death.

Mr. Speaker, this last paragraph does indeed speak volumes of praise for those connected with the C. P. T. P., and I congratulate Colonel Connolly and his associates.

Air Tragedies

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, March 17, 1941

ARTICLE BY MERLO J. PUSEY

Mr. TRUMAN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article on air tragedies by Merlo J. Pusey. The article appeared in Saturday's edition of the Washington Post. I think it is a common-sense approach to the Civil Aeronautics Authority situation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of March 15, 1941]

THE AIR TRAGEDIES—TEMPORARY APPOINTMENTS AS A CLEW

(By Merlo J. Pusey)

Robert H. Hinckley, Assistant Secretary of Commerce, appears to have given one clew to the mysterious increase in air-transport crashes since the Civil Aeronautics Authority was reorganized last July. Following the tragic smash-up near Atlanta last month, Mr. Hinckley invited the operating heads of the air lines to Washington for a heart-to-heart talk. He reports that they do not favor another reorganization of the C. A. A. On the contrary, he said, they believe that there have been "too many moves around here already."

Here is an unmistakable hint that the shake-up in the C. A. A. last summer may have had some bearing upon the series of air-line accidents which have since claimed the lives of 54 persons. The remarkable safety record achieved by the air lines during the 17 months ended last August came at a time when the C. A. A. was well organized and its inspection machinery was functioning smoothly. In that period not a single fatality occurred on any air-transport line. The disastrous smash-ups at Lovettsville, Centerville, Utah, Chicago, St. Louis, and Atlanta took place during the period of the C. A. A.'s reorganization.

It should be noted, of course, that most of the regulatory machinery set up by the original Civil Aeronautics Authority was preserved by its successor, the Civil Aeronautics Administration. In some respects the new set-up seems to offer advantages from the viewpoint of safety in aviation. It brought about a closer relationship between the C. C. A., the Weather Bureau, the Coast and Geodetic Survey, and the Bureau of Standards, all of which are now under the general supervision of Mr. Hinckley as Assistant Secretary of Commerce. Moreover, the technique of making inspections and investigating accidents remains the same. On the surface it appears that the reorganization of the C. A. A. should have had no appreciable effect upon the safety of travel by air.

But there are many intangible factors in a shake-up of administrative personnel. Even if the same men stay on the job during a reorganization, they may work with less efficiency. If the period of transition is prolonged, morale may be severely impaired. No inspector, for example, can be expected to demand rigorous compliance with the rules if he is concerned about his own status and if he can't be certain of full support from his chief. And supervising officials are not likely to follow a vigorous policy when their own positions seem to be lacking in security.

The really astonishing fact about the new C. A. A. is that neither its executive officer nor any one of its six division chiefs has yet been granted a permanent appointment. Several of them are career men, but they are all listed as acting directors. These include A. S. Koch, acting director of the vital inspection service. Mr. Koch supervises a large staff of inspectors who check the performance of airplanes the qualifications of pilots, and the adherence of air-line companies to the safety regulations prescribed by the Civil Aeronautics Board.

These inspections are the heart of the Government's air-safety program. One of the duties of the C. A. A. inspectors is to sit with pilots on their regular flights to determine whether or not all the rules of safety are observed. They have the dual function of detecting violations of the safety code and of suggesting improvements in that code to the Civil Aeronautics Board. It is easy to see how even a slight let down in the morale of this group or any confusion as to the backing they will have in making violation reports might lead to a less rigorous observance of safety requirements.

Safety in aviation, said the C. A. A. in its last annual report, can be attained only by "the promulgation and enforcement of the best possible set of minimum safety standards, rules, and regulations, and the maintenance of an efficient system of examinations, inspections, and certifications * * *." The truth of that statement is not open to question. Indeed, the present C. A. A. this week recognized the primary importance of an effective inspection service by ordering 10 of its best men to make a special 90-day survey of all air lines, their equipment, and pilots in an effort to forestall repetition of the Atlanta tragedy.

This action also suggests some fear in the minds of C. A. A. officials that the routine inspection service is not entirely satisfactory. Their effort to make a more thorough check is commendable, but, of course, a special survey will not eliminate any disadvantages that may result from confusion and uncertainty at the top. Some inspectors have left the service, apparently in dissatisfaction over the prolonged period of reorganization. Information as to the extent of the turn-over cannot be readily attained. There are indications, however, that the turn-over is less important than the lack of permanent organization in the Inspection Service.

After 6 months of operation the new C. A. A. has not even issued an organization chart. That fact alone suggests a lack of clearly defined responsibilities. When it is combined with the equally significant fact that the division chiefs have not yet attained a permanent status, confidence in the ability of this organization to enforce safety regulations with full efficiency may be easily shaken.

It is important to remember that fatal accidents in the air are very largely a matter of personnel failure. Not all crashes involve negligence on the part of the pilot or disregard of safety regulations. But even those crack-ups resulting from mechanical failures or bad weather can be reduced to a bare minimum by proper inspections and scientific use of weather data. It is the business of the Government to make certain that these safety measures are fully applied.

The congressional committees set up to investigate the recent air-line tragedies may thus be expected to give the activities of the C. A. A. a thorough airing. If these inquiries are constructive, they may have a salutary effect upon future safety in the air. At the moment only one point seems to stand out clearly. Efficient regulation certainly cannot be obtained by subjecting the regulatory agencies to frequent reorganizations. Stability is often more important in difficult undertakings of this kind than a theoretically perfect organization.

Congress may easily blunder, therefore, if it tries merely to decide whether the old independent C. A. A. or the new C. A. A. in the Department of Commerce affords the best pattern for an aviation-control system. The real question seems to be whether the poor showing of the new C. A. A. to date is merely incident to its reorganization or whether it indicates fumbling that cannot be overcome by an administrative agency for aviation within the Department of Commerce.

David Wilmot

REMARKS

OF

HON. ALBERT G. RUTHERFORD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

Mr. RUTHERFORD. Mr. Speaker, March 16, 1941, marked the seventy-third anniversary of the death of David Wilmot, antislavery leader and judge, who represented some of the counties which now comprise my district in Congress before the Civil War. That he was a great statesman no one will deny. His memory is revered by the people of my district. He was born in my home county and for that reason I take this opportunity to bring the matter to the attention of this body at this time. The following article sent out by the Pennsylvania Department of Commerce and published in many papers in my district gives a short account of his many accomplishments. The article is as follows:

Born in Bethany, Wayne County, in 1814, David Wilmot became a lawyer and statesman who fought for the free-State principle. When territory was to be obtained from Mexico he framed a proviso to the effect

that "neither slavery nor involuntary servitude" should ever exist in any part of that territory. This caused much consternation in the House because Members had not previously realized that the antislavery feeling was growing so fast, especially in the North.

Much to the surprise of both sides of the house, the proviso was adopted by a vote of 83 to 64. Later, when Wilmot was a candidate for reelection to Congress, the proviso was used by opposition forces against him, and he withdrew in favor of Galusha A. Grow, a lawyer from Susquehanna County, who shared Wilmot's views on the slavery question.

When David Wilmot ran for the governorship on the Free Soil ticket in 1857 he was defeated by William F. Packer. He then returned to the bench of the judicial district composed of Bradford, Susquehanna, and Sullivan Counties on which he served when he retired from Congress. He held that position until 1861.

That same year he was defeated as a candidate for United States Senator, but when Simon Cameron resigned his Senate seat Wilmot was chosen to succeed him and remained for 2 years. He was temporary chairman of the convention which nominated Abraham Lincoln for President and later was appointed judge of the Court of Claims by Lincoln.

David Wilmot's grave is in Riverside Cemetery, Towanda, where one side of the simple headstone bears the text of the Wilmot proviso.

The Federal Mine Inspection Bill

EXTENSION OF REMARKS

OF

HON. LAWRENCE E. IMHOFF

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

Mr. IMHOFF. Mr. Speaker, I am certainly glad that the Federal Government has finally become concerned with the loss of human life in our mining industry and is now, therefore, going to undertake the supervision of our mines throughout the entire United States in order that something may be done to remedy the inadequacies of State mining laws in insuring greater safety in our mines; and, thus, prevent the reoccurrence of these disastrous catastrophes, the thought of which haunts every miner as he goes down into the bowels of the earth to dig out one of Nature's most prized treasures.

Yes, it is indeed a pleasure for me to be representing the Eighteenth Congressional District of Ohio, which district is located in the eastern part of Ohio and represents one of the largest coal-producing areas in the State as well as in the Nation. I am happy to have an opportunity to manifest my interest and feelings in behalf of the thousands of miners whom I represent, and who are close to my own life.

I believe that this legislation will be welcomed by all the groups interested in the mining industry. Yes; the miner as well as the operator, the owner, and the consumer, because all of these groups are, first, primarily interested in safeguarding the lives of those men whose hazardous occupation down in the bowels of the earth makes possible the production of coal. The use of coal has helped to build America into a great industrial country, and the least we can do is to show our appreciation to that particular class of workers by helping to make their respective occupation less hazardous.

In my opinion, it is not the purpose of this bill to usurp the powers of our States' mine divisions, nor is it an attempt to create a hardship upon our operators and owners. It is, however, an effort to assist the States, the operators, and the owners by offering to them all the scientific knowledge now in the possession of our Federal Bureau of Mines in order that proper safety measures may be practiced and safety devices installed so as to decrease the possibility of wholesale loss of life in the mining industry. Records of the Federal Bureau of Mines conclusively show that many of our mine disasters could have been averted or reduced in severity had the mine operators or owners followed the practices recommended by the Federal Bureau of Mines. It is within my own personal knowledge that even today some of our smaller mines are operating under such conditions which have been termed "extremely hazardous and dangerous to life" by the Federal Bureau of Mines.

Let us examine the record of accidents in the mining industry in Ohio. During the last 12 years there have been more than 71,000 accidents, resulting in over 1,600 deaths. Of this number of fatalities, over 230 have resulted directly from an explosion in the mine. During 1940 the major mine disasters in the United States alone accounted for the loss of some 276 lives. This record is absolutely inexcusable.

I am vitally concerned in the significance of this record because one of the worst disasters happened at the Willow Grove Mine, Neffs, Belmont County, Ohio. This mine is not many miles removed from my home, and I assure you all that the news of the explosion last March 16 was certainly shocking to the senses. I know that it must have been shocking to the senses of all of us who are interested in the preservation of human life.

Perhaps some of you have not had the occasion to be in a community following a mine disaster and seen the miners' sorrowful mothers, wives, children, and friends gather around the particular mouth of the mine, anxiously awaiting and praying that Mother Earth deliver from its bowels those loved ones who may have been trapped thousands of feet below the surface. Yes; hour by hour they await patiently for the victims to be brought out of the mine, many permanently injured; but at the Willow Grove Mine the bodies of 72 dead persons were brought to the top.

This mine catastrophe should have served notice to the mine owners in neighboring vicinities. However, it did not, for with the Willow Grove disaster still fresh in our memories another explosion happened on November 29 at the Nelms Mine, Cadiz, Harrison County, Ohio, which took the lives of 31 men.

If for no other reason, certainly this record of the loss of life in mine disasters warrants the enactment of the Federal mine-inspection bill. Our consideration of this legislation, coming on the eve of the first anniversary of the Willow Grove disaster, will be most gratefully welcomed by all, and I strenuously recommend its enactment, for I am sure that it will be encouragement to the thousands of men who day in and day out leave their homes and loved ones to go down into the bowels of the earth and pursue their occupation, never knowing whether or not they will again return to see the light of another day.

The Defense of America

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

ADDRESS BY HON. JOSEPH R. BRYSON, OF SOUTH CAROLINA

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following speech which I delivered in Cleveland, Ohio, on the afternoon of March 16 before the United Temperance Forces, Hon. Harvey O. Yoder, honorary president, and Hon. Parker C. Williams, president, presiding:

The battle for the defense of America has already begun!

We see that battle in the planes rolling off the assembly lines; we see it in the ships being built for a two-ocean navy; we see it in the increased production of tanks, guns, and other weapons of modern, mechanized warfare; we see it in the billions appropriated by Congress for defense; we see it in the gallant young men who, almost overnight, have doubled and redoubled the size of our armed forces.

Yes; what we see on every side, in every activity, through every day is evidence of the mightiest defense effort in all American history. America is preparing for any eventuality. And that, I contend, is just as it should be, for the situation which confronts us today is without precedent or parallel in the annals of our national development.

OUR HIGH RESOLVE

We, the American people, are advancing in the spirit of national unity because never were we more united in a common purpose than we are today in our determination to make this Nation strong enough to withstand the onrushing tide of armed aggression. To us it is something which concerns a way of life, liberty, and pursuit of happiness that has prevailed on this continent for over a century and a half. In our high resolve to preserve that way of life, we are forming what may well become democracy's last great line of resistance to the encroachments of totalitarian despotism. Men who represent the cause of freedom the world over to us are saying:

"Stand, thou great bulwark of man's liberty

* * * * * *

Hold your proud peril! Freemen undefiled."

The defense effort goes on at top speed. But while the planes are rolling off the assembly lines; while ships are being built for a two-ocean Navy; while the production of defense armaments moves ahead, while billions are being spent for defense, and while young men are undergoing military training, the liquor traffic is permitted to continue its attack on America's strength through the medium of alcohol. We are bending every effort to gain increased strength, striving to prepare this Nation for any eventuality, and yet we tolerate an evil which undermines the foundations of our defense system by destroying the power and endurance of our manhood.

This is a serious matter. Our production of the weapons of defense is going forward at top speed, but the conservation and strengthening of our manpower, that is to defend this Nation if need be, has all too long been neglected. Yet the internal forces which induce weakness and promote debility should be considered no less seriously than the technical problems which create "bottlenecks" in our defense industries. The one, like the other, is a hazard to national security; the one, like the other, must be overcome.

GREATEST FOE OF ARMY

During the last World War it was our own Gen. John J. Pershing who described alcohol as America's deadly enemy when he declared: "Banish the entire liquor industry from the United States; close every saloon and brewery; suppress drinking by severe punishment to the drinker * * * and the Nation will suddenly find itself amazed at its efficiency and startled at the increase in its labor supply. I shall not go slow on prohibition, for I know what is the greatest foe to my men, greater even than the bullets of the enemy." British Prime Minister David Lloyd George likewise said: "We are fighting Germany, Austria, and Drink, and, so far as I can see, the greatest of these deadly foes is Drink."

The recent fate of France should stand before us as a grim reminder of disaster. France entered the present European War with at least one outstanding asset and with one known liability. Military experts all agreed that France possessed the best trained Army in the world—that was a real asset. Medical authorities declared that France's per capita consumption of alcoholic beverages exceeded that of every other European nation—that was a decided liability. A number of factors may have accounted for the incredible fall of France last spring but the factor of alcohol appears to have weighed heavily. The part that alcohol played in the fall of France was stated in a news dispatch from Vichy on August 29 last, reading as follows: "A Government spokesman said today that alcohol was one of the chief causes of the moral collapse of France under attack."

Yesterday France came to grips with a Germany so intent on success and victory that she established higher standards of self-discipline and sobriety than ever attempted by the French people. Today, Germany being more intent than ever on success and victory has pushed to even higher levels her standards of self-discipline and sobriety. The question is, Will tomorrow find America softened by alcohol for the same sort of moral collapse which spelled disaster for France or will we be found hardened for any possible test of strength?

LIQUOR TRAFFIC IMPOSES BURDEN

No thoughtful American would underestimate the importance of that question. No patriotic American would scoff the warning implied by that important question. The pity of it all, however, is that our national attitude toward alcohol and the liquor traffic has been conditioned to such a high degree of indifference that millions of Americans are no longer sensitive to the injurious qualities of alcoholic beverages, nor are they fully aware of the burden which it imposes on our national strength. To witness the fact that the American people are willing to endure the liquor traffic at a time when every obstacle to complete national defense should be removed is to fully realize that the American people have been tricked into a false line of reasoning which carries to a false sense of security on the subject of alcohol.

But if there obtains throughout our land a sad state of public indifference to the evils of alcohol, such is not the expressed will of the American people but rather the direct result of a hideous brand of propaganda which seeks to make what is a lie the truth, and what is the truth a lie. We find the climate of public thinking still beclouded by the misty arguments and flimsy pretenses of those alcoholic missionaries who were once bold to preach the gospel that to legalize the manufacture and sale of alcoholic beverages would be no mistake and could do no harm.

We observe that interests of the liquor traffic have spared no effort in their attempt to drape the white linen of virtue over the naked evil of drinking. For instance, the word saloon, the American people made it too harsh for social respectability, so exponents of the liquor traffic now describe drinking places as cocktail lounges. A cocktail lounge, however, is no different from a saloon except for the absence of a brass rail and the presence of women. The brass rail with all its manifold evils hardly seems worse than the spectacle of dragging the motherhood of the Nation down to places of drinking. National advertising on an unparalleled scale has been employed to weaken all lines of resistance to alcohol. What do we see in our newspapers and magazines—attractive, carefully worded, skillfully designed advertisements which begin with the brazen assumption that drinking is no evil and end with deceptive claims as to the values of alcoholic beverages. Thousands of dollars are spent daily to perpetrate the lie that beer is real food while hardly a penny is given to publicize the truth that milk is nutritious.

ALCOHOL UNDERMINES NATIONAL DEFENSE

But the time has come, and it is later than you think, to lift this veil of propaganda and look down on the real facts. The American people cannot longer fail to realize that alcohol is no friend of national defense. These truths I hold to be self-evident:

First. Alcohol wastes national wealth needed for national defense.

Second. Alcohol saps the strength of manpower essential to national defense.

Third. Alcohol undermines the spiritual and moral forces which must sustain the efforts of men and women when the hour of greatest national crisis comes.

Alcohol wastes national wealth. Since repeal in 1933 we have spent $20,000,000,000 in the United States for liquors, not including illicit liquor. Today we are spending more than three and one-half billions annually for liquor, and for many months following the outbreak of the European war our importation of Scotch whisky from England was so heavy that it enabled Great Britain to maintain a favorable balance of trade with the United States despite her enormous purchases of planes, tanks, and other war materials from American manufacturers.

The total amount of our national income which is absorbed by alcohol annually is not fully represented in these figures since they only account for the outright sale of alcoholic beverages. The indirect costs of the liquor business run into still more billions of American dollars, as witness the size of our crime bill, which has reached a high of $15,000,000,000 a year. It is conservatively estimated that arrests for intoxication cost the country at least $6,000,000,000, while another $15,000,000,000 goes for the treatment and care of persons in mental hospitals due to alcoholism. In this year, 1941, at a time when billions are needed for defense expenditures, how can we afford to dissipate so sizable a portion of our national income on alcohol?

Alcohol not only wastes national wealth, needed for national defense, it saps the strength of our manpower essential to national defense. Medical authorities regard alcohol as being primarily a narcotic drug. Dr. Haven Emerson, professor of public-health practice, Columbia University, recently declared: "Alcohol is a depressant, habit-forming narcotic drug. Alcohol is a protoplasmic poison. Alcohol reduces endurance, accuracy, and rapidity of muscular action of all kinds. Alcohol deteriorates emotional and nervous control, as expressed in unreliable judgment and self-control."

MUST PRESERVE FIGHTING STRENGTH

Modern warfare is mechanized warfare; modern defense is mechanized defense in which men with clear brains and steady hands must exercise split-second judgment for precision in the operation of planes, tanks, and other motorized units of a modern defense system. This thing which confronts us is not a theory, it is a practical problem: We simply must preserve the physical, fighting strength of this Nation for common defense against any eventuality. The late Thomas A. Edison, that greatest of inventive geniuses, had a message for us when he said: "To put alcohol in the human system is like putting sand in the bearing of an engine." What good will it do us to fashion the weapons of defense if we dispossess ourselves of the strength with which to wield them against the foe?

The fact that alcohol destroys essential teamwork between head and hand is reflected in the ever-increasing number of automobile accidents since repeal. In 60 percent of the fatal motor accidents for the year 1939 investigation proved that drivers had been drinking 1 hour before the accident. That world-famous surgeon, Dr. Charles Mayo, sums the matter up in these words: "You can get along with a wooden leg, but you can't get along with a wooden head. The physical value of a man is not so much. Man as analyzed in our laboratories is worth about 98 cents. Seven bars of soap, lime enough to whitewash a chicken coop, phosphorus enough to cover the heads of a thousand matches, is not so much, you see. It is the brain that counts, but in order that your brain may be kept clear you must keep your body fit and well. That cannot be done if you take liquor."

If there are those who are inclined to view this particular problem without any expression of concern, I ask them can comfort be found in the fact that approximately 50 percent of the young men examined for regular service in the United States Army are being rejected because of failure to meet minimum standards of physical well-being. This is, indeed, an alarming revelation, but still more alarming are the War Department's reports concerning the pressure of the liquor traffic on young men now undergoing training in Army camps throughout the country. Army Chief of Staff, Gen. George C. Marshall, recently deplored the fact that "establishments for the purpose of selling liquor are becoming increasingly active in the communities adjacent to camps." Said General Marshall: "Here we have on the one side a sordid business for the accumulation of money and on the other the interest of every parent in the United States who has a son in the Army."

Letters from parents aroused by these reports are now reaching Members of Congress. Is there any reason why parents whose sons are now serving with our armed forces should not be manifestly concerned about this acute problem which, in the words of General Marshall, threatens to undermine the integrity of our young Army? We ask thousands of young men to serve with our armed forces. They gladly respond to our call, leaving behind homes with stabilizing influences and interests. Is this what they deserve for

their sacrifice, exposure to evils and inducements capable of undermining their integrity?

OUR MEN DESERVE PROTECTION

There can be but one answer to that question: We owe it to these young men and we owe it to their mothers and fathers as well to expressly forbid the sale of alcoholic liquors inside or near any United States Army camp or other military establishment. Senator SHEPPARD, of Texas, chairman of the Senate Military Affairs Committee, has introduced a bill which admirably provides for such restrictions. This measure is entitled, "A bill to provide for the common defense in relation to the sale of alcoholic liquors to the members of the land and naval forces of the United States and to provide for the suppression of vice in the vicinity of military camps and naval establishments." Now pending before the House Military Affairs Committee are similar legislative proposals. I am actively supporting these measures, and it is my determination to work for their enactment at the present session of Congress.

In our drive for increased national defense, we must not forget that alcohol undermines the spiritual and moral forces which strengthen individual character and national unity. On the occasion of his recent inaugural address President Roosevelt pointed out that a nation, like a person, has a body, mind, and spirit and, like a person, to be strong must possess a full measure of physical, mental, and spiritual vitality.

The physical, mental, and spiritual havoc wrought by alcohol and the liquor traffic has been well described by Col. Robert G. Ingersoll who remarked: "Intemperance cuts down youth in its vigor, manhood in its strength, and age in its weakness. It breaks the father's heart, bereaves the doting mother, extinguishes natural affections, blots out filial attachments, blights parental hope, and brings down mourning age in sorrow to the grave. It produces weakness, not strength; sickness, not health; death, not life. * * * It is the son of villainies, the father of all crimes, the mother of abominations, the devil's best friend, and God's worst enemy."

DEFENSE CONTROLLING OBJECTIVE

Today, we are called upon to subordinate all lesser interests to the interest of national defense. The controlling objective before us is increased national defense. So to those who are not disturbed by the fact that our per capita consumption of alcoholic beverages reached the high of 14 gallons in 1940; to those who would ignore the fact that the estimated drink bill of the United States in 1940 was $5,000,000,000; to those who would trifle with an evil which contributed to the moral collapse of France; to those who would overlook the fact that arrests for drunkenness were three times as great in 1939 as they were in 1932, the year before repeal; to those who would defy the findings of science and scoff at standards of morality; to those who would obey the false commands of propaganda, believe its lie, till it lulls them into a false sense of security, I ask them of what aid is alcohol and the liquor traffic to national defense?

If we be conscientious, it is for us to realize that the fate of a nation will ultimately depend upon the strength and health of her population. If we be sincere, it is for us to realize that a nation, like a person, may drift with the tides of indulgence that end in oblivion or sail on the winds of self-discipline, which lead to greatness. If we be true to the traditions of our forefathers, we must, in this fateful year of 1941, set our sails to the purpose of gaining such increased strength as may be essential for the fulfillment of America's destiny among the nations of the world.

America, our faith is still in thee. For—

"We do not know beneath what sky
Nor on what sea shall be thy fate;
We only know it shall be high,
We only know it shall be great."

The Defense Program

EXTENSION OF REMARKS
OF
HON. NAT PATTON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

MESSAGE OF GOV. W. LEE O'DANIEL TO THE FORTY-SEVENTH LEGISLATURE OF TEXAS

Mr. PATTON. Mr. Speaker, under leave to extend my remarks in the RECORD I include the attached message by the Governor of Texas, the Honorable W. Lee O'Daniel, to the forty-seventh legislature.

In these times the attention of every American is focused on the great defense program, and I do not believe that the American people plan to tolerate any activity or influence that will hinder the progress of preparedness. In my judgment, the statements of Governor O'Daniel reflect the feelings of the people.

The message follows:

MARCH 13, 1941.

To the Members of the Forty-seventh Legislature:

Today I am addressing you on one of the most momentous problems which I believe has ever confronted our State.

There may be some important State problems on which our opinions are divided, but on this problem which I now mention I cannot believe that there can be any division of opinion. This problem is that of strikes and lock-outs within our State during this grave national emergency.

I have been over this State a great deal lately and have seen and heard much, and duty demands that I speak frankly to you.

Yesterday I attended the dedicatory ceremonies of the great new naval base at Corpus Christi, which, by the way, is the largest naval base in the United States. I looked into the faces of those young officers and men and saw written thereon the grim determination to protect and preserve our American way of life, at any cost. Yes, even at the cost of their own lives.

As commander in chief of the Texas National Guard I have learned to know personally many of these splendid officers and men. They are the finest and cleanest of our true Texas boys. They have now stepped into the national service, and not one murmur of dissatisfaction or complaint have you heard from one of them. They have made the most colossal personal financial sacrifices and have said to their superior officers, "Here I am, my all, my life, if necessary, to protect and preserve our American way of life."

As each new day dawns, the cold, stark realization comes to more and more of us that the most horrible and devastating war of all ages is raging on the most of this earth's surface, and the main goal of the power-crazed aggressors is the overthrow of democracy, including our American way of life. Particularly does this realization strike home when your boy or my boy answers to the call of his number, abandons his life's plans, packs his suitcase, and bids good-bye to his mother, wife, sister, sweetheart, and others near and dear to him, and walks out into the darkness of a muddled world.

Into the sincere, patriotic faces of these fine young men have I looked. From their lips I have heard these words: "Governor O'Daniel, our training is being held up and retarded on account of strikes stopping production in national-defense industries."

Now, ladies and gentlemen of this Forty-seventh Texas Legislature, are you going to sit idly by with a cry like that ringing in your ears?

Texas cannot answer this pathetic cry of our brave boys for the other States in this Union, but this Forty-seventh Texas Legislature can answer that cry for Texas and you can answer it today. This is one subject which needs no debate and on which there surely can be no opposition.

While our Texas boys and boys from other States are sacrificing their jobs—yes; sacrificing their whole future opportunities and possibly their very lives—for the pittance of from $21 to $30 per month, are you going to permit those whose lives are safe and who are making wages from 5 to 10 times that amount call strikes overnight and shut down essential industries in this State, and, by so doing, deprive these soldier boys of things they so desperately need? Where is the inherited blood of Sam Houston, Travis, Bonham, Crockett, and other noble Texas patriots?

So far as I am concerned, I believe every employee in this State has a right to join any organization he chooses to join, and I think the same right should be accorded to every employer in the State, but I am unalterably opposed to resorting to force and violence in labor disputes.

While we are dealing with this question I think no one would contend that we should not go beyond our national-defense program, and in addition to protecting our national-defense program, at least protect our own citizens from force and violence in exercising their right to work in all industries regardless of what organization they may be affiliated with or whether or not they are affiliated with any organization.

War supplies cannot be produced in factories which are closed down by strikes or lock-outs. Dead war industries mean dead soldiers. I have no sympathy with strikes being called in essential industries where workmen in these industries are frequently making more money in 1 week than these soldier boys make in a whole month, and the lives of these industrial workers are safe, while our soldier boys' lives are in jeopardy. Especially are these strikes intolerable when the facts indicate that in some cases they have been promoted by the racketeering element who have sought to impose their leadership upon the conservative workmen in these essential industries.

Texas is indeed a great State, and resplendent in heroic deeds of the past. Our people are peaceful and fair and patriotic. While we are wearing only our swaddling clothes as an industrial State, yet the dawn is now breaking on a new industrial day for us. Within the past 2 years more than $100,000,000 has been invested in new industries in Texas, not including those established on account of our national-defense program. Around $300,000,000 worth of new national-defense industries have recently been allotted to Texas. Naturally, on account of this great industrial expansion within our State, some labor agitators and racketeers have been attracted here from other places for the purpose of fomenting labor trouble. Now is the psychological time to head this off. So let us serve notice to the world that Texas is going to tolerate none of this imported racketeering, "fifth column," radical violence-producing element while this national-defense program is under way.

I am wholly opposed to those academic "alibiers" who seek to show by scientific percentages that only a small percentage of our national-defense factories are idle on account of strikes. I am reminded of the old saying, that:

"For the want of a nail the shoe was lost,
For the want of a shoe the horse was lost,
For the want of a horse the rider was lost,
For the want of a rider the battle was lost."

I consider that we owe a duty to these noble mothers of Texas and other States whose sons are steadily advancing toward the front. I do not intend that they shall be short a gun or a drop of oil for that gun, or anything they need, be it large or small, and be it only one one-thousandth or less of our whole national-defense production. If this is an all-out-aid defense program, let us quit quibbling about percentages, let us make it 100 percent, with no industries shut down which are directly or indirectly contributing to our national-defense program.

There is so much racketeering and "fifth column" activities and un-American activities now going on in Texas, that no doubt many of you will want to go much further in enacting legislation than I am hereby recommending. But let me caution you to be conservative. Let us be fair with both labor and capital. The bill I am attaching to this message seeks to stop force and violence in labor disputes in Texas. It provides for a cooling-off period of 60 days before strikes or lock-outs can start. It provides for peaceful picketing so that labor organizations can let the public know that a strike exists, but peaceful picketing can be accomplished by two pickets at the entrance to the industry. More than two are superfluous, and more than two can easily lead to force and violence instead of peaceful picketing. It provides for free men to work when they can get a job, and without being forced to pay a fee to some racketeeer, or without being forced to ask the consent of any other person, or without joining any organization. That is in accord with our American way of life.

May I urge you to please pass this conservative bill without adding any harsh, radical, or unreasonable amendments, or controversial amendments. If any of you have additional legislation in mind, please bring it up in another bill after this bill has been passed.

Some folks may say that this job is for the Federal Government. Surely we must admit that the Federal Government has a most gigantic task on its hands and why should we fold our arms and wait for the Federal Government to do it all?

I want to announce to the whole wide world today that, as Governor of this great State of Texas, there are not going to be any strikes or lock-outs in the national-defense industries or other essential industries in Texas during the time of this national emergency, without it proving to be very unprofitable for those who engage in such strikes or lock-outs.

I am submitting this as emergency legislation, and I ask for the concurrence of the Forty-seventh Texas Legislature by the quick enactment of the attached bill today, if possible.

Respectfully submitted.

W. LEE O'DANIEL,
Governor of Texas.

A bill to be entitled, "An act requiring employers and employees in industries essential to national defense, and certain businesses charged with a public duty, to file notice of any intended strike or lock-out with certain county officials; fixing the time such notice shall be given and the nature thereof; declaring certain strikes and lock-outs to be illegal; making unlawful the giving of aid and assistance to persons engaged in illegal strikes or lock-outs, and fixing penalties therefor; making unlawful the using of more than two pickets at any entrance to place where labor difficulty exists, and fixing penalties for violation thereof; making unlawful the use of force and violence, or threats thereof to prevent any person from engaging in any lawful vocation, and providing penalties for violation thereof; making it unlawful for persons to assemble and attempt by force or violence to prevent any person from engaging in any lawful vocation, and making unlawful the promoting, encouraging, and aiding of such unlawful assemblages, and prescribing penalties for the violation thereof; making the provisions of this act cumulative of existing laws, and providing a severance or saving clause; and declaring an emergency"

Be it enacted by the Legislature of the State of Texas:

SECTION 1. Hereafter, when a dispute shall arise between an employer and employees in an industry which is essential to national defense, or where the employer is operating a hospital, public utility, or a transportation system, before any strike shall be engaged in or put into effect by such employees, or before such employees shall be locked out by the employer, a written notice shall be filed by such employees or employer, as the case may be, with the county clerk of the county where the industry is situated, as well as with the respective county clerks of all other counties in which such industry operates its business, if any, and the same is affected by such dispute. Such notice by the employees shall state that it is the purpose of such employees to enter upon a strike and state the reasons and demands, and such notice by the employer shall state that it is the purpose of such employer to close his business and lock out the employees and give the reasons therefor. No such strike shall be entered into, and no such lock-out shall be made effective, until after the lapse of not less than 60 days from and after the filing of said notice or notices with the county clerk or county clerks as herein provided. Such notice when filed with the county clerk shall be posted by him in a public place in the courthouse and shall be released to the press.

Any strike which may be called in violation of this section shall be deemed to be an illegal strike, and any lock-out which shall be made in violation of this section shall be deemed to be an illegal lock-out, and any person acting by himself, or as a member of any group or organization, or acting in concert with one or more other persons, who shall knowingly grant any aid or assistance to any person engaged in any such illegal strike, or any such illegal lock-out, shall be guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not less than $1,000, nor more than $5,000, and each day such aid or assistance is continued shall constitute a separate offense. The provisions of this section shall not apply to employees of railroads or the management of railroads who are under the jurisdiction of the Federal Railway Labor Act.

SEC. 2. In all cases where disputes exist between employers and employees, it shall be unlawful to have more than two persons on picket duty at any entrance to a place or building where a labor difficulty exists. Any person guilty of violating this section, or any person or organization guilty of abetting or aiding others to violate this section, shall be guilty of a misdemeanor and upon conviction thereof shall be punished by a fine of not less than $100, nor more than $1,000, and each day such violation of this section shall continue shall constitute a separate offense.

SEC. 3. It shall be unlawful for any person by the use of force or violence, or threat of the use of force or violence, to attempt to prevent any person from engaging in any lawful vocation within this State. Any person guilty of violating this section shall be deemed guilty of a felony, and upon conviction thereof shall be punished by confinement in the State penitentiary for not less than 1 year nor more than 2 years.

SEC. 4. It shall be unlawful for any person acting in concert with one or more other persons, to assemble at or near any place where a labor difficulty exists, and attempt by force or violence to prevent any person from engaging in any lawful vocation, or for any person acting either by himself, or as a member of any group or organization or acting in concert with one or more other persons, to promote, encourage, or aid any such unlawful assemblage. Any person guilty of violating this section shall be deemed guilty of a felony, and upon conviction thereof shall be punished by confinement in the State penitentiary for not less than 1 year, nor more than 2 years.

SEC. 5. The provisions of this act shall be cumulative of all other existing articles of the penal code upon the same subject, and in the event of a conflict between existing articles and the provisions of this act, then and in that event the provisions, offenses, and punishments set forth herein shall prevail over such existing articles.

SEC. 6. If any section, paragraph, clause, or provision of this act is declared unconstitutional, inoperative, or invalid by any court of competent jurisdiction, the same shall not affect or invalidate the remainder of this act.

SEC. 7. The fact that it is essential that industries of this State engaged in national defense be protected from strikes and that all citizens of this State be protected from the use of violence in labor disputes, creates an emergency and an imperative public necessity that the constitutional rule requiring bills to be read on 3 several days be suspended and it is hereby suspended and this bill shall be in full force and effect from and after its passage, and it is so enacted.

An Unfortunate Circumstance

EXTENSION OF REMARKS
OF
HON. ROBERT F. JONES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

EDITORIAL FROM THE PIQUA (OHIO) DAILY CALL

Mr. JONES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Piqua (Ohio) Daily Call:

[From the Piqua (Ohio) Daily Call]

AN UNFORTUNATE CIRCUMSTANCE

One of the major problems facing selectees, or more specifically draftees, today is whether they are going to be accepted in the United States Army even after they have been ordered to report for induction. The notice of selection specifically states, "Persons reporting to the induction station in some instances may be rejected for physical or other reasons. It is well to keep this in mind in arranging your affairs, to prevent any undue hardship if you are rejected."

This is indeed an unfortunate circumstance and places young men in a most difficult position. It leaves his future hanging in midair. He must prepare to leave his home and job for 1 year or more, for if accepted he does not come back. At the same time in disposing of his automobile and such property he faces the financial loss should he be rejected.

What to do? That is certainly the problem facing the hundreds of young men being taken into the Army. But the most unfortunate part of the question is that it could easily be remedied and should be at once.

It should be just as easy to examine a man finally in his home town and give him sufficient notice as to whether he is going to the Army or not before he actually makes preparation to leave.

It is true that there is a local examination, but apparently the United States Army does not have sufficient confidence in local physicians to give them final decision in the matter. It is no hidden fact that the percentage of rejections has been and still is much higher than the Army anticipated—that is, rejections at the induction station.

Four Piqua men have made preparations to leave for a year or more. In each of these cases the man was back home 24 hours later. In at least one instance the selectee had gone to much trouble to turn over his business and other affairs only to have the trouble, worry, and perhaps financial loss go for naught.

The remedy for the problem seems to be confined to two alternatives: Either the Army place sufficient confidence in local physicians for final decision on the question of physical fitness or send Army physicians to each community for wholesale examinations of men eligible for call. In the latter case registrants should have sufficient notice that they were going to enter Army service and could act with full knowledge that they were to be accepted when the time arrived.

It is indeed an unfortunate and perplexing circumstance faced by young men who must literally gamble with their business and personal property when induction time comes.

Fort Lincoln, N. Dak.

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

RESOLUTION OF THE NORTH DAKOTA STATE LEGISLATURE

Mr. ROBERTSON of North Dakota. Mr. Speaker, at this time, when the Congress is being called upon for large appropriations all important in their character, I am sure, and thoroughly needed in our defense program, I cannot fail to present to the House Concurrent Resolution U from the Legislative Assembly of the State of North Dakota, asking that the Congress give due consideration to some phase of economics in this rather extensive appropriation campaign in which we are engaged.

There is located today in the State of North Dakota an important Army post that has been in existence for a long span of years, the name of which is Fort Lincoln. Originally this post was located just across the river, the Missouri River, and was the post at which General Custer and his forces were located when he received his order to go forth and engage the Indians in battle. The history of this important episode is now known to all. It is not, however, to the tradition back of this old post that I direct the attention of the Congress today, but rather to the fact that the post today is one of the finest in the country, excellent officers' quarters and first-class barracks, smaller by far than many other posts, but yet well equipped, modern, and up to date, and in excellent condition.

Within the last 2 years the Government has expended large sums of money on repairs; conspicuous among them was the building of a fine outdoor swimming pool at the cost of many thousands of dollars. This important post has been abandoned at a time when these vast appropriations are being made for Army housing. It does not seem to me to be consistent with good business. True, the argument is made that it is a cold country, and the cost of the Army is too expensive. This is not altogether a reasonable argument when we take into consideration that the Government still maintains Fort Meade in South Dakota and Fort Missoula in Montana, both of which suffer the same degree of cold weather as does Fort Lincoln. Surely if these other posts are practical to maintain, the Government should give due consideration to the already large investment at Fort Lincoln, and the post should be regarrisoned at the earliest possible date.

I submit herewith the resolution from the Legislative Assembly of the State of North Dakota:

House Concurrent Resolution U

Concurrent resolution memorializing the Congress of the United States to maintain a military post at Fort Lincoln

Whereas Fort Lincoln is situated in approximately the center of an individual area comprising 150,000 square miles, with a population of 1,250,000, and is supported by an excellent rail and highway network, and is adjacent to a proposed international air line joining the United States, Canada, and Alaska; and

Whereas Fort Lincoln is situated in the geographical center of the State, and is the only military post in North Dakota, and the only one between Fort Snelling, in Minnesota, and Missoula, Mont., and is the only military post between the Canadian border on the north and Fort Meade, in the Black Hills section of South Dakota, on the south; and

Whereas the buildings and grounds comprising the military post of Fort Lincoln are in excellent condition and are capable of caring for many hundreds of citizens called to the service of their country during the present national emergency: Now, therefore, be it

Resolved by the House of Representatives of the Twenty-seventh Legislative Assembly of the State of North Dakota (the Senate concurring therein), That the Congress of the United States is hereby respectfully memorialized and urged to take such steps as are necessary to maintain Fort Lincoln as a military post.

EARL D. SYMINGTON,
Speaker of the House.
C. E. TERRY,
Chief Clerk of the House.
OSCAR W. HAGEN,
President of the Senate,
W. J. TROUT,
Secretary of the Senate.

Under Our Flag

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

ARTICLE BY IGNATIUS K. WERWINSKI

Mr. GRANT of Indiana. Mr. Speaker, I was encouraged by the unanimous support given by the House this afternoon to the pending resolution providing for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski on October 11, 1941. In the Third Congressional District of Indiana, which I have the honor to represent, we have an outstanding citizen, Mr. Ignatius K. Werwinski, who has devoted many years of his life to preserve the memory of this gallant soldier, a soldier who played such an important role in our war for independence. Mr. Werwinski formerly served as Chairman of the United States Pulaski Sesquicentennial Commission and is a lieutenant in the Officers' Reserve Corps.

On Pulaski Day, October 11, 1940, Mr. Werwinski wrote a beautiful tribute to the memory of General Pulaski. With the unanimous consent of the Members of the House I am pleased to submit it herewith:

UNDER OUR FLAG

(By Ignatius K. Werwinski, lieutenant, Officers' Reserve Corps; also former Chairman of the U. S. Pulaski Sesquicentennial Commission)

Under our flag, purest, most potent emblem of law, order, Christian civilization that ever saluted the dawn, during the Revolutionary War, gave a life to a hero of two hemispheres, Brig. Gen. Casimir Pulaski.

Under our flag, ne'er dropped in dust of defeat, fostered by revered father of the Revolution, the name of Brig. Gen. Casimir Pulaski is imperishably written in letters of gold on the pages of American history, defying the ages.

Under our flag, floating in zephyrs of high heaven o'er the eternal capital of a republic, founded on the rock of righteousness, symbol of humanity's fondest, dearest hope, forever proclaiming justice, human brotherhood throughout the land, through the inspiration left us by Brig. Gen. Casimir Pulaski.

Under our flag, unstained, untarnished, bejeweled, gleaming in darkest night, her triumphal march across the centuries a path of light. Who dare touch with profaning hand, this sleepless majestic guardian of an ardent, strong, brave, free people, and under which flag Brig. Gen. Casimir Pulaski gave his life in Savannah, Ga., on October 11, 1779.

Under our flag, inspiration of a mighty race, mingling in sentiment of cherished children, native of her soil undefiled, and lovers of liberty from every clime, seeking naught but the common good, yearning to serve mankind 'neath sheltering aegis of the red, white, and blue, under which Brig. Gen. Casimir Pulaski fought.

Under our flag, immortalized by Washington, and under which flag fought Brig. Gen. Casimir Pulaski, her beauteous folds spread from gulf to coast by Jefferson, borne aloft by Lincoln in strife of heroes that united as one a sisterhood of States and blended the blue and gray in fires of patriotism, preserving every star in the shining standard of national sovereignty. May Old Glory, under which Brig. Gen. Casimir Pulaski fought and gave his life, in all the flood of time wave with undimmed radiance and increasing splendor over the fairest expanse of God's earth.

Under our flag, precious, sublime inheritance, blessing of America's faith, power, unity, sanctified by patriot blood of our hero, Brig. Gen. Casimir Pulaski. We consecrate anew in o'erflowing measures our hearts, our eager, willing service of hand and brain to the defense and greater glory to our country for which Brig. Gen. Casimir Pulaski fought and gave his life.

Under our flag may the American people pay the due tribute to the memory of Brig. Gen. Casimir Pulaski on the one hundred and sixty-first anniversary of the death of Brig. Gen. Casimir Pulaski, Revolutionary War hero, by observing and commemorating the anniversary of his death.

Dedicated to the Sons of Revolution.

OCTOBER 11, 1940.

A Separate Air Force Now

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

RADIO ADDRESS BY HON. JENNINGS RANDOLPH, OF WEST VIRGINIA

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address, entitled "A Separate Air Force Now," I made over the Columbia network Friday, March 14:

A SEPARATE AIR FORCE

This week the Government of the United States took a historic step to clarify its position in regard to World War No. 2. What you or I thought of this position last week, or last month, is no longer important. The vital fact is that a majority of the Congress—the duly elected representatives of the people—joined with President Roosevelt to enact a national policy whose significance is unrivaled in the history of this Nation; yes, perhaps unrivaled in the history of the world. Now that the policy has been adopted, the important thought for everybody—you and me—is to see that this policy is carried out with the greatest possible degree of efficiency; nothing short of complete success will do. The best is none too good, and we won't stop until the best is achieved. This is the American way.

AN ARSENAL OF DEMOCRACY

The best and clearest way for me to outline this new national policy for you is to quote from President Roosevelt's brief letter to Speaker of the House RAYBURN last Wednesday. The President declared:

"This Nation has felt that it was imperative to the security of America that we encourage the democracies' heroic resistance to aggressions by not only maintaining but also increasing the flow of material assistance from this country. Therefore, the Congress has enacted and I have signed H. R. 1776.

"Through this legislation our country has determined to do its full part in creating an adequate arsenal of democracy. This great arsenal will be here in this country. It will be a bulwark of our own defense. It will be the source of the tools of defense for all democracies who are fighting to preserve themselves against aggression.

"While the defense equipment produced under H. R. 1776 remains under the control of the United States until it is ready for disposition, it is the fixed policy of this Government to make for democracies every gun, plane, and munition of war that we possibly can."

To me this means a national policy based on two equally important points: First, the United States will provide every possible gun, plane, and munition of war to help the democracies who are fighting aggression and who are thereby forming our first line of defense; second, the United States will continue its present policy of building our own defense strength so that, come what may in Europe and Asia, the Western Hemisphere will always remain the citadel of democracy and international law and order. Since we are committed to a policy of sending every possible ship, plane, gun, and shell to Europe, the efficiency with which we use what is left on this side of the Atlantic and Pacific becomes the paramount factor in our own defense program. Efficiency and unity—these are the key words. Gone are the days when we could indulge in the amusing spectacle and luxury of interdepartmental debate and discussion. Gone are the days when we could afford forensic discussions on whether wars are won by infantry or battleships—whether fleet power is more important than air power, or whether the United States should stock up on long-range bombers or pursuit planes.

The answer to these questions and hundreds of similar ones is as simple as it is important. The answer is—we need as much of everything as we can get; we need as many battleships, cruisers, and destroyers as we can build; we need as large an army training force as we can handle; and we need as many planes of every category as we can make. But even more important than the mere collection of men, matériel, and equipment, we need a unified plan which provides for utilization of men, matériel, and equipment with the greatest degree of efficiency ever known to mankind.

MUST LOOK TO FUTURE

I don't want to be critical of what has been done thus far. I think our Army and Navy have done the best job possible under the circumstances. I am not interested in the past. Post mortems don't win wars. I am interested in the future. I want to see the best possible use made of all the equipment that is not sent across the Atlantic and the Pacific. And to provide this unity and efficiency I have introduced legislation which would provide a unified department of national defense in the Cabinet. This bill, also before Congress last year, would substitute the unified and streamlined department of national defense for the now separated War and Navy Departments. Under my measure the War and Navy Departments would become important segments of a single defense command.

And what is just as important, my proposal would provide that the Nation's air power would become an independent segment of the unified command. It would be raised to a position of equal importance to the Army and Navy. In short, our three equally important fighting forces—the Army, Navy, and Air Corps—would be welded into one unified and efficient defense machine under the leadership of one coordinating head who could sit at the Cabinet table and speak for all the fighting forces in one breath. I believe this to be in line with the provision of the Constitution making the President the Commander in Chief of all the Nation's fighting forces. If the Constitution provides for one Commander in Chief, I believe it is up to Congress to provide for one—and only one—unified fighting force. There might have been a time when we could afford to have a separate War and Navy Department, but I honestly believe that such a time has become history along with the events of the last 18 months.

Now that I have described the primary purpose of my bill H. R. 3795—the unification of the Nation's fighting forces—let me point out another important end that would be accomplished. I refer to the fact that it would liberate our air-fighting power from under the bushel that is now hiding its true light. I am not interested in past debates over whether the Army and Navy have placed sufficient emphasis on air power. I am only interested in making certain that future development of United States air power will be placed in the hands of those who have only one responsibility—maximum development of United States air power. I want the United States air force to be the most efficient and powerful in the world, and to achieve this end I believe every military flying machine in the Nation should be under one command. That is real unity—the essence of our national defense.

WAR IS FOUGHT IN AIR

So far as I am concerned, this is not a new project or a novel idea. I am not a military expert. I am a layman. So are most of you, my listeners tonight. But I do not believe it takes a military or naval expert to see the logic of a unified defense command—of an air force equal in rank to the Army and Navy. I do not believe it takes a military expert to judge the importance of air power in modern warfare. Just read the newspaper headlines or listen to the radio news broadcasts that will follow this program, and you can see the reason I stress the need for an efficient and unified Air Corps. I do not claim to be a prophet, but I should like to recall an excerpt from a speech I made in February 1937 during a debate on the House floor:

"The next war will be fought in the air. * * * We must realize that the center of our national defense has shifted from the land and sea into the air. * * * With this fact in mind, prompt preparedness at that point should be our chief concern."

Let us see what has happened to my prediction. Let me quote from an excellent article published in the March issue of Readers Digest. This article, Why We Must Have a Separate Air Force," was written by Maj. Alexander P. de Seversky, a United States Air Corps Reserve specialist, who commanded a Russian air squadron in the World War, and who has been designing and manufacturing airplanes and inventing bomb sights for the United States Army Air Corps since he became a United States citizen in 1927. He unexpectedly is in the studio tonight. I am happy he is here. Major de Seversky opens his article:

"In Europe today a flaming scroll bearing a military message of tremendous import is

being unrolled before America's eyes. That message is ominously clear: Vast armies lie immobilized in England and Europe; once-proud navies venture forth in peril of destruction from the skies; and plainly for all to see, the air has become the decisive arena of combat."

AMERICAN AIR FORCE WEAK

With this introduction, the Major continued:

"I have studied, as far as I am aware, all recent attacks on the idea of an independent air force. * * * The common denominator of all the objections is the claim that the United States has built a fairly creditable air force under the aegis of the two older services.

"The rebuttal is simple: It is that at present the United States has no air power at all. We have a miscellany of warplanes but no air power. We have an effective naval air arm, plus an amorphous mass of Army aircraft. Neither of them, nor the two together, constitute air power"

In giving his expert analysis of the strategic lesson to be learned from the events in Europe to date, the Major declared: "The present war discloses one basic principle of air power: No land or sea operations are possible where control of the air is in the hands of the adversary. Dunkerque is a superb demonstration. The withdrawal operations there were accomplished primarily because the British had established local superiority in the air. British Spitfires and Hurricanes, masters of any German pursuit plane by reason of a mere 25-mile-per-hour margin, were able to control the air over the Channel; without such control the evacuation would have been a shambles. This supremacy, however, applied only within a radius of 150 miles—the effective range of land-based British pursuit planes.

"The same local superiority accounts for Hitler's inability hitherto to invade England. The Battle of Britain is an almost perfect laboratory case of pure-air warfare. Out of it one blood-red fact emerges: Hitler cannot invade Britain, so long as a swift British fighter command maintains its margin of superiority in the skies over the British Isles."

GENERAL ARNOLD SEES NEED

No less an authority than Maj. Gen. Henry H. Arnold, Deputy Chief of Staff of the United States Army, and head of the Army Air Corps, has given tacit approval to the idea of a unified air command. I have already asked the House Committee on Executive Expenditures for an immediate hearing on my bill, and I have a list of air force experts who will be called as witnesses when this hearing is granted. I can tell you now that Major Arnold will be one of the experts whose testimony I will be most anxious to hear. In his new book, Winged Warfare, Major Arnold, in collaboration with Col. Ira C. Eaker, his former executive officer in the Air Corps, declared:

"Many feel that eventually the defense air component of the Nation will be given a status coordinate and commensurate with that of the Army and Navy. When that time will come, if it does come, is not yet clear. It came in some of the other nations of the world when the pressure of war was upon them. We shall be fortunate in our time if that reorganization comes in the relative calm of peace, or at worst, in the preparatory stage and not in the fighting stage."

The book continues:

"It may be that eventually air forces for all countries will be separated from land and sea forces for the same reasons that sea and land forces were separated more than a century ago."

When Major Arnold says that every nation might eventually have to separate air power this question, Why shouldn't the United States do this very thing right now while we are in the midst of the greatest national preparedness effort in our history?

I believe we should.

from land and sea forces, I am forced to ask

Old-Age Assistance

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

RESOLUTION BY THE WISCONSIN STATE LEGISLATURE

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Legislature of the State of Wisconsin:

Assembly Joint Resolution No. 1

Joint resolution memorializing Congress to enact a just and adequately financed old-age-pension law

Whereas 53,310 persons received old-age-assistance grants in Wisconsin in the month of December 1940, with the average payments of $22.80 per recipient; and

Whereas such payments are wholly inadequate to maintain the American standard of living because of the mounting food prices and increase in rent costs; and

Whereas it is now an accepted duty of our Government to provide security for the aged, even inadequate and complex as it is, by reason of an advanced age qualification of 65 years and a faulty system of taxation to raise sufficient revenues to carry on the program in decency; and

Whereas most northern Wisconsin counties cannot raise sufficient moneys to pay the 20 percent charged back to them for old-age assistance because of delinquent tax rolls caused by cut-over lands, thereby causing the State to lose much revenue because of inability to match the Federal allotment to which it would be otherwise entitled, and which, if received and matched by the State, would enable payments to old-age-pension recipients of $40 per month as provided by law; and

Whereas many authorities, including President Roosevelt, are in full accord with a Federal old-age-pension system: Now, therefore, be it

Resolved by the assembly (the senate concurring), That the Wisconsin Legislature respectfully memorializes the Congress of the United States to consider the passage of a just and adequately financed national old-age-pension law; and be it further

Resolved, That this legislature urges the consideration of legislation as proposed in bill H. R. 1036, introduced in the Seventy-seventh Congress and known as the Townsend General Welfare Act, which provides for liberal pension payments for all over 60 years of age and carries with it a just tax measure, based upon the ability to pay; and be it further

Resolved, That properly attested copies of this resolution be sent to both Houses of the Congress of the United States and to each Wisconsin Member thereof.

WALTER S. GOODLAND,
President of the Senate.
VERNON W. THOMSON,
Speaker of the Assembly.
LAWRENCE R. LARSEN,
Chief Clerk of the Senate.
ARTHUR L. MAY,
Chief Clerk of the Assembly.

The Townsend Plan

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

EDITORIAL FROM THE TOWNSEND NATIONAL WEEKLY

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial comment from Townsend National Weekly:

[From the Townsend National Weekly]

AN OPEN LETTER TO DR. LEWIS HANEY, PROFESSOR OF ECONOMICS, NEW YORK UNIVERSITY

DEAR DR. HANEY: You have recently carried two articles in the nationally syndicated Hearst newspapers purporting to answer questions regarding the Townsend plan.

On March 4 you printed the following item:

"Chicago asks:

"'Why did you fail to answer the second part of the question about the Townsend plan—what are the objections to it?'

"Answer: I did answer, but the answer seems to have been cut. The plan is unsound and bad in every way, and no reputable economist has ever favored it. It would give money to people, regardless of what they may or may not have done to earn it. The burden of additional taxes would be enormous, and would take away as much purchasing power as given. It would force inflation and a rising cost of living.

"Fortunately this wild scheme does not have the ghost of a chance now when we need all our funds for defense."

First, Dr. Haney, you say the "plan is unsound and bad in every way."

Are we to assume that you mean bad as to its objectives too? And just what is meant by "unsound"? Or are you merely expressing a prejudiced opinion? What portion of the plan is unsound? Is it the gross income tax you object to—a levy that has been proven successful in actual operation—or is it the retirement of the aged on a decent living basis?

Incidentally, you might tell us if you consider mass unemployment of youth and the virtual starvation of the aged economically sound.

You say that "no reputable economist has ever favored it" (the Townsend plan).

Please tell use how many reputable economists have ever favored any plan that was of benefit to the mass of the people. We know

the difficulties in their way, because they would immediately lose their reputation and highly remunerative assignments.

Your next line is a gem:

"It (the plan) would give money to people regardless of what they may or may not have done to earn it."

Please tell us what authority is set up to protect the position of those who have worked hard and earned retirement. What of the aged investors in 10,000 smashed American banks? What of those who lost their all in the failure of hundreds of life-insurance companies, building and loan associations, and high-class stocks? What of those who worked, slaved, and earned only to have their savings taken from them in some high-sounding legitimate promotion?

And what of the two-thirds of the population who do not have a mathematical chance, regardless of the opportunities at the top, to earn enough to have any real savings?

You know that of the 64,000,000 persons covered by life insurance in the United States, nearly 80 percent will have their insurance policies terminated in a manner which does not fulfill the principal purposes for which insurance was intended. Only a fraction of America's insurance policies are terminated by death.

As a reputable economist, you certainly are familiar with the vast inroads made on employment by the march of technological advance. Even national defense has proven but partially effective in eliminating unemployment.

Whether we like it or not, there are no jobs for millions—and particularly for the aged—yet abundance can be produced for all (national survey of potential product capacity).

You say the burden of additional taxes under the Townsend plan would be enormous.

Will you figure the additional cost of a ton of coal, or a loaf of bread, from the ground to the consumer, and show us just exactly what that burden will be? Prove, if you can, that it could possibly be more than a mere 5 percent—actually a replacement tax and not a fresh burden.

And what of the stupendous load of taxation that the Townsend plan will lift from the shoulders of the economically oppressed? What of the canceled 6-percent social-security tax on pay rolls, or the savings on the cost of maintaining old people's homes, hospitals, present pension payments (small as they are), the saving on our $15,000,000,000 annual crime bill through the employment of youth, as well as the moral, spiritual, and physical satisfaction accruing to the whole of society?

To our unbounded surprise, Dr. Haney, you also state that this "burden of additional taxes * * * would take away as much purchasing power as given. It would force inflation and a rising cost of living."

Come, come Doctor. Surely it is not possible for one simple tax to do both these things. If it takes away as much purchasing power as it gives, it could scarcely add to the gross amount of purchasing power—and therefore could not force inflation or a rise in the cost of living. We are sure that you will at least admit you are wrong on one of these two contradictory statements.

Your last paragraph, which seeks to discourage the only hope held by millions who are not wanted or needed by industry, and in which you rejoice that this "wild scheme does not have the ghost of a chance because we need all our funds for defense," is again a mere expression of personal opinion. Your use of the word "scheme" reflects your bias against the Townsend plan.

We believe that we can demonstrate to even the reputable economists, if they will open their minds, that the operation of the Townsend plan would be of the greatest possible advantage to the defense program. We know that it will add to the national-defense revenue by bringing idle excess savings into circulation and through its forced spending program, beginning with those who now have little or nothing, give the Government new billions to tax.

The legislatures of 19 States, representing 40,000,000 people, have given their approval to the plan and have memorialized Congress to enact it. At least 200 Congressmen are known to be favorable, as well as many Senators, including Senator CHARLES L. MCNARY, recently Republican candidate for the Vice Presidency. Your colleague, Cecil B. Dickson, of International News Service, has informed us that the President has endorsed three cardinal features of the Townsend plan.

In conclusion, be assured that we are not cross with you but are very happy that you have found it necessary to give us so much attention in your interesting column. It gives added assurance to the timid that an organization of 10,000 clubs, stretching from coast to coast, is very much alive.

Sincerely,

SHERMAN J. BAINBRIDGE,
Editor, Townsend National Weekly.

Is the St. Lawrence Seaway a "Gateway to World Trade?"

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

EDITORIAL FROM THE LOCOMOTIVE ENGINEERS JOURNAL

Mr. VAN ZANDT. Mr. Speaker, among the many extravagant benefits credited to the proposed St. Lawrence seaway project has been added the glib promise that the farmers of the great agricultural areas of North America will reap an increase in the money obtained for the fruits of their production.

It is another artful attempt by those advocating this unsound and impractical seaway project to try and mislead the American people into regarding the St. Lawrence seaway as a harbinger of increased commerce and an aid to our national defense.

The fallacy of being blindly led into a veritable "fool's paradise" in accepting the proposed St. Lawrence seaway is ably portrayed by the following editorial written by Paul M. Smith, editor of the Locomotive Engineers Journal, issue of March 1941.

Editor Smith's message is as follows:

[From the Locomotive Engineers Journal of March 1941]

A MESSAGE

To the Membership:

Baited with glittering misconceptions, the farmers of the great agricultural areas of North America are being led to believe that the St. Lawrence waterway and power scheme will help them get more money for their products. They are told that such a project would make the area a mighty "gateway to world trade."

Skillful instigators of the scheme have neglected to mention that this so-called gate to world trade, which is so generously offered this great area—at the expense of the already overburdened taxpayers—is a swinging gate. One that will swing back and smack the face (and security) of the very same farmer and businessman, small and large, who would have to struggle to pay this enormous tax bill. The great farm areas should become alert to the fact that America's agricultural markets are jeopardized by this scheme which is being proven unsound economically and politically.

A quick survey of world trade conditions reveals the backswing that could be expected from the St. Lawrence scheme. Most of America's trade, except for war and defense transactions with Great Britain, is with South America and probably will remain so balanced for years to come. Our good neighbor policy will see to that.

In return for our goods Latin America offers principally agricultural products, cattle and hides. Through lower living standards and peon labor their cost of production is much cheaper than in the United States and Canada. Thus the St. Lawrence scheme would enable them to dump these products into the very center of America's own agricultural area and would do much to demoralize the markets.

Not so long ago, you may recall, a number of small ocean-going boats from South America came through the circuitous St. Lawrence route and unloaded their cargoes of grain in the Midwest. This raised havoc with grain markets in the area.

With the good-neighbor policy enforced, politicians would find it most discomforting and embarrassing to endeavor to raise protective tariffs to guard our agricultural markets in the Midwest. Thus, through the St. Lawrence scheme, America's great army of farmers would toil in their fields to raise the taxes for a project that would severely cripple their own markets.

Increased opposition to the St. Lawrence project is becoming more evident throughout Canada and the United States, as people become more familiar with its economic and political effect. As a defense measure it cannot be completed in time to be of any use in the present conflict, and when completed it could be used only about 7 months of each year because it would be icebound and unnavigable 5 months of the year. As a power project steam plants have been conceded to be far more desirable because they can be erected where the power is needed, more quickly and at less cost.

A channel 27 feet deep is specified in the project, which eliminates the possibility of building warships of capital size—battleships or cruisers—in the Great Lakes shipyards as many of the project's proponents would have us believe. Lake shipbuilding facilities are already congested with their share of the construction of boats which can go through the existing water route.

As we consider the St. Lawrence scheme in the solid light of day we must not neglect the fact that it will do much to harm the farmers of Canada and the United States. Neither can we forget that the scheme will serve to drain millions of dollars from overburdened taxpayers in every part of the country now (and for many years to come) when every effort and dollar is urgently needed for advancement of a vital rearmament program.

Yours fraternally,

PAUL M. SMITH, *Editor.*

The Cotton Situation—Parity for Domestic Consumption

Monday, March 17, 1941

LETTER OF GEORGE SEALY, OF GALVESTON, TEX., TO THE NATIONAL COTTON COUNCIL, MEMPHIS, TENN.

Mr. MANSFIELD. Mr. Speaker, I embrace in my remarks on the cotton situation the letter of Mr. George Sealy, of Galveston, Tex., to the National Cotton Council, Memphis, Tenn. Mr. Sealy is a man of wide experience in the cotton business and his letter will be found of interest.

The letter follows:

GALVESTON WHARVES,
Galveston, Tex., March 14, 1941.

NATIONAL COTTON COUNCIL,
Memphis, Tenn.

GENTLEMEN: Replying to your recent letter asking for remedial suggestions pertaining to our cotton problems, I give you the following, which I have advocated consistently for the past 8 years, and which is gradually, although not admittedly, being put into practice.

I refer more specifically to a two-price system on cotton, one domestic and the other foreign, or an "inverted tariff policy" upon that portion of cotton domestically consumed.

Since the cost of a farmer's living is based largely upon factors wholly within our country, and is based upon a needed income for the cotton farmer to live decently, I feel that since his revenue has largely been curtailed through causes not of his own making, but in behalf of the general good of all, as so ably explained in exhibit B of the National Cotton Council of America, he should be reimbursed for this loss of revenue.

This reimbursement should apply to that quantity of his product eligible for sale in his domestic market, inasmuch as his necessities are based upon domestic market prices.

The quota allotted to him in the American market should be based upon bales and not acres, and the Government should not, on one hand, abandon cotton acreage and, on the other hand, through the expenditure of millions of dollars, encourage a similar production on the remaining acreage allotted for cotton.

If industry has two prices for its product, agriculture should have the same opportunity in meeting foreign competition with a lower price, if need be.

Cotton cannot ask for favors, nor charity, from its Government, and it must be consistent in its demands for a near parity price for its product sold in its home market, and, like indusry, take its chances in selling any surplus production abroad.

Sugar producers in America enjoy a bonus upon that portion of their product domestically consumed, and American labor and farmers contribute largely to such an added cost for sugar. In some instances the average protection per pound of sugar has been 2 cents since the beginning of the Sugar Act in 1934. This is equivalent to 172 percent ad valorem of the average world price of 1.2 cents a pound in the same period.

It might not be inappropriate to mention that Secretary Wallace, then Secretary of Agriculture in 1938, estimated the total net cost to the Nation of sugar protection, under the quota-subsidy system, was about $300,000,000 per year.

A small bonus given to the cotton farmer upon his share of domestic consumption would not bear heavily upon the ultimate consumer of his finished product. Even if 10 cents per pound were added to the present price of, say, 10-cent cotton, giving the farmer 20 cents a pound upon that portion of his cotton sold in America, would add only 5 cents to the cost of a laborer's shirt, ½ cent to the cost of his socks, 2½ cents for his towel, and 10 cents to the cost of his pants, all of which any retailer of laboring men's apparel would advise offers no great sales resistance.

In other words, give the farmer 80 percent of parity price on the domestically sold cotton, to which he is justly entitled, and as a bonus, for his loss of his foreign cotton on account of no fault of his own, add a $10 bill per bale, or just 2 cents per pound.

His small surplus remaining must find a foreign market, like any other product, or a loan at world's prices could be given him.

Eighty percent of parity, or say 12 cents for the farmer's entire 12,000,000-bale crop would be $720,000,000.

The farmer would receive this sum in the following manner:

80 percent of parity, or say 12 cents for 9,000,000 bales domestically consumed would be	$540,000,000
A proposed bonus of, say, 2 cents on his 9,000,000 domestic sales would be	$90,000,000
(This bonus is on account of loss of foreign markets, Neutrality Act, etc.)	
3,000,000 bales remaining for foreign sales at 6 cents, or a Government loan at world competitive prices would be	90,000,000
	720,000,000

Ample Government machinery is already established for fair allotment purposes, and since the general consensus of opinion seems to be that all past efforts have not solved our cotton difficulties, it seems to me that the above suggestion might at least be attempted.

With thousands of southern acres suited only to cotton cultivation, there can be no further abandonment of any more cotton land without disrupting the entire economic structure of the South.

Since those days when we first started a curtailment program, foreign nations have consistently increased their cotton planting, and during the past several years for every single acre increase in foreign cotton acreage we have reduced ours 3 acres.

With 24,400,000 acres planted to cotton in 1940 and only 1,200,000 acres in sugar beets and sugarcane, it does seem the cotton farmer rightfully deserves an inverted tariff like the direct tariff applicable to the sugar producer.

It is doubtful if any other product of human endeavor, either in industry or agriculture, calls upon so many human hands for its passage into ultimate consumption from the time it was conceived.

Hand chopped and hand picked, ginned and compressed bale by bale, loaded and unloaded into cars by human effort alone, sampled, classed, and marked, tagged and weighed, trucked and toted bale by bale, until it is stowed into the hold of a ship, and stacked by sweating muscles, until it reaches the textile mill at home or abroad.

Hundreds of thousands have depended upon and coordinated the ramifications of cotton growing and handling, and the world still clamors for more and more cotton, while we stack ours higher and higher, like Brazil did with its coffee, Canada with its wheat, and England with its rubber.

It all seems so simple if the cotton farmer could just get an even break at home, and, like the producer of steel, kodaks, and sewing machines, meet foreign prices with his surplus, if need be.

Perhaps this plan is too easy, but it might be well worth trying.

Yours truly,
GEORGE SEALY, *Chairman.*

P. S.—Total cotton exports from all the South today are 759,006 bales as against 5,067,870 bales last year—while Brazil sells her cotton to Canada.

Government Can Save $2,000,000,000 a Year on Interest Charges and Prevent Dangerous Inflation

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

RADIO ADDRESS BY HON. WRIGHT PATMAN, OF TEXAS

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me on Saturday, March 15, 1941, over the Mutual Broadcasting Co.'s national hook-up from Washington, D. C.:

Ladies and gentlemen of the radio audience, the country faces today vast new economic as well as social problems. We now speak in terms of billions of dollars, whereas, up until the recent past such huge amounts were seldom referred to. Changes in the structure of our country are occurring with bewildering speed.

Every citizen is deeply and earnestly concerned about the national debt. It is said if we keep on expanding the national debt at this rate that we will go broke; that we will not be able to pay our debts.

History teaches us that governments do not default on their debts to their own people. They always pay them; however, it is not unusual for such debts to be paid in money of a changed value.

NATIONAL DEBT EQUIVALENT OF $130,000,000,000

By the end of this year our Federal Government will owe $65,000,000,000. It will be owed to individuals and corporations holding United States Government bonds. The interest burden on this enormous debt will exceed $2,000,000,000 annually. A debt of $65,000,000,000 is equal to a per capita debt of $500, or for a family of five, it is equal to $2,500. The interest on this $65,000,000,000 debt will amount to as much as the principal by the time the debt is paid. So our debt is really $130,000,000,000 instead of half that amount, if our unconstitutional method of Government financing is not changed. This debt, including principal and interest, is $1,000 per capita, or $5,000 for a family of five.

It is now generally talked on Capitol Hill, here in Washington, that more taxes will have to be raised, that all sorts of nuisance taxes will have to be levied, and individuals with incomes as low as $20 a week will likely have to pay a part of it in taxes.

HOW DEBT CAN BE EASILY RETIRED

Our $65,000,000,000 national debt can easily be retired in 25 years and no interest will have to be paid if Congress will carry out a constitutional mandate. That is what I desire to talk to you about.

The deadline for filing income-tax returns and making the first payment on 1940 income taxes was reached today. The tax burden has assumed proportions never before dreamed of in this country. More individual citizens filed Federal income-tax returns this week than ever before in the history of this Government.

It is one of the duties of a Member of Congress to see that the money collected from the taxpayers for the Government is not squandered. Wasteful and extravagant spending must not be permitted. At the same time, we must spend the amount of money necessary for the purpose of adequately and properly preparing our country against any attack, and we must not be niggardly in defense expenditures.

In financing defense the Government should not promise to pay interest on its obligations when it is unnecessary, useless, and wasteful.

CONGRESS HAS FARMED OUT SOVEREIGNTY OF NATION

The Constitution says that Congress only can coin or print money. The Constitution also says that no State shall coin or print money. The Federal Government is, therefore, supreme over others and is the highest in power on the question of issuing money. I say to you, without any fear of contradiction, that Congress many years ago farmed out to special interests the sovereignty of our Nation to issue money. The people are paying for it now, and paying dearly.

GOVERNMENT INTEREST HAS BECOME A BURDEN

For the first 125 years of our country's existence, the matter of the Federal Government paying interest on bonds was no problem at all as the amounts paid were not sufficient to cause concern. During recent years we have been paying up to $1,000,000,000 a year in interest on United States Government obligations. Now, with our interest burden approaching more than $2,000,000,000 a year, it is time that we give this question serious consideration and, at the very earliest date possible, take away from private interests the power to create money on the Government's credit and vest such power where it belongs—in an agency of Congress. This will not only save the people $2,000,000,000 a year in interest; it will be helpful in many other ways.

SOVEREIGN GOVERNMENT SHOULD NOT PAY INTEREST

If a State borrows money, it is proper that the State promise and pay interest on the bonds issued, which are sold for the money issued by the Federal Government. This should not be true of the sovereign Federal Government, since the Federal Government creates all money. It does not make sense to say that the Federal Government should sell interest-bearing bonds to private interests for money that the Government itself creates and furnishes the private interests, in order for them to buy the bonds.

A private corporation must sell interest-bearing bonds to obtain money that is created by the Government. That is no reason why the Government, which creates both bonds and money, should sell interest-bearing bonds in return for money of its own creation. I insist it is illogical and unfair.

MONEY-ISSUING PRIVILEGE FARMED OUT

Through the Federal Reserve Bank System, the money-issuing power of the Government has been farmed out to the private commercial banks. These 12 Federal Reserve banks are owned—lock, stock, and barrel—by the private banks of the country. It is said in reply that the Federal Reserve Board which administers the law is appointed by the President of the United States, which is true, but the members of this Board are paid their salaries by the private banks and the system is otherwise controlled by the private banks. They are Federal in name only. No individual can do business with them. These 12 banks are for banks exclusively.

These 12 Federal Reserve banks perform a governmental function by issuing money upon the credit of the United States Government. The money issued by these 12 banks is really Government non-interest-bearing bonds, and upon the face of this money, it is stated that it is an obligation of the United States Government. This is in violation of the Constitution of the United States, which says that Congress shall issue money. This privately owned Federal Reserve System is certainly not an agency of Congress.

The private commercial banks, in order to claim this great System, have purchased by permission of Congress $138,000,000 of its stock, which represents all of the stock outstanding. Although this is a large amount of money, it is insignificant compared to the privileges enjoyed and exercised by these 12 banks. These 12 banks are privileged to issue money—blanket mortgages on the Government's credit—by paying the cost of printing, which is about 30 cents per thousand dollars. The Treasury sells Government interest-bearing bonds. These 12 privately owned banks pay 30 cents a thousand dollars for another form of Government obligation—money—to buy them with. Perfectly ridiculous, but it enables these 12 banks to pay salaries up to $50,000 a year and receive other undue benefits. These 12 banks pay no taxes to the Federal Government, and no part of their earnings goes to the United States Treasury, as required in the original law. These 12 Federal Reserve banks also claim title to more than $20,000,000,000 in gold that Congress by penal laws has forced the people to give up. In addition, these 12 banks have issued more than $6,000,000,000 in money. All of this, mind you, upon the small investment of $138,000,000 upon which they, too, receive an annual dividend of 6 percent.

This money issued by the 12 Federal Reserve banks is a mortgage upon all of the property of all of the people and is used for the benefit of a few. The salaries and earnings of every individual are pledged to pay any debt contracted by these 12 banks on the credit of the Nation.

TIME HAS COME FOR A CHANGE

The famous Disraeli, former Prime Minister of England, once said:

"Nothing is so powerful as an idea whose time has come."

I say to you, in all earnestness, that the time has now come for the people to change the unconstitutional system of permitting the private banks of the country to use the Goverment's credit free of charge. Congress can, by the enactment of a law of less than 100 words, change this system entirely and save the people more than $2,000,000,000 a year in interest that they will be compelled to pay if the system is not changed and, in addition, can entirely pay off and liquidate the $65,000,000,000 national debt in 25 years by paying on the principal of Government bonds each year what will have to be paid as interest if the system is not changed. The law suggested should provide, among other things, that the $138,000,000 invested by the private banks in the Federal Reserve System should be returned to them immediately. Then the Government will own these money-issuing banks and, without any cloud whatsoever, will own the enormous gold supply of more than $20,000,000,000, and that gold can be used in the interest of the people instead of permitting its use by the private banks.

NON-INTEREST-BEARING BONDS SHOULD BE USED

When the Government owns the 12 Federal Reserve banks, it will not be necessary for the Government to issue and sell interest-bearing bonds. Then as money is needed, non-interesting-bearing bonds can be delivered to these 12 banks, credit given for them on the books of the banks, and checks drawn by the Treasury to pay any debt that is owed by the Government. All outstanding Government bond issues can be paid the same way as they become due or callable. This will be exactly the same system that is used today, except interest will not be paid. The money or credit will be paid into circulation. No more money will be printed than is printed under the present system. There will be no substantial change whatsoever, except the people—the taxpayers—will save $2,000,000,000 a year. It will not be necessary for bonds to be sold to anyone.

I respectfully submit that the Government needs neither the money created by private banks nor the savings of the people to finance our defense program.

THIS PART OF MONEY SYSTEM NO MYSTERY

It is realized by me and others, who are advocating the change of this system, that if anyone speaks out on the subject of money, he is immediately told that this subject is too deep for the common intellect; that it is understandable only by a seventh son of a seventh son, born with the vail in the dark of the moon and that the rest of us must not presume even to think on the subject. The fact is that anyone who knows the difference between right and wrong knows that it is absolutely wrong for the Government to issue interest-bearing bonds when it is absolutely unnecessary, extravagant, and wasteful.

The slogan, "Money is a mystery," has been worth billions of dollars to special interests in this Nation.

Representatives of the people are driven to cover with slogans that mean nothing in connection with this problem.

NO EFFORT TO STIR UP HATE AGAINST THE BANKERS

I have no desire to engage in the old technique of stirring up hate against bankers. They are as fine a group of citizens as we find in the country, and this is not a fight against banking institutions or bankers.

Bankers have much to do in connection with national defense without creating money on the Government's credit and lending it to the Government with interest. The financing of their customers in defense operations will be quite a great undertaking and in addition to their normal business operations.

If commercial banks properly develop their service opportunities to the utmost, it will not be necessary for them to rely, in whole or in part, upon the ownership of Government bonds for support.

OUR PROPOSAL NOT NEW

Mr. Thomas A. Edison said:

"It is absurd to say that our country can issue $30,000,000 in bonds and not $30,000,000 in currency. Both are promises to pay, but one promise fattens the usurer and the other helps the people."

Mr. Edison said further:

"If our Nation can issue a dollar bond, it can issue a dollar bill. The element that makes the bond good makes the bill good

also. The difference between the bond and the bill is that the bond lets money barkers collect twice the amount of the bond and an additional 20 percent interest, whereas the currency pays nobody but those who contribute directly in some useful way."

Those of us who believe that the Government policy of issuing interest-bearing bonds is absolutely idiotic are fortified with the views of some of the greatest men who have ever lived in this country. Among those who entertained the same views were Benjamin Franklin, Thomas Jefferson, Abraham Lincoln, Andrew Jackson, Thomas A. Edison, and many others.

No sane argument has ever been presented in favor of the sovereign Government of the United States issuing interest-bearing bonds in preference to its own credit, non-interest-bearing bonds.

INFLATION COMING

It is evident that we are going to have what is generally referred to as inflation. The issuance of bonds and selling them to the banks is the creation of additional money or credit and is more inflationary than if the Government issued the money or credit in the first instance. Because we are going to have inflation does not mean that it should necessarily be ruinous inflation. It can be controlled, and it must be controlled.

ENCOURAGE PRIVATE ENTERPRISE

We should encourage private enterprise, the Government should not engage in any business that can be properly conducted in the interest of the people without Government help. At the same time, the private commercial banks should not be in the Government's business. The issuance of money is a governmental function, and should not be farmed out to private banking interests as it is today.

If the Government issues non-interest-bearing bonds, that does not mean that they will never have to be paid. They will have to be paid, but it does mean that the Government will not have to pay a dollar in interest for every dollar of principal.

No effort is being made to prevent the charging of private interest, or to cause the Government to take over the private banking institutions. The only effort we are making is to have the Government reassume its constitutional duty of coining money and regulating its value. The first step is for the Government to own the Federal Reserve Banking System, which should be just as much a part of this Government as the Treasury itself. When private selfish interests succeeded in getting control of the money-issuing privilege of the Government, they obtained a franchise which is possibly worth more money than a franchise to levy and collect taxes from the people.

THE BILL TO CARRY OUT THE PROPOSAL

For many years I have had pending in Congress a bill providing for the Government ownership of the 12 Federal Reserve banks. In the present Congress that bill is H. R. 116. Time for its consideration has not been ripe in the past, but now the time has come when its consideration cannot be evaded.

If you are interested in preventing dangerous inflation, saving the taxpayers $2,000,000,000 a year, paying our $65,000,000,000 debt in 25 years, and in repealing the law which has farmed out the use and abuse of our Government's credit to the private commercial banks, please let your Congressman and your Senators in Washington, D. C., know your views.

Inauguration of President of Mexico

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, March 17, 1941

ADDRESSES BY DELEGATES

Mr. BARKLEY. Mr. President, on the occasion of the inauguration of Manuel Avila Camacho as President of Mexico the Mexican Congress most kindly invited several of the visiting delegates to address them in the congressional Chamber. Because of the fact that hemispheric solidarity is so important for mutual defense of the Western Hemisphere, I ask permission that the speeches made on that memorable occasion be inserted in the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

4 DE DICIEMBRE DE 1940—SESION DE CONGRESO GENERAL

En esta sección se incluyen los discursos proununciados durante la sesión que celebró el Congreso de la Unión en honor de las misiones especiales que vinieron a la transmisión del Poder. Se da a estos discursos el orden en que sus autores ocuparon la tribuna de la Cámara.

El señor diputado doctor don José Gómez Esparza, a nombre de la Cámara de Diputados, dijo: Excelentísimos Señores Embajadores, Honorables Senadores y Diputados, Señoras, Señores: Estamos viviendo en este País hondos capítulos de la vida institucional de la República.

Son los solemnes momentos en que un gran patricio mexicano, el general Lázaro Cárdenas, ha terminado su mandato presidencial, dejando tras de siuna estela luminosa, especialmente marcada en la historia de la Revolución.

Son los instantes en que, cubierto con el blanco manto de la democracia, un ciudadano ilustre, pleno de patriotismo y de virtud, el general Manuel Avila Camacho, ha sido electo Presidente de la República. (Aplausos.)

Y es en el clímax de estos acontecimientos, cuando hoy el Congreso de la Unión de los Estados Unidos Mexicanos se honra con vuestra presencia, excelentísimos señores embajadores, en este nuestro recinto parlamentario.

Desde esta tribuna, que significa el eco más alto de la representación nacional, que tanto enaltecieron con la inspiración de su verbo y la alteza de su pensamiento las más autorizadas voces de mi País, recibid, Excelentísimos Señores, la más cordial bienvenida que os envía sincera el pueblo entero de México. Aceptadla como el homenaje augusto que os tributa una nación, que tiene recorrido un largo y cruento camino, en busca de la libertad y en pro de la democracia.

Deseamos vivamente que vuestra estancia en este suelo sirva para afianzar la amistad, que felizmente hemos tenido con todos los pueblos latinoamericanos y las naciones de los demás continentes, así como también para unir una vez más el noble pabellón de las estrellas y las barras, con el tricolor emblema de la República Mexicana.

Ojalá que vuestra permanencia en México sirva también para daros aunque sea noción somera de la enorme mutación social que está experimentando un pueblo, cuyos aborígenes vivieron largos siglos como siervos durante la dominación colonial; no conocieron su liberación después de la independencia; siguieron atados a la esclavitud durante la dictadura porfiriana y sólo comenzaron a vislumbrar el horizonte de su bienestar al amanecer glorioso del año de 1910.

Al iniciarse ahí el movimiento vindicativo mexicano, la Revolución tuvo, en sus múltiples fases, tragedias sólo comparables a la fantasía titánica de Esquilo y dramas tan sólo concebidos por el genio divinamente fatídico del Dante; pero dramas y tragedias que encerraban en el fondo de su pavura el anhelo infinito de un pueblo, al pretender arrancar de las manos de un dictador la pertenencia a sus derechos y a sus principios más cruelmente conculcados.

Esta es, excelentísimos señores embajadores, la inmanente justicia que asistió desde sus comienzos al postulado de la Revolución Mexicana.

Su primera etapa fué de orden eminentemente político; luchar por el derrocamiento de un régimen presidencial, convertido en aquel entonces en un trono de oropel y en cortes de brillo y plata.

El voto popular, constantemente violado, constituía una de las formas más sangrientas de nuestra ciudadanía y por ello los venerables iniciadores de aquella fuerte cruzada, inscribieron en sus pendones el noble signo de combate: "Sufragio Efectivo y No Reelección."

Fué la época romántica de nuestra causa, el idealismo electoral coronaba el pináculo excelso en la ambición más cara de los hombres de aquellos tiempos.

Después, y en el transcurso de dos décadas y media, la Revolución comprendió que no debía dedicar sus energías exclusivamente a defender el respeto del sufragio; pues no se puede concebir una democracia, en cerebros sin ilustración aunque sea rudimentaria; en hombres no organizados, que con paupérrimos salarios, tenían que doblegar sus convicciones ante la crueldad del amo que les pagaba, y en campesinos que no eran dueños siquiera del techo que piadosamente los cubría de las inclemencias del cielo.

Y en este ambiente, la Revolución se lanza en forma definitiva al campo de la acción social, abordando el problema de los latifundios, los derechos del obrero, la educación de las masas analfabetas del país y el ingreso a la civilización de la sufrida raza de nuestros indios.

Los Gobiernos que sucedieron a don Francisco I. Madero, trabajaron con más o menos entusiasmo, pretendiendo solucionar asuntos tan importantes; pero, a decir verdad, y juzgando ya el pasado como un hecho que a la historia pertenece, no fué sino hasta este último sexenio cuando un conductor de multitudes, con recio perfil de apóstol, el general Lázaro Cárdenas, ha dado el más vigoroso impulso al temario de la Revolución Mexicana. (Aplausos.)

Y así llegamos a los días en que se verifica la elección más democrática y por excelencia ejemplar: la elección que designó al general Manuel Avila Camacho como Primer Magistrado de este nuestro país, debiendo agregar que al Presidente Constitucional de los Estados Unidos Mexicanos, general de división Manuel Avila Camacho, no lo llevó al poder ninguna falacia electoral sino el clamor vibrante y magnífico que brotara espontáneo y sincero del alma popular de la República. (Aplausos.)

Es por esto que el general Manuel Avila Camacho será un Presidente para todos, sin distinción de credos políticos ni religiosos; su Gobierno tendrá la significación de un Gobierno eminentemente nacional, donde impere la justicia y se imponga la moral. Para él no existirán vencedores ni vencidos, sino únicamente mexicanos que conviertan a su nación en un laboratorio fecundo de trabajo para el engrandecimiento creciente de esta tierra mexicana.

Bajo la égida del Gobierno del señor general Avila Camacho, quedarán abatidos todos aquellos pendones que signifiquen ideas contrarias a nuestro medio, para izar en su lugar y en el más alto de los mástiles de la nave de su Gobierno, la única bandera que podemos enarbolar, la que está por encima de todas las ideas, la que está por encima de la propia filosofía y del pensamiento, de todo concepto contrario a nuestra nacionalidad, el pabellón que preside estas sesiones: la bandera santa de la Patria. (Aplausos.)

México y su Presidente fervientemente desean la Paz del mundo y condenan la guerra que está minando a la humanidad.

Dice un original pensador mexicano, don Félix F. Palavicini, que las tiranías son entidades secularmente belicosas, porque su emblema es la fuerza; pero cuando pierden a los soldados que las sostienen, se precipitan sin remedio hasta el fondo mismo del desastre.

Son, pues, los ejércitos los pedestales más firmes para entronizar a los dictadores.

Pero si en los países demócratas se permite la constante propaganda contra la defensa nacional y, consiguientemente, contra su instituto armado, esto es sencillamente entregarse a los tiranos; no es salvar a la democracia.

De suerte que cuando los agitadores de profesión y más que ellos los demagogos, combaten a los ejércitos de los países demócratas, están haciendo la preparacion del campo para el advenimiento de una nueva tiranía.

Las democracias necesitan forzosamente de un ejército que defienda sus instituciones.

Es por ello que México no ha visto jamás en los ejércitos de América masas agresivas de combate, sino fuertes atalayas de defensa que sabrán resistir en todo tiempo los embates del destino, haciendo respetar su profundo espíritu demócrata, que forma la escencia misma de nuestra soberanía continental.

Y en esta hora de angustia y desesperanza, en que la continenda de Europa está llenando de luto a multitud de hogares de combatientes, y en esta austera sesión en que para la fortuna histórica de mi País están reunidos aquí embajadores de treinta y una naciones amigas nuestras, me permito, con toda emoción y en nombre del Parlamento Mexicano, elevar nuestra voz junto con la vuestra, excelentísimos señores embajadores, en favor de la Paz universal, evocando la memoria de esos paladines anónimos de las democracias del mundo, que enarbolando el estandarte de la libertad entre el fragor del combate, han caído arrogantes y soberbios, con el cuerpo acribillado por las balas y el espíritu alucinado por la victoria, teniendo el aire del campo de batalla como único aliento de su vida, y la soledad impenetrable y muda como único testigo de su muerte. (Aplausos.)

México les envía su pleitesía más excelsa y el homenaje sublime de su eterna admiración.

Sénores Embajadores: Que lleguéis con felicidad a vuestras naciones, es el mejor deseo de esta tierra méxicana. (Aplausos.)

JOSÉ GÓMEZ ESPARZA.

El señor senador General don Enrique Estrada, en representación del Senado de la República, dijo: Señores Embajadores y Representantes Extranjeros: El deseo satisfecho de veros hoy en el recinto de este Congreso, tiene un significado especial: esta es la representación del pueblo de México. Queremos que captéis fielmente el sentir real, la sinceridad de este momento, y que os dignéis transmitir su viva expresión, como un mensaje fraternal de este pueblo a los pueblos hermanos que representáis aquí, porque sabemos que sois valores auténticos, representativos reales de vuestros pueblos. Uno de vosotros, el señor Wallace, conserva viva la emoción de las manifestaciones de su pueblo al conferirle una alta investidura en su patria.

Seáis bienvenidos.

Apreciamos vuestra actitud de comprensión ante el drama mexicano de treinta años, para crear nuestra democracia y una efectiva justicia social. Vuestra presencia nos conforta y aviva nuestra fe. Asistís a la culminación de un proceso democrático que significa la afirmación de neustras tendencias. Ciertamente nos falta la cooperación directa de Cárdenas; pero tenemos ya la dirección de Avila Camacho. El primero es despedido con gratitud y respeto por su pueblo, y al segundo, le da su cooperación y confianza para cumplir con su misión en el interior y responder a la solidaridad continental.

Ante vuestra presencia nuestro pueblo se pregunta: ¿por qué la representación de estos hombres tiene ahora un sentido real, distinto del convencional de la diplomacia? Es que por primera vez surge una conciencia continental respecto al espíritu de nuestros pueblos y la estructura de nuestras nacionalidades, sobre los mismos principios de libertad y de justicia, tanto individuales como nacionales, cuyo valor, por contraste con los novísimos de otros continentes, se destacan salvadores.

El mundo extraamericano debe entender que las naciones de América creen:

En los Gobiernos emanados de la voluntad popular.

En el mantenimiento de libertades colectivas e individuales.

En el respeto a la soberanía de las naciones, sin distingos por su fuerza material.

En que el concepto de superioridad de raza es injusto y ofensivo.

En que la comprensión y la cooperación son factores positivos que deben sustituir en definitiva el negativo de la agresión brutal, para resolver los problemas internacionales. (Aplausos.)

Más allá de nuestras fronteras oceánicas, el Continente Americano debe aparecer como una gran patria, dispuesta a defender sus principios de libertad, igualdad y fraternidad, aplicados tanto a individuos como a naciones.

No pretende México, como lo dijo nuestro actual Presidente, estar organizado militarmente ni lo estará nunca con fines de agresión; odiamos la guerra, pero nos prepararemos a ella y la afrontaremos con apasionamiento en defensa del Continente Americano, sin menoscabo de nuestra soberanía.

En la tragedia de Europa hemos escogido el campo de nuestra simpatía, pero no el de nuestro odio. Por igual sentimos el drama de los pueblos inglés, alemán, francés o español. Todos ellos han contribuido a la cultura americana, que sentimos nuestra. Reconocemos tener esa deuda y la pagaremos creando una América unida y fuerte, que sea un inexpugnable baluarte de la civilización occidental y de la libertad humana.

Debemos ser dignos de la herencia de Wáshington, Bolívar e Hidalgo, y nos proponemos que no haya poder humano que la destruya.

Confiamos en que de hoy en adelante desaparezca de nuestras fronteras la rigidez de los prejuicios, y que surjan los derechos precursores de una ciudadanía continental. (Aplausos.)

ENRIQUE ESTRADA.

El Excmo. Señor don Manuel Hidalgo Plaza, a nombre de las misiones diplomáticas, dijo: Una circunstancia especialísima, la de estar indispuesto nuestro Decano, me impone la obligación de contestar los dos magníficos discursos que habéis escuchado. Lo haré, acogiéndome a la exquisita benevolencia vuestra, que espero, porque sé que me encuentro en un Parlamento de un pueblo que, como lo han manifestado sus representantes, afirma que la expresión más soberana de él es la que viene de sus propias entrañas y el representante de Chile, en esta ocasión, interpreta a su pueblo, viene de las masas humildes de la clase trabajadora hasta llegar al honroso cargo que ostenta. (Aplausos.)

En nombre del Cuerpo Diplomático nos asociamos con intensa emoción, los que aspiramos a que en América haya una democracia, abandonando un poco los conceptos un tanto rígidos de la igualdad ante la ley, para declarar que la democracia en sus esencias más íntimas y profundas, descansa en la igualdad de posibilidades ante la vida; México en estos momentos representa la avanzada de una cultura política superior, la afirmación internacional de que en América el acto de transmitir el poder es la forma habitual, trasunto de nuestra educación cívica, que ahora venimos a presenciar en este instante de regocijo de la democracia del Nuevo Mundo, y asociarnos en el momento en que deja el Gobierno un hombre de la figura de Cárdenas. (Aplausos.) A los que han soñado, a los que han afirmado enfáticamente que en las democracias latinoamericanas no surgen mentalidades excelsas, podemos deciries nosotros y vosotros los mexicanos, que tenéis una figura que ha escrito la más espléndida página de vuestra historia, con otra que viene a sucederle y que espera y que esperamos los representantes de los pueblos amigos, que afirme esta gran jornada de progreso, de civilización y de cultura, que significa incorporar a un pueblo a todas sus conquistas, no sólo políticas, sino económicas, porque la democracia que se expresa afirmando que el pueblo es soberano y lo clava en la cruz del hambre, es una democracia fingida y mentirosa. (Aplausos nutridos y prolongados.)

Las democracias nuestras, los pueblos de América, empiezan a orientarse en esta concepción de que no es una élite, que no es un grupo reducido de la sociedad quien dirige a la nación; que es el concurso de todos los hombres, que es la herencia magnífica del pueblo griego que, para afirmar su concepto de democracia, se reunía a juzgar a sus hombres para llevarlos a la primera magistratura, que salía a designar en las justas de sus contiendas olímpicas a sus grandes poetas. Afirmamos que en América queremos trasplantar este ideal democrático en medio de una civilización que agoniza en la más espantosa de las tragedias que haya visto el mundo.

¿Por qué esta asociación? ¿Por qué la concurrencia de 31 delegados de pueblos que vienen a unirse a vuestra fiesta? Se trata de decir qué pasa en esta ocasión: ¿Una fiesta deslumbrante de oro o de vanas exteriorizaciones? No. Asistimos a la fiesta en que un pueblo delega en un ciudadano el derecho de gobernar confiado en que este hombre responderá ampliamente a las aspiraciones de bien y de justicia social del pueblo mexicano. (Aplausos.)

A cuantos nos han acusado en el pasado por nuestra inexperiencia política, porque no hemos sabido gobernarnos con la tranquilidad que los pueblos viejos lo hacían, podemos en esta ocasión deciries ante el mundo que nos negaba el derecho a gobernarnos consciente y realmente, que los pueblos como México, como la Argentina, como Bolivia, como Cuba, como Chile, como todos los países que forman la América Latina, y como todos los representantes que aquí han concurrido, que la fiesta de la democracia es la fiesta de la

afirmación de la nacionalidad, porque cuando un pueblo tiene conciencia para elegir a sus representantes, ese pueblo irá a cualquier sacrificio por mantener la fórmula de dirigirse a sí mismo antes que alguien pretenda, por cualquier causa, por cualquiera predestinación enseñorearse de él. Los pueblos que saben darse gobierno se perpetuarán en la historia y serán ejemplo para los países que en un momento dado olvidan los principios eternos de la justicia y del derecho por afanes transitorios. Para mí la fórmula que vosotros habéis impuesto, la que celebra en estos momentos América, es la solución del porvenir. Por eso, cuando un orador distinguido decía aquí que las democracias deben tener Ejército, lo que creo que es inevitable, la verdad es, pensé, que las democracias cuentan con esa inmensa falange, esa inmenso ejército de los obreros, creadores de riqueza en la paz y que en un momento culminante sabrán abandonar la herramienta para empuñar el fusil en defensa de su ideología y de su patria. (Aplausos.)

Esta solemne fiesta de un pueblo libre, que nos invita a congregarnos para participar con él en este torneo de la libertad, deseo que trascienda las fronteras de América, que llegue hasta la agitada y trágica Europa y le diga con el ejemplo nuestro, que los pueblos pueden vivir perfectamente en unidad y en comunión de fronteras; pero, para alcanzarlo, es necesario comprender que hay fórmulas económicas que lo impiden y que en América tenemos nosotros que resolverlas.

Demos nosotros el ejemplo de que los países poderosos, fuertes económicamente, pueden vivir en perfecta sociedad con los países débiles. Y si esto no es posible, si la convivencia económica en América no es una realidad, nuestra fraternidad es simplemente una dicción gramatical, falta de todo sentido. [Aplausos.] Necesitamos, en el concurso de los países americanos, que los que hayan alcanzado una holgada situación económica, contribuyan a afianzar las conquistas políticas y sociales de sus hermanos menores, sin lo cual no hay posibilidad de fraternidad internacional. Es menester que nos convenzamos de que hemos luchado un siglo por realizar el pensamiento de Bolívar y que no son únicamente problemas políticos los que nos dividen, puesto que nuestros países tienen muy semejantes formas de gobierno, que son las fronteras económicas las que no nos han permitido realizar el ideal del genio hispanoamericano, y es necesario que nosotros, después de una larga experiencia, busquemos la solución, tratemos de encontrar el camino definitivo que nos una, porque el día que nosotros hayamos barrido con las fronteras económicas de las diversas nacionalidades, la solución del problema político de la unidad continental efectiva será una perfecta realidad. (Aplausos.)

Señores diputados y senadores de México: Yo quiero, en nombre del Cuerpo Diplomático, elevar en este momento nuestra más profunda admiración por la manera de resolver vuestros problemas políticos, por el acierto de manejar la democracia y ojalá que los pueblos del Continente, siguiendo vuestro ejemplo, encuentren la solución interna de sus problemas sociales y algún día esta América pueda vivir unida bajo la orquestación plena de todas las libertades. (Aplausos prolongados.)

MANUEL HIDALGO PLAZA.

El señor Maury Maverick, Alcalde de la ciudad de San Antonio, Texas, E. U. de A., dijo: Señor Presidente, mis colegas de la democracia constitucional, amigos Diputados y Senadores, México entero: Estimados amigos míos, no hablo el español bien, mi gramática es terrible. Hoy soy el Alcalde de una gran ciudad—la ciudad de San Antonio, Texas—, y cien mil de mis conciudadanos, son méxico-americanos. Son buenos ciudadanos; son mis amigos; así, pues, aunque mi español es malo, cuando hablo de los mexicanos hablo con el corazón. (Aplausos.)

Nuestra amistad, el acercamiento de nuestras gentes, están completamente establecidas ya. Ha habido tiempos en que se ha dudado de nuestras relaciones internacionales; pero ahora nuestra amistad está firmemente cimentada y no existe entre nosotros ninguna sospecha. ¡No, absolutamente ninguna! (Aplausos.)

Pero ha sonado ya la hora de obrar. Podemos hablar de amistad y de acercamiento eternamente; mas en estos momentos, no es eso sólo lo necesario; debemos efectuar una verdadera cooperación; no simplemente hablar de cooperación, sino que ésta sea efectiva en los órdenes económico, social y político.

El objetivo de todos nosotros, de todos los que creemos en la democracia constitucional debería ser elevar el nivel de vida de nuestras gentes; no sólo preservar su libertad, sino ensancharla.

Amigos míos, está surgiendo algo que yo desearía llamar "La Constitución de las Américas"; florece hoy en los corazones de las gentes del Hemisferio Occidental.

Y es que jamás construiremos fortalezas unos contra otros; el Río Grande será conocido como el Río de la Paz. (Aplausos.)

En segundo lugar, jamás entraremos en guerra unos contra otros.

En tercer lugar, nos defenderemos mutuamente.

Y, por último, habrá igualdad entre todas las naciones—ninguna nación dominante—todos seremos iguales. (Aplausos.)

Considero una grande honor hablar en esta Cámara de Diputados del Congreso de México.

Amigos míos, nosotros tenemos al gran libertador y Presidente George Washington, pero (aquí señala el orador hacia el muro en donde figura inscrito el nombre del Padre Hidalgo) ustedes tienen a su libertador, Miguel Hidalgo y Costilla. (Aplausos.)

Nosotros tenemos a Lincoln—¡al gran Lincoln!—, pero ustedés (aquí apunta hacie el nombre de Juárez), tienen a ese gran patriota, al Benemérito de las Américas.

Y, amigos míos, nosotros también tenemos al gran amigo del pueblo, a un hombre de grandes miras y de grande espíritu, a Franklin D. Roosevelt, y ustedes, a su vez tienen a Lázaro Cárdenas, el Presidente que se retira.

Nosotros los de los Estados Unidos estamos muy orgullosos del señor Henry A. Wallace; de mi Vicepresidente, nuestro amigo, el amigo del pueblo; y ustedes tienen a su nuevo Presidente, el señor general Manuel Avila Camacho. A él, es decir, a estos dos, vayan hoy nuestras mayores felicitaciones y nuestros mejores deseos.

¡Viva mi patria!

¡Viva México!

¡Vivan todas las gentes de Norte, de Centro y Sudamérica! ¡Viva la libertad y viva la Independencia! (Aplausos.)

MAURY MAVERICK.

El señor diputado Sol Bloom, Presidente de la Comisión de Asuntos Exteriores de la Cámara de Diputados de Estados Unidos de América, dijo: Señores: Es para mí un gran placer y más que placer un gran privilegio el formar parte de la Delegación de los Estados Unidos de Norteamérica y de encontrarme junto con los señores delegados de mi país en el Congreso de la Unión de los Estados Unidos Mexicanos. Hace unos breves momentos, cuando llegué a este recinto parlamentario, algunas personas me pidieron que dirigiera unas cuantas palabras a los señores representantes y enviados extraordinarios aquí congregados, y debo deciles que entonces me sentí completamente feliz, porque desde hace cinco días que me encuentro en esta vuestra bella ciudad y hasta la fecha nadie me había pedido que hablara. ¡Y ustedes saben lo que es un diputado que no esté constantemente hablando! (Aplausos.)

Al escuchar los discursos que se han pronunciado esta tarde, mi espíritu me llevó a otros lugares del planeta y pensé, entonces, que lo que aquí se hace en estos solemnes momentos, no solamente interesa a nosotros, sino que interesa profundamente a todos los pueblos de la tierra que tienen su mirada fija en lo que estamos realizando en este recinto: demostramos ante el mundo entero que podemos reunirnos hombres de diversos países en perfecta armonía, con el propósito de entendernos mejor. Yo estoy seguro, pues, que esta reunión que no se parece a las reuniones que se verifican en otros lugares de la tierra, habrá de ser un bello ejemplo de lo que los pueblos de este Hemisferio pueden hacer. (Aplausos nutridos.)

Siento profundamente no hablar el español.

Yo visité vuestro país hace cincuenta y dos años y no es sino hasta ahora que regreso para concurrir a la ceremonia de toma de posesión del Presidente de México. Debo confesar que durante dicha ceremonia no me dí cuenta, no pude entender el formidable discurso, el magnífico discurso que pronunciara el señor Presidente Avila Camacho. Lo aplaudí porque presentí lo grandioso de sus conceptos; pero después, al leerlo en su traducción al inglés—¡y lo he leído lo menos seis veces!—, me dí cuenta de que se trata de un documento de singular importancia, de enorme trascendencia. Por esto soy de opinión de que este Mensaje debe traducirse a todos los idiomas y debe hacerse llegar a todos los países del mundo para que los hombres de todos los pueblos conozcan el pensamiento de un gran estadista. (Aplausos nutridos.)

Tengo en mi poder la traducción al inglés del Mensaje pronunciado por el señor Presidente Avila Camacho. Lo conservaré como un documento histórico de gran valor.

No quiero dejar de manifestaros que al concluir la ceremonia de toma de posesión, visité la ciudad por todos los rumbos; escuché opiniones de toda clase de personas y tengo la impresión de que la opinión optimista que yo me he formado, es una opinión compartida por todas las gentes que viven en este país. Al escuchar esas opiniones, me preguntaba a mí mismo: ¿será posible que en otros países del mundo puedan observarse las caras de satisfacción que tienen las gentes en México al escuchar las palabras pronunciadas por su nuevo Mandatario? El párrafo sobre el cual yo quiero hacer hincapié, es el siguiente: "Tenemos que unir nuestros esfuerzos para cooperar desde el fondo de nuestros corazones para armonizar los sentimientos con los que estamos forjando nuestro destino bajo una misma bandera. Yo pido con todas las fuerzas de mi espíritu a todo el pueblo mexicano, a todos los patriotas mexicanos, que se unan y que lancen fuera de sí toda intolerancia, todos los odios estériles, en esta cruzada de fraternidad constructiva y de grandeza nacional". (Aplausos nutridos.) Tengo la seguridad de que fué este uno de los párrafos al que se refirió de un modo preferente el orador que primero hizo uso de la palabra desde esta tribuna. Pensamos nosotros como piensa el general Avila Camacho; él ha expresado el punto de vista que servirá para hacer historia en el pueblo de México y en el pueblo de los Estados Unidos y en los pueblos todos del mundo. Tengo la seguridad de que en este discurso—en el que trató, además de este tema importantísimo, veinte o más temas de igual trascendencia—el general Avila Camacho ha señalado una serie de puntos fundamentales que de ser cumplidos, de ser realizados, habrán de traer la felicidad para todos los hombres del mundo. (Aplausos nutridos.)

Terminaré a la mayor brevedad posible. Quiero solamente decir, para concluir, que iniciada la tarea que ha anunciado el señor general Avila Camacho, mucho habrá de lograrse. Habrán de pasar a la historia monumentos, habrán de destruirse obras materiales; pero la obra que él ha preconizado en su discurso

perdurará, será inmortal. Yo tengo la seguridad de que las palabras del señor Presidente Avila Camacho constituirán un faro que alumbrará el camino a los otros pueblos, para señalarles la ruta del amor, de la verdad y de la felicidad. (Aplausos nutridos y prolongados.)

SOL BLOOM.

El señor Dennis Chavez, senador de los Estados Unidos de América por el Estado de Nuevo México, dijo: Honorable Congreso de los Estados Unidos Mexicanos: Respetables diplomáticos, embajadores de diversos países, que estáis aquí ahora pagando homenaje a la voz del pueblo mexicano, representado por el nuevo Presidente, el general Manuel Avila Camacho, y también—usando las palabras del más grande humanitario, de aquella persona que representa la libertad humana, el Presidente de mi patria, Roosevelt—, "my friends". (Aplausos.)

Como dijo el señor Secretario de la Cámara que me presentó a ustedes, yo soy de origen español y mexicano; pero me presento ante ustedes como americano de Estados Unidos, por la gracia de Dios y nada más.

Los míos han hecho en tiempos pasados todo lo que un ser humano puede hacer como sujeto del virreinato español, como ciudadano del pueblo mexicano, y ahora estamos haciendo lo mejor que nos es posible, como buenos americanos en Estados Unidos.

Me presento ante ustedes de esta manera y, reconociendo vuestra inteligencia, comprendo que aceptarán mis humildes frases, aunque sean en mal español, en el intento con que yo sé que serán aceptadas; vienen del alma; yo soy amigo de México y del pueblo mexicano.

Siendo mis antepasados españoles y mexicanos, conociendo la libertad fundada en Estados Unidos por Wáshington y los demás; sabiendo bien la libertad que Hidalgo quería, puedo apreciar las tristezas y las alegrías, los esfuerzos y los deseos del pueblo mexicano que ama la libertad. Yo sé que hay esperanza, yo sé que hay por qué tener regocijo y tener esperanza de que en poco tiempo la libertad del pueblo mexicano, el avance económico, el progreso social y el progreso político, serán una cosa real en México. Eso es lo que espero.

Hace dos o tres días que tenían en México otro Presidente. Espero que interpreten debidamente lo que deseo expresar. No pretendo tomar parte en política extranjera, en la política de cualquier país fuera de Estados Unidos; pero sí, como ser humano, creo que tengo derecho a creer en ciertas cosas; tengo derecho de opinor si tal o cual persona está haciendo bien a su país. Hace tres o cuatro días rendía yo respeto, como oficial americano, como ciudadano particular, a una persona que yo creo que fué gran Presidente de la República Mexicana, el general Cárdenas, y ahora quiero expresar el mismo respeto, la misma admiración que le tenía yo al Presidente, al ciudadano Lázaro Cárdenas. (Aplausos.) Pero en los asuntos políticos del país, el pueblo mexicano ha hablado, y esto nada más se debe tener en la mente. El pueblo mexicano ha dicho: el general Manuel Avila Camacho es el President. (Aplausos.) Con todo el respeto que puede tener una persona que conoce las debidas normas de relación entre pueblos cristianos, entre pueblos que entienden los derechos ajenos, con todo el respeto que le tengo yo al Presidente, admiro más el hecho del pueblo mexicano que eligió a Avila Camacho Presidente de la República. (Aplausos.) Este asunto de personalidad en aquellas personas que creen en derechos de los pueblos, de gentes, no es más, en mi poquito español, que incidental. Roosevelt representa una idea; Avila Camacho representa una idea: uno, al pueblo americano, otro, al pueblo mexicano. (Aplausos.)

Yo sé que expreso los sentimientos de mis compañeros americanos que se hallan presentes: le deseamos a México, le deseamos al pueblo mexicano, le deseamos al señor Presidente de la República, le deseamos al Congreso Nacional el éxito mejor, el mejor que quiera Dios. Gracias. (Aplausos nutridos.)

DENNIS CHAVEZ.

El señor Henry A. Wallace, Vice presidente electo de los Estados Unidos de América, y Representante del Presidente Roosevelt, dijo: Señor Presidente, señores miembros de la Honorable Cámara de Diputados, señores Senadores, Vuestras Excelencias: Es para mí un gran placer dirigirme al distinguido Cuerpo Legislativo de la gran República de México. Estoy convencido de que el supremo pensamiento de ustedes, como acontece en todas las democracias, es de mantener vivientes los principios fundamentales que mejor sirvan a los intereses de esta gran República.

Durante los últimos siete años, he tenido la oportunidad de estar en contacto con la Cámara de Diputados de vuestra república hermana del norte. De esta asociación, he llegado a la conclusión de que un representante popular tiene que enfrentarse a muchos problemas a fin de determinar el camino conveniente para la realización de su programa legislativo. Por lo tanto, vuestra responsabilidad es, ciertamente, ilimitada, y lleva en sí una gran oportunidad de servir a vuestro pueblo.

Como estudiante de las actividades del gobierno, siempre me ha interesado profundamente vuestro país, ya que ocupa tan importante posición en los asuntos de este Hemisferio. Vuestro país ha hecho grandes progresos y su historia tiene el privilegio de grabarse en la mente. Habéis producido numerosos hombres de gran capacidad. Vuestro suelo, vuestros minerales y vuestro clima, únicamente pueden ser apreciados en toda su amplitud por aquel que ha tenido el privilegio de visitar este encantador país—un país de un pasado grandioso y de un futuro aún más prometedor. Vuestros recursos naturales son extensísimos, pero el don más valioso de México, es el corazón noble y amistoso de su pueblo.

La fortuna de visitaros personalmente, me ha dado una comprensión más profunda de la fuerza fundamental del verdadero México. La cortesía de los mexicanos, su gran simpatía, y, sobre todo, sus aspiraciones de mejoría hacia sus hijos, se graban indefectiblemente en el ánimo del visitante. He quedado profundamente impresionado con aquellos que cultivan el suelo y constituyen uno de los sectores por los que trabajáis, y no dudo que esta Honorable Cámara de Diputados hará máximos esfuerzos por serviles. Todo cuanto pueda fortalecerles por medio de la educación, por medio de preparación agrícola, y por medio de préstamos a bajo rédito, será reembolsado por ellos mismos con un aumento de producción y de felicidad, bases sobre las cuales se levanta una nación poderosa.

Deseo expresaros mi más alto agradecimiento por los fervientes tributos que el señor Presidente de la República, general don Manuel Avila Camacho, y vosotros, habéis hecho al espíritu del panamericanismo.

El ideal más elevado para los habitantes de este Hemisferio, es el panamericanismo. Sin esta solidaridad hemisférica, jamás podremos trabajar ordenadamente por esa prosperidad en la agricultura, en el trabajo y en el comercio, que ciertamente es nuestro mayor anhelo.

En esta solemne ocasión ha sido para mí un gran placer el haberme asociado a los distinguidos representantes de numerosas naciones, quienes han venido desde los más apartados rincones de la tierra a desearle bienestar. Los considero amigos a quienes espero volver a ver en Wáshington. Nunca habrá demasiadas reuniones de hombres de buena voluntad.

Gobierno y pueblo mexicano, permitidme agradeceros nuevamente vuestras múltiples cortesías, y, estad seguros, de que esta visita quedará para siempre grabada en mi corazón.

HENRY A. WALLACE.

Stanford—The First 50 Years

EXTENSION OF REMARKS

OF

HON. THOMAS ROLPH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

ARTICLE FROM THE SAN FRANCISCO NEWS

Mr. ROLPH. Mr. Speaker, under leave to extend my remarks, I include therein an article which appeared in the San Francisco News under date of March 8, 1941, entitled "Stanford—The First Fifty Years."

[From the San Francisco News of March 8, 1941]

STANFORD—THE FIRST 50 YEARS—1891–1941

(By Robert de Roos)

In 1884 a 16-year-old boy—"the luckiest and richest kid in America"—died in Florence, Italy.

That event almost crushed the tough spirits of the boy's parents, Senator Leland Stanford and Jane Lathrop Stanford. But the loss of their only son, heir to the Stanford railroad millions, led them to establish Leland Stanford Junior University so that "the children of California will be our children."

Tomorrow Stanford University observes the first event of its program commemorating the first 50 years at Stanford—founders' day.

Between the death of that American boy in Italy and tomorrow's celebration of a half century of progress are many events, many men and women, many hardships, many a triumph.

THE IDEA GOT A LAUGH

When Senator and Mrs. Stanford announced the founding grant for a university of high degree November 11, 1885, there were a lot of people who thought the bearded senator had gone off his rocker. Wits called the projected university "Stanford's circus." Editors declared the university "as unnecessary as a home for retired admirals in Switzerland." The boys down at the barber shop would give two-to-one that the institution never would open.

And for a while it looked as though the scoffers might be right. But on May 14, 1887, the university's cornerstone was laid right out in the green fields of Senator Stanford's Palo Alto stock farm, 30 miles south of San Francisco. Four years later, Senator Stanford, standing with David Starr Jordan, a young educator chosen as Stanford's first president, greeted the university's first 559 students. Not many for a start, but at that, 39 more than the University of California attracted that year.

The doors of Stanford University opened only to let trouble in. Financial problems, the cross of many a young undertaking, beset the university despite a popular idea that 20 of the Stanford millions had been laid aside for the university's spending money. Actually, on that opening day, October 1, 1891, the Stanford endowment consisted of 8,800 acres of rolling farm land—beautiful but startlingly unproductive. For administrative and running expenses, the university had to depend on Senator Stanford's business enterprises.

MRS. STANFORD'S DETERMINATION WINS

Senator Stanford died in 1893. The Nation was in the depth of a panic. The entire

Stanford estate was tied up in court—$8,000,000 in debts and bequests had to be paid before university funds would be available. Mrs. Stanford, having lost her beloved son and her stalwart husband, determined that the university should not close.

A court allowed her $10,000 monthly from the estate for personal maintenance and for servants. Stanford professors were blanketed in along with Mrs. Stanford's domestics, and the university battled along on this cash and a few other dollars which came in from sale of the stock-farm equipment. Then the Federal Government stepped in with a suit against the estate for $15,000,000.

Mrs. Stanford warned the first graduating class, which included young Herbert Hoover and CHARLES L. MCNARY, that loss of this suit would mean the closing of the university. But the suit was won, and Stanford University continued after "6 pretty long years."

Meanwhile the university was growing physically. The first quadrangle was supplemented by an outer quadrangle which surrounded it. New library, science, and gymnasium buildings were erected. When Mrs. Stanford died in 1905, her grants increased the original endowment of the university to $20,000,000.

A UNIVERSITY IS REBUILT

On the morning of April 18, 1906, Stanford University was jolted out of its sleep by the crash of falling sandstone, the clatter of glass as a rumbling earth tossed the buildings around. Two persons were killed; buildings were shattered.

"It is not buildings but men that make a university," said Dr. Jordan, pitching into the task of rebuilding. Stanford reopened for the fall term.

Dr. Jordan retired as president in 1913 and was succeeded by Dr. John Casper Branner. Dr. Branner served until he reached retirement age and Dr. Ray Lyman Wilbur was appointed in 1916.

Under Dr. Wilbur's administration the university has made great progress. Perhaps his most notable achievement is the high estate of the present medical school—his baby from the first.

The first 50 years have seen Stanford taking part in the shaking events of the world. It sent Herbert Hoover to the White House after he had served in a Presidential Cabinet; it sent Dr. Wilbur to serve as Secretary of the Interior; it sent graduates to become presidents of 14 universities; 360 of its graduates are listed in Who's Who—1 out of every 100.

Its men of science have contributed to human well-being. Dr. Ernest C. Dickson gave the first complete account of valley fever; Dr. Edwin W. Schultz directed research which discovered a preventative for infantile paralysis in monkeys; Dr. Paul J. Hanzlik and Dr. H. G. Mehrtens discovered iodobismitol for treatment of neurosyphilis; Prof. E. C. Dickson's studies of botulism enabled food manufacturers to protect canned foods; important work has been done on high voltages in the Ryan laboratory, on insulin research, on food research, in aeronautics, in education, in history, in medicine.

Stanford has developed educational techniques. It was first to inaugurate a "major course" system. It led in the development of a lower division, in independent study, in the start of a university division designed for superior students.

FIFTY YEARS—JUST A GOOD START

Stanford's men have served in two wars and are ready for what comes. Stanford teams—in football, track, swimming, basketball, baseball—have won their share of championships. Its engineers have helped reshape the world; its graduates have helped recast business procedures; its doctors have saved countless lives.

From that small inner quad the university has grown into a sprawling giant. Newest building is the Hoover Library of War, Revolution, and Peace, a 274-foot tower containing one of the world's biggest stores of documents on the World War.

Fifty years isn't such a long time. But down at Stanford they figure they've got a pretty good start.

Michigan Large Milk State

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

ARTICLE RELEASED BY THE MILK INDUSTRY FOUNDATION

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following release from the Milk Industry Foundation:

MICHIGAN LARGE MILK STATE, FOUNDATION FIGURES REVEAL

NEW YORK.—Michigan's outstanding position in the dairy industry is vividly depicted in a new handbook issued by the Milk Industry Foundation. According to the book, Milk Facts, 932,000 cows valued at $60,580,000 produced $62,090,000 in cash farm milk income for Michigan farmers in 1939. Production of farm milk in the State for the year totaled 2,205,000,000 quarts; creamery butter, 90,088,000 pounds; cheddar cheese, 13,328,000 pounds; ice cream, 13,851,000 gallons.

The United States is one of the ranking milk-using nations in the world with per capita consumption of fluid milk totaling 153 quarts a year, pictographs show. Milk and its products comprise over 25 per cent of the 1,500 pounds of the principal foods consumed each year by the average American, the book says, with 45,000,000 quarts of milk delivered daily to homes and stores.

Pictorial charts and figures show the importance of the milk industry to the country's economic picture and illustrate how milk costs less in the United States in minutes of labor. Diagrammatic charts illustrate how the annual milk supply of some 51,000,000,000 quarts is utilized.

Fluid or fresh milk for cities and villages providing the farmer's highest cash return, accounts for 29.9 percent of the country's yearly production. Creamery butter takes 31.6 percent; farm butter, 9.2 percent; while 11.7 percent of the milk is used as fluid milk on farms where produced. In making cheese 6.3 percent of the total milk is used; ice cream, 3.1 percent, and canned milks, 4.5 percent, according to charts.

A chart of the distributor's milk dollar shows 52.31 percent going to dairy farmers for milk, 19.24 percent to delivery labor, 8.21 percent to delivery expense, 6.33 plant expense, 4.94 plant labor, 2.78 administrative labor, 2.18 administrative expense, 1.68 office labor, and profit, 2.33 percent, representing only a fraction of a cent per quart of milk.

"The production and utilization of milk have so increased in this country," says the booklet, "that today we are the greatest of dairy nations. Milk, butter, and other dairy products annually create an output valued at three and one-half billion dollars.

"Facts about the cows and the farmers that furnish the milk, the distributors whose efficiency has made wide usage possible, and the consumption of this 'most nearly perfect food' should lead to a clearer understanding of milk economics.

"One out of ever fifteen families in the United States is dependent on milk for a livelihood. Milk is the largest single source of farm cash income—larger than cattle, twice cotton, 3 times wheat, 5 times tobacco. There are 25,000,000 cows on three-quarters of the Nation's 7,000,000 farms.

"Americans enjoy the best milk in the world, and economical distribution, meticulous sanitation, pasteurization, and other safeguards have made our milk supply a world standard."

Communism, Fascism, and Nazi-ism

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, March 17, 1941

LETTER FROM THE SENTINELS OF AMERICA

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an open letter written by R. Swinburne Clymer, supreme commander of the Sentinels of America, which has been brought to my attention by Earl B. Musser and a large number of other citizens of Kansas City, Kans., setting forth the stand taken by that organization in opposition to communism, fascism, and nazi-ism. I also approve the sentiments expressed in this statement with respect to the large number of aliens who are permitted to remain in America while they are seeking to overthrow it as a free Nation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AN OPEN LETTER TO SENATORS, CONGRESSMEN, REPRESENTATIVES, AND ALL AMERICAN CITIZENS, AND A DEMAND FOR ACTION BY ALL THE MEMBERS OF THE VARIOUS LEGISLATIVE BODIES

(By the Sentinels of America)

Three short years ago the Sentinels of America, in their first open letter to Senators, Congressmen, Representatives, and all American citizens, made the statement that there were no less than 3,500,000 aliens in America.

These claims were ridiculed at that time, and we were accused of being alarmists. Denials were issued from every quarter, and our contentions were set aside as unworthy of consideration.

Now, however, as a result of the Alien Registration Act, more than 5,000,000 aliens have registered, and it has been vividly proven to the American people and their representatives that, instead of being extremists and alarmists, our estimate was short almost 2,000,000.

It is therefore definitely established that America is harboring some 5,000,000 aliens, many of them of the most vicious, and a vast number of them engaged in subversive activities of the worst kind.

Since we have been vindicated and proven correct in the first claim brought to an issue, some of our other statements are now being resurrected and receiving renewed consideration.

We now add to our former statements the fact that many of the aliens in America, adhering as they do to communism, fascism, and nazi-ism, are the scum of the underworld of nations now engaged in destroying democratic nations as nations; murdering women, children, and old people; aye, even invalids and mothers-to-be in hospitals; and that these aliens in our midst would not hesitate to do these things to us at their first opportunity and as a step toward destroying America itself as a free nation.

Two years ago, and again a year ago, we issued numerous statements regarding the great number of these aliens, thorough converts to the doctrines of communism, nazi-ism, fascism, and nihilism, willing to give their lives if need be, engaged in overt acts and in converting many disgruntled American-born to their vicious system and obtaining their willing help in carrying forward their plans of destruction.

We and our many members demanded the enactment of legislation—our 16 points of a clear-cut remedy (published in the Appendix of the CONGRESSIONAL RECORD, vol. 86, p. 2311)—for the registration of aliens, as well as other necessary laws. Such a law was passed, and these aliens, both desirable and undesirable, are now registered. However, that is but the first step. Though registered, the vicious element of these aliens has not been curbed. They are as active and more vicious than before. Neither the Communist, Nazi, nor Fascist Party has been outlawed in America. This is because of many factors, among them interference by interested parties, and, except for the fact that we have a record of most of the aliens in America, we are not in a much better position to deal with the active "fifth column" in America than we were before.

Possibly the greatest shame of the American Nation is the fact that there are possibly 3,000,000 aliens in America who are members of one of the three major "isms"—Communist, Nazi, or Fascist—or very sympathetic to them, and that there are no less than 2,000,000 American-born either downright converts to these "isms" and their activities or favorable to their doctrines and ready to help in their acts of sabotage. The money spent by these 5,000,000 potential enemies of America, her people, and her institutions, would well nigh arm us for defense. This statement may at the moment be contradicted, but when all the facts are known, the estimate will be shown to be modest.

We boldly charge that the United States is today, as were the Allies of the past, slumbering under a foolishly mistaken idea that it cannot happen here. As a matter of fact, it is now happening, and all our institutions, our unions, our business concerns, and even families are honeycombed by "fifth columnists," be they Communists, Fascists, or Nazis, and when the people finally do awaken there will be much "wailing and gnashing of teeth."

England had a bitter awakening and has lost untold billions in property, not to mention the great loss of life. Our neighbor, Canada, showed greater wisdom, has outlawed the "isms," and has swiftly punished even her own people who were found active in any one of the "isms." We, America alone, are sound asleep at the helm of our immense ship of state. Unless America soon awakens from her slumber, God alone can foresee what the result will be.

The fundamentals of our liberties are based on certain privileges; among these:

When civil liberty sedately permits disloyal expressions and acts, it becomes license and is destructive to liberty itself.

The voice of the people is the voice of the Nation, and as such should be free, but when that voice is raised for the purpose of destroying cherished institutions or forms of government by force, it is anarchy.

It is the right of all men to seek and maintain freedom. This includes all citizens. The employer should be as free to hire men of his choice, without restriction or interference, as the individual to seek employment wherever he pleases and without restriction, except his own capability and capacity. Argentina, one of the great South American republics, early recognized this fact and wrote into her Magna Carta: "There is equality before the law, and the right to take any kind of job without any other condition than the capacity to fill it." That is the creed of freemen.

They who see wrong committed against State or Nation, either in word or deed, and refuse to eloquently voice their disapproval or attempt to stop it, are disloyal to State and Nation and, by inaction and inertia, help bring about their own ruin and thereby sell themselves into slavery.

Aliens do not by right possess the essentials of freedom. They have not the right of free speech or even free action because they, lacking citizenship, do not belong to the society of either State or Nation. Only those who assume the full responsibility of any given order or society possess the rights and privileges of that society. Were it otherwise there would be no incentive to assume the burdens and responsibilities of such State, order, or society.

The State belongs to man and not man to the State. The citizen has the right to change constitutions and forms of government, but only by right of franchise. Aliens do not possess such franchise and therefore have no right to attempt or work for the bringing about of any changes in our form of government. Only the citizen can express his will by the right of his vote.

Our Constitution confers certain rights upon its citizens, but only on citizens. Americans should be proud of their rights as citizens and so jealously guard these rights that no one will be permitted to interfere with or destroy them. Only thus can the rights, privileges, and liberties of the Nation—the members of this free society—be guaranteed a continuation of such liberties.

We, as American citizens, believe that if American freedom is to continue, it is necessary to firmly demand the passage of certain legislation, and that it is the duty of the duly elected Representatives to pass, in due and righteous form, such acts of legislation, among these being:

Recommendation No. 1: Since both the Federal Bureau of Investigation and the Dies committee have uncovered the existence of schools and centers teaching methods of sabotage, and that it is an undeniable fact that the acts of such saboteurs may readily and frequently cause death of air pilots, soldiers, and others engaged in vital preparations for the defense of the Nation, it is essential and no more than just to all those engaged in defense work of whatever nature that laws be enacted for their protection and for the punishment by life imprisonment, or the death penalty, of all those convicted of such acts, and long-term imprisonment for those convicted of being engaged in teaching such methods.

Recommendation No. 2: The outlawing of all organizations of a communistic, Nazi, Fascist, or other un-American nature and a ban, under heavy penalty, against all such meetings. (Canada should serve as an example.)

Recommendation No. 3: Communist, Nazi, Fascist, as well as members of all other un-American alien and subversive organizations, should be banned from all work, all projects, and all activities of whatever nature which have to do with the building of airplanes, ships of every nature, and defense material of every kind.

Recommendation No. 4: The prevention of all strikes and labor disputes in every department of the manufacture of material for defense purposes, as well as in the building and construction trades connected with the housing of soldiers, the building of ships and airplanes, and in every department where the welfare of the individual soldier, marine, and of the Nation is concerned, making it compulsory for labor and the manufacturer to settle all disputes by arbitration, empowering for this purpose a board so composed as to guarantee its impartiality.

Recommendation No. 5: The placing of all seamen, both of merchant and passenger ships, into the active Reserve during the period of the present emergency. The dissatisfaction of the American people traveling on American ships will force the issue in some other manner if not settled by legislation.

Recommendation No. 6: The prohibition via the mail of all totalitarian propaganda literature; the immediate repeal of the Universal Postal Union laws which permit the free (or paid) distribution of subersive propaganda literature in the United States, whether this be direct from Germany, Russia, Italy, or Japan or through their agents in America.

What manner of fools are we staunch Americans who pay, via taxes or otherwise, for the distribution of millions of pieces of literature which has as its aim the destruction of our institutions, while we, as Americans, find it impossible to reach our friends in France, Holland, Belgium, and other conquered territory by even first-class, paid postage?

Let it be noted that the writer and his associates, after his return from Europe 2 years ago, contributed to the libraries and individuals in France, Belgium, and Holland thousands of dollars' worth of books on religion, philosophy and science, absolutely gratis, because these people were too poor to buy such books. Today these books, both in libraries and private homes, have been confiscated and destroyed. Despite such acts, we permit the distribution, and pay for it by our taxes, of millions of pieces of literature issued by these same subversive agencies now engaged in despoiling the people and in destroying our literature. Senators and Congressmen, again we ask you: What manner of people are we, the American people, to continually permit such outrages upon us, a free people, and, in addition, be made to pay the expense?

Recommendation No. 7: The revocation of citizenship of anyone convicted of espionage or any act against the interests of American institutions or the American people as a whole.

Recommendation No. 8: Compelling all aliens to take an oath of loyalty to America and her institutions before they may be employed in any essential industry, however menial the position may be.

Recommendation No. 9: The control of all alien fishing, freight, or other boats operating in domestic waters. Such an enactment should include the registration of all boats, of whatever nature, while operating in American waters, together with the strict control of the purpose of the boats and the crews.

Recommendation No. 10: The immediate withdrawal of all State and Government funds from all schools, colleges, and every public educational institution wherein is taught any subversive propaganda, any inculcation inimical to American thought, or which employs any teacher or professor, or permits any student in attendance, subscribing to such "isms."

Recommendation No. 11: Making it compulsory for the Department of Labor or some other department of state to deport within 3 months after conviction any alien found guilty of subscribing to or of being a member of a local or foreign center of the Communist, Nazi, Fascist, or other subversive party, adhering to or spreading such inculcations.

Recommendation No. 12: Making compulsory the revocation of the citizenship of any foreign-born union official found guilty of a major act of grafting on either the union, business institutions, the Government, or its own members.

Recommendation No. 13: The prohibiting of the citizens of America, aliens of any country, banks, or institutions, from sending funds in any form from the United States to any government, or to any individual through whom it might reach any government now engaged in making war upon democracies.

(It should be noted that Canada restricts its own good citizens from spending any money except for legitimate business purposes, even in friendly neighboring countries, and no one has declared this to be unjust.)

These laws, we, the citizens of America, request that you, our Senators, Congressmen and Representatives, enact for the purpose of safeguarding our rights and liberties, our country and our institutions. We declare them just and proper and of such nature as we ourselves would be governed.

Respectfully submitted,

R. SWINBURNE CLYMER,
The Sentinels of America,
Supreme Commander.

The Securities and Exchange Commission and National Defense

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

ADDRESS BY HON. SUMNER T. PIKE

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Sumner T. Pike, Commissioner, Securities and Exchange Commission, before the New York Securities Dealers Association, New York City, March 7, 1941:

There is today in this Nation a singleness of purpose. We are united toward one overriding objective—making ourselves so strong that no power on earth will dare to challenge our way of life. The towering necessity for attaining this objective with all possible speed overshadows all other needs, both in our national and in our personal lives. Differences which were important not long ago have melted to nothing as the inferno abroad has drawn closer to our shores.

Tonight I am not going to talk about problems arising from the relationship of the brokers and dealers to the Securities and Exchange Commission. I shall talk about our common problems in connection with national defense. I shall tell you some of the things we are trying to do in Washington. And I want to discuss with you how you can take a greater part in this defense job.

Discussion of finance during defense refers sooner or later to control of capital issues. This is natural, because, at the time of the first World War, capital was not plentiful in this country. It had to be conserved and directed into the most useful channels of our war economy. It was essential that capital should not be frittered away on projects not absolutely necessary for the creation and support of our Army and Navy.

Today our problem is somewhat different. Of all the resources necessary for our present national-defense drive money is probably the most abundant. Reserves of private capital today appear to be comparatively plentiful. To be sure, our capital is not as productive as it should be. Nonetheless, we seem to have ample reserves. Because of these reserves, control of capital issues to conserve capital funds seems unnecessary for the present.

Of course, the cost of defense absorbs a great portion of the Nation's income. Or, to state it another way, military expenditures must utilize a great portion of the Nation's capital, labor force, natural resources, and plant equipment. In the economic sense, a considerable part of our productive resources is used to produce military goods instead of civilian or commercial goods. Since our full productive capacity has not yet been reached, however, the economic problem may not be so much one of shifting productive efforts as increasing them on all fronts. A main function of finance is to make it possible to attain shifts and increases in productive effort. The scope of defense finance, therefore, goes much more deeply than the problem of available capital. We must always keep in mind that basically the problem is one of shifting and increasing the employment of our resources—labor, materials, and equipment. A primary economic balance must therefore be sought between production for defense and production for nondefense purposes.

There are many essential materials which must be conserved. I refer, of course, to raw materials, to products of industrial plants, to many classes of labor. The wasteful or unwise employment of these resources now must be guarded against, and it is, of course, to this end that the Adisory Commission to the National Defense Council, the Office of Production Management, the Priorities Board, and other special agencies and offices have been created, to which leaders of business, finance, and government are now giving their time and energy. Control of capital borrowing, as such, has not yet been necessary. However, we must be careful that our abundance of capital does not promote competition with the national-defense effort for these resources.

This problem of competition with the national-defense program for our Nation's resources has been brought forcibly to our attention in connection with our job of protecting the investor under the Securities Act. Only a few months ago, after we were well into the defense program, a registrant came to our Commission with a project to raise funds for the building of a grandstand at a race track. The issue was effectively registered and, so far as I know, the money was raised. Later we got to thinking about this, and other issues of the same kind. We began to wonder about the materials and labor which would be necessary to complete the project. Steel forms would undoubtedly have to be used, and labor which could handle that type of construction. These problems were brought more sharply to our attention when, a little later, several commercial air lines registered issues the proceeds of which were to be used for the purchase of additional commercial airplanes. Not very long after these issues were registered and the money raised, these air lines were told that they could not have their planes because of the needs of the Army and Navy. Then there was the big biscuit company which raised money, after registration, for the erection of a $1,500,000 new cracker plant in a midwestern area where there is great need for new construction for defense purposes. Here again the question was, Could it get the materials and labor to do the job? I do not for a minute suggest that any of these enterprises was contrary to the national objective of total defense. I don't know the answer. But two main problems arise. The first is, Do the Priorities Board and the labor-control administrators within the national-defense organization know about these projects; and second, are we permitting, by inadequate disclosure, the investment of the public's money in projects which national defense cannot permit to materialize? In other words, are we adequately protecting the investor?

We have recently discussed this matter with Chairman Stettinius of the Priorities Board and Mr. Hillman's office, and we have developed the following working arrangement. I am now authorized to state that henceforth, where new projects are concerned, we shall regard as material for registration purposes any information relating to priorities for raw materials and equipment or the availability of labor necessary for the completion of the project. Wherever it appears that any of the proceeds of a securities issue registered with us are to be used for new or additional facilities, such as buildings or machinery, we shall contact these two branches of the national-defense organization. If they tell us either that materials or labor are unavailable or likely to be unavailable for the purpose specified in the registration statement, we shall require that this information be prominently displayed in the registration statement and prospectus. Similar disclosure will be required whenever the Priorities Board or labor director of O. P. M. indicates that there may be substantial delay in obtaining the necessary materials, equipment, or labor. It may well be that this disclosure will discourage financing of such projects. Of course, our interest is that the prospective investor will be sufficiently on guard so that he can make an enlightened judgment. As a result of this program, the national-defense organization will have all efforts for the public raising of money for new projects brought to its attention whether or not priorities have already been sought, and we shall be properly warning investors that they may be putting their money into impossible or unlikely undertakings. The Securities Act already gives us ample authority to do this job. For priorities information at a time like this is obviously necessary to full and truthful disclosure to the investor.

Of course, the Securities Act is also designed to prevent fraud. This enables us to prevent the diversion of the public's money and the Nation's resources into fraudulent channels, and conserves them for legitimate business and bona fide defense industries. All kinds of companies, for instance, have mushroomed in the last year in the name of national defense. Our investigators all over the country have been watching these promotions and it is clear that some of them are plain, unadulterated frauds. These frauds are ruthless efforts to prey upon the patriotic emotions of small and unsophisticated investors. Fortunately, the securities laws are on the books. By criminal prosecution and by injunction we prevent expenditure of the public's money on fraudulent schemes. Money that might have gone into phantom factories is thus saved for legitimate business, including defense industries.

Under the Public Utility Holding Company Act the problem of priorities of materials has also arisen in connection with utility financings. We know that greatly increased generating facilities are rapidly becoming necessary for national defense, and at first blush it seems inconceivable that such utility projects should not obtain a clear track. From the standpoint of priorities, however, there are actually situations where this is not true. Battleships and cruisers require enormous generating capacity, and we are building a great number of these today. The question has been raised whether our present capacity is adequate to meet our increased naval and industrial requirements. Not long ago, I heard of an instance where a battleship had to be tied at dock for several months to supply the power needs of an expanded naval post ashore. The net result is that additional generating capacity must meanwhile be carefully apportioned between our mili-

tary and our civilian needs, and then, carefully reapportioned between civilian projects in areas most vital to national defense. All this until our capacity to build generators can be increased to meet our needs. To this end, this Commission must scrutinize all applications by utilities to raise funds for generating facilities. Under the Holding Company Act, of course, our powers over utility financings are more pervasive than under the Securities Act. We shall be alert that utility financings for additional facilities are reviewed from the standpoint of national defense priorities of materials and equipment and the availability of labor.

In these connections, private finance can play a role. You can spot these things as they arise, even before they come to us. When a prospective issuer talks to you about preparing an issue, you can raise the priorities and the labor question, and discourage issues which appear to be out of line with the defense program—or at least have him make sure that the project is not out of line. Our primary function of protecting the Nation's investors is inseparably linked to the fundamental endeavor to make the Nation secure. In short, we can jointly aid the defense program by preventing the diversion into illusory ventures of funds and resources which might otherwise stimulate bona fide defense projects. I realize that in these days it is difficult for the financial community to discourage issues. But because I know you, I have no doubt that you will do it when necessary to our common defense program.

The S. E. C. has also participated in another aspect of the defense program. Under the Second Revenue Act of 1940, special accelerated amortization deductions are permitted for additional emergency plant facilities. These special amortization deductions, however, are granted only if a so-called certificate of necessity is obtained from the Secretary of War or Navy and the Advisory Commission to the Council of National Defense certifying the need of the additional plant facilities in the interest of national defense during the emergency period. Errors may result in corporations gaining undue tax advantages and unconscionable profits, contrary to the intent of Congress, and might possibly lead to dislocation of our economy after the emergency is over.

Facts are important. And that is where the S. E. C. comes in. We have made our facilities available for aiding in the investigation of applicants for such certificates, thereby helping to get the facts for the War and Navy Departments and the Advisory Commission, where they want to supplement existing information. After we have delivered the relevant facts, the defense authorities can make an informed judgment. The decision as to whether the certificate of necessity should be granted or denied appropriately rests with the defense authorities, not with us. We are merely advisory fact finders for the defense authorities when they need us. But fact finding, I am sure you will agree, is a necessary and important preliminary job.

The Commission's duty to integrate and simplify holding-company systems under section 11 of the Public Utility Holding Company Act is another front on which the arsenal for democracy is being forged. Before I go into that, I want to remind you that section 11 isn't only a problem of the utility industry. It's another field in which you and we can work together for the common good. The successful accomplishment of the task of integration and simplification so that their benefits may be quickly felt in the national-defense program is a very large and important job for the financial community. But if it is large, it is still one which will not be without its rewards for those who play a part. The section 11 program is on its way. It will be done and it will be completed as speedily as practicable. The distribution of securities is your business. It is the business from which you make your livelihood. The realists among you will acquaint themselves with the utility situation and help work out the section 11 problems. They who allow emotional opposition to the objectives of the Holding Company Act to obscure their vision will be left by the wayside while the more practical members of the financial community get the business and reap the benefits.

The electric- and gas-operating utilities are vital to the national-defense program. Section 11, however, is aimed at the holding company. Section 11 will not uproot or destroy physical operating facilities. To the contrary, the act is designed to improve the operating efficiencies and financial health of the operating companies. It's the holding company superstructure above the vital foundation of operating companies that we are directed by the act to integrate and simplify.

Efficiency in operation of utilities is necessary to defense and the public good. Efficient operation requires intimate knowledge of the operating property, local industrial needs, and community problems. Remote control by holding company executives in large financial centers is scarcely compatible with efficient operation. Local operating executives who are animated by puppet strings pulled in distant financial centers cannot give us the benefits of localized management and efficient operation. Only management which is on the operating scene, not absorbed in the far-flung problems of running a utility empire of four or five layers spread over half the world can do the job with the high degree of efficiency that is now vital. Integration and simplification will increase utility managerial and operating efficiencies which are essential to the effective mobilization of industry for defense purposes.

The present absence of integration obstructs an effective national-defense program. Lack of integration of utility properties makes power more costly and tends to block proper coordination of power resources. The growth and extension of holding companies has had little relation to economy of management and operation or the integration and coordination of related operating properties. Desirable grouping of adjacent properties has been prevented in many instances by rival holding-company systems which gobbled up everything in sight without regard for their digestive abilities. For example, look at the utility situation in the State of Ohio, one of the most important steel, rubber, machine-tool, munitions, and powder-plant manufacturing centers in the country. The entire State of Ohio is split up into isolated islands of separate utility properties owned by rival holding-company systems. I counted more than 50 different islands of holding-company system operating properties on the map of Ohio the other day, and that doesn't begin to take in some of the municipals. Holding-company systems such as North American Commonwealth & Southern, American Gas & Electric, United Light & Power, Columbia Gas & Electric, Cities Service Power & Light, American Water Works, Associated Gas & Electric, Utilities Service Co., Crescent Public Service Co., United Public Utilities Co., Midland United, and others all have their own preserves in this State. In many cases their own properties are separated from each other by intervening properties of other companies. Proper coordination of power facilities in Ohio is a tough assignment because of this holding-company-system hodgepodge.

The country-wide scatteration of electric utility service areas and the consequent paralleling and leapfrogging of transmission lines are the natural results of a development which has come about without proper regard for regional considerations. Under the present set-up, transmission lines have been badly located, and frequently parallel and jump over those of rival systems. Generating and transmission facilities sometimes have been built because of holding-company benefits and without regard to the power needs of the area served. The existence of rival holding-company systems in an area which should be a single integrated system causes the building of unnecessary generating plants and, in some cases, an uneconomical location of generating plants, resulting in waste of our power resources as well as investors' and consumers' money. Not only this, but the pressure of the holding company to take up earnings from its operating subsidiaries has had a marked effect on the condition of generating stations. Inadequate depreciation allowances and reserves increased reported earnings of operating companies which were siphoned off by parent holding companies. Adequate depreciation policies and plowed-back earnings would have enabled many operating companies to build new, modern generating plants. Instead, because of holding-company appetites for subsidiaries' earnings, we have old, obsolescent power plants still being used for national defense.

I want to illustrate the unfortunate situation frequently caused by scattered holdings of rival holding-company systems. An Army aeronautical research laboratory located at Langley Field, near Newport News, Va., required additional power. Virginia Public Service Co., a subsidiary of the Associated system and formerly an Insullite, happens to have an isolated eastern division, far removed from the rest of its facilities, which serves Langley Field. Virginia Public Service, however, had neither the capacity nor the money to meet the need of this Army station. Now it so happens that Virginia Electric & Power, a subsidiary of the rival Engineers Public Service System, is logically located to serve the Langley Field area, and had the capacity and necessary financial resources to furnish the needed power. Yet, because Virginia Public Service had previously stretched out into this territory, it was necessary to deal with it and for it, in turn, to go through months of negotiations with Virginia Electric & Power to work out a plan for extending power facilities into the area. Negotiations were not successful. Finally, the Government found it necessary to begin construction of a 10,000-kilowatt power plant to take care of the peak loads at Langley Field. To this day the Army station at Langley Field needs more power. Lack of integration of operating facilities caused unnecessary delay on defense work. The program, under section 11, will eliminate these unfortunate delays and break-downs in defense by providing for integrated utility systems which are devised by engineers' planning, rather than financiers' scheming.

The section 11 program is aimed at integrating properties like this so that the crazy-quilt situation will disappear. As the Federal Power Commission's reports on electric power requirements and supply indicate, we need a great deal of utility expansion in the next few years to meet the demands of national defense. It is urgently necessary—not only for national defense but to protect us from paying excessive rates for the next few decades—that these new facilities be planned and operated as coordinated parts of integrated systems. We can no longer afford the wastes and inefficiencies of the past. I believe that the widely scattered properties of today show that the holding companies haven't done much sound planning. And I am convinced that the S. E. C. integration and simplification policies will make possible intelligently planned power programs which will effectively coordinate the needs of national defense.

Integration and simplification will also improve the financial status of many operating utilities. The holding company, by and large, has not done the job of sending downstream equity money to its operating subsidiaries.

The record will bear me out that holding companies proceeded most reluctantly in putting their money into operating subsidiaries. Before the Utility Act, the favorite device of pyramiding was often based on running a shoestring investment into control of a vast number of operating companies. So small was the holding-company stake in its subsidiaries at times that Congress, in passing the Holding Company Act, specifically mentioned the evils caused by "disproportionately small investment." And before the act the studies of Dr. Moulton, of Brookings Institution, showed that very little of the money put into holding company securities went into productive capital for operating companies. The holding companies, by and large, financed their subsidiaries by selling senior securities of those subsidiaries to the public.

I want to give you some figures that were startling to me. From November 1, 1935, to the end of 1940 there have been registered with the S. E. C. under the Holding Company Act, security issues by holding companies in the total amount of $466,000,000. Of these, our records show that securities amounting to a grand total of about $8,000,000 were sold by the holding companies for expanding the productive power facilities of their operating subsidiaries. And of this total, $1,250,000 was raised by an R. F. C. loan. Now, these figures do not take into consideration other funds sent down to the operating companies from sale of portfolio securities or from dividends or interest received. But it does give you an idea of the holding company as a means for raising money for expansion of power facilities of its subsidiaries. These figures would seem to kill any contention that the holding company has been a valuable vehicle for financing the operating companies. If the holding company does send money downstream, it appears to serve largely as a mere conduit, taking up money from the operating companies and then releasing it to them. Even in this regard it is known that frequently the parent has taken up excessive dividends and then returned them to the operating subsidiary in the form of interest-bearing debts which rank ahead of publicly held preferred stocks.

The operating utility, cut loose from holding-company shackles under section 11, can borrow privately or publicly just as well as it does today. In fact, in some instances its credit might be improved if the holding company is taken off its back. For the most part the operating companies are in a stronger financial position than the holding companies; yet many of them are unable to undertake new financing necessary for defense construction only because they are tied to the holding company. For instance, this may occur where an operating company needs additional facilities but cannot sell additional senior securities because the holding company had already overloaded it with excessive bonds and preferred. New money might possibly be raised on common stock, but the controlling holding company won't let the public in on the ground-floor common-stock investments in its operating subsidiaries. And the holding-company parent has neither the money nor the credit necessary to subscribe to additional common itself.

The corporate simplification program contemplated by section 11 (b) (2) of the act is designed to reorganize the holding company and the corporate structure of the holding-company system so that healthy, vigorous utilities may emerge to serve the public interest. Some of the holding companies have been so sick that they couldn't possibly do their job of financing operating subsidiaries even if they wanted to. In many instances the corporate simplification program will enable a holding company to clean up arrearages and take a new lease on life with a sound capital structure. For the first time in a decade some of the holding companies will be able to raise money on their own for expanding the operating facilities of their subsidiaries.

For the past several years our experts have cooperated in planning an over-all power program for the Nation's defense needs. Our knowledge of the Nation's power requirements and supply convinces us that we can aid the national-defense program by an intelligent, speedy enforcement of section 11. Cooperation from the utility industry and the Street's representatives would be in keeping with a true mutual national-defense effort. And the cooperation that we have recently received from executives of some of the major systems in working out parts of the program I commend to the rest of the utility industry.

As for the investment banking and dealers of the country, there is little question in my mind that they can do a fine job in meeting the financial problems raised by integration and simplification. The ice is breaking in this field. Before long you will have the job of distributing the shares of many operating companies to the public. I repeat that it is a very important undertaking from the standpoint of national defense, and I know you can do it well. The electric and gas operating utilities are sinews of our national strength. We must free them from the handicaps which are preventing their proper development.

A powerful defense must be predicated upon a vital working democracy. For if our democratic system fails to work, the defense machinery will be powerless. We must strive together to vitalize the working democracy in finance upon which a vigorous defense must be built.

Indiana a Large Dairy State

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

REPORT OF THE MILK INDUSTRY FOUNDATION OF NEW YORK

Mr. GILLIE. Mr. Speaker, with all due respect to my colleagues from Wisconsin, who never miss an opportunity to proclaim that they are from "America's Dairyland," I wish to call attention to a recent report of the Milk Industry Foundation of New York, which points out that Indiana holds an important position as a dairy State.

The report follows:

INDIANA LARGE DAIRY STATE, FOUNDATION FIGURES REVEAL

NEW YORK.—Indiana's important position in the dairy industry is vividly depicted in a new handbook issued by the Milk Industry Foundation. According to the book, Milk Facts, 774,000 cows valued at $44,892,000 produced $42,121,000 in cash farm milk income for Indiana farmers in 1939. Production of farm milk in the State for the year totaled 1,496,000,000 quarts; creamery butter, 68,972,000 pounds; cheddar cheese, 24,186,000 pounds; ice cream, 7,765,000 gallons.

The United States is one of the ranking milk-using nations in the world with per capita consumption of fluid milk totaling 153 quarts a year, pictographs show. Milk and its products comprise over 25 percent of the 1,500 pounds of the principal foods consumed each year by the average American, the book says, with 45,000,000 quarts of milk delivered daily to homes and stores.

Pictorial charts and figures show the importance of the milk industry to the country's economic picture and illustrate how milk costs less in the United States in minutes of labor. Diagrammatic charts illustrate how the annual milk supply of some 51,000,000,000 quarts is utilized.

Fluid or fresh milk for cities and villages providing the farmer's highest cash return, accounts for 29.9 percent of the country's yearly production. Creamery butter takes 31.6 percent; farm butter, 9.2 percent; while 11.7 percent of the milk is used as fluid milk on farms where produced. In making cheese 6.3 percent of the total milk is used; ice cream, 3.1 percent; and canned milks, 4.5 percent, according to charts.

A chart of the distributor's milk dollar shows 52.31 percent going to dairy farmers for milk; 19.24 percent to delivery labor; 8.21 percent to delivery expense; 6.33 plant expense; 4.94 plant labor; 2.78 administrative labor; 2.18 administrative expense; 1.68 office labor; and profit 2.33 percent, representing only a fraction of a cent per quart of milk.

"The production and utilization of milk have so increased in this country," says the booklet, "that today we are the greatest of dairy nations. Milk, butter, and other dairy products annually create an output valued at $3,500,000,000.

"Facts about the cows and the farmers that furnish the milk, the distributors whose efficiency has made wide usage possible and the consumption of this 'most nearly perfect food' should lead to a clearer understanding of milk economics.

"One out of every fifteen families in the United States is dependent on milk for a livelihood. Milk is the largest single source of farm cash income, larger than cattle, twice cotton, three times wheat, five times tobacco. There are 25,000,000 cows on three-quarters of the Nation's 7,000,000 farms.

"Americans enjoy the best milk in the world and economical distribution, meticulous sanitation, pasteurization, and other safeguards have made our milk supply a world standard."

Detroit, the Bulwark of National Defense

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1941

Mr. RABAUT. Mr. Speaker, Detroit has long been known as the automobile city; today it more properly might be called the city that is the bulwark of national defense. In this great metropolis, American science and technology are being brought to a focus, as the country's engineers and technicians devote all of their energies to our one common cause of making America and its democratic heritage free from the threat of conquest by any nation or group of nations in the world. No other city is contributing more to our united effort to make this Nation impregnable.

The world and its way of living has changed considerably since Antoine de la Mothe Cadillac founded the "city of the straits" in July 1701, and Detroit not only has managed to keep up with this change, but the city itself has been one of the major contributing factors which brought about the new pattern of life. Long ranking first of all American cities in its exports, which in normal times have a value of nearly a million dollars a day, Detroit is a city that is geared 100 percent to the industrial processes that are the backbone, not only of the material needs of modern life, but also, lamentably, of modern warfare.

Detroit has 11 miles of river frontage. To meet the economic needs of this restless, dynamic metropolis, over 25,000 vessels sail the Detroit River annually and during the season a steamship passes the city once every 3 minutes. Detroit River tonnage is about 100,000,000 tons a year. Further, the city has over 2,200 manufacturing plants which employ the world's most highly skilled workers at the world's highest wages. Lying midway between the iron ore deposits of Michigan and Minnesota and the coal mines of the Eastern States, Detroit is geographically as well as technologically the hub of American industry. Its central location on the continent, easily reached by either rail, water, or highway, adds to its great strategic importance as the center for national-defense industries.

Detroit, the oldest city in the United States west of the Thirteen Original Colonies, has been predominantly a manufacturing center ever since the opening of the Erie Canal made the export of its products possible. Always alert to changing social conditions, the businessmen of the city have been ever ready to adopt new and growing industries, so that at one time or another during the last century Detroit has been a center for tanning, hat making, flour milling, copper smelting, shipbuilding, cigar making, freight-car building, and so forth. Four pioneers of the automobile industry—Ford, Olds, and the two Dodge brothers—did their early work in Michigan, and it was Detroit's bankers who were ready to back the new enterprise despite the skepticism of the financiers of the East. Further, because the city had long been a manufacturing town, Detroit residents knew how to run the new machinery that was needed by the automobile industry. Today, in this age of mechanized battle, Detroit manufacturers once more have been alert to the new needs, and the city's gigantic mass-production plants speedily are being converted to the manufacture of all kinds of military products for national-defense purposes. Once more Detroit's skilled technicians are transferring their energies to a new industry.

In order that we may better understand the immensity of the present national effort to secure complete safety from any possible attack by aggressors, I should like to analyze today only a part of the present defense activity in Detroit with the aim of showing how it is taxing to the utmost the manufacturing capacity of even this most technological city in the world.

Let us take for our first example the present activity of the Packard Motor Co., one of the oldest automobile and engine manufacturing concerns and one which won distinction during the World War for its famous Liberty engine. This company, despite its outstanding manufacturing record of the past, now is undertaking the biggest job in its history—a job so large that this already mammoth manufacturing plant is being forced to spend $62,000,000 for 3 new buildings and 3,000 different pieces of machinery and, in addition, is finding it necessary to more than double its personnel. In all its previous years of industry the Packard Co. had built up a total factory personnel of 10,000 workmen, and we may better judge the immensity of its present effort when we note that for its present airplane-engine program alone the company will require an additional 17,000 highly skilled men.

At present, only 600 men are at work on the airplane-engine program, under which Packard will build 6,000 Rolls-Royce Merlin aircraft engines for England and 3,000 more for the United States. Company officials point out that this means that there is a shortage of 16,400 men which will have to be overcome within a few months if they are to attain the scheduled production rate of 809 engines a month by fall of this year. The officials add that the 10,000 regular Packard employees cannot be used to build airplane engines because they are not trained for the more exacting duties of this type of construction.

W. P. A. employment officials in Michigan several months ago had a "labor pool" of 112,000 men listed as being available for work on defense projects, but today this list has dwindled to 30,000 and this number is further reduced by the new restrictions imposed upon national-defense workmen which bar all but American citizens and require minimum qualifications and physical fitness. Technological experts estimate that 80,000 additional trained men are needed for defense work in Detroit alone, despite the fact that this city has more skilled workmen than any other in the world.

The implications of this situation with respect to the economic life of the city are tremendous. First of all, there is the immediate problem of housing the 80,000 new employees needed in the area, for housing authorities estimate that there is not now available housing for more than 12,000 additional persons, despite the fact that housing conditions in Detroit are far superior to those of most cities in the East. Closely related to the housing problem is the immense program of construction which the industrial concerns themselves are being forced to undertake in order to provide working facilities for their additional employees, and the $62,000,000 Packard program and the new $21,000,000 airplane factory being erected by the Ford Motor Co. are only examples selected from innumerable instances of necessary industrial expansion. To supply these new plants, machinery and tools are necessary, and that means a heavy strain upon the tool and die plants of the city. The Packard Co. has placed orders totaling $18,000,000 for 3,000 different machines ranging in size from 1,000 to 60,000 pounds and costing from $600 to $125,000 apiece. The company is spending $400,000 for soundproofing of cells for testing the engines after they are completed.

In my own congressional district on Detroit's east side, the Chrysler Corporation has thrown its titanic production facilities into the national-defense program. Already it has manufactured and shipped a large proportion of United States Government orders for a total of 58,000 vehicles of various descriptions, some of them highly specialized, for defense purposes. Work on a new tank arsenal, for which a contract was awarded last August, is proceeding on schedule and 700,000 square feet of the new building are now under roof. The building is enclosed and heated, and the installation of mass-production machinery has been started.

For the Chrysler Corporation's part in the manufacture of airplane parts and subassemblies, some 600,000 feet of floor space has now been made available preparatory to work designed to expand the production of Martin bombers. A complement of able and experienced manufacturing executives, drawn from the corporation's regular staff, for many months has been making a special and intensive study of the problems involved in this work. In the airplane-building program, the Chrysler Corporation is serving as a subcontractor to the Glenn L. Martin Co. Meanwhile, Chrysler engineers have been busy studying the special characteristics of airplane engines, and the Air Corps at the present time is showing interest in a new in-line liquid-cooled airplane motor which they have designed.

The Chrysler Corporation also has taken an order to convert the design of a foreign machine gun to American standards and to produce two sample guns. At the Government's request, the firm is preparing a proposal to manufacture these guns in substantial quantities. Additional educational orders for shells, shell cases, and bomb fuses will shortly be completed, and an order for field kitchens already has been filled.

At the Ford Motor Co., where work is getting under way on the $122,000,000 Government contract for 4,236 Pratt and Whitney twin Wasp air-cooled engines, a total of 1,540 new machines is required and the new plant will have to be supplied with entirely new tools from the ground up. To make production on the assigned schedule possible, the already over-burdened machine-tool industry must deliver before the end of March a total of 7,484 machine fixtures such as punches, dies, jigs, gages, and chucks. Because of the highly specialized problems involved, the Ford Co. has let out most of the orders to plants already building them for the airplane industry. Also, because there was a threatened shortage of magnesium, the Ford Co. has erected an $800,000 magnesium foundry, located not far from the $21,000,000 aircraft-engine plant being built at the Rouge.

In the face of similar activity all over the country, technical experts say that Germany, or any other country, can never hope to match the industrial production of the United States, and after consideration of the foregoing, the reason becomes obvious. American advances in metallurgy, the substitution of castings for forgings in aircraft engines, and the adaptation of automobile production methods to airplane manufacture—all these emanating for the most part from Detroit—will, I am confident, make America secure. In this time of national emergency, Detroit the dynamic, once the automobile city, has become indeed the bulwark of national defense.

The Dairy Industry in Oregon

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

REPORT OF THE MILK INDUSTRY FOUNDATION

Mr. ANGELL. Mr. Speaker, I ask leave to extend my remarks in the RECORD by including a report recently made by the Milk Industry Foundation in New York, with reference to the dairy industry in Oregon. The release follows:

OREGON LARGE DAIRY STATE, FOUNDATION FIGURES REVEAL

Oregon's important position in the dairy industry is vividly depicted in a new handbook issued by the Milk Industry Foundation. According to the book, Milk Facts, 258,000 cows, valued at $13,158,000, produced $18,566,000 in cash farm-milk income for Oregon farmers in 1939. Production of farm milk in the State for the year totaled 634,000,000 quarts; creamery butter, 31,127,000 pounds; cheddar cheese, 19,907,000 pounds; ice cream, 2,067,000 gallons.

The United States is one of the ranking milk-using nations in the world, with per capita consumption of fluid milk totaling 153 quarts a year, pictographs show. Milk and its products comprise over 25 percent of the 1,500 pounds of the principal foods consumed each year by the average American, the book says, with 45,000,000 quarts of milk delivered daily to homes and stores.

Pictorial charts and figures show the importance of the milk industry to the country's economic picture and illustrate how milk costs less in the United States in minutes of labor. Diagrammatic charts illustrate how the annual milk supply of some 51,000,000,000 quarts is utilized.

Fluid or fresh milk for cities and villages providing the farmer's highest cash return accounts for 29.9 percent of the country's yearly production. Creamery butter takes 31.6 percent; farm butter, 9.2 percent, while 11.7 percent of the milk is used as fluid milk on farms where produced. In making cheese 6.3 percent of the total milk is used; ice cream, 3.1 percent; and canned milks, 4.5 percent, according to charts.

A chart of the distributor's milk dollar shows 52.31 percent going to dairy farmers for milk, 19.24 percent to delivery labor, 8.21 percent to delivery expense, 6.33 plant expense, 4.94 plant labor, 2.78 administrative labor, 2.18 administrative expense, 1.68 office labor, and profit 2.33 percent, representing only a fraction of a cent per quart of milk.

"The production and utilization of milk have so increased in this country," says the booklet, "that today we are the greatest of dairy nations. Milk, butter, and other dairy products annually create an output valued at $3,500,000,000.

"Facts about the cows and the farmers that furnish the milk, the distributors whose efficiency has made wide usage possible, and the consumption of this 'most nearly perfect food' should lead to a clearer understanding of milk economics.

"One out of every fifteen families in the United States is dependent on milk for a livelihood. Milk is the largest single source of farm cash income—larger than cattle, twice cotton, 3 times wheat, 5 times tobacco. There are 25,000,000 cows on three-quarters of the Nation's 7,000,000 farms.

"Americans enjoy the best milk in the world and economical distribution, meticulous sanitation, pasteurization, and other safeguards have made our milk supply a world standard."

Agriculture and Defense

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

EDITORIAL BY MARVIN CLEMENT, EDITOR AND PUBLISHER OF THE CANBY NEWS, CANBY, MINN.

Mr. H. CARL ANDERSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following worth-while editorial on the relation of agriculture to national defense. Mr. Clement, editor and publisher of the Canby News, Canby, Minn., brings out in the following editorial, that, without parity, the debt-ridden, discouraged farmer is an unfirm cornerstone in our national economy, and a weak spot in our defense:

AGRICULTURE AND DEFENSE

It is becoming apparent that in the hustle and bustle of making this Nation impregnable, the farmer is going to be elbowed and shouldered out of the way in Washington. His hoarse appeal for parity is being drowned out by the roar of guns and crash of bombs in Europe and by the clatter of defense machinery in America.

The industrial East has a blind spot which makes it impossible for it to see that it is just as vital to our national economy and to the defense of our Nation to have farm machinery oiled and in good repair as it is to have the machinery for producing guns and planes running smoothly. The guns of the Allies in the last war made a terrific din and spewed death and destruction like water out of a garden hose, but it was the pangs of hunger in blockaded Germany which really won the war.

As the defense program accelerates, prices will go up. But prices for farm products, burdened by huge surpluses which will be increased by buying in South America to win friendships in the interest of hemisphere defense, will have little chance to rise far. The disparity between what the farmer receives and what he must pay, narrowed in recent years, will widen again.

This is no time for selfishness, no time to go begging to Washington for hand-outs. This is a crisis, a time when we should ask ourselves what we can do, not what we can get. In asking for parity the farmer isn't asking for a hand-out, he's asking for justice, for the right to sell what he produces at a fair price, so he may pay his share of the defense bill. Without parity, the debt-ridden, discouraged farmer is an unfirm cornerstone in our national economy and a weak spot in our defense.

New York Leading Dairy State

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

REPORT OF THE MILK INDUSTRY FOUNDATION

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following release from Milk Industry Foundation:

NEW YORK LEADING DAIRY STATE, NEW FOUNDATION FIGURES REVEAL

NEW YORK.—New York's leading position in the dairy industry is vividly depicted in a new handbook issued by the Milk Industry Foundation. According to the book, Milk Facts, 1,437,000 cows, valued at $112,086,000, produced $134,018,000 in cash farm milk income for New York farmers in 1939. Production of farm milk in the State for the year totaled 3,472,000,000 quarts; creamery butter, 17,052,000 pounds; cheddar cheese, 21,970,000 pounds; ice cream, 33,882,000 gallons.

The United States is one of the ranking milk-using nations in the world, with per capita consumption of fluid milk totaling 153 quarts a year, pictographs show. Milk and its products comprise over 25 percent of the 1,500 pounds of the principal foods consumed each year by the average American, the book says, with 45,000,000 quarts of milk delivered daily to homes and stores.

Pictorial charts and figures show the importance of the milk industry to the country's economic picture and illustrate how milk costs less in the United States in minutes of labor. Diagrammatic charts illustrate how the annual milk supply of some 51,000,000,000 quarts is utilized.

Fluid or fresh milk for cities and villages providing the farmer's highest cash return accounts for 29.9 percent of the country's yearly production. Creamery butter takes 31.6 percent; farm butter, 9.2 percent; while 11.7 percent of the milk is used as fluid milk on farms where produced. In making cheese 6.3 percent of the total milk is used: ice cream, 3.1 percent; and canned milk, 4.5 percent, according to charts.

A chart of the distributor's milk dollar shows 52.31 percent going to dairy farmers for milk; 19.24 percent to delivery labor; 8.21 percent to delivery expense; 6.33, plant expense; 4.94, plant labor; 2.78, administrative labor; 2.18, administrative expense; 1.68, office

labor; and profit, 2.33 percent, representing only a fraction of a cent per quart of milk.

"The production and utilization of milk have so increased in this country," says the booklet, "that today we are the greatest of dairy nations. Milk, butter, and other dairy products annually create an output valued at three and one-half billion dollars.

"Facts about the cows and the farmers that furnish the milk, the distributors whose efficiency has made wide usage possible, and the consumption of this 'most nearly perfect food' should lead to a clearer understanding of milk economics.

"One out of every fifteen families in the United States is dependent on milk for a livelihood. Milk is the largest single source of farm cash income—larger than cattle, twice cotton, three times wheat, five times tobacco. There are 25,000,000 cows on three-quarters of the Nation's 7,000,000 farms.

"Americans enjoy the best milk in the world, and economical distribution, meticulous sanitation, pasteurization, and other safeguards have made our milk supply a world standard."

Pollution Prevention

EXTENSION OF REMARKS

OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

LETTER FROM THE GOVERNOR OF IOWA AND RESOLUTION OF THE GENERAL ASSEMBLY OF IOWA

Mr. TALLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a letter received by me today from Gov. George A. Wilson together with a copy of House Concurrent Resolution No. 22, passed by the Forty-ninth General Assembly of the State of Iowa.

The people of Iowa are keenly interested in all phases of conservation. The fish and game clubs are pursuing constructive programs; farm practices reveal the enterprise of a forward-looking and progressive rural population; and good health is receiving more and more of the attention which this most valuable asset merits.

The people of Iowa should be commended for their zeal in promoting and practicing conservation on a broad scale.

The letter and resolution follow:

STATE OF IOWA,
EXECUTIVE OFFICE,
Des Moines, March 15, 1941.

Hon. HENRY O. TALLE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: I have the honor to transmit herewith certified copy of House Concurrent Resolution No. 22 of the Forty-ninth General Assembly of Iowa, which has just recently been adopted.

I ask that you give the contents your very serious consideration and that the matter receive the attention of the Congress.

With expressions of high regard.

Sincerely yours,

GEO. A. WILSON.

House Concurrent Resolution No. 22

Concurrent resolution petitioning the Congress of the United States to pass a bill for an act to abate existing pollution, to prevent the future pollution of the waters, streams, and lakes under present Federal control, and to impress upon the Iowa Members of the National Congress the desires of the Iowa people for the abatement and prevention of such pollution by national law

Be it resolved by the house (the senate concurring), That the Congress of the United States is hereby memorialized and requested to pass a law along general, broad, and effective lines to abate existing pollution, and to prevent the future pollution of the Federal waters, streams, and lakes of the United States.

That the Governor of the State of Iowa is hereby requested to officially convey such memorial and petition to the Congress of the United States, and to the Iowa Members thereof.

New Hampshire Legislature

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, March 17, 1941

ADDRESS BY HON. JOHN G. WINANT

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address by His Excellency John G. Winant, United States Ambassador to Great Britain. This address was made before a joint session of the New Hampshire Legislature prior to Mr. Winant's departure for Great Britain. It gives an insight into the thoughts in Mr. Winant's mind as he undertakes this major post.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Governor Blood, Mr. Speaker, members of the general court, no compliment you could have paid me could mean more to me than to meet with you in these legislative halls before leaving for England.

A quarter of a century has gone by since I first served, as you are now serving, as a member of the general court.

Nothing is more real to me than the memory of those with whom I worked here.

More than once I have told you, that what we do alone is of little importance, because what we accomplish is always measured by what others can do in relation to it.

There is nothing today in my opinion that means so much to this great country as unity in support of right action. Everybody counts. What we do together can never fail.

It was here that I learned, in the years of the depression, that the social and economic problems that we faced reached beyond State lines and across national frontiers. It was because I understood that and because I realized that security, a stabilized economy, and peace were essential to the happiness of all people everywhere that, whether in Washington or in Europe, I felt that I was still working for you here at home.

We know that the frontiers of democracy have been receding and the fundamental principles upon which this country rests have been challenged by those who would replace with force "government by consent." I can illustrate what I mean quite simply. Some days before the invasion of Czechoslovakia I visited there. Immediately following the invasion the students protested, not differently than students might demonstrate here in America. Six students were shot by the invaders, the other undergraduates were placed on forced labor. The university was closed.

For nearly 5 years now I have worked for an organization in which there is a representation of employers, labor, and of government. Many of the men with whom I have associated in the past have been killed or imprisoned, and the right to organize has been denied all those workers in those countries which have been invaded.

Just before the battle of Paris I was taken to Geneva by automobile. I saw not hundreds but thousands upon thousands of refugees—of farmer folk who worked all their lives for what little they had and who had been driven out by the invaders. That is what happened to youth and that is what happens to workers and employers as well and to their organizations, and that is what happens to farming people who come under the heel of the invader.

And then there is another thing that I think we all realize today, and I think it can't be said too often. The pillars of our Republic, the sinews of democracy have to do with the right of free speech, the right to peaceably assemble, the right of the free press, habeas corpus, the right of a man to his own body and trial by jury, the right to worship according to our conscience.

In the aggressor countries and in every country dominated by the aggressor countries, all these rights have been wiped out. There is no right of free speech, no right to assemble peaceably, no right of free press. All men subject to arrest at will, no trial by 12 men good and true, no trial by peace.

All those things that men have fought for here in this country; all those things that have made America what it is, those things have been wiped out in Europe. We are today the "arsenal of democracy," the service of supply against the aggressor nations.

England has asked that we give them the tools that they "might finish the job." We can stand with them as free men in the comradeship of hard work, not asking but giving, with unity of purpose in defense of liberty under law, of government answerable to the people.

With God's will and a just cause, we can do no less.

There is only one thing I would ask of you, and that is to believe me when I say that wherever I may be in the world, this is forever home to me.

Democracy in Action

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1941

ADDRESS BY R. M. EVANS, ADMINISTRATOR OF THE AGRICULTURAL ADJUSTMENT ADMINISTRATION

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given

by R. M. Evans, Administrator of the Agricultural Adjustment Administration, before a meeting of farmers and A. A. A. committeemen in St. Paul, Minn., Friday, March 14, 1941:

If we were living under the kind of system that dominates most of Europe, we would not be gathered together in a democratic meeting like this today. Free discussions and free decisions by freemen could not exist.

Instead of thinking out farm problems together and taking cooperative action through a truly democratic program, you would probably be getting your commands from a one-party, one-track bureaucracy. About this time of the year perhaps you would receive in the mail a technical document ordering you how to use every square foot of your farm, telling you exactly how much you will be allowed to keep for your own use and how much you must deliver to a government-controlled market at a government-fixed price. Later on an inspector would come to your farm and measure everything to see that you obeyed your orders to the last drop of milk or the last kernel of wheat. After that there would probably be more inspectors to check up on the first one, and then maybe some members of the secret police to check up on the inspectors and on you, too. If you made one little slip, or if you dared argue against the system, there would be a concentration camp waiting for you—or, in time of war, even a firing squad.

But this is America. You have something to say about how you will tackle your farm problems, and each man decides for himself whether he will participate in the farm program. That is democracy. And the Triple-A is democracy in action. If you choose to cooperate, you are making use of a program that you helped plan, that you are carrying out in your locality through farmer committees which you yourselves have elected. To conserve your soil, adjust your acreage in line with market demand, store your crops in the ever-normal granary, support your prices, and improve your income, you are offered certain positive incentives—not only payments and loans, but a stable agriculture for the entire country. Then, if world events beyond our control threaten to pile up surpluses, you can resort to marketing quotas by a two-thirds vote in a popular referendum.

Triple A is really a great cooperative. Six million farmers are its members and stockholders. Farmer committees, elected annually by farmers in all the agricultural communities of the country, are its real managers. They apply national policies to each individual farm. They are finally responsible for the success or failure of the whole enterprice. From their own practical experience, they constantly supply suggestions for improved administration year after year. Without hesitation or qualification, I can tell you that the farm program depends on these elected farmer committeemen to maintain real democracy and real efficiency in our cooperative enterprise.

I can promise you further that the overwhelming majority of farmers in America are determined to defend their cooperative farm program against any possible attack either from abroad or from within our own borders. Democracy has worked, and democracy will fight in self-defense.

Today I am here to report to you on the farm situation, which is partly good and partly bad. I'll begin with the favorable aspects.

First of all, agriculture is 100 percent prepared for total defense. In fact, farmers were ready long before the emergency call was issued.

We did not have to organize local committees all over the country to speed up the production of food and fiber. Farmers had already created their own organization of elected committeemen and had proved that they could work together to meet any kind of crisis.

We did not have to plow up every hillside in a desperate attempt to feed the Nation. Farmers were producing more than the people were consuming, more than we were able to export, and more than we needed to carry as reserves against any possible emergency. Moreover, 6,000,000 farmers were creating a second storehouse underground by putting into the soil the fertility that can be converted into food at any time. By resting crop-worn acres and by carrying out land-building practices through the agricultural conservation program, farmers have stored up great potential harvests for tomorrow.

If it had been necessary to mobilize 6,000,000 farmers to produce an abundance of food and fiber all of a sudden, in a frantic last-minute drive, the entire population would have stood up and cheered the dramatic effort. I believe the Nation owes an ever greater tribute to farmers for having done the same job before the emergency arose. It is certainly more foresighted and more heroic to prevent bottlenecks than to struggle to break them after they occur.

The second item that I have to report on the favorable side of the farm picture is that domestic demand for some types of commodities is definitely improving and is bound to improve still more. Producers of dairy, livestock, and poultry products, as well as most fruits and vegetables, can look forward to better prices as more people get jobs and as the wages of the workingman rise with greater industrial activity. Then, too, the food consumption of low-income families is being increased substantially by such programs as the stamp plan, free school lunches, and the purchase of surplus commodities for distribution to people on relief.

Two-thirds of all the families in this country are living on inadequate diets. To promote the general welfare and to provide for the common defense, we should lose no time arranging things so that all families can earn enough purchasing power to buy the food and clothing they need. We are moving in this direction, but we still have a long way to go for full employment and adequate income to provide the kind of living standards which only the United States of America can afford for all its citizens.

From the standpoint of the farmer, I am happy to say that butter and milk prices are now about 90 percent of parity. Pork prices are less than 80 percent of parity, but are considerably higher than last year. Beef prices are about 25 percent above parity.

But let's not fool ourselves with a false sense of security. Some day the war will end, and our defense program will no longer need to expand. That's all to the good, of course, but it will mean a violent shock for the farmer. After the war and the defense emergency are over, America faces the threat of a thundering depression. If the Nation's buying power skids downward, farm prices will slide in the same direction. The consequences would be especially disastrous for dairy and livestock producers who are now building up their herds to meet the rising demand brought about by the defense program.

This year the producers of our basic export crops are confronted with a grave crisis as a result of the war. If we do not solve their pressing problems, we cannot expect to have a stable agriculture in the years ahead. Essentially all farmers are in one boat, and in that same boat are the workers and businessmen who depend for a large part of their income upon rural buying power. All of us will have to pull on our oars, for there is a storm brewing, a dark and threatening storm big enough to tip over the boat if we do not work hard together.

I for one, am gravely concerned about the folks who cannot hope to make a decent living in agriculture. Bigger and better machines have made it possible to produce abundantly with less manpower. There are from six to eight million people on farms who are not needed to supply the Nation with food and fiber. One out of every four or five farm families could be taken off the land, and modern agriculture could still supply all our needs for home consumption and for export.

Of course, the defense program will provide work and wages to some of these people—temporarily at least—but the war has also wiped out several hundred million dollars' worth of agricultural exports on which many farm families depend for a good share of their income.

Where are these millions of farm folks who are not needed in agriculture and who cannot make a living by farming? They are not counted among the millions of folks who are roaming the country as homeless migrants. They are not counted among the millions of unemployed in our cities and towns. They have simply stayed on the farm because there are no opportunities for them elsewhere.

By supporting from six to eight million farm people who are not required for commercial production, agriculture is carrying out a large-scale relief program at its own expense. It is taking care of more people than all of the direct relief programs in all of the 48 States combined.

This situation is bad for agriculture and bad for the Nation. For several million people, farming is only a matter of keeping from starving. These folks commonly live on small parcels of land which they cultivate to the point of exhaustion. The result is a steady disappearance of soil resources accompanied by lower living standards for more and more farmers.

My grandparents came all the way from Norway to take up a homestead here in the Middle West. They were looking for something more than a bare existence with an overdue mortgage hanging over their heads. They wanted a chance to work for the real opportunities that America had to offer.

Subsistence farming on submarginal land is not an American answer to the stranded families who are unable to make an adequate living in agriculture. It is up to the Nation to give these folks a chance in other fields of enterprise. The problem of finding useful work for the surplus population on farms is a national problem, and it will take a great national effort to solve it.

I said before that the present war had brought on a grave crisis for the producers of our export crops. Farmers in this part of the country have felt the wartime loss of markets for about 90,000,000 bushels of wheat, 75,000,000 pounds of pork, and 140,000,000 pounds of lard.

As a matter of fact, the foreign market for our farm products has been shrinking for many years. In the early 1920's more than 60,000,000 acres were devoted to the production of farm exports, but during the current marketing year perhaps less than 15,000,000 acres will be required to produce all the agricultural commodities we are able to export.

Up to the present time at least, the war has hit farmers in the United States much harder than producers in other Western Hemisphere countries. Great Britain, the greatest buyer of foodstuffs in the world, has been forced to conserve its dollar exchange for the purchase of airplanes and other war materials in this country. Britain has thus imported a large share of its farm products from countries like Canada and Argentina that accept the pound sterling in exchange. These countries have actually increased their exports of some agricultural commodities during the war, while farm exports from the United States have gone down.

The main wheat exporting countries of this hemisphere are Canada, Argentina, and the United States. During the year ending on June 30, 1940, Canadian wheat exports were

81 percent larger than during the year before, and Argentine wheat exports were 53 percent larger. Wheat shipments from the United States, however, were 53 percent less.

Canada and the United States are the largest pork-exporting countries of this hemisphere. In the calendar year 1940 Canadian pork exports were 81 percent more than in 1939 and 358 percent more than the average of the 5-year period 1925–29. Pork exports from the United States in 1940 were 28 percent less than in 1939 and 74 percent less than the 1925–29 average.

In spite of more favorable export conditions for some commodities, huge agricultural surpluses have piled up in the farming countries of the Western Hemisphere. Lacking production control, they are in very serious trouble.

Canada has enough wheat to supply its markets for 2 years even if not another bushel were raised. The Canadian Government has been compelled to impose a penalty of fine and imprisonment upon farmers who market more than a fixed quota of wheat, and the quota is on the average only about half of the yield of the great wheat farms on the Canadian prairie.

Argentina has so much cheap corn that it is being burned as fuel in creameries, electric plants, and other establishments. The Argentine Government gave farmers some 20 cents a bushel for last year's corn and then offered it back to the farmers for about 5 cents a bushel. But the farmers would not even buy back their corn for a nickel, and much of it is just stacked up outdoors where it is rotting away.

I am citing these examples as a warning that our own farmers who raise export commodities would be in an equally serious plight if they did not have acreage allotments, commodity loans and marketing quotas.

Nobody knows just what the foreign market for our farm products will be after the war. We certainly cannot take it for granted that all our export trade in agricultural commodities is gone forever, any more than we can assume that we are sure to get back to the highest levels of the past. The future is a question mark. However, our agriculture has been geared to produce large quantities of some commodities for export, and I believe we should put up a fight, within the limits of good national policy, to regain our fair share of the foreign markets that farmers need so badly. It seems to me that Western Hemisphere countries in their own interest should work out marketing agreements for their great export commodities.

At any rate, right now farmers in the United States are facing a grave crisis as a result of vanishing exports. We will have to exercise stricter controls than ever before to keep the supplies of wheat and corn, for example, within the limits of available markets.

Let me add up what I have been saying about the farm crisis today and tell you what I think we can do about it.

1. There are too many people in agriculture wearing themselves out and wearing out their land by raising crops which are not needed to supply our markets.

2. Our exports of farm products have fallen away for many years; they have almost disappeared as a result of the war, and it is doubtful if they will come back in full after the war is over.

3. Farmers in this country have suffered worse losses in foreign trade than producers in other countries of this hemisphere.

4. In the absence of production control, farmers in Canada, Argentina, and other countries are having acute surplus troubles that we are able to avoid through the national farm program.

These factors add up to the proposition that for the first time farmers this year will have to decide in a referendum whether they will adopt marketing quotas for both wheat and corn.

The main reason is vanishing exports. Supplies are piling up as a result of the war, and we are also feeling the effects of long-time shrinkage in the foreign market for our farm products.

During the 20 years before the present war we exported on the average about 150,000,000 bushels of wheat and about 980,000,000 pounds of pork and lard annually. In this fiscal year, ending June 30, we do not expect to ship abroad more than about 20,000,000 bushels of wheat and about 230,000,000 pounds of pork and lard. Thus at present we have lost the foreign markets for almost nine-tenths of the wheat and more than three-fourths of the pork and lard that we formerly exported.

Primarily, because of shrinking foreign markets, our supplies of wheat and corn are now close to record levels. The 1940–41 wheat crop and carry-over from the year before amount to over a billion bushels of wheat. The corn crop and carry-over last fall amount to more than 3,000,000,000 bushels of corn.

It looks as if the supplies of both wheat and corn will exceed the levels that Congress has determined to be necessary to call for a referendum on marketing quotas. After a referendum is announced wheat growers will vote early this summer, and corn-hog producers in the commercial corn area will vote in the fall.

For years farmers have had their prices protected and their incomes increased by loans and payments and a Nation-wide adjustment program. If our only objectives were to control production and take care of the land in accordance with the best conservation practices, we could reduce the acreage of soil-depleting crops like wheat and corn to lower levels than ever before. But we cannot cut acreage so drastically as to squeeze out farmers who are having a hard enough time trying to live on small plots of ground. Farmers cooperating in the adjustment programs have gone about as far as they can under present conditions to keep corn and wheat supplies in line with existing demand.

It is now up to all farmers to do their part in keeping abundant supplies from running into wasteful surpluses. The most effective means available is to set limits on the marketings of those farmers who at present are not cooperating in the agricultural-adjustment program. Marketing quotas are the farmers' answer to the problems brought about by world forces which none of us created.

It is my duty to be very frank with you about the choice before us, and I am going to talk straight from the shoulder.

If marketing quotas fail to be approved by a two-thirds vote, wheat and corn loans are automatically eliminated by law. That might mean 30- or 35-cent wheat and 20- or 25-cent corn. Wheat and corn-hog farmers would face a crisis just about as bad as in 1932.

But that's not all. When corn is too cheap and too plentiful, farmers will feed more of it to an increasing number of hogs and also beef cattle and dairy cows. Eventually that means danger ahead for livestock and dairy producers.

We are going to work for the kind of America in which every family is able to buy the meat and milk and eggs that they need and should have. Farmers are going to keep on producing these good things in full measure for their fellow citizens. However, we now have on hand enormous supplies of foodstuffs. It would be folly to accumulate unmanageable surpluses. Past experience has shown this to be wasteful.

What I fear is that after the war ends, for the long pull after the defense program stops expanding, the number of dairy cows, beef cattle, and hogs will be in an upward spiral, and producers of dairy and livestock products will be overstocked at a time of falling prices and shrunken national income.

That is not the only danger ahead. If farmers cannot raise wheat profitably because of surpluses and low prices, many of them are bound to shift over to more commercial dairying and livestock production.

You may remember that wheat supplies began to pile up in the years following 1925, and wheat prices started to fall at the same time. Farm income from wheat fell off every year following 1927 right down to the bottom of the depression. Shortly after wheat prices and income had begun to slide downward in 1928, beef-cattle and dairy-cow numbers began an upward march for 6 years.

Many farmers have told me that the dairy and livestock business at that time looked better to them than wheat, and so they began to build up their herds.

Once an increase in livestock numbers is under way, however, it is hard to govern even when the bottom falls out of prices. When the depression came along after 1929, the prices of beef and veal and dairy products sank to the lowest levels on record, but the number of dairy and beef cattle kept right on increasing until the drought in 1934.

A slump in buying power in this country after the present war might catch farmers in just about the same position. If too much cheap corn is fed to an increasing number of hogs, and if cheap wheat causes too many farmers to stock up on dairy and beef cattle, there is a real danger that the dairy and livestock business may be overcrowded later on just when the market is at its worst.

That's why dairy farmers and livestock producers have a personal interest in the success of marketing quotas on corn and wheat this year. The stability of grain prices is their best assurance against excessive competition and overproduction in their own field at some future time when prices take a toboggan slide. Over a period of years the regulation of feed-grain supplies and prices will go a long way toward straightening out the wide swings in livestock numbers and prices that have ruined producers and hurt consumers in the past.

I have told you about the probable consequences if marketing quotas are voted down. Now let's see what will happen if marketing quotas are adopted.

Those of you who are cooperating in the triple-A program won't have to change your plans at all. You can market the entire output of your acreage allotment.

It is the noncooperator who will be brought into line. If he markets more than his quota, he will have to pay a penalty. If he wants a loan to store the excess over his quota, he can get only 60 percent of the rate that is available to cooperating farmers.

But I don't believe very many farmers will stay out of the program if marketing quotas are adopted. Since noncooperators will be subject to the quota, anyway, it will be to their advantage to plant within triple-A allotments, to take part in the agricultural-conservation program, and to establish eligibility for the full amount of commodity loans.

Marketing quotas will bring about almost complete participation and thus assure the greatest possible success of the entire program. Those who are not participating now will benefit from the many advantages offered by the farm program. Those who are a part of the program already will have the assurance that markets won't be flooded by noncooperators.

I saw a newspaper story recently to the effect that Australia is having trouble with large landowners who are trying to increase their wheat acreage in order to obtain larger payments from the Government. These large growers in Australia must be somewhat like the noncooperator in this country who raises all he can in an attempt to take unfair

advantage of the higher prices which are brought about by acreage adjustments and commodity loans.

Marketing quotas and high penalties for nonparticipation will make it impossible for a selfish minority to chisel on the overwhelming majority who are ccoperating in the national farm program. Marketing quotas treat everyone alike, big or little. In particular, they protect the small farmers who plant within their allotments year after year.

I hope I have made it clear what you will be deciding if you take part in a wheat or corn referendum this year. Failure to approve marketing quotas would mean surpluses and ruinous prices for wheat and corn, as well as grave perils for dairy and livestock producers. The adoption of quotas would mean cooperation by practically all commercial wheat and corn producers to keep supplies under control, to support prices, and to increase the farmer's cash return from wheat and corn.

Our goal is parity for the farmer. We have just about doubled farm income in the past 8 years, but agriculture as a whole is still about $2,000,000,000 below parity. We are not going to rest until that deficiency in farm income is made up in full.

Of course, we will hear the argument over and over again that parity prices for the farmer would mean undue hardship for the consumer. When you hear that complaint, I hope you will remember a few simple figures.

The wheat farmer gets only about 1 cent from a loaf of bread that sells at the store for 5 or 9 cents. The farmer's share of a 7-cent package of corn flakes is just a little over 1 cent. The cotton producer gets only about 7 cents from a dollar cotton shirt. Several years ago, when tobacco prices were above parity, the producer got only a cent and a half from the sale of the average package of cigarettes.

If the farmer were to get parity prices for his wheat and corn, the retail cost of a loaf of bread and a package of corn flakes would not need to increase by more than three-fourths of a cent each. Parity cotton would add only about a nickel to the cost of a cotton shirt.

Parity prices on farm products like wheat, corn, and cotton should mean very little increase in retail costs because the farmer gets such a small share of the consumer's dollar. But parity would mean a great deal to the farmer, and would also mean decided gains for labor, business, and industry. If the farmer is earning only enough to get along on the barest necessities, he obviously does not have enough left over to buy a radio or a car or an electric refrigerator. But just as soon as farm income rises above a subsistence level, the farmer's money goes to town in a big way. Then every additional dollar of farm buying power turns over in the channels of trade and brings more than a dollar's worth of benefit to the workingman, the storekeeper, and the manufacturer. For every $100 that farm income has increased since 1932 rural retail sales have gone up about $120. Thus, parity for the farmer would be a real gain for the folks who live in our cities and towns.

The farmer is genuinely interested in the welfare of consumers. They are his customers. Their welfare has been carefully safeguarded in A. A. A. legislation, through the ever-normal granary and otherwise. I am sure the overwhelming majority of city folks are equally fair in their attitude toward farmers. Consumers are apt to think fair prices are low prices. But all of us should keep in mind that food prices in America since the opening of the West have been the cheapest in all world history. As measured by the fair yardstick of parity, farmers have actually subsidized consumers about $2,000,000,000 a year for a long time in the form of cheap farm prices. This inequality can be ended with only slight advances in food costs that will be returned to consumers many times over through greatly increased farm buying power for city products.

I know we are all agreed that adequate farm income is vital to the welfare and the defense of America. Complete preparedness means more than guns. It means building up the physical and moral strength of every man, woman, and child. The farmer, like anyone else, must have a real stake in the democratic way of life that we are determined to defend. A strong agriculture is every bit as much a part of national preparedness as our planes and tanks and battleships. The first, the last, and the best defense of America is the American citizen himself.

Labor's Non-Partisan League

REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 14, 1941

Mr. McCORMACK. Mr. Speaker, I do not want to take issue with the gentleman from California, but I do know that Labor's Non-Partisan League in Massachusetts is not communistic and has in it no communistic influence or control. I can speak for my own State. I know many of them personally. Those that I know are constructive labor leaders. Of course, they are men of varying shades of thought and of opinions on matters of public interest, but they are all fine Americans. Speaking for Massachusetts, I feel it my duty to defend the men I know who belong to Labor's Non-Partisan League. I cannot speak as to the situation outside of Massachusetts; I am not taking issue with or entering into any controversy with the gentleman except insofar as Massachusetts is concerned. I have no knowledge of conditions elsewhere, upon which I can base and express an opinion. However, I do know that the members of Labor's Non-Partisan League in Massachusetts are very fine Americans. [Applause.]

Mr. LELAND M. FORD. I confined my remarks only to California.

Old-Age Pensions

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1941

MEMORIAL BY THE WASHINGTON STATE LEGISLATURE

Mr. SMITH of Washington. Mr. Speaker, public opinion throughout the Nation is rapidly crystallizing in favor of a national old-age pension, financed by a national tax and uniform throughout the 48 States of the Union. This is the formula which some of us have been advocating for the past 7 years, ever since the Townsend plan was first proposed in 1934.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the memorial of the Legislature of the State of Washington relating to this subject:

Senate Joint Memorial No. 4

Relating to old-age pensions

To the Honorable Franklin D. Roosevelt, President of the United States, and to the Senate and House of Representatives of the United States of America in Congress assembled:

We, your memorialists, the Senate and the House of Representatives of the State of Washington, in legislative session assembled, most respectfully represent and petition Your Excellency and honorable body as follows:

Whereas the present National and State social-security laws relating to old-age pensions are steps in the right direction, but have proved unsatisfactory, inadequate, inefficient, and subject to many conflicting State and National interpretations, all of which have created uncertainty and doubt as to the time, amount, and payment of old-age pensions; and

Whereas President Roosevelt has advocated a liberal, uniform, national old-age pension system; and

Whereas the Gallup old-age pension poll indicated that the citizens of the United States favor a uniform, national old-age pension system with individual monthly payments of $40 and such additional amounts as the Congress may from time to time decree; and

Whereas the electors of the State of Washington in the recent general election clearly indicated by the passage of an initiative measure that individual pension payments be increased to $40 per month: Now, therefore, be it

Resolved, That we, the Senate and House of Representatives of the State of Washington, do hereby respectfully memorialize and petition the President of the United States and the Congress of the United States to cause to be enacted into law a uniform, national, old-age pension system along the lines of the desire of the people as expressed in the Gallup national poll; and be it further

Resolved, That copies of this memorial be immediately transmitted to the President of the United States and to the Senate and the House of Representatives of the United States and to each Senator and Representative in Congress from the State of Washington.

Agriculture and Defense

EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1941

LETTER AND RESOLUTION FROM WISCONSIN COUNCIL OF AGRICULTURE

Mr. BOLLES. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter and resolution I have received from the Wisconsin

Council of Agriculture of Madison, Wis., relating to the position of agriculture in national and Western Hemisphere defense, as follows:

WISCONSIN COUNCIL OF AGRICULTURE,
Madison, Wis., March 11, 1941.

Hon. STEPHEN BOLLES,
Member of Congress,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN BOLLES: The Directors of the Wisconsin Council of Agriculture in session at Madison Thursday, March 6, after due consideration, adopted a resolution concerning the position of agriculture in national and Western Hemisphere defense. A copy of this resolution is herewith enclosed. I am sure you will be very much interested in studying this united considered opinion of Wisconsin farm leaders assembled in the Wisconsin Council of Agriculture.

Consumer minded groups and individuals, both in and outside governmental agencies, today exert considerable influence in the way of restricting price advances of consumer goods. This is evident with respect to consumer propaganda found in the National Defense magazine. Within the A. A. A., the consumers' division exerts a similar influence on the price trends of agricultural products.

Throughout this program of national preparedness, few seem to realize that the costs of the things farmers buy are rising way out of proportion to the farmer's ability to pay. Many of these same people who are very conscious of any increases in the cost of consumer goods, condone increasing labor rates, and pay little attention to the rising cost of capital goods, industrial products, and defense materials.

In view of this situation so adverse to the interests of agriculture, the free importation of products from Latin America is certain to have a further depressing effect which will be much more manifest in the case of agriculture than in its influence upon industry.

Your defense of American agriculture in helping to curtail these influences and proposed policies that threaten agricultural well-being will be very much appreciated.

Sincerely yours,
MILO K. SWANTON,
Executive Secretary.

RESOLUTION REGARDING THE POSITION OF AGRICULTURE IN NATIONAL AND WESTERN HEMISPHERE DEFENSE AS ADOPTED BY THE WISCONSIN COUNCIL OF AGRICULTURE AT MADISON MARCH 6, 1941

Hemisphere defense involves economic as well as military considerations and we urge that especial care be exercised during this period of emotional stress in order that agriculture in this country not be asked to carry an undue share of the economic burdens of such Western Hemisphere defense. Latin America is suffering from decreased agricultural exports, as is this country. They are accumulating agricultural surpluses as are we. Some of their surpluses are identical in kind with our own.

The Wisconsin Council of Agriculture urgently requests that our Government proceed slowly and cautiously in assuming responsibility for these foreign surpluses, at least until we have formulated methods for the efficient handling of our own agricultural surplus problems.

In relation to other major economic groups and classes in America, the farmers stand ready and are willing to assume their full share of the burdens and responsibilities of national defense. This is just as true now as during the last World War. Our production of food and fiber goes into the channels of trade largely in the form of consumer goods. Hence, the prices of our farm products are most directly affected and influenced by the efforts and propaganda of the consumer groups for stabilization of prices as voiced by the Consumer Division of the A. A. A. and as expressed in the National Defense magazine.

We protest that this program, designed to restrict price advances affecting agricultural commodities, apparently does not attempt at the same time to curtail the rising cost of capital goods, industrial products, and defense materials. The effect of this is to increase cost of production on the farm while curtailing the prices farmers receive. This results in lower net farm income.

We urge that efforts be made by our State and National Governments to assist more aggressively in moving our surplus agricultural commodities into world markets when and where at all possible.

The Harry Bridges Case

EXTENSION OF REMARKS
OF
HON. A. LEONARD ALLEN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1941

STATEMENT BY THE AMERICAN LEGION

Mr. ALLEN of Louisiana. Mr. Speaker, more interest has been manifested in Harry Bridges than in any other alien in our history. A long battle has been waged to deport him. My bill last year to deport him passed the House by a vote of 330 to 42, and was bottled up in another body. I have reintroduced the bill again this year (H. R. 1644) and it is now pending in the House. The American Legion has compiled a chronological statement of the Bridges case and because of the very great interest in the subject I am inserting it here in the RECORD.

[From National Publicity Division, the American Legion, Indianapolis, Ind., April 17, 1939. Revised and new material added February 14, 1941]

CHRONOLOGICAL REVIEW OF HARRY BRIDGES CASE

1900

July 28: Harry Bridges born at Melbourne, Australia.

1918

October 18: United States Congress passes Immigration Act providing for the deportation of dangerous aliens.

1920

April 12: Harry Bridges enters the United States at San Francisco, Calif.

1921

Bridges files application for citizenship papers at New Orleans, La., but permits them to lapse.

1928

Bridges files second application for first citizenship papers at San Francisco, Calif., but again permits them to lapse.

1930

November 17: In an important decision on Immigration Act, United States Circuit Court of Appeals for Ninth District, definitely holds that an alien is deportable because of membership in Communist Party. Decision made in case of an alien named Kenmotsu.

1931

March 23: United States Supreme Court denies certiorari in Kenmotsu case.

1933

September 23: Hearing starts at Little Rock, Ark., before Immigration Director Walter L. Wolfe, in case of Joseph George Strecker, an alien of Polish origin, charged with being a Communist active in 1932 Presidential election, for whom deportation warrant is asked. Strecker admits former membership in Communist Party but denies present membership.

October 25: Strecker hearing continued at Little Rock before Immigration Inspector Carroll D. Paul.

November 25: Deportation warrant under provisions of Immigration Act of 1918 issued for Strecker's arrest.

1934

January 23: Strecker is arrested at Little Rock, Ark., on deportation warrant.

May 8: Immigration authorities hold public hearing in Strecker case as provided by law.

May 9: Bridges leads San Francisco longshoremen into bloody strike. He is now president of the Pacific coast district of the International Longshoremen's Association, president of the San Francisco district council of the Maritime Federation, and vice president of the California State Federation of Labor.

July 5: Two strikers are killed and scores are injured as Bridges' longshoremen clash with San Francisco police.

July 16: Bridges foments a general strike in San Francisco which ties up all business, as a protest against the killing of two of his men. Governor proclaims martial law, calls out 7,000 California National Guard men.

August 14: Secretary of Labor Frances Perkins signs order for the deportation of Strecker.

1936

Bridges files third application for first citizenship papers at San Francisco but again lets them lapse.

June 25: Strecker, who has been held pending establishment of his foreign citizenship, files petition for a writ of habeas corpus in Federal court at Little Rock, Ark., which action stays deportation proceedings.

October 22: Republic of Poland recognizes Strecker as a citizen of Poland and Polish consul in Chicago issues him a passport.

December 26: Bridges jailed at Long Beach, Calif., after his car in which he was hurrying to address a meeting of strikers at Wilmington Bowl runs down and kills 8-year-old Joe Miranda.

December 27: Bridges released from Long Beach jail on writ of habeas corpus. He had been booked for investigation of negligent homicide. His defense was boy was riding bicycle without lights on wrong side of street and he did not see him.

1937

January 28: United States District Court for Eastern District of Arkansas denies writ of habeas corpus to Strecker in deportation case.

May 17: United States Circuit Court of Appeals, Eighth District, dismisses Strecker appeal.

June 16: Strecker starts new habeas corpus action in Federal court at New Orleans, La.

July 30: Federal Judge Wayne G. Borah, at New Orleans, denies Strecker a writ of habeas corpus.

September 21: Strecker appeals to the United States circuit court of appeals again, this time in fifth district.

September 22: Photostatic copy produced by Portland, Oreg., officials of 1937 Communist Party membership book No. 54,793, issued to Harry Dorgan, an alias of Harry Bridges.

September 22: Application made at Seattle, Wash., by Divisional Director R. J. Norene and

District Director R. P. Bonham, of the United States Immigration and Naturalization Service, to Edward J. Shaughnessy, Assistant Commissioner of Immigration and Naturalization, Washington, D. C., for a deportation warrant for Harry Bridges. The application included nine grounds, the last being "that he, Bridges, believes in, advises, advocates, and teaches the overthrow by force and violence of the Government of the United States of America."

October 18: Gerard D. Reilly, solicitor for the Department of Labor, examines Harry Bridges under oath in New York City to get a deposition in connection with the deportation action. To Reilly's question whether he had associated with the top fraction of the Communist Party, Bridges replied: "I decline to answer on advice of counsel." The counsel was Sidney E. Cohen, New York attorney.

Following the New York hearing, a number of protests reached the Department of Labor against the move to deport Bridges. Typical of these protests is the following from Mauritz Hallgren and Elizabeth Gilman, chairman and secretary, respectively, of Maryland Civil Liberties Committee:

"Maryland's Civil Liberties Committee strongly protests against reported intention of Department of Labor to issue warrant for deportation of Harry Bridges on unsupported charges that he is a radical agitator. We consider this contemplated move wholly an unwarranted attack upon constitutional rights of American labor."

1938

January 28: Solicitor Reilly replies to Maryland protest as follows: "Your committee need have no fear that the Department proposes to deport Mr. Harry Bridges or anyone else on unsupported charges. You may be sure that such procedure would be as repugnant to the Secretary of Labor as it would be to the Civil Liberties Committee of Maryland."

February 2: International Longshoremen's and Warehousemen's Union of Bellingham, Wash., sends resolution to Secretary Perkins attacking the record of District Director Bonham and demanding his removal. He is the official who filed deportation charges against Bridges.

February 3: Bridges writes to Secretary Perkins asking for a bill of particulars of the charges against him.

February 5: Department of Labor finds that the original copies of the application for the warrant for Bridges' arrest, made by the Seattle officials, have disappeared from the files of the Department. A request is rushed to District Director Bonham at Seattle to forward his office copies.

February 8: Wisconsin Workers' Alliance telegraphs Secretary Perkins as follows: "Wisconsin Workers' Alliance demands that President Bridges, of the Timber Workers' Union, be admitted to citizenship of this United States at once. We believe that no one should be denied citizenship because of his activities in labor circles."

February 8: Secretary Perkins writes to Harry Bridges admitting her office is investigating him. Madam Secretary in reply to Bridges' allegation that the charges against him were "trumped up," says: "Should the Department proceed with hearings it does not mean that it has adopted the view that the evidence which the complaining witnesses are submitting is necessarily trustworthy."

February 8: Solicitor Reilly is quoted in New York Herald Tribune as stating that "the Department of Labor was in possession of sufficient information about Harry Bridges, Pacific coast maritime leader for the C. I. O., to make out a prima facie case for his deportation as an alien."

Later Reilly declared he had said only that "a prima facie case could be made out against Bridges."

February 11: Bridges wires Secretary Perkins asking immediate hearing on the deportation charges, alleging that attempts were being made to prejudice the case against him.

February 12: James L. Houghteling, Commissioner of the Immigration and Naturalization Service, advises Bridges: "Have your request for prompt hearing and agree with you that it is desirable that you be given opportunity to be heard as soon as possible on charges relating to deportation. Unable to advise you today the details of time and place but will notify you when arrangements complete."

March 5: Bridges arrested at Baltimore, Md., on deportation warrant at office of Acting District Director Leon R. Fouch of the Immigration and Naturalization Service. Released on his own recognizance. Hearing scheduled for April 25, 1938, at San Francisco, Calif.

Original warrant for the arrest of Bridges found to be endorsed on its face as follows:

"Pending further proceedings, the alien may be released from custody upon his own recognizance."

On back of warrant is following endorsement:

"Served on alien at the office of the Immigration and Naturalization Service at Baltimore, Md., at 10:10 a. m. March 5, 1938. Hearing to be commenced at San Francisco, Calif., April 25, 1938. Charles R. Frank, Immigrant Inspector."

March 23: Secretary Perkins advises the Attorney General of the United States that formal deportation charges against Harry Bridges would be aired at a public hearing at San Francisco, Calif., beginning April 25, 1938.

March 25: District Director Bonham, of Seattle, reports to T. B. Shoemaker, Deputy Immigration and Naturalization Commissioner in Washington, D. C., that Communists were plotting to intimidate witnesses scheduled to appear against Bridges at San Francisco deportation hearing, that radicals also plotted to picket the hearing, and that numerous protests were being received against the holding of public hearings in the case.

April 6: United States Circuit Court of Appeals for the Fifth Circuit at New Orleans, La., reverses the decision of District Judge Borah which denied a writ of habeas corpus to Strecker. The higher court held, in effect, that membership in the Communist Party, standing alone, is not sufficient ground for deportation, thus setting up a conflict with the United States Circuit Court of Appeals for the Ninth District which had held exactly the reverse in the Kenmotsu case.

The decision of the higher court in the Strecker case, however, was based upon the conclusion of the court that insufficient evidence had been offered by the Government to show that the Communist Party was an organization that taught the overthrow of the Government of the United States by force and violence.

It followed, therefore, that at a retrial before the district court an opportunity would have been given to the Government to introduce additional evidence showing the character of the Communist Party. Certain stock exhibits which had been offered usually by the Government in such deportation cases to show the character of the Communist Party, and which for some unknown reason were not offered in evidence before the district court in the Strecker case, were available and had previously been accepted by many Federal courts as proof that the Communist Party was an organization that taught the overthrow of the Government of the United States by force or violence.

Nevertheless, Secretary Perkins, Commissioner Houghteling, and Solicitor Reilly refused this opportunity to submit the usual stock exhibits in a retrial of the Strecker case, but proceeded to have the case appealed to the United States Supreme Court on an admittedly defective record.

April 8: Arthur J. Phelan, inspector in charge of legal division in San Francisco, notifies the Department of Labor that an informant had reported that Harry Bridges had ordered his "beef squad" to get in a lot of practice because there would be a lot of work to do on the witnesses who were to appear against him. Bridges also was quoted as boasting he would beat the deportation charges, and that if he did lose, he would be able to stave off his deportation for years.

April 12: Bridges through his counsel again demands a bill of particulars of the deportation charges against him.

April 14: District Director Bonham writes Commissioner Houghteling that "in my opinion and that of others with whom I have talked, the safest place to hold Bridges deportation hearing would be at Angel Island; they have a special launch that we could utilize, if necessary, for the safety of our witnesses."

April 14: Commenting on Bridges' request, Deputy Commissioner Shoemaker, in a memorandum to Solicitor Reilly, says: "The basic thought is that the Department would be less likely to be criticized from any sources if it adhered strictly to the long-established practice in warrant proceedings and did not depart therefrom for this or any other particular case."

In long hand on the margin of this letter is found the following notation: "I do not entirely agree but matter can be postponed until case is set down for hearing again. G. D. R." (G. D. R. are the initials of Solicitor Reilly.)

April 14: Commissioner Houghteling sends memorandum to Secretary Perkins suggesting as one reason for postponing of Bridges' deportation hearing, the following:

"If we go ahead with the hearing scheduled for April 25 and the Supreme Court should later affirm the action of the circuit court of appeals in the Strecker case, the Department might be charged with 'smearing' Harry Bridges unnecessarily."

April 20: District Director Bonham wires Commissioner Houghteling as follows: "Radio news announces your continuance of Bridges deportation hearing until Supreme Court decides New Orleans Strecker case. Hope this is incorrect as difficult to protect our witnesses indefinitely. I have examined entire record of testimony and the court decisions in Strecker case. Service failed introduce adequate proof Communist Party teaches violence. We have ample such evidence, both in current official party documents and on part of witnesses. New Orleans Strecker case weak and devoid of proper proof; therefore, not hurtful or controlling our case. Hope same will not be regarded as precedent or of sufficient consequency postponing pending case. Please wire instructions."

April 21: Edward W. Cahill, District Immigration Commissioner at San Francisco, writes letter to Commissioner Houghteling, containing following significant sentence:

"Before we bury this Bridges case, may I just present this sequence of facts?"

April 21: Commissioner Houghteling writes to Cahill, saying:

"Because of the reproof which I was obliged to administer therein to Mr. Bonham's excessive zeal and bad judgment in putting into the record his telegram prejudging the action of the central office, I request that you destroy this copy after reading it; you may, however, show it to Mr. Haff, whom I wish to keep in touch with the developments in this situation. Because Raphael Bonham is so keenly devoted to his duty as he sees it, I should not want a knowledge of this gentle reprimand to go beyond yourself and Mr. Haff."

April 26: Petition for rehearing of the Strecker case by the United States Circuit Court of Appeals filed at New Orleans by United States District Attorney R. A. Viosca.

May 5: Commissioner Houghteling in an address before the National Executive Committee of the American Legion in Indianapolis, announces that the Department of Labor had postponed the deportation hearings in the Bridges case, scheduled to start April 25, because of the appellate court decision in the Strecker case, and that the Bridges case would be held in abeyance until the United States Supreme Court settled the issue whether membership in the Communist Party of America was grounds for deportation.

May 6: National executive committee of the American Legion adopts resolution demanding deportation of Harry Bridges. The resolution follows:

"Whereas Harry Bridges has been charged with fomenting strikes, labor racketeering, conspiracy to cripple our merchant marine, membership in the Communist Party, intention to attempt overthrow of the American Government by force, and other acts making him ineligible to American citizenship and subject to deportation; and

"Whereas appropriate charges are pending against the said Bridges before the Department of Labor; and

"Whereas trial of said charges has been repeatedly continued and now appears to have been indefinitely postponed; and

"Whereas activities such as those with which Bridges is charged will, if continued, inflict damage upon our citizenry and endanger our form of government: Now, therefore, be it

"Resolved, by the national executive committee of the American Legion, That demand be made upon the Department of Labor to proceed with the immediate prosecution of the charges against Harry Bridges."

May 26: Largely as the result of the efforts of the American Legion, Congress adopted House Resolution 282 providing for a special committee headed by Congressman MARTIN DIES, of Texas, to investigate un-American activities within the United States. The sum of $25,000 is appropriated for the work of this committee.

August 14: Dies committee opens its probe into un-American activities. Edward F. Sullivan, one of its investigators, files charges that Harry Bridges, west coast C. I. O. leader, was being advised, instructed, and protected by "an outstanding" official of the Department of Labor.

August 16: Dies committee votes to inquire immediately into charges that Labor Department officials had given "aid and advice" to Harry Bridges when efforts were being made to have him deported as an alien Communist.

September 7: Petitions for certiorari filed in Strecker case in United States Supreme Court.

September 22: The twentieth annual national convention of the American Legion at Los Angeles, Calif., elects Stephen F. Chadwick, of Seattle, Wash., as national commander and adopts following resolution on Bridges case:

"Be it resolved by the national convention of the American Legion, That we demand the immediate trial and deportation of Harry Bridges and like undesirable aliens."

September 22: American Legion national convention at Los Angeles also adopts following resolution:

"Whereas certain officials of the Department of Labor have failed miserably in enforcement of the laws relative to immigration and deportation; and

"Whereas said officials of the Department of Labor have consistently blocked the passage of new and much-needed laws to regulate immigration and deportation: Now, therefore, be it

"Resolved by the American Legion in national convention at Los Angeles, That it demands that the Congress of the United States investigate the failure of these officials to comply with the existing immigration laws and take such steps as may be necessary to correct this unwarranted failure of duty."

October 17: Writ of certiorari granted by United States Supreme Court in Strecker case.

October 24: Ray E. Nimmo, American Legion attorney from Los Angeles, Calif., appearing before Dies committee in Washington, accuses Secretary Perkins of resorting to a "subterfuge to protect" Harry Bridges.

November 15: National Commander Chadwick addresses a letter to Secretary Perkins demanding that the Department of Labor proceed with the trial of Bridges.

November 18: Secretary Perkins replies to Commander Chadwick, saying the Bridges case was being held up pending a decision by the United States Supreme Court in the Strecker case.

November 24: National Commander Chadwick again addresses letter to Secretary Perkins urging her to bring Bridges to trial not on grounds he is a member of the Communist Party but on the grounds that he advocates the overthrow of the Government by force or violence.

December 7: National Commander Chadwick appears before the Dies committee and reviews Bridges case.

December 27: National Commander Chadwick sends a letter to every Member of the new Seventy-sixth Congress, outlining charges against Bridges and reviewing failure of Labor Department officials to enforce the deportation law against Bridges.

1939

January 3: Dies committee files exhaustive 124-page report of communistic penetration of Government, and asks for $150,000 for continuance of its probe.

January 24: Representative J. PARNELL THOMAS of New Jersey files House Resolution 67 asking for the impeachment of Secretary of Labor Perkins, Commissioner of Immigration Houghteling, and Solicitor Reilly. Resolution is referred to the Committee of the Judiciary.

February 3: The House, by a vote of 344 to 35, votes to continue Dies committee; also votes appropriation of $100,000 for committee's expenses.

February 8: Secretary of Labor Perkins makes a personal appearance before the House to defend herself in lengthy address on Bridges case.

February 10: Strecker case argued before United States Supreme Court.

March 23: House Judiciary Committee returns unfavorable majority report on Parnell resolution seeking impeachment of Secretary Perkins and her two aides, and House adopts the majority report, thus ending impeachment attempt. However, a minority report charged that the three Labor Department officials had been "lenient and indulgent to Harry Bridges in the conduct of his deportation case to an unprecedented extent."

The minority report on the Parnell resolution follows:

"We are in general agreement with the findings and recommendations contained in the report of the committee, but disagree to the extent and in the particulars contained in these additional views.

"We feel that from the testimony adduced before the committee and from the records and files examined by the committee it is apparent that the Secretary of Labor, the Commissioner of the Immigration and Naturalization Service, and the Solicitor of the Labor Department have been lenient and indulgent to Harry Bridges in the conduct of his deportation case to an unprecedented extent.

"The record before us lacks proof of any kind as to the motive actuating such leniency and indulgence. It cannot escape our severe condemnation and censure. Bridges' record as a sympathizer with radical and communistic movements, if not his active participation therein, is an open book. He should have been dealt with firmly, and his case should have been disposed of with all possible speed. The confidence of the people in the proper administration of the laws governing the deportation of aliens, particularly those associated with the extreme radical and communistic elements, by the present Secretary of Labor and her subordinates has been profoundly shaken by the failure promptly, vigorously, and impartially to proceed to a final determination in his case.

"This course of conduct which we condemn does not justify impeachment, but it does call for the official and public disapproval of this committee.

"U. S. Guyer, C. E. Hancock, Earl C. Michener, John M. Robsion, Chauncey W. Reed, John W. Gwynne, Louis E. Graham, Wallace E. Pierce, B. J. Monkiewicz, Raymond S. Springer."

March 28: Harry Bridges files fourth application at San Francisco for first citizenship papers.

April 17: United States Supreme Court, in a long-awaited decision in the Strecker appeal, rules, in an opinion written by Justice Owen J. Roberts, that the Immigration Act does not authorize the deportation of a nonnaturalized alien solely because he once held membership in the Communist Party.

The high Court held the 1918 statute providing for the deportation of nonnaturalized aliens belonging to organizations advocating violent overthrow of this Government was intended to apply only to two classes:

1. Those belonging to such organizations when they entered the country.

2. Those belonging to such organizations when the deportation proceedings were instituted.

The immediate effect of this ruling was to order Strecker released from custody, but by wiping out a construction of the deportation statutes, followed by the Department of Labor for many years, the ruling affected many other cases.

July 10: Bridges' deportation hearing opens at San Francisco, with James M. Landis, dean of the Harvard Law School, as special examiner.

September 14: Bridges' deportation hearing closes at San Francisco.

December 30: In an 80,000-word report, Special Examiner Landis reports to Secretary Perkins that in the 1,500,000-word testimony of 32 witnesses at the San Francisco hearing he could find no substantiation that Bridges is or ever was a member of the Communist Party.

1940

January 8: Secretary Perkins cancels deportation warrant issued against Bridges.

January 27: Bridges seeks a short cut in San Francisco to American citizenship by seeking to invoke the provisions of the Cable Act of 1922. This provides that an alien may apply immediately for his second, or final, papers by proving he or she had been married for 3 years to an American and was living in this country. Bridges explained his wife, born in Scotland, acquired American citizenship by a prior marriage to an American.

February 8: Dies committee renews fight on Bridges, according to announcement of Representative NOAH M. MASON, of Illinois, a member of the committee.

May 14: American Legion-sponsored bill to deport Bridges introduced in House of Representatives by Representative A. LEONARD ALLEN, of Louisiana. Measure is known as H. R 9766.

June 13: House of Representatives passes Bridges deportation bill by a vote of 330 to 42.

September 25: The twenty-second national convention of the American Legion adopts following resolution:

"Resolved, That we urge the speedy enactment of H. R. 9766 and the immediate deportation of said Harry Bridges."

1941

February 12: Attorney General Robert H. Jackson announces that on the basis of "new and additional" evidence contained in a 2,500-word report on Bridges prepared by the Federal Bureau of Investigation, he had ordered a new deportation hearing for Bridges, to start in San Francisco, Calif., March 31.

Cladakis, Administrator of the New York State Milk Pact, is an Able and Fearless Official—Except for the Racketeers and a Few Die-Hards, Administrator Cladakis Has the Producers of New York State Backing Him to a Man

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1941

ARTICLE BY JOHN H. BRIOR, WATERTOWN (N. Y.) TIMES

Mr. CULKIN. Mr. Speaker, a Daniel has come to judgment in the clear-visioned Cladakis, Federal and State administrator of the New York State milk shed. In that murky atmosphere where distributor interests until recently controlled, Mr. Cladakis has hewed to the line and steadily refused to be purchased or intimidated. The Secretary of Agriculture, Mr. Claude Wickard, has been most valiant in his support of Mr. Cladakis and is thoroughly steeled against the arts and wiles of the milk politicians, who have consistently and for many years sold the New York State producers down the river.

Under the firm, impartial, and intelligent supervision of Mr. Cladakis, and partially as a result of the almost unanimous vote on the amendments to the Federal-State milk orders on February 17, this milkshed is in a comparatively peaceful condition. As a result of this vote, $5,000,000 will be added to the dairymen's annual income. In addition to this, the amendments give the administrator the power to audit the books of the dealers and cooperatives.

As a result of the new powers granted under the amendments, Mr. Cladakis has promptly uncovered fraudulent practices in buying milk for the New York State market. These frauds stem from the dealer-contrived device of surplus, and are said to be wholesale in character. Mr. Cladakis intends to bring these malefactors to justice. I trust that he will call in the long arm of criminal law for the purpose of putting these thieves, big and little, behind the bars. I was district attorney of my county for 10 years, and it was my observation that as long as lawbreakers are able to keep out of jail they continued to offend. Reimbursement or a payment of a penalty is simply a license to go and steal some more. My suggestion to Mr. Cladakis is that these cases, when they arise, should be called to the attention of the district attorney of the county where the offense was committed and put them on trial before up-State juries. When these "gentry" learn that that is to be the procedure, they will mend their ways.

Naturally, this action of Mr. Cladakis in bringing these thieves to book has created some excitement. They have enjoyed immunity so long with State instrumentalities inactive or failing to follow up with criminal prosecution that they are naturally greatly disturbed. They now seek the removal of Cladakis and the substitution of a weaker type of administrator. These larcenists are seeking to appoint their own prosecutor. The answer is to push these prosecutions vigorously and without mercy.

I am including a statement which appeared in the Watertown (N. Y.) Times of March 15, 1941, and written by its able dairy editor, Mr. John H. Brior. Mr. Brior is correct in his statement that any move on the part of the exploiters of the dairymen to force the transfer of Administrator Cladakis will meet with rebuke from the producers of New York State.

Pursuant to the permission of the House, I append hereto Mr. Brior's article:

[From the Watertown (N. Y.) Times of March 15, 1941]

DRIVE AGAINST CLADAKIS SEEN—PETITION FOR REMOVAL REPORTED CIRCULATED—CONTENTS NOT ANNOUNCED—OBJECTION TO MILKSHED ADMINISTRATOR BELIEVED BASED ON FEDERAL ORDER REVISION AND RECENT ORDERS HITTING INCOME OF SOME HANDLERS

(By John H. Brior)

A small group of milk dealers in New York City and up-State were today reliably reported to be quietly circulating a petition asking for the removal of N. J. Cladakis as Federal administrator of the New York milkshed.

The petition, whose contents have not been divulged, today was said to bear the signatures of "only a few" milk dealers, and it is said there is some question if it will ever be submitted to Secretary Claude R. Wickard in Washington, as was the original plan.

Circulation of the petition started, it is reported, after a conference of a small group in a New York City hotel. An attempt was made more recently to have it supported by a dealers' association in New York but the attempt failed and reference to it was kept from the minutes of the meeting.

Federal officials, admitting knowing of the petition unofficially, decline to discuss it excepting to say that "there is nothing we can do about it. If any individual or group seeks to petition the Federal Secretary, it is their right and should not be discouraged."

It is known that several dealers have refused to join in signing the petition.

The move is the second against Mr. Cladakis since he was transferred from Chicago to New York nearly 9 months ago.

It is said that revision of order 27, the marketing pact for the New York milkshed, and Mr. Cladakis' subsequent orders will affect income margins of dealers generally in the industry.

Officials feel that any move to force the transfer of Administrator Cladakis would meet with rebuke by the industry. Revision of the marketing agreement and orders to prevent discrimination against New York producers should benefit all phases of the State's $2,000,000,000-a-year dairy business.

The new program, effective since March 1, is expected to be a tremendous stabilizing influence in the market and raise prices to farmers, at the same time lowering consumer costs and making sales volume turnover steadier.

Proportion of Defense Expenditures To Be Raised by Taxes

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1941

LETTER FROM THE SECRETARY OF THE TREASURY

Mr. LUDLOW. Mr. Speaker, at this time when taxes are very much in the public mind I think that a letter I have received from the Secretary of the Treasury will be of general interest. In it he expresses his views as to the proportion of national-defense expenditures that should be raised by taxation and the proportion that should be raised by borrowings.

His letter follows:

THE SECRETARY OF THE TREASURY,
Washington, March 14, 1941.

The Honorable LOUIS LUDLOW,
Chairman, Subcommittee on Appropriations for Treasury and Post Office Departments,
House of Representatives,
Washington, D. C.

MY DEAR MR. LUDLOW: It has come to my attention that the printed record of the hearings December 17, 1940, on the Treasury-Post Office appropriation bill for the 1942 fiscal year incorrectly indicates that I believed the cost of Government, as increased by national-defense needs, should be financed on a ration of one-third from revenues and two-thirds from borrowing. This unfortunate impression has since been referred to as fact by a number of reporters and editorial writers.

On February 12, 1941, in testimony on the Public Debt Act of 1941 before a subcommittee of the Senate Finance Committee, I responded as follows to a question by Senator BYRD:

"If the Congress would adopt a program under which we could raise through revenues an amount sufficient to finance two-thirds of all expenditures, and one-third from borrowing, I think it would be a very wholesome method to follow."

I shall appreciate any help you can give me in clearing up my position in the minds of Members of the Congress, writers, and others interested.

With sincere personal regards, I am

Faithfully yours,

HENRY MORGENTHAU, JR.,
Secretary of the Treasury.

For the Best Interests of the Nation

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1941

EDITORIAL FROM IL PROGRESSO ITALO-AMERICANO AND THE CORRIERE D'AMERICA

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in Il Progresso Italo-Americano and in the Corriere D'America on March 2, 1941:

[From Il Progresso Italo-Americano and Corriere D'America of March 2, 1941]

FOR THE BEST INTERESTS OF THE NATION

There is too much discussion, particularly for and against the foreign and economic policies of the Government. These policies are being discussed in Congress, in the press, on the radio, and in meetings of every party. Special organizations have been formed with the most diversified aims, to oppose any trend in favor of intervention or to reinforce it against the opposition of the isolationists; to invoke a policy that is clearly defensive or one more vigorously anglophile. And these organizations send out a flood of telegrams, resolutions, and pamphlets, to Senators, Congressmen, newspapermen, and heads of societies of every kind.

No one should even think of placing a gag on public discussion. But neither should it be forgotten, particularly when it concerns people who hold places of some responsibility, that we are in a period of exceptional emergency and that it is necessary spontaneously and conscientiously to impose limits on the free exercise of any propaganda which might create obstacles in the way of Government policy and consequently in the way of the best interests of the Nation.

A few short months ago we reelected for a third consecutive term a President who spoke to the American people in the clearest terms even as regards foreign policy. And one of the reasons which favored his reelection was that the pilot of the ship should not be changed while the storm rages, particularly when you have an expert commander. And after all what would the country have gained from the election of his opponent Wendell Willkie, notoriously ignorant of the great international problems who, in the end, fully endorsed the Rooseveltian foreign policy and who, even after his much-publicized visit to England, came back with several proposals which Congress could not consider because they were contrary to the interests of national defense.

President Roosevelt has at his command the most complete and most precise elements of judgment. And he is steadfast for his program which—no one can deny—has had the approval of the great majority of the American people. He therefore has the right to count on the confidence and cooperation of all in this moment charged with grave responsibilities, while the work of national rearmament continues with ever-increasing rhythm so that, regardless of how events may develop beyond both oceans, the country will be prepared to face any situation.

It is high time to support with discipline, serenity and confidence, the work of the Chief Executive, sacrificing, whenever necessary, ideologies, sympathies, and personal or partisan interest for the best welfare of the Nation.

Even the President's warning to the press to avoid publishing military secrets will not remain unheeded.

When the skies are clear again, that is, when the war is ended, we shall again take up our discussions with greater freedom. And let us hope that we shall not have to wait long, for in no field as in that of the press do we more painfully feel the duty of sacrificing, in times of national danger, the right of free expression in favor of the duty of not endangering the safety of the internal united front and the work of defense entrusted to the care and responsibility of the Federal Government.

GENEROSO POPE.

Newspaper Public Service in Times of Emergency

EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1941

LETTER FROM INLAND DAILY PRESS ASSOCIATION, INC.

Mr. BOLLES. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter I have received from the Inland Daily Press Association, Inc., of Chicago, Ill., containing a statement of their policy as to newspaper public service in times of emergency, as follows:

THE INLAND DAILY PRESS ASSOCIATION,
Chicago, Ill., February 27, 1941.

Hon. STEPHEN BOLLES,
Old House Office Building,
Washington, D. C.:

This is to certify that the following statement of policy as to newspaper public service in times of emergency was presented to the delegates of our member newspapers on February 18, 1941, in regular convention assembled and unanimously adopted:

"The Inland Daily Press Association, the oldest and largest regional daily newspaper association in America, representing more than 300 dailies in 19 North Central States, is proud of its long record of public service.

"This association and its individual members always have loyally supported the Nation in time of emergency.

"Today, as the Nation is again engaged in a great defense effort, the Inland Daily Press Association, assembled for its fifty-seventh annual meeting, urges the press of America to use its facilities to best further real national unity.

"We urge our members and the newspapers of America to cooperate to the fullest with the Government in the safeguarding of vital military secrets. Likewise, we urge the Government to keep the American people as completely informed on the progress of national defense and of developments in international affairs as is compatible with the national safety.

"At the same time, we urge that the press remain ever vigilant to the preservation of civil liberty, freedom of speech, and of the press. These are paramount if our Republic is to survive the world tide of totalitarian ideologies."

Respectfully submitted.

INLAND DAILY PRESS ASSOCIATION, INC.

Wisconsin's Milk Production

EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1941

NEWS RELEASE BY THE MILK INDUSTRY FOUNDATION

Mr. BOLLES. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a news release by the Milk Industry Foundation of New York City, relating to milk production in Wisconsin, entitled "Wisconsin Largest Dairy State," as follows:

WISCONSIN LARGEST DAIRY STATE, NEW FOUNDATION FIGURES REVEAL

NEW YORK.—Wisconsin's leading position in the dairy industry is vividly depicted in a new handbook issued by the Milk Industry Foundation. According to the book, Milk Facts, 2,223,000 cows valued at $157,833,000 produced $134,991,000 in cash farm milk income for Wisconsin farmers in 1939. Production of farm milk in the State for the year totaled 5,569,000,000 quarts; creamery butter, 173,227,000 pounds; cheddar cheese, 284,035,000 pounds; ice cream, 7,588,000 gallons.

The United States is one of the ranking milk-using nations in the world with per capita consumption of fluid milk totaling 153 quarts a year, pictographs show. Milk and its products comprise over 25 percent of the 1,500 pounds of the principal foods consumed each year by the average American, the book says, with 45,000,000 quarts of milk delivered daily to homes and stores.

Pictorial charts and figures show the importance of the milk industry to the country's economic picture, and illustrate how milk costs less in the United States in minutes of labor. Diagrammatic charts illustrate how the annual milk supply of some 51,000,000,000 quarts is utilized.

Fluid or fresh milk for cities and villages providing the farmer's highest cash return, accounts for 29.9 percent of the country's yearly production. Creamery butter takes 31.6 percent, farm butter 9.2 percent, while 11.7 percent of the milk is used as fluid milk on farms where produced. In making cheese, 6.3 percent of the total milk is used; ice cream, 3.1 percent, and canned milks, 4.5 percent, according to charts.

A chart of the distributor's milk dollar shows 52.31 percent going to dairy farmers for milk, 19.24 percent to delivery labor, 8.21 percent to delivery expense, 6.33 plant expense, 4.94 plant labor, 2.78 administrative labor, 2.18 administrative expense, 1.68 office labor, and profit 2.33 percent, representing only a fraction of a cent per quart of milk.

"The production and utilization of milk have so increased in this country," says the booklet, "that today we are the greatest of dairy nations. Milk, butter, and other dairy products annually create an output valued at 3½ billion dollars.

"Facts about the cows and the farmers that furnish the milk, the distributors whose efficiency has made wide usage possible and the consumption of this most nearly perfect food should lead to a clearer understanding of milk economics.

"One out of every 15 families in the United States is dependent on milk for a livelihood. Milk is the largest single source of farm cash income, larger than cattle, twice cotton, three times wheat, five times tobacco. There are 25,000,000 cows on three-quarters of the Nation's 7,000,000 farms.

"Americans enjoy the best milk in the world and economical distribution, meticulous sanitation, pasteurization and other safeguards have made our milk supply a world standard."

Extracts From Letters Concerning the Proposed St. Lawrence Seaway Project

EXTENSION OF REMARKS
OF
HON. ALFRED F. BEITER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1941

Mr. BEITER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following quotations from a few letters which I have received lately concerning the St. Lawrence seaway. These show in a few words widespread opposition to that project.

Ralph L. Carr, Governor, State of Colorado, February 3, 1941:

I learned more about it than I had known heretofore when I visited Washington recently and became convinced at that time that it was not for the best interests of the people of this section of the country at least.

Ben F. Stapleton, mayor, Denver, Colo., February 25, 1941:

I cannot see any reason why anybody west of Buffalo should be in favor of such a project.

L. C. Heare, mayor, Port Arthur, Tex., March 6, 1941:

Our chamber of commerce has gone on record as being opposed to this project.

George W. Morgan, mayor, city of Beaumont, Tex., February 24, 1941:

A resolution passed by the city commission on December 31, 1940, opposing the St. Lawrence Seaway says:

"There is no need for the St. Lawrence Waterway by the citizens of the United States in reaching the open sea, incident to the exportation, importation or other handling of foreign and domestic commerce by water, existing port facilities being adequate to care for the needs thereof."

F. G. Robinson, traffic manager, Galveston Chamber of Commerce, May 21, 1940:

I might state that both the Texas and Southwestern Industrial Traffic League, of which we are members, have all along vigorously opposed the St. Lawrence Waterway Treaty, and I know that that position will be adhered to in the event the matter again comes before Congress.

R. A. Hefner, mayor, city of Oklahoma City, Okla., February 26, 1941:

I can see no reason why we should spend that large amount of money for this purpose. It cannot be regarded as a war measure or defense project; besides, I don't believe in loading the people with taxes. We are bending now until our backs are breaking with the burden of taxation.

Joseph M. Boos, city clerk, Battle Creek, Mich., February 20, 1941:

Resolution adopted by city commission on February 10, 1941:

"Whereas the effect of this project, if consummated, will, in our opinion, be detrimental to the welfare of the Nation, to its industries, and the transportation agencies which now serve such industries; and

"Whereas the seaway route if constructed will be tolls free, thus benefiting no one except the navigation companies who do not reflect the savings thus made in the price of commodities transported, to the consumer: Therefore be it

"*Resolved*, That we seriously object to the taxpayers of this community being saddled with this additional tax burden at a time when they are being called upon to carry such a load of taxes for our preparedness program."

Daniel J. Hackett, mayor, city of Jackson, Mich., February 25, 1941:

Both the city commission of Jackson, and the Greater Jackson Association have passed resolutions against the project.

It is my understanding that a deeper St. Lawrence would harm that territory immeasurably.

J. G. Payne, mayor, Oil City, Pa., February 19, 1941:

I am very much opposed to this project as being unwarranted and economically unsound. It offers no benefits to anyone commensurate with the money to be expended—most of which will be advanced by the American people. With the Nation confronted with the present emergency, this is particularly no time to go into the construction of this project which, at the best, will take 6 or 7 years to complete and will utilize resources that might better be used in the defense program.

J. Paul Pedigo, secretary to the Governor, Commonwealth of Pennsylvania, February 18, 1941:

Great harm would result in construction of the St. Lawrence waterway which proposes to connect the Great Lakes with the Atlantic Ocean at a Canadian seaport. We approve the action of our representatives in the Congress in opposing this project.

Rhode Island State Industrial Union Council, March 7, 1941:

It has been pointed out that, should the enabling legislation pass, the result would be a dumping of cheap foreign coal into the Canadian and American markets, mined by ill-paid foreign workers and carried by foreign vessels.

United Mine Workers of America:

Local No. 2246, Marstellar, Pa.: "Our local, composed of about 600 members, have gone on record as opposed to the St. Lawrence seaway and power project."

Local No. 6240, Morrisdale, Pa.: "Five hundred members of the United Mine Workers of America, local union No. 6240, Morrisdale, Pa., are against any potential legislation drafted for the purpose of subsidizing the St. Lawrence waterway project."

Local No. 160, Shamokin, Pa. (membership 800 to 1,000): "Resolved, whereas we, the entire membership of Commeron Local No. 160, U. M. W. A., do hereby protest against any and all legislation that would enable the passing of the St. Lawrence seaway and power project or any other bill leading to same."

District 7, U. M. W. A., Hazelton, Pa.: "May I inform you that the tridistricts executive members, comprising districts Nos. 1, 7, and 9, representing 100,000 miners, at their last meeting of February 21, 1941, have adopted resolutions in regards to this project.

"No doubt this project, if passed by Congress, will be detrimental to the entire anthracite industry."

Local No. 6165, Alpoca, W. Va.: "With a membership of 240 members, this local voted 100 percent against the passage of the St. Lawrence seaway and power project."

Local No. 1840, Bellaire, Ohio: "Our local of 600 men go on record as opposing the St. Lawrence seaway and power project."

Local No. 35, Harco, Ill.: "The members of local union No. 35, U. M. W. A., representing 500 miners of Harrisburg, Ill., goes on record condemning the St. Lawrence seaway project."

The Truth About Canada and the St. Lawrence Seaway Project

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1941

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

A great deal has been said by proponents of the St. Lawrence seaway, claiming all kinds of advantages to this country and Canada should the seaway become an actuality.

Time and again the glittering but empty promises made in an effort to enlist support for the undertaking from within the United States have been shown to be the fruits of wishful thinking or stock propaganda.

This has happened so often and over such a protracted period of time that most of us have had countless opportunities to realize this project is extravagant, useless, and even deleterious to the welfare of our Nation. We recognize the national defense claims made for this project, which could not be completed within 6 or 7 years, to be utter nonsense.

However, we have had little authentic data relative to the Canadian position. Many rumors are in circulation which indicate this country is taking undue advantage of the grim plight of the British Empire to barter aid to England for the St. Lawrence seaway. The State Department has termed these rumors fantastic and they certainly are when applied to the Nation.

The good common sense of the American people, I am thoroughly convinced, causes them to oppose the St. Lawrence scheme but even if they were completely sold on the undertaking, the traditional good sportsmanship of the American people would restrain them from taking advantage of such a friendly nation when in trouble.

Yet the very fact the State Department deemed it necessary to answer such rumors shows the huge proportions they have assumed. It seems incredible that our Government would do anything to infer that

aid to England and Canada would be affected in any way or in any degree by the outcome of Canadian-American St. Lawrence seaway negotiations.

Nevertheless there is justification for Canadian officials to assume that such is the case in view of the past unreasonable attempts to bludgeon approval of the seaway project.

In order to disclose these previous attempts, it is necessary to give some of the Canadian background. As far back as 1923, the possibility of diverting water from the James Bay watershed into the Great Lakes was studied by the Province of Ontario through the Ontario Hydro Electric Commission. Surveys were made and plans prepared for the diversion of 4,000 cubic feet of water per second from the headwaters of the Ogoki River to Lake Superior. The entire project was estimated to cost an amount not to exceed $3,000,000.

In 1924, surveys were also initiated by the Hydroelectric Power Commission which ultimately led to a project designed to divert 1,200 cubic feet of water per second from the Kenogami River into Lake Superior. This required a dam to be built on the Kenogami River some miles below Long Lac, and a channel excavated from the southerly end of the lake across the divide to the headwaters of the Aquasabon River which flows to Lake Superior.

The Ontario Hydroelectric Commission proceeded with the Kenogami development but restricted the diversion to minimum amounts required for the transportation of pulpwood—and only during the driving season—because our Government would not consent to a revision of the Boundary Waters Treaty of 1909. Without the treaty revision, Ontario could not use waters at Niagara diverted into Lake Superior at her own expense from rivers normally flowing to Hudson Bay.

The Province of Ontario had a "Back to Niagara Policy" for power development. The first step in this program was the full Long Lac diversion into the Great Lakes and its use at Niagara Falls. Later it was hoped to proceed with the Ogoki diversion with similar use—either at Niagara or the Welland Canal, De Cew Falls development.

The United States would have benefited tremendously and at no expense by the construction of these projects. The increased flow into the Great Lakes would have materially benefited navigation and assisted in elimination of river pollution which today is taking a terrific toll in fish life.

But no; our Government wouldn't permit the full Canadian use of these projects to be constructed wholly at Canadian expense unless that country agreed against her will to sanction the St. Lawrence seaway project. That's a serious statement but the following quotation taken from official correspondence will prove the charge beyond any peradventure of a doubt.

OGOKI DIVERSION

Letter from O. D. Skelton, under secretary of state of external affairs, to T. S. Lyon, chairman, Hydroelectric Power Commission of Ontario, February 15, 1936:

"A separate treaty for this purpose (the Ogoki diversion) would be difficult to negotiate with the United States for the double reason that the administration would not wish to sidetrack the St. Lawrence Treaty, and that it would not in the present short pre-election session undertake any new negotiations."

Letter from the Prime Minister of Canada, Right Honorable W. L. MacKenzie King, to the Premier of Ontario, Hon. Mitchel F. Hepburn, January 8, 1937:

"It is further quite clear that they are much more interested in the St. Lawrence than in the Niagara treaty. * * * It is quite clear that it will not be possible to make any agreement with the United States with regard to Niagara without asking an agreement on the St. Lawrence as well."

KENOGAMI DIVERSION

Letter from the Prime Minister of Canada, Right Honorable W. L. MacKenzie King, to the Provincial Secretary of Ontario, H. C. Nixon, September 7, 1937:

"The United States Administration would be unwilling to sidetrack the St. Lawrence Treaty for such an object (diversion at Niagara equivalent to Kenogamy)."

PREMIER OF ONTARIO OPPOSED TO SEAWAY—NO POWER NEEDED

The Honorable M. F. Hepburn wrote to the Right Honorable W. L. MacKenzie King, in reply to inquiries as to his views pertaining to the St. Lawrence seaway, November 25, 1937:

"Yesterday I consulted with my cabinet colleagues on the question of Ontario's position in respect to the proposed St. Lawrence waterways scheme, as a result of which I can only reaffirm the position taken by me during the time of the discussion we had on the occasion of your visit to this office.

"Having finally arrived at a tentative arrangement with respect to a settlement of our power problems with Quebec companies, I am advised by the hydro commissioners and technicians that Ontario's power requirements have been taken care of for many, many years to come.

"We are, therefore, not in need of power; nor, in my opinion, having in mind our acute railway problem, any additional avenue of transportation.

"In my judgment, the purchasing power of European and Asiatic countries will collapse with the continued dissipation of gold reserves for armament purposes and this continent will, as a consequence, witness an era of depression comparable to the one through which we have just passed.

"I should be very happy to have members of the hydro commission and technical officers confer with your officials at any time you so desire."

PREMIER OF ONTARIO WANTS THE NIAGARA PROBLEM SEPARATED FROM THE ST. LAWRENCE

The following is a quotation from a letter by the Honorable M. F. Hepburn to the Prime Minister of Canada, the Right Honorable W. L. MacKenzie King, February 14, 1938:

"By reason of the settlement effected with the Quebec power companies, our engineers advise that our power requirements have been taken care of for many years.

"I am hoping that you will reconsider the position of your Government and endeavor, on behalf of the Province of Ontario, to separate the general scheme of the St. Lawrence waterways from the problem of diverting the waters above Niagara."

THE PRIME MINISTER OF CANADA HAS TRIED TO SEPARATE THE NIAGARA PROBLEM FROM THE ST. LAWRENCE, BUT THE UNITED STATES GOVERNMENT WILL NOT CONSENT

The following is a quotation from the Prime Minister of Canada to the Premier of Ontario, February 22, 1938:

"In conclusion, you express the hope that the Canadian Government will reconsider the position and, on behalf of Ontario, will endeavor in the international negotiations 'to separate the general scheme of the St. Lawrence waterways from the problem of diverting the waters above Niagara.' In this connection I have observed public statements intimating that our Government has been trying to impose a general scheme upon Ontario against her will.

"None of the correspondence or consultations with Ontario representatives affords any foundation for such suggestions. At no time has the Canadian Government declined to ask the United States Government if they could deal particularly with this problem of retaining for Canada the benefits of waters that might be diverted into the Great Lakes; nor has there been any effort to impose anything upon Ontario. What has been done has been to bring to the attention of the Ontario authorities the position of the United States Government from time to time as it has become known to us; and, in view of the practical importance of all these matters to Ontario, we have invited discussions with your representatives. This we were naturally bound to do in order to find out what it might be practicable to say in reply. In so doing the Canadian Government was merely making known the position taken by the United States, whose cooperation was necessary to the settlement of any international water development. At no time has the Government of Canada itself taken the position that the St. Lawrence waterway, Niagara, and other boundary waters questions must be settled as a whole, or that it was not prepared to deal with the projects for diversions into the Great Lakes separately from the St. Lawrence project."

It is quite evident from the above correspondence that our Government is using the Ogoki and Kenogami projects, which the Province of Ontario finds so necessary for the development of vast areas of their north country, and will eventually desire for power purposes at Niagara Falls, as a bludgeon to force that country to accept the St. Lawrence seaway.

Is it any wonder, then, that rumors to the effect Canadian acquiescence will have a direct bearing upon our aid to England?

The Congress of the United States should decisively reject any proposal to consider any agreement or treaty pertaining to the St. Lawrence. Even the most ardent advocate of the project should resent being asked to take such an advantage of our friend and neighbor during her terrible hour of need.

The Canadian tax and loan load for next year only will put a burden of $225 on every man, woman, and child in that country. This terrific tax load is more than half the Canadian national income. When the Minister of Finance, Mr. Ilsley, made that statement to the House of Commons the latter part of February this year, he stated that even that amount may not be enough.

Should our Government force Canada to add more hundreds of millions of dollars to their staggering debt loads to satisfy a whim for a project which even advocates admit is highly controversial? Of course, not. It is time Mr. Berle and Mr. Olds, of our Government, stop heckling the Canadian Government about the seaway. But if they do not—if the project comes before the Seventy-seventh Congress, it should be shouted down with a vehement "No."

Hitler's Phony Money Versus Gold

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1941

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. CASE of South Dakota. Mr. Speaker, under leave granted by the House, I place in the RECORD an editorial

from the Chicago Tribune on putting our gold to work. It follows:

[From the Chicago Tribune of March 9, 1941]

AN UNCONQUERABLE ARMY

In the serious magazines—those sometimes described as the ones which are read on trains by girls who want to be alone—a number of articles have appeared from time to time in recent years discussing German monetary practice under Hitler. The early articles asserted that Hitler would not long be able to carry on his financial operations without a collapse, and told why. The later pieces assert that Hitler has been able to create a new money system, which will work in peace and war, and tell why.

The writers who have recently been telling why the German financial explosion has not come off, as forecast, appear to us to have given every reason for it, except one—the right one. Hitler's money hasn't caused him any grief, despite a shortage of gold, the world's standard of value, because the United States has acquired nearly all of the world's gold and buried it in Kentucky, where it isn't of use to anyone. Hitler money gets by because all other countries, and especially this country, have adopted his methods.

Hitler's money is phony. It is money only on his say-so. It is printing-press stuff. It isn't exchangeable for gold or for anything. It is just paper. Hitler's money isn't essentially different, except in quantity, from that of the wild inflationary period in Germany in the early twenties.

But American money is also fiat money now. It was really money in 1923. On the face of a $10 bill it is stated explicitly that the United States will pay $10 to the bearer upon demand. The bill isn't money. It is just a promise to pay money, and as good as the promise. But when you present a bill to the Government or to its agent, the Federal Reserve bank, you are told that you may have only other promises to pay money. You can't get any hard standard money for it.

It is true you may have silver dollars. But the silver dollar is real money only up to 26 cents, the other 74 cents representing what is attributed to the coin because of the Government's imprint. Real money, in gold, the kind we always had before 1933, has intrinsic worth here and anywhere. It doesn't vary with time or place. The value of our old gold dollar was in the gold itself, not in the printing. It didn't depend upon the will of any man, any political party, or the outcome of any war. The imprint of the Government merely was a certification as to weight and purity.

Hitler has averted his financial doom, not only because of his own efforts but because of those of our national administration. By imitating the Hitler fiat-money plan we give the phony German mark a standing in Germany and in neighboring countries. He has the same kind of money rich America uses.

Re-create the full gold standard with currency freely convertible into gold and see where Hitler will be. We have $24,000,000,000 worth of gold—three times as much as would be necessary to redeem every paper dollar that could be presented. Let the world know that American money cannot be inflated because there is full value in gold back of every dollar of it, which anyone may obtain freely.

Gold and steel make an irresistible combination. We have 24,000,000,000 gold men to array in battle against any contender, and we have the requisite amount of steel to defend this mighty army. If the Roosevelt administration really wants to do Hitler some dirt, let them call into the Nation's service the army of 24,000,000,000 confined to barracks at Fort Knox.

Strikes

REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1941

Mr. HOFFMAN. Mr. Speaker, I ask unanimous consent to proceed for 1 minute and extend my remarks in the RECORD and include certain excerpts from newspapers.

The SPEAKER. Is there objection?

There was no objection.

Mr. HOFFMAN. Mr. Speaker, the Government has completed a powder plant in Virginia, but production there is delayed because the Government cannot get the machinery necessary to start full production out of the Allis-Chalmers plant in Milwaukee. That strike began on the 22d day of January last, and ever since material needed by the Navy and the machinery needed in the Government's power production plant has been held up. The point at issue is the demand of the C. I. O. that no one, other than members of its organization, be permitted to work. Thus it will be seen that the C. I. O., at the Allis-Chalmers plant, has been holding up our national-defense program.

It is reported that a majority of the workers desire to return to work, but have been prevented from doing so by manipulation of elections which have been held at the plant to determine the question of whether the employees should accept the company's proposals, whether the strikes should be called off. A few days ago, I put into the RECORD a form of the ballot which it was said had been used in one of these elections.

A copy of the ballot which was used on January 21, 1941, reads as follows:

Shall the bargaining committee's recommendation to reject the company's current proposals and to authorize the bargaining committee to call a strike be accepted?

Proceedings have been instituted by the company and the Wisconsin authorities to determine whether the employees are guilty of unfair labor practices. Angelo Christopher, one of five C. I. O. men who had charge of the balloting, was asked by the company's attorney, Leo Mann, whether he understood the ballot quoted above. He replied that he did. He then was asked:

Question. If you had wanted to vote in favor of accepting the company's current proposals, would you have voted "yes" or "no"?

Answer (after a long pause). I don't know. That question runs together. You can't separate it.

Question. What were the company's current proposals?

Answer. I don't know that.

If a member of the election board having charge of the election, and evidently a C. I. O. official, would not know how to vote on this question, how can it be expected that the employees could vote intelligently?

Another point showing the need of a fair election among the employees as to whether the men should return to work is found in the discrepancy between the number of ballots cast and the number of employees voting. A record was kept of the number of employees voting at the election, and it was found that but 4,547 persons voted. Nevertheless, a count of the ballots showed that 6,759 votes were cast. Is it not amazing that the ballot boxes, when opened, showed that there were 2,212 more votes cast than there were persons voting? Someone must have had two or more ballots and voted more than once. Such ambiguity in a ballot; such fraud in the election will explain in part why it is that this particular strike continues. All too often strikes are declared and carried on contrary to the wishes of many of the employees for the gratification or for the enrichment of those who do not have the true interests of the workers at heart.

To remedy this evil, yesterday I introduced a bill.

This bill provided that when there was a strike which interfered with or delayed the use, production, fabrication, or transportation of any material as defined in the Lend-Lease Act, the Department of Justice should call an election of the employees at the struck plant. It further provided that unless 50 percent of the employees of the plant voted in favor of continuing the strike, the board should certify the result to the nearest Army officer in charge of the territory in which the plant was located. That, thereupon, such Army officer should use whatever means were necessary to prevent interference with any employee returning to work or continuing at the task assigned to him. No doubt this bill will be characterized as "antilabor"; nevertheless, its only effect is to enable employees who want to work to proceed at their tasks having to do with national defense without interference from anyone. No loyal worker, it would seem to me, can honestly object to such a procedure. If he claims for himself the right to work for his Government, he should be willing that a like privilege should be enjoyed by other employees. This bill is submitted for your earnest consideration.

The opposition of union officials to this bill is illogical. They contend for majority rule, for a closed shop. They certainly should have no objection to permitting their members, when a majority expresses that wish, to return to their jobs.

Yet, when the International Harvester Co. proposed an election among its employees at its strike-bound plant at Richmond, Ind., its plea was rejected by the C. I. O. leaders. A petition was presented to the company, signed by nearly 700 of the 1,174 union members and union eligibles, asking for such an election. Yet the leadership of the C. I. O. turned it down.

Unless we are willing to permit minorities to obstruct preparations for national defense, some action must be taken. It is no answer to say that the delays are not serious.

This morning's issue of the United States News contains a summary showing how strikes hamper defense industries. It is as follows:

[From the United States News of March 21, 1941]

HOW STRIKES HAMPER DEFENSE INDUSTRIES—PRODUCTION OF PLANES, TANKS, MUNITIONS, SHIPS SLOWED BY STOPPAGES—ADMINISTRATION BEGINS ACTION TO AVERT NEW WALKOUTS AS THREAT OF TROUBLE SPREADS

Strikes are hampering defense production in 20 States. Plants manufacturing arms, ammunition, and equipment for the fighting forces are being closed, sometimes for a few hours, sometimes for weeks. Production for Britain has been affected.

Manpower lost to the defense program in 5 weeks would have been sufficient to produce 397 light pursuit planes, or 95 light bombers, or 10 flying fortresses or 4 destroyers.

Labor Secretary Frances Perkins has reported that more strikes occurred in January than in December. More time was lost in February than in January. The March strike record is going to be even higher on the basis of early returns.

The pinch is being felt by both Army and Navy. Few producers are ever one jump ahead of the Government's demands. Every delay is fatal to the timing of military plans. This is true not only of aircraft, but of the production of such essential items as gunpowder, tanks, cantonments, even shirts. Equally important are delays in the basic industries, in coal mining, in steel, in oil, in lumber, in rubber.

Here are some delays that have held up production of vitally important equipment:

Gunpowder: Approximately 7,800 men, C. I. O. members, have been on strike at the Allis-Chalmers Manufacturing Co., Milwaukee, since January 22. Time lost: 2,174,000 man-hours. Work on three turbo-generators has been held up. Without these generators the Hercules Powder Co. cannot bring the new Radford (Va.) powder plant into full production. The Radford arsenal was expected to double the Army's supply of gunpowder. The Combustion Engineering Co. manufactures all nitric-acid equipment for all ordnance works now under construction except the Radford Arsenal. A C. I. O. union shut this company's plant for 2 weeks. Time lost, 28,000 man-hours.

Aircraft: The C. I. O. strike against the Vultee Aircraft Co., San Diego, was a direct delay to aircraft production. This strike lasted from November 15 until November 26, 1940. Time lost: 410,400 man-hours. An A. F. of L. strike against the Motor Wheel Corporation, Lansing, Mich., lasted 13 days. This company makes landing-wheel drums for the Curtiss P–40. Other strikes have hampered the production of many airplane parts. These include acetone, batteries, airplane cloth, carburetors, rheostats, screws, and bolts. An A. F. of L. strike at Wright Field, Dayton, Ohio, is delaying construction of the Air Corps' testing center, an important part of the air expansion program.

Tanks: American Car & Foundry Co. at Berwick, Pa., is the only current source of light tanks for the Army. Some 2,800 C. I. O. members kept this plant shut from February 12 to February 18. Construction of a new tank arsenal at Detroit has been delayed because of a dispute among A. F. of L. unions.

Trucks and tractors: The new army on wheels has had difficulty in obtaining its most important means of locomotion — trucks. C. I. O. strikers have kept shut 4 plants of the International Harvester Co. producing trucks and trailers for the Army. The Motor Wheel strike delayed work on wheel drums for the Yellow Cab Co., which has an $83,000,000 order for Army trucks. The Motor Wheel Corporation also is producing similar equipment for British antiaircraft batteries. A C. I. O. strike at the Fisher Body plant at Oakland, Calif., delayed work on cars being assembled for the Army. At Detroit, 1,700 C. I. O. members struck against the Midland Steel Products Co., delaying the work on Army truck frames for three companies.

Ships: The Allis-Chalmers strike is estimated to have delayed the Navy's destroyer program 3 months. Allis-Chalmers manufactures pumps and turbines, the latter also essential to the submarine program. Conversion of merchant ships into naval vessels was halted by another C. I. O. strike at Mobile, Ala., site of the Alabama Drydock & Shipbuilding Corporation. A. F. of L. patternmakers are now on strike against several west coast shipyards.

Artillery: Two strikes, involving both C. I. O. and A. F. of L. unions, closed the Pullman Standard Car Co. plant at Michigan City, Ind. This plant makes gun carriages and trench mortars for Britain as well as the United States Army. Time lost: 144,000 man-hours. Other strikes affected manufacture of shells, gun mounts, and howitzers.

Scores of other items of equipment essential to the Army and Navy have been delayed in production because of strikes, most of which involved C. I. O. unions. These include ammunition, bombs, fuzes, small arms (four strikes), boxes and chests, blankets, hammers, khaki cloth, mattresses, socks, shirts, ranges, towels, trousers, underwear, copper wire, batteries, wire and cable, generators, insulator equipment, radio equipment, and lumber.

Basic to all munitions manufacturing is the steel industry, which has been in turmoil for the past 2 months. Organizational drives by the C. I. O. Steel Workers' Organizing Committee are in progress. Bethlehem's Lackawanna, N. Y., plant, furnishing basic steel to both Army and Navy, was shut for 19 hours. Dues-collection picket lines, stoppages of single departments in mills, and other nuisance strikes have occurred in big and little steel mills in Pennsylvania, Indiana, Ohio, and New York. Today new strikes face Bethlehem. A Crucible Steel Co. plant at Pittsburgh is down.

The picture in other basic industries is threatening. The C. I. O. coal miners' union is now demanding a $1-a-day wage increase. The important Edgewater, N. J., plant of the Aluminum Co. of America has been closed by the C. I. O., as has the smaller Fairmount Aluminum Co. plant in West Virginia.

In the oil industry, a C. I. O. union has threatened to strike against the Shell Oil Corporation's refinery at Houston, Tex. This refinery produces about half the Army's supply of aviation gasoline.

The Vanadium Corporation of America furnishes alloys essential to the production of special steels. About 15 percent of the armament program is dependent on these alloys. The C. I. O. closed the company's Niagara Falls, N. Y., plant for 8 days, and its Bridgeville, Pa., plant is still closed in a month-old dispute. The Bridgeville strike has been branded a violation of the union's contract by C. I. O. officials, but still local leaders refuse to send the strikers back to work.

Strikes resulted in loss of 1,461,000 man-days in defense industries last year, an average of 121,750 man-days a month. Under Secretary of War Patterson reported that 120,000 man-days were lost during 1 week in February. The Labor Department has not yet completed its tabulation of time lost through strikes for February. Other sources place the total time lost in defense industries alone at 468,000 man-days or 3,744,000 man-hours. This loss is 75 percent higher than the total time lost through strikes in all industries last February. Time lost during the first week of March amounted to 128,900 man-days, an increase of almost 9,000 man-days over the previous week.

This was the situation in which Labor Secretary Frances Perkins; William S. Knudsen, Director General of the Office of Production Management; and Sidney Hillman, Office of Production Management's Associate Director General, took to the White House their proposals for a new national-defense mediation board. This was the situation on Friday when the President called to the White House 16 labor-union officials who comprise Mr. Hillman's Labor Policy Advisory Committee.

The men who administer labor policy in Washington have all had a hand in shaping the new program. Edward F. McGrady, special assistant to Secretary of War Stimson and vice president in charge of labor relations for the Radio Corporation of America, is a long-time exponent of Government mediation. Isador Lubin, Commissioner of Labor Statistics; John R. Steelman, Director of the United States Conciliation Service; William M. Leiserson, of the National Labor Relations Board, and Dr. Harry A. Millis, new N. L. R. B. chairman, have been consulted.

These men do not agree on the specifications for the new Mediation Board. Generally, they are in agreement with Mr. Hillman and Miss Perkins that the time has arrived when some agency should be set up to serve as a court of final appeal in disputes between management and unions. Leaders of the A. F. L. have expressed their agreement with the proposal. On the other hand C. I. O. leaders are strenuously opposed.

The men who make labor policy already are working in their own agencies to stem the strike tide. The Conciliation Service is asking Congress to increase its staff of 107 conciliators to permit speedier handling of defense cases. Dr. Millis has announced the Labor Board's new policy of giving priority to all cases involving defense industries in order to make it easier for unions to resort to the Board in certain types of disputes.

The thinking of all these men is summed up by Miss Perkins. "Labor," she asserts, "has status today as never before, and that status carries with it responsibility which calls for cooperation by labor with employers and with all responsible groups to avoid delays and interruptions in defense production."

The Mahoning Valley is the Ruhr of America

EXTENSION OF REMARKS

OF

HON. MICHAEL J. KIRWAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1941

STATEMENTS OF MAYOR ROBERT H. ROBERTS, OF WARREN, OHIO, AND OTHERS

Mr. KIRWAN. Mr. Speaker, under leave granted to extend my remarks in

the RECORD, I include the following statements of the mayors of several cities in my district:

MARCH 18, 1941.

To the Members of the Seventy-seventh Congress:

The Mahoning Valley, extending from Newton Falls, Ohio, east to the Pennsylvania State line, a distance of approximately 30 miles, is frequently referred to as "the Ruhr" of America. It has a population of approximately 400,000 people. Its industry is in the main the production of iron and steel. In this industry there is invested more than a billion dollars. Its annual capacity exceeds 8,000,000 tons of pig iron, 10,000,000 tons of steel ingots and castings, and 13,000,000 tons of rolled products. In 1929 the value of its products exceeded $440,000,000, and in 1941 will, it is estimated, exceed $500,000,000. Until recently the Mahoning Valley was second only to Pittsburgh in the production of iron and steel. It has since been displaced by the Chicago district. Such plants as those of the Republic Steel Corporation, located in Newton Falls, Warren, Niles, and Youngstown; the Youngstown Sheet & Tube Co., located in Hubbard and Youngstown; the Carnegie-Illinois Steel Corporation, located in McDonald and Youngstown; the Sharon Steel Co., located in Niles, Youngstown, and Lowellville; the Thomas Steel Co. and the Brainard Steel Co., of Warren; the Mahoning Valley Steel Co. at Niles, are all now engaged to a large extent either directly or indirectly in assisting to meet the present defense needs of the country. The Copperweld Steel Co., of Warren, Ohio, a manufacturer of steel alloys, is now engaged 100 percent in defense activities. The Packard Electric Division of General Motors Corporation, which manufactures about 50 percent of all of the electric cable sets for automotive equipment and airplanes that are manufactured in the country, is largely engaged in defense work. Attached hereto and marked "Exhibit A" is a statement of the industries in and about Warren, prepared by the Honorable Robert H. Roberts, mayor of the city of Warren, which shows in some detail the industry centered in this one portion of the Mahoning Valley.

Large amounts of river water are required by these industries. Ground water in sufficient quantities is not available. The only source of water supply is the Mahoning River, which in periods of dry weather and low flow has upon occasions yielded as little as 20,000,000 gallons a day. While the latter is exceptional, the average low-flow yield is but 50,000,000 gallons per day. Yet the demands for industry alone are approximately 800,000,000 gallons a day. Thus the Mahoning River at its average low flow and within the short distance from Warren, Ohio, to the Pennsylvania State line is at the time of low flow used 16 times. The Ohio Public Service Co. requires 120,000,000 gallons of water a day in the generation of electric energy in its power plant at Warren. At times of low flow it recirculates all the water in the river, using it more than twice. The Republic Steel Corporation in its Warren plant alone requires sixty to seventy million gallons of water a day. As a result of this continuous reuse of the water, the summer temperatures of the river at Youngstown, prior to use by all the industries there located, frequently reaches a temperature of 120° F. The dire need of this "Ruhr" of America for additional water is thus apparent.

The cities of Niles and Youngstown organized, in 1928, the Mahoning Valley Sanitary District, which now supplies their needs for domestic water from a reservoir on Meander Creek. The city of Girard and the village of Newton Falls procure their domestic supply from deep wells. How long these wells will last in face of the receding water table in Ohio is problematical. The city of Warren, with a domestic requirement of from four to five million gallons of water a day, obtains the same from the Mahoning River. The cost of cleaning, cooling, softening, and purifying the water is such that in view of the constant increasing demand for water it is imperative that it seek a supplemental or entirely new source of supply. Experimentation with underground water has so far been unsuccessful. Low flow periods coupled with intense industrial activity and the dumping of untreated or partially treated industrial wastes into the river impart an acid characteristic to the stream, damaging water intakes, pumps, and other equipment. During such periods total hardness in excess of 300 parts per million is encountered. On two occasions, once in 1929 and again in 1930, the hardness approached 400 parts per million at Youngstown.

None of the cities in Ohio bordering upon the Mahoning River has sewage-disposal plants of any kind. In the short distance of 20 miles from Warren to Youngstown there is discharged into the Mahoning River about 40,000,000 gallons of untreated domestic sewage a day. If it were not for the simultaneous discharge of industrial acid wastes the river would be a highly offensive stream due to the natural decomposition of sewage matter. In fact, in August of 1930, when there was but little industrial activity, the river at Youngstown was black in color, boiling and bubbling with putrefaction, and giving off offensive sewage odors. Sewage-disposal plants must soon be built, and it has been estimated that such plants will initially cost the Mahoning Valley approximately $6,000,000, not including the cost of intercepting sewers and collecting appurtenances.

Recently the Federal Government saw fit to locate what is known as the Ravenna Arsenal on the west branch of the Mahoning River. This arsenal is now under construction, with some 7,000 people engaged in the building thereof. It is anticipated that by August of 1941 some ten or twelve thousand people will be employed there and the probabilities are that most of them will take up their residence in Newton Falls and Warren. A defense-housing project is now under way in the city of Warren to house some of these employees, and the city of Warren has agreed to furnish water and sewer facilities for the occupants thereof. All waste matters and sewage from the arsenal and its employees will be dumped into the Mahoning River about 9 miles above Warren, and despite the fact that disposal plants are being installed at the arsenal the Mahoning River will be further polluted.

What is needed is additional reservoirs on the headwaters and tributaries of the Mahoning River. At the present time only one such reservoir exists, to wit, Lake Milton, having a storage capacity of 9,000,000,000 gallons of water. This was built in 1913 by the city of Youngstown to regulate the flow of the Mahoning River, from which it was then obtaining its domestic as well as industrial water. Prior to the construction of Milton Dam the river flow in dry periods was as low as 5,000,000 gallons a day. Since the construction of Meander Dam and its completion in 1931 or 1932, Milton Dam has been used to regulate the flow of the Mahoning River for industrial purposes. Even with Milton Dam, the flow in the summer months and dry periods is as low as 50,000,000 gallons a day on the average. Another dam site is available above Lake Milton, at what is commonly referred to as Berlin, where a reservoir can be created capable of impounding from 6,000,000,000 to 18,000,000,000 gallons of water, depending upon the height of the dam. Another site is available on the west branch of the Mahoning River, at Charleston, where a reservoir capable of impounding 8,000,000,000 gallons of water can be built. A third site is available on Mosquito Creek, a tributary of the Mahoning River, the reservoir capacity of which is 36,000,000,000 gallons of water. A fourth site is on Eagle Creek, the capacity of which is 6,000,000,000 gallons of water.

If these reservoirs were built and used for the purpose of regulating the flow of the Mahoning River, the average low flow could be increased from 50,000,000 gallons a day to 300,000,000 gallons a day, just one-third of the average daily amount required to supply the needs of the many industries located in the 30-mile stretch from Newton Falls to the Pennsylvania State line. A low flow of 300,000,000 gallons a day would so dilute the sewage now discharged into the river as to make it unnecessary to build complete sewage-disposal plants. Partial-treatment plants would suffice and they can be built and subsequently operated at one-half the cost of complete-treatment plants. Such reservoirs would also so retard floodwaters and could be so operated as to guarantee to the Mahoning Valley freedom from flood.

Mahoning Valley has its fingers crossed. Its fear is not enough or too much water. If the one and only reservoir—Milton Dam—should be sabotaged, or if the summer of 1941 should be unusually dry, or if an unusual rainy season, with its attendant floods, should intervene, it could not make the contribution it is now making, or the contribution it is expected to make, to national defense. The Mahoning Valley is one of the chief sources of supply for all items of national defense. Without steel, there can be no airplanes, motors, guns, battleships, tanks, or shells. Steel cannot be made without water or in a flooded area. The crippling of the Mahoning Valley means the severing of one of the main life lines of national defense. It is no answer to say that reservoirs cannot be built overnight; neither can battleships, airplanes, or any other item of national defense; and who is the prophet who can foretell the duration of the present emergency? Moreover, the present emergency is not the last one that will ever confront us. How soon another will follow the one now existing, we do not know. Reservoirs on the headwaters of the Mahoning River are lasting and permanent improvements which will guarantee to our Government the full productive capacity of the Mahoning Valley at all times to come. To build them is to guarantee that the foundation upon which present and future national-defense programs rest will support the superstructure. It is safe to say that the success of any defense program is dependent at least to the extent of 40 percent upon the productive capacity of the Mahoning Valley. The expense is not great. According to engineers who have hereto studied the problem, no one of the 4 reservoirs suggested will cost more than $4,000,000. All 4 can be built for $12,000,000—a small price to pay to meet existing emergencies and to insure a firm foundation upon which to rest in meeting future problems.

Mahoning Valley, on behalf of the Nation, respectfully implores your earnest consideration and assistance.

Respectfully submitted.

ROBERT H. ROBERTS,
Mayor of Warren.
WILLIAM P. KEARNEY,
Mayor of Niles.
ELMO W. BAILEY,
Mayor of Newton Falls.
HARRY L. DITTMER,
Engineer of Trumbull County.
DON DAWSON,
Secretary of the Warren Chamber of Commerce.
KARL B. DODGE,
Secretary, Trumbull County Manufacturers Association.
H. H. HOPPE,
Chairman, Water Defense Committee.

EXHIBIT A

MARCH 11, 1941.

Hon. FRITZ G. LANHAM,
Chairman of the Public Buildings and Grounds Committee,
Washington, D. C.

HONORABLE SIR: The Warren district, located entirely within Trumbull County, contains approximately 60 industrial plants; of these, 45 are located in Warren, Ohio.

The 60 industrial plants are now employing in excess of 28,000 employees, the 45 industries in Warren are employing in excess of 20,000.

The major industries, together with their products, are as follows:

Aetna Standard Engineering Co.: This company manufactures tin-mill machinery and at the present time are manufacturing gun carriages for the United States Army.

Air Reduction Sales Co.: Manufacturers of acetylene and other gases vital to welding. Oxyacetylene and electric cutting and welding equipment.

American Welding & Manufacturing Co.: Steel products fabricated by electric butt, spot, arc, or gas welding. This company is now in a period of a $100,000 expansion due to national-defense orders for Army tank parts.

Associated Box Co.: Manufacturers of wood boxes, crates, and platforms. The major portion of this company's products are used by steel manufacturers, and so are instrumental in the defense program.

Beaver Pipe Tools, Inc.: Pipe cutters and threaders, bolt threaders, reamers, vises, etc. This company is making products for the United States Department of the Interior, the United States Army at Fort Banks, Fort Bragg, Fort Leavenworth, Fort Mason, and the United States Navy, as well as a long list of industrial users.

Brainard Rivet Co.: Manufacturers of steel rivets.

Brainard Steel Corporation: Cold rolled, and both cold and hot rolled electro-galvanized strip steel.

Copperweld Steel Co.: Electric furnace and open-hearth alloy-steel billets, bars and rods. Aircraft, stainless and special tool steels. This company, in production for less than 1 year, now employs in excess of 1,500 employees and its entire output is going to the United States Navy and manufacturers of aircraft for the Army and Navy. Within the next year this company, now in third place as a producer of electric furnace alloy steel, will, upon completion of additional furnaces, greatly advance its production capacity.

Denman Tire & Rubber Co.: A full line of pneumatic tires including truck tires, and pressed rubber goods. Manufacturers of bumper rubber for pressed steel companies and rubber covering for industrial steel rolls.

Federal Machine & Welder Co.: Resistance welding machines including spot welders, projection welders, roll-seam welders, butt and flash welders and special welding machines.

At the present time this company is manufacturing shell turning lathes for the turning and boring of projectiles. This firm is almost exclusively working on national defense, having recently received Government orders for airplane factories, navy yards, and munitions plants in excess of $150,000.

Flexible Road Joint Machine Co.: Surfacing and joint installing machinery for concrete highway construction.

General Fire Extinguisher Co.: Automatic sprinkler fire-protection systems; power and industrial piping, and piping supplies, a good share of which is being used in airplane hangars.

Heltzel Steel Form and Iron Co.: Road building and construction equipment. Steel mill and fabricated structural, annealing furnaces, heavy welded steel machinery parts and fabricated steel from ⅛ inch to 18 inches in thickness.

Hilton Steel Co.: Plate-fabricated steel equipment, machine bases, rubber-covered and lined-steel equipment used by steel and chemical industries.

Hull Manufacturing Co.: Magnetic compasses of many types now being used on trucks combat cars, tanks, boats, and aircraft.

Lenney Machine & Manufacturing Co.: Manufacturers of variable speed transmissions.

Mullins Manufacturing Co.: This company is now working on a $6,000,000 order of the United States Government of deep-drawn antiaircraft shells. This company's regular products are vitreous enameled sinks, bath tubs, lavatories, synthetic enameled kitchen equipment, and general stamping contract work, a good share of which is being used in Army cantonments and defense housing.

Oakes Bronze & Aluminum Co.: Manufacturers of castings in electrolytic and casting copper, aluminum and its alloys, brasses and bronzes of any analysis and to specifications; Mallory alloys of hardened copper, cast iron, semisteel, nickel-iron, and nickel-chrome iron; also pattern service in both wood and metal.

Ohio Corrugating Co.: Manufacturers of steel drums, capacity 2 to 60 gallons, both tight and open head; also steel pails, capacity 2 to 10 gallons, both tight and open head; also sanitary containers for foods up to 60 gallons.

Ohio Lamp Works of General Electric Co.: Manufacturers of incandescent lamps, 200 to 1,500 watts, inclusive; also many special types.

Packard Electric Division, General Motors: This company, a division of General Motors Corporation, manufactures 50 percent of all automotive electric cable used by the automotive and aircraft industry. At the present time this company has just completed a large addition to their Warren plant for the express purpose of manufacturing aircraft shielded and unshielded electrical ignition, starting and lighting cable, per Army and Navy specifications, also radio shielded look and antenna cable assemblies. This firm has doubled its employment, due to national defense.

Peerless Electric Co.: Manufacturers of fractional to 10-horsepower motors; also, exhaust fans and blowers. This company has large defense contracts.

Reed Iron & Steel Co.: Manufacturers of steel building supplies.

Republic Steel Corporation: The Warren district of the Republic Steel Corporation manufactures 95,000 tons per month of finished steel and employs in excess of 6,000 employees. Their products are classified as hot- and cold-rolled carbon, silicon, and stainless strip steel; carbon and silicon steel sheets; tin, terne, black, lacquered, and coated terne plate steel. It is hard to estimate the percentage of this company's products that is going into direct defense items, but it is safe to assume that by far the greatest percentage is being so used. At present it is estimated that Republic Steel, of Warren, uses 60,000,000 gallons of water per day.

Schaefer Equipment Co.: Manufacturers of drop-forged railroad equipment.

Seminole Pigment Co.: Manufacturers of pigment for ceramic, industrial paint, and mortar color trade. This product is used for iron, steel, and wood.

Standard Transformer Co.: Manufacturers of distribution and power transformers (oil or pyranol filled), instrument transformers, general-purpose dry-type transformers, auto transformers, street-lighting transformers, testing transformers, and special transformers. This company is now working on Navy contracts.

Sunlight Electric Division, General Motors: Manufacturers of alternating-current fractional-horsepower motors.

Halsey W. Taylor Co.: Manufacturers of water coolers, both ice and electric, drinking fountains, valves, and fittings.

Taylor Winfield Co.: Spot-, butt-, flash-, seam-, and resistance-type electric welding machines. This company's engineering department and laboratory has designed and is now making hydromatic, hydrospeed, and hi-wave machinery for welding aluminum which is being used in the manufacture of airplanes for both Army and Navy.

Thomas Steel Co.: Cold-roll, zinc-coated, copper-coated, nickel-coated, brass-coated, tin-coated, and painted strip steel.

Trumbull Bronze Co.: Brass, bronze, copper, and aluminum castings.

Trumbull Lamp Works of General Electric: Sealed beam head lamps and special incandescent lamps.

Trumbull Manufacturing Co.: Manufacturers of tank-car fittings, machine equipment, fabricating products, and complete steel-mill equipment.

United States Gypsum Co.: Manufacturers of metal lath, steel building supplies, and expanded metal and accessories for partition and reinforcing.

Van Huffel Tube Corporation: This company's products consist of all types of tubing such as open-seam, tight-butted, lock-seam construction, and welding tubing, made from cold-rolled, hot-rolled stainless and alloy steel.

Warren City Tank & Boiler Co.: Welded or riveted steel plate fabricated storage or pressure tanks, bins, and hoppers.

Warren Tool Corporation: Manufacturers of forged tools; commercial heat treating, drop forging, and upsetting.

Wean Engineering Co.: Processing equipment for the manufacture of sheet-, strip-, and tin-mill products.

This imposing and important list of manufacturers, all located in Warren, is dependent for power on the Ohio Public Service Co. This company is now capable of producing 80,000 kilowatts of capacity which is entirely insufficient and which capacity cannot be increased due to the lack of water available from the Mahoning River.

Nine miles west of Warren, Ohio, and serviced from this district, is being constructed an ordnance plant where 12,000 employees will be working on shell loading by August of 1941. This plant will need ample water as will its employees. This plant will require 5,000 kilowatts that are to be supplied from the Warren plant of the Ohio Public Service Co.

A survey of Warren industry, made in November 1940, indicated that at that time 14 percent of the total industrial employees were engaged on national-defense orders. Recent estimates indicate that 20 percent are now so engaged, but under the broadest heading of "national defense," both direct and indirect, it is safe to say that 60 percent of Warren's industrial employees are so engaged.

Warren's industries need power to produce that which is being asked of them for national defense. It takes water to give industry the necessary power. It is not at all farfetched to say that Warren's manufacture of defense items is dependent upon its ability to secure an adequate water supply.

Respectfully submitted.

ROBERT H. ROBERTS,
Mayor, City of Warren, Ohio.

On Being an American

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1941

EDITORIAL FROM US WEEK

Mr. GEYER of California. Mr. Speaker, a few days ago I found on my desk volume 1, No. 1, of a little magazine entitled "US Week." This statement appears on the editorial page:

Established to foster and forward the Jeffersonian democratic ideals of William E. Dodd and supported by the William E. Dodd Foundation, Inc.

I note that they carry no advertising. I find, also, on the editorial page the following editorial whose philosophy I like very much. I reproduce it for all to read and ponder. The article follows:

[From US Week of March 12, 1941]

ON BEING AN AMERICAN

There is something about being an American today that was never so before. Something that closes the throat. A sense of luck you're likely to have while you're riding on the bus or washing the baby's face, or even while you're poring over the want ads. It's no longer a sensation reserved for the Fourth of July. It's gone beyond flag waving and 4-minute speeches. Textbooks have nothing to do with it.

It's still a joyful thing, thank God. You can sing it or swing it and be glad. But it's too important to need advertising, too solemn to be exhorted. It's something like the feeling you would have looking at your child just after the neighbor's child had been killed. It's a private matter. Nothing you care to argue about. Beyond other people's doubts or questioning.

Each of us has his special reasons. One loves America because he can be a Catholic here in peace; another because his kids can go to public school; another because he belongs to a successful trade-union; another because he has got riches by his own efforts.

Perhaps it is because I have three little daughters that I am so unendingly glad we are Americans. They are sturdy children, with sweet, fair faces. For them this is a good world—safe and joyful and promising. War and Europe are very remote. They know nothing of labor camps. The future seems dazzling. One wants to be a foreign correspondent; one isn't quite sure whether to be an architect or clerk in a candy store, or just have a large family; the third wants to drive a big green bus. The oldest is rapt about swing; the middle one likes Mr. Roosevelt's fireside confidences, particularly when they last past bedtime; the little one likes everything.

I do not clip the wings of their plans. As they grow, I know they will explore ideas, test their abilities, discover what is good and what is less good. As adults, they will hold what opinions seem right and there will be no dreadful consequences. I need not teach them to lie or be furtive. For this is America, and for this I am grateful every hour of every day.

Our loyalty to America is the loyalty of citizens in a democracy. We give it freely, gladly, in exchange for the birthright of our children. Those groups which would bully Americans into conforming to their personal or corporate purposes by shouting "un-American" at what they do not like mistake the quality of the feeling. They crack the word like a lash over opinions and groups not subservient to their interests. But this is America.

In Germany they crack the whip to command loyalty. The product is not, I think, what we want here. The sudden pounding of storm troopers in the dawn, the secret spying of neighbor on neighbor, the show of public frenzy—these methods are offensive to the decent tastes of citizens in a democracy. Here, as in Germany, the authors of the methods are the enemies of democracy.

And democracy is the American idea. It is the very stuff of patriotism. The record of our history shows that it is from the warp and woof of proposal and protest, of majorities and minorities, that the fabric of progress is woven.

As we love this country, so we plan for it, work for it, advocate for it, and criticize it. The right to protest is more precious to an American than the privilege of goose-stepping could possibly be to a German. As Americans, we will speak when there is need of speech. When we encounter a child, undernourished and whimpering with cold, we will say, "This must not be."

We speak as Americans.

Give 'Em Plenty of Religion

ARTICLE BY CLARENCE W. HALL, MAGAZINE EDITOR OF THE CHRISTIAN ADVOCATE

Mr. GEYER of California. Mr. Speaker, the Christian Advocate is the official organ of the Methodist Episcopal Church. Its magazine editor, Clarence W. Hall, made a special study of our Army camps. He has written a series of articles for his magazine describing the conditions as he found them. Under leave to extend my remarks, I am reproducing the fourth in this series.

I am sure the membership of this body will be appalled as was I and desire to do something about it. Surely these young men coming mostly from sheltered homes, and often not of their own free will and accord, have the right for better than that described in Mr. Hall's article. It is a challenge to all—the military authorities, the local civil authorities, and last but not least, the Congress of the United States.

I also suggest to my colleagues after reading this article to think again as to whether the draft ages should be lowered to 18 as advocated by some. Should mere children be subjected to such conditions?

The article follows:

[From the Christian Advocate of March 13, 1941]

"GIVE 'EM PLENTY OF RELIGION," SAID THE SERGEANT

(By Clarence W. Hall)

A leathery old top sergeant was sitting next to me on the bus running between Starke, Fla., and Fort Blanding. The conveyance was jammed with soldiers, most of them newly arrived "selectees." Virtually all were in various stages of drunkenness, induced by frequent references to a bottle of "corn" acquired in Starke, legally "dry."

It was Saturday night, and they were returning to quarters after a night's diversion in the vastly bloated little town, whose population of 1,400 drowsed contentedly beneath its moss-hung live oaks, before the defense program dropped 10,000 construction men and 40,000 soldiers on its doorstep.

The old sergeant, a self-described "relic of the World War," watched the antics of the soldiers with disgust. Two were unconscious on the floor of the bus. A trio in the back was rendering bawdy songs. Then a fight started in front, and the harassed driver stopped the bus while the sergeant went up to quell it. He came back dusting his hands.

"Look at 'em!" he said. "All clean-looking kids—most of 'em from good homes. Some punk with hell-raising in his heart leads 'em on—and zingo, they go to the devil."

"Well, what's the answer, Sarge?" I asked.

"I've been in the Army a long time. An outfit's only as clean as the towns they can get to. If things are wide open, we have trouble. If the people in these towns make the shady politicians clean things up, chase out the women and the liquor, we do all right. Soldiers are pretty much like everybody else—they don't go to the devil if you give 'em plenty of religion."

I brooded on that. "Plenty of religion" to this hard-boiled soldier meant influences for good—a clean-up of bad spots and a development of decent environments. That, averred my unclerical preacher, was the answer. It was good preaching.

I found a vast need for that kind of sermon in all the areas around camps I visited.

Take Jacksonville, Fla., for instance. Forty-seven miles from Blanding, it has an average of 4,000 soldiers a day on its streets—not a big number in a big city, it's true, but in the eyes of liquor and vice racketeers these 4,000 are a veritable Klondike gleaming with gold.

In this city the National Defense Commission made a mayor's committee responsible for cleaning things up and providing decent recreation for the soldiers to keep them out of the hands of the vultures. The committee got as far as recommending a segregated district for prostitution, which plan was promptly scuttled by Col. Bascom Johnson, of the Public Health Department, then foundered.

However, the Jacksonville Ministerial Alliance was awake. Snubbed by the mayor's group, the preachers, headed by Methodist District Superintendent J. H. Daniel, formed their own committee. They have opened a splendid recreation building in the downtown section and, in cooperation with camp chaplains, are doing a beautiful piece of work.

But Jacksonville itself is odoriferous. Soldiers reeling drunk down the streets (until the M. P.'s get them) are common. I found the Houston Street vice district, only a few blocks from the Blanding bus station, resembling "old home" week for streetwalkers.

In the vicinity of the camp itself whole villages of trailer camps mushroomed into activity and vice flourished until pounced upon by the military police. But this action only put hundreds of prostitutes touring the highways near the camps in cars, "mobile units" of assignation.

The seeds of reform in Jacksonville are being lightly sown, but it will take some energetic cultivation by public opinion before anything very virile sprouts up to crowd out entrenched vice.

Everywhere, however, you find the liquor industry trying to curry public favor by inspiring its associates. While the Jacksonville ministers' project was being launched a prominent liquor dealer strolled in with social-climbing intentions.

"See where you need money to get this place going," he observed amiably. "Well, just say the word, and I'll be glad to get some contributions for you. The boys of our association are making a lot of money now, what with all these soldiers, and they feel they'd like to kick in—sort of a gesture of appreciation, you know!"

This thank offering got short shrift from the Methodist lady who was hanging curtains. Her pastor will probably forgive her for the uncharitable language she used in the sulfurous lacing she handed out!

The evils surrounding Fort Dix, near Trenton, N. J., are scattered throughout the numerous small and large towns in this populous area, therefore do not appear so boldly on the surface as in communities adjacent to the large southern camps. But the smaller places—like Pointville and Wrightstown—are "frontier" towns in spirit and activity, constructive and destructive. And you can find plenty of evidence that hordes of harlots have set up profitable "housekeeping" in Camden and Trenton.

Dr. W. R. Raver, Methodist district superintendent, gave me an encouraging picture of the work being conducted by the Fort Dix Community Service, a federated group comprising 23 religious and social-service organizations. Headquarters for this unit have been set up in the parish house of the Pointville Methodist Church.

I found Battle Creek, Mich., to be a town where liquor flows without restraint, but prostitution is not rife. The police department began early to eliminate the swarms of lewd women who drifted in, and an unofficial red-light district of long standing was dispersed. It is too much to claim, however, that prostitution doesn't exist here, for while no solders in uniform are admitted in certain houses that informed citizens will point out to you, they get around this by coming in civilian clothes—at the suggestion of the women themselves.

I visited Fort Custer on pay day. One soldier prophesied in my hearing, "Boy, what a beating Battle Creek is going to take tonight!" He was right. I stayed long enough to witness it.

Kalamazoo, also within easy distance from Custer, is likewise "taking a beating." A newspaperman there, commenting on the recent formation of a Women's Home Guard, who promised to drill with real rifles "in defense of home and community," sardonically remarked to me: "They're trying now to get the rifles. They'd do better to get hatchets, a la Carrie Nation, and go to work on some of our taverns. That's where our trouble is coming from." I think he has something there.

Not much of an antidotal program seemed to be under way at my visit. They were talking of a clubhouse soon to be obtained for the soldiers. But pending this, Rev. Spencer B. Owens and his live-wire fellowship league are featuring special open-house programs for soldiers in the First Methodist Church of Battle Creek. A more nearly community-wide program is slowly getting under way.

Last stop on my camp itinerary was Fort Sheridan, near Chicago. Here, too, the acuteness of the liquor-vice problem is lost to view in the big city. I talked at some length with Lt. Albert R. Haney. I also visited several of the 23 taverns in Highwood, a town of 3,600 population bordering the fort. I counted 15 saloons in 1 short block, and the keepers frankly told me their main support came from soldiers.

A local military regulation forbids the sale of bottled liquors to soldiers within 5 miles of Sheridan, but no limits are placed on counter and table consumption.

In Sheridan an efficiently operating morale division and chaplains' corps are striving, with considerable success, to keep the soldiers' minds off outside attractions. And in Col. John L. Homer, fort commander, the churches have a warm backer.

In totaling the sum of my impressions of the camps—together with what I learned in Washington of the War Department's attitude toward the problem—I get this:

"The coalition of liquor, gambling, and prostitution is strong in almost every community adjoining the camps. All three are readily available for the soldier who looks for them. In many cases the arrangements between such forces of corruption and local politics appear to be based on an amiable reciprocity."

"Their patronage comes not only from men already addicted to such practices, but also from adventurous youths who, separated from home ties and tempted by the propinquity of such evils, dabble experimentally for the sake of an unaccustomed thrill. The resulting rapid decadence of morals among hitherto clean young men is a threat that only a mind persistently blind will fail to see.

"The communities themselves are saddled with a tremendous problem, one that is bound to become more complex as the camps grow in population. A few are wrestling bravely, against such odds as limited facilities and corrupt local government, to master the problem before it masters them. But others are dazed, bewildered. The local papers carry little or no reference to the problem—a good many, doubtless, being in the same boat as one editor who phrased it thus: 'I am in the embarrassing position of having yelled for repeal. Now I can't face about without losing face!'

"The Army commanders, charged with the task of turning out men who are physically and morally fit, are frankly apprehensive—'off the record.' In many cases their own military police have had to step in and, as one expressed it, 'wash the town's dirty linen because the local people are too lazy or too holy to tackle it themselves.'

"The Army's own morale division and corps of chaplains are doing a splendid job in the camps. But, as General Marshall told me, 'When the soldiers leave camps they're on their own.'

"Official Washington is making some motions to help. A whole batch of committees is now out surveying conditions for the National Defense Commission. But little will be accomplished because of bureaucratic red tape.

"Legislative action by the Federal Government seems to be the only answer to any widespread reform. A bill, proposed by Representative MAY, aims to outlaw prostitution near the camps; the War Department high command favors its passage; it stands a good chance of being enacted. But official Washington definitely shies away from any similar attempt to control liquor—probably made chary by the administration's own attitude toward anything resembling a return to prohibition. My attempts to point out the inconsistency of favoring prostitution control while evading liquor regulation met only silence—no argument—on the part of Washington's 'brass hats.'"

In view of all the foregoing, it would appear to this reporter that the only hope of bettering conditions on anything like a broad scale lies in following the suggestion given me privately by a high-ranking War Department official whose name, for obvious reasons, I cannot divulge. Said he:

"My suggestion is that the church people of America band together, first force their local governments to clean up liquor and vice conditions, and then unite with others all over the country to put up such a holy howl to Washington that Federal legislation will have to be enacted—or else!"

Unity and Cooperation on the Part of the City of York, Pa.

REMARKS

OF

HON. HARRY L. HAINES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

Mr. HAINES. Mr. Speaker, I have asked for these few minutes today to speak upon a subject that is uppermost in the minds of our people at this time—peace or war. There is a wide diversity of opinion not only in this House, but also in the rank and file of our citizens concerning the effect that the passage of H. R. 1776 will have upon the future of our beloved country. There is no doubt but that this country now faces a crisis probably more serious than at any other period of our national existence. I believe that a large majority of our people prefer the road to peace, and because I believed that the passage of H. R. 1776 would contribute to peace I supported that legislation. I hope that I am not mistaken in this conclusion, but should I be I want to assure my countrymen that I voted my honest convictions. I have always believed that the surest guarantee for peace rested in the strength of our Army and Navy.

We have charted our course, Mr. Speaker, and there can be no turning back. We are appropriating billions of dollars that future generations must pay, but if it will mean peace, I am sure it is money well spent, and that our posterity will not look back upon us with any degree of disfavor, but rather with a spirit of thankfulness for having done what we believed to be right at a most critical period. On the other hand, should we be compelled to defend ourselves against those who would destroy our democracy, we have the satisfaction of having had the courage to do what we believed was in the best interest of our own country.

I said these were critical days, Mr. Speaker. Believing this, I am firm in my convictions that these days call for a spirit of unity and a fine spirit of cooperation on the part of every citizen. This is particularly true with labor and industry. May I call your attention to a city in my congressional district where such a spirit of unity and cooperation does exist. I refer to that old, historic city of York, Pa., a city noted for its industrial activity. Although York ranks fourteenth in population among the cities of Pennsylvania, it leads all of the

cities of that Commonwealth in its variety of the finished product in proportion to its population. It has the proud distinction of having a greater percentage of its population gainfully employed than any other city of that State. I would be glad to have the membership of this House acquaint itself with the variety of the finished product manufactured in York, and would also like to advise that this city has nine industrial plants that lead all others in volume of production. It is a city of fine people, who are intensely patriotic and anxious to do their full share in these days of emergency.

York's historic background is unsurpassed. Indeed, I have the honor to represent cities like Gettysburg and Chambersburg, where men of the North and the South struggled in other critical days for a cause that both believed to be just. In Hanover, in my district, the first blood was shed in the great Civil War north of the Mason and Dixon's line, and I am very proud of the fact that I represent this section of our great Nation. York's place in Revolutionary history has not received the publicity to which it is entitled. It was at York that the Congress convened in the darkest days of the American Revolution, and for 9 months it was the seat of this Nation. When the British occupied Philadelphia, Congress traveled westward, stayed 1 day at Lancaster, then crossed the Susquehanna River, and from September 30, 1777, to June 27, 1778, was in session at York. These sessions were held in the little courthouse that was located on what is now known as Continental Square, and it was here that Congress learned of the surrender of Burgoyne.

It was here that Congress passed the Articles of Confederation, issued the first national Thanksgiving proclamation, received the news from Benjamin Franklin in Paris that France would send a fleet, money, and an army; received Baron Von Steuben and Lafayette and commissioned them as major generals.

It was in York that the plot to supplant Washington with Gates was frustrated by Lafayette, when at an opportune time at a banquet he proposed a toast to the Commander in Chief. This plot is known in history as the Conway cabal. It was the home of James Smith, a Member of Congress from York and a signer of the Declaration of Independence. He lies buried in the First Presbyterian Churchyard, and this churchyard also contains the body of David Grier, a colonel in the Revolution and a delegate to the convention that nominated Washington for the first term. In another cemetery lies the body of Philip Livingston, a signer of the Declaration of Independence, who died in York while a Member of the Congress. On the site of the Continental Treasury there is now erected a splendid bank building, the First National Bank of York. The building used by General Wayne as headquarters while recruiting his brigade for the march upon Yorktowne still stands. In another burial ground of a church erected in 1743 lies the body of Thomas Hartley, colonel of the Revolution and a Member of Congress from York for 12 years, and John Clark, a major in the Revolution and chief of staff for General Greene after 1778, is also buried here.

These and other interesting historical facts make York a sacred spot in our American concept of freedom and liberty, and I feel that I am justified in anything that I might say here today when we are considering the appropriation of money for the defense of a country that these men were willing to die for.

This year—in November—York will celebrate its two-hundredth anniversary by staging ceremonies that are fitting and due the memory of those who struggled and gave their best in the early days of our great, free land.

Mr. Speaker, I have requested the Post Office Department to issue a commemorative stamp for this celebration, and I am certain you will agree with me that with the place York has in our early history this recognition is due.

I stated that York is a great industrial center. Indeed, as early as 1831 a gentleman by the name of Phineas Davis built a locomotive and called it the York, and this old locomotive won first prize offered by the Baltimore & Ohio Railroad at their great exposition held a few years ago. Phineas Davis was a watchmaker by trade. He resided in York, and the city has honored him by naming one of its high schools in his memory.

The York Imperial apple originated in York County.

The present citizenship of York has had a fine heritage, and this is evidenced by the fine spirit of cooperation that now characterizes its people today. They believe in the old philosophy of helping each other "to do what we can with what we have." That is the philosophy back of the so-called York plan that has attracted Nation-wide interest. York industrial and labor leaders got together and decided upon a course of action that might well be copied by all the Nation. Very early in our present defense program these industrial and labor leaders got together and with a fine spirit of cooperation they agreed upon 15 objectives that have since attracted so much attention that our own Government heads have approved and complimented these men and women for their fine spirit of helpfulness in a day when this Nation wants unity in action.

The York plan is an ideal one and any section of the country can copy it. This is not a patented idea—simply good horse sense, as Mr. William Shipley, president of the York Ice Machinery Corporation and chairman of the Defense Board in York, stated in an address to the Manufacturers' Association of York recently.

Mr. Speaker, with your permission I am going to name these 15 objectives with a view of having the attention of the entire Nation called to them. They are:

First. To use our present facilities in regard to tools.

Second. To get idle tools and idle men working.

Third. To make a survey of the tools outside the metal trades.

Fourth. To study what type of work we can do with the facilities at our command.

Fifth. To make a decided effort to explain and sell in detail the defense plan to our community.

Sixth. To assist in educational work as it pertains to educating new employees.

Seventh. To study housing.

Eighth. To study workers' health.

Ninth. To establish the costs of the subcontractor to the prime contractor.

Tenth. To study deliveries of subcontractor to prime contractor so that the material would be supplied to the prime contractor as needed.

Eleventh. To study supplying needed labor if and when working three shifts.

Twelfth. To impress on the minds of the subcontractor the necessity for accuracy of work so as to assure the Federal acceptance of the parts being furnished to the prime contractor.

Thirteenth. To study labor potentials in York.

Fourteenth. To take steps to supply this additional labor when and where needed.

Fifteenth. To enter into all local activities that deal either directly or indirectly with the present emergency.

With these objectives, and the fine spirit of these people, there is little wonder that the men who advanced this program are being sought throughout the entire country to go and tell their story.

Mr. Shipley is ably assisted in this great program by Mr. Turner, Mr. W. J. Fisher, and Mr. Warren C. Bulette, all fine industrialists who have won the confidence of labor and their organizations. With such leadership in every part of the Nation we cannot fail.

Terminus of the Alaska Railroad

EXTENSION OF REMARKS

OF

HON. ANTHONY J. DIMOND

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

MEMORANDUM OF B. C. JOHNSON, OF SEWARD, ALASKA

Mr. DIMOND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum of B. C. Johnson, of Seward, Alaska, relative to proposed change of terminus of the Alaska Railroad:

Congress is asked, in a Budget-supported estimate, to make an appropriation with which to relocate the southern end of the Alaska Railroad and to change the seaboard terminus of that railroad from the city of Seward, Alaska, to a point at the head of Passage Canal. In the judgment of the writer, the suggestion is unsound, and a thorough investigation of the subject should be made before action is taken on the requested appropriation.

The Alaska Railroad is owned and operated by the United States Government. The seaboard terminus of the railroad is at the city

of Seward, Alaska, situated on the shores of Resurrection Bay, which opens into the Gulf of Alaska. From Seward the railroad extends northerly a distance of 471 miles to Fairbanks, Alaska. The railroad has been continuously operated for its entire length since 1920. A considerable portion of the railroad is located in mountainous country. North of Seward for approximately 60 miles the road follows a series of low valleys through the mountains and crosses two low passes in those mountains.

It is now proposed to change the seaboard terminus of the railroad from Seward to a place at the head of Passage Canal, sometimes called Portage Bay, which is an inlet of Prince William Sound. Congress is requested to appropriate $5,300,000 for that purpose. Such a change would necessitate the building of 14 miles of new railroad, departing from the present line at or near mile 64, north of Seward. Upon the building of the new line to the head of Passage Canal it is proposed to abandon and dismantle all of the railroad between Seward and mile 64.

The reasons assigned for the proposed change of terminus of the railroad are two in number: First, that the timber structures on the present line between Seward and mile 64, particularly a long and high wooden trestle at or near mile 50 and wooden bridges in what is called the loop at or near mile 51, are readily susceptible to destruction by sabotage, and such destruction would cause considerable interruption of traffic; and, second, it is asserted by the geenral manager of the railroad that the building of the new line to Passage Canal would result in considerable economies in operation and of maintenance.

The railroad is of military importance because of the recent establishment and construction of an army air station at the northern terminus of the railroad at Fairbanks, Alaska, and of an army base and military post at Anchorage, Alaska, which is located on the railroad 114 miles north of Seward. For this reason, the military authorities are naturally concerned that there should be no interruptions of traffic on the railroad and, therefore, the War Department is supporting the proposed change in the interests of national defense.

From intimate knowledge of conditions in that region gained by personal inspection and examination, I am cofident that the national defense will be better promoted, and at much less expense, by not changing the terminus of the railroad to Passage Canal, but rather by rehabilitating the present line of the railroad between Seward and mile 64.

The danger which now exists to interruption of traffic through the possible failure or destruction of the timber structures on the line above mentioned can be readily and cheaply obviated by making fills of earth and rock at these points and thus totally eliminating the timber trestle and bridges. The cost of making all the necessary fills to replace the present structures of wood would not exceed $400,000. The railroad between Seward and mile 64 is located on hard, solid ground, or on rock and, therefore, there is no danger that this particular portion of the railroad is any more liable to destruction through sabotage or otherwise than would be the proposed new line if built to Passage Canal.

It is further asserted that since the railroad between Seward and mile 64 crosses two low passes in the hills, it is unduly expensive to operate because additional power is sometimes needed to haul trains through these passes. It should be noted, however, that the steepest grade on the present line between Seward and mile 64 is 2.4 percent, compensated. On the grades complained of, that at mile 12 could be practically eliminated by the construction of a tunnel if the cost thereof were deemed justified. The traffic over both summits can easily be taken care of at slight expense by having an extra locomotive stationed in that area and supplied by only one crew. As compared with the interest on the money necessary to be borrowed to build the proposed new line to Passage Canal, the cost of maintaining one locomotive and one train crew on this part of the line is entirely negligible.

It is true that the original cost of construction on that part of the road between Seward and mile 64 was considerable, because a large portion of that work was in solid rock. But that construction is now in and will last indefinitely, and the only thing needed to make all of the line safe is to provide earth and rock fills for the present wooden structures in that area.

While someone has estimated that the cost of construction from mile 64 to Passage Canal is $5,300,000, I wish to put myself on record new that the proposed new line between mile 64 and Passage Canal when completed with the necessary terminal facilities, and giving credit for whatever material may be recovered from dismantling the present line between mile 64 and Seward, minus the expense of recovery, will cost between $10,000,000 and $12,000,000, and, therefore, the estimate of $5,300,000 is a gross underestimate for the job. The total cost of rehabilitating the present line of the railroad between Seward and mile 64, including a span at Snow River and the making of fills in the loop district so as to eliminate all trestles and wooden bridges, would not exceed $1,400,000. Such rehabilitation would make the present line between Seward and mile 64 at least as safe as the proposed new line between mile 64 and Passage Canal.

Moreover, on the proposed mile 64-Passage Canal line two long tunnels will be necessary, one about 2½ miles and the other a little less than 1 mile in length. These tunnels must be driven in proximity to enormous glaciers which fill the intervening valleys. In fact, if it were not for the glaciers, no tunnels would be necessary on this proposed route. The nearness of the tunnels to the glaciers to me spells wet tunnels. This means that they must be heated in the winter months to keep them from freezing, and how this can be done in such long tunnels, with the maintenance of proper ventilation, is a difficult problem to solve. For any man to say that the cost of maintenance of the proposed new line to Passage Canal will be less than the cost of rehabilitation and maintenance of the existing line between mile 64 and Seward is simply to indulge in guesswork.

It is said that the line between Seward and mile 64 is in poor condition, and that is correct as to the wooden structures to which I have referred, but it must be remembered that the remainder of the railroad north of mile 64 is also in poor condition. I have walked over the entire railroad from one end to the other, in both directions. In many places, the rail joints are bent and the rail ends battered. For dozens and dozens of miles, the railroad crosses soft ground and at those places there should be at least 1 foot of ballast instead of 6 inches put under the ties which would allow drainage in the fall of the year when the rainy season sets in and would do away with a lot of frost heaving and costly maintenance and would avoid the danger of the necessary shimming of the track to compensate for frost heaves.

To go on north from mile 64: We find at mile 70 that there were six snowslides this year, in the same location, 400 to 500 feet long and 25 feet deep; along Turnagain Arm a number of snow-and-rock slides occur and at a place near Potter mud sloughs off from under the tracks; fills in the Turnagain Arm area are continually settling; mud is encountered between Anchorage and a point north of Eklutna; a lake in the glacier at the head of Knik River breaks every year and floods the country on occasion for days at a time; mud slides occur between Wasilla and Matanuska and north of Montana; between Talkeetna and Curry, the Susitna River causes trouble on many occasions and there are several mud slides in that region; between Canyon and 15 miles north, the Indian River in flood washes out the railroad in several places, and on this account all traffic was suspended over the railroad at one time for weeks. Between Cantwell and McKinley Park, the track glaciers over during the winter at several points; between McKinley Park and Healy is the most dangerous track on the entire road, extremely costly to maintain and hazardous to operate trains over; from Healy to Nenana, trouble is encountered with glaciers during the winter season.

Taking the railroad as a whole, it is, in my judgment, indisputable that if the railroad between Seward and mile 64 is rehabilitated, it will be the safest and best part of the entire road and certainly no more costly to maintain and operate than the rest of the line.

In fact, rather than spend even $5,300,000 to build the proposed new line into Passage Canal, it would be much better to relocate that part of the railroad between mile 28 and mile 81 by following a low open valley called Moose Pass and crossing the head of Turnagain Arm with a bridge. This entire job could be done for not more than $4,000,000 and would eliminate all of the so-called loop district where the dangerous timber structures are located. However, it is totally unnecessary to even consider this alternative because the present line, if rehabilitated at comparatively small expense, will serve every possible purpose for many years to come.

The people who reside in the city of Seward and for 50 miles north thereof are deserving of some consideration. Probably 1,500 citizens reside in this area. If the proposed new line is built to Passage Canal and the line to Seward abandoned, more than half of those residents will lose their homes and practically everything they have. To thus ruin them without any necessity for such action would be a cruel thing. The present line of the railroad and its present terminus should by all means be maintained.

I have discussed this subject at some length with the Delegate from Alaska, who is personally familiar with the entire area mentioned, and I believe Mr. DIMOND concurs with the views herein expressed.

Respectfully submitted.

B. C. JOHNSON.

Position of Agriculture in National and Western Hemisphere Defense

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

LETTER AND RESOLUTION OF THE WISCONSIN COUNCIL OF AGRICULTURE

Mr. MURRAY. Mr. Speaker, the agricultural people of this country, who represent 25 percent of the population and must be content with less than 10 percent of the national farm income, are continually striving to obtain economic justice for the rural people. Thousands

of agricultural college graduates, thousands of teachers of agriculture in high schools and thousands of agriculturally trained people living on the farms of our country are, in a constructive manner, seeking to obtain fair consideration for the rural population.

The following letter and resolution from the Wisconsin Council of Agriculture is an example of this interest:

WISCONSIN COUNCIL OF AGRICULTURE,
Madison, Wis., March 11, 1941.

Hon. REID F. MURRAY,
Member of Congress,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN MURRAY: The directors of the Wisconsin Council of Agriculture in session at Madison, Thursday, March 6, after due consideration, adopted a resolution concerning the position of agriculture in national and Western Hemisphere defense. A copy of this resolution is herewith enclosed. I am sure you will be very much interested in studying this united considered opinion of Wisconsin farm leaders assembled in the Wisconsin Council of Agriculture.

Consumer-minded groups and individuals, both in and outside governmental agencies, today exert considerable influence in the way of restricting price advances of consumer goods. This is evident with respect to consumer propaganda found in the National Defense magazine. Within the A. A. A., the Consumers' Division exerts a similar influence on the price trends of agricultural products.

Throughout this program of national preparedness few seem to realize that the costs of the things farmers buy are rising way out of proportion to the farmer's ability to pay. Many of these same people, who are very conscious of any increases in the cost of consumer goods, condone increasing labor rates, and pay little attention to the rising cost of capital goods, industrial products, and defense materials.

In view of this situation so adverse to the interests of agriculture, the free importation of products from Latin America is certain to have a further depressing effect which will be much more manifest in the case of agriculture than in its influence upon industry.

Your defense of American agriculture in helping to curtail these influences and proposed policies that threaten agricultural well-being will be very much appreciated.

Sincerely yours,

MILO K. SWANTON,
Executive Secretary.

RESOLUTION REGARDING THE POSITION OF AGRICULTURE IN NATIONAL AND WESTERN HEMISPHERE DEFENSE AS ADOPTED BY THE WISCONSIN COUNCIL OF AGRICULTURE AT MADISON, MARCH 6, 1941

Hemisphere defense involves economic as well as military considerations, and we urge that especial care be exercised during this period of emotional stress in order that agriculture in this country not be asked to carry an undue share of the economic burdens of such Western Hemisphere defense. Latin America is suffering from decreased agricultural exports, as is this country. They are accumulating agricultural surpluses, as are we. Some of their surpluses are identical in kind with our own.

The Wisconsin Council of Agriculture urgently requests that our Government proceed slowly and cautiously in assuming responsibility for these foreign surpluses, at least until we have formulated methods for the efficient handling of our own agricultural surplus problems.

In relation to other major economic groups and classes in America, the farmers stand ready and are willing to assume their full share of the burdens and responsibilities of national defense. This is just as true now as during the last World War. Our production of food and fiber goes into the channels of trade largely in the form of consumer goods. Hence the prices of our farm products are most directly affected and influenced by the efforts and propaganda of the consumer groups for stabilization of prices as voiced by the Consumer Division of the A. A. A. and as expressed in the National Defense magazine.

We protest that this program, designed to restrict price advances affecting agricultural commodities, apparently does not attempt at the same time to curtail the rising cost of capital goods, industrial products, and defense materials. The effect of this is to increase cost of production on the farm while curtailing the prices farmers receive. This results in lower net farm income.

We urge that efforts be made by our State and National Governments to assist more aggressively in moving our surplus agricultural commodities into world markets when and where at all possible.

Mr. Speaker, the Wisconsin Council of Agriculture is a parent organization and represents the various agricultural organizations throughout the State of Wisconsin.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. JARED Y. SANDERS, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

RESOLUTION BY THE BOARD OF THE DEPARTMENT OF PUBLIC SERVICE OF LOUISIANA

Mr. SANDERS. Mr. Speaker, under leave to extend my remarks, I desire to have printed in the CONGRESSIONAL RECORD a resolution adopted by the board of the department of public service of the State of Louisiana in opposition to the so-called St. Lawrence River-Great Lakes navigation and power project.

This resolution well expresses the considered opinion of informed and responsible people in my State and the reasons that actuate our people in opposing this proposed project. The resolution was unanimously adopted by the board and director of the department of public service of Louisiana on March 10, last. The resolution in question is as follows:

Whereas it is currently reported in the public press and through other media that there will be introduced at the 1941 session of the Congress of the United States, either in the form of a treaty between the Governments of the United States and the Dominion of Canada, or in the form of other legislation, a measure to revive the so-called St. Lawrence River-Great Lakes navigation and power project, similar in substance to the proposed treaty between the two Governments which failed of ratification in the Senate at the 1934 session of Congress; and

Whereas in the judgment of the board and the director of the department of public service in the State of Louisiana, the proposed project is economically unsound and inimical to the best interests of the United States as a whole, and in particular is prejudicial to the State of Louisiana, its ports, industries, and commerce, in that—

(1) The vast amount of preliminary work necessary before actual construction can be commenced will divert to an objective which cannot be attained for a number of years to come, engineering and other technical personnel vitally needed in designing and carrying into effect the national-defense program; to the extent that the project has for its objective providing an additional water transportation route between the ports of the Great Lakes and the sea, it is unsound because in the opinion of recognized authorities, due to the channel-depth limitations only 30 percent of the registered tonnage of the world could use the waterway; and but 5 percent of the tonnage registered under the American flag could use it, for like reasons; and this use would be restricted to a maximum of from 5 to 6 months in a year, due to the freezing over of the St. Lawrence River. Thus the project, as an instrument of commerce and navigation, would impose a cost upon the United States wholly disproportionate to its value as such a facility.

The project is further objectionable in that practically the only vessels which could navigate the waterway would be small foreign-flag carriers of the tramp-ship type engaged in the handling of low-grade bulk commodities, such as coal, grains, etc. This type of carrier would thus be enabled to reach the Great Lakes ports laden with such commodities as ballast produced in other nations under substandard wage, working, and living conditions and moving in substandard carriers. These cargoes would be dumped on the domestic market in competition with the agricultural, mining, and other industries of the United States to their great harm and detriment. This dumping process would adversely affect the line ships of the American merchant marine which now serve the recognized and established ports of the United States—a merchant marine upon which the United States has in recent years spent, and upon which it is now spending, hundreds of millions of dollars in construction and operating subsidies. This ill effect would reflect itself not only upon the American merchant marine as an industry but upon the shipowners and operators, the employed personnel, and would generally adversely affect the operating and financial stability of the organizations and facilities of established ports of the United States.

Specifically the project would gravely prejudice the ports and port facilities of Louisiana (upon whose bonds the State of Louisiana is an unconditional guarantor in an amount in excess of $35,000,000), as well as other ports in the Gulf. The port of New Orleans normally handles a great volume of import and export tonnage destined to and originating in that area of the United States adjacent to the American segment of the projected waterway. This traffic is presently handled by common carrier, contract carrier, and private barge lines operating on the Mississippi River and its tributaries, as well as by railroad and truck lines.

The Mississippi River, in conjunction with the Illinois and Desplaines Rivers and the Chicago Sanitary Drainage Canal, is the main stem of this water lane, forming a through route from the Great Lakes to New Orleans, and it is vital to the port of New Orleans as well as other Gulf ports that a channel be maintained of sufficient depth to permit unimpeded navigation thereover. At certain seasons of the year this minimum channel depth is only made possible by a diversion of water from Lake Michigan; and, indeed, in years of abnormal drought conditions in the upper Mississippi Valley even this water diversion is not sufficient to fully accomplish this purpose.

"During 1938, river conditions were quite satisfactory. In 1939, although no unusual navigational difficulties were experienced during the first 8 months, during the remainder of the year low river stages on the Missouri, lower Mississippi, and to some extent on the upper Mississippi, slowed up tow movements and increased the difficulty of maintaining regular schedules.

"Delays on account of low channel and consequent groundings on the Mississippi system consumed 7,310 hours during the last 4 months of the year. These delays made it necessary to add more power in order to complete deliveries, and, of course, added to the cost of operation." (Annual Report of the Inland Waterways Corporation for the calendar year 1939, p. 2.)

Lake Michigan alone of the Great Lakes lies wholly within and is subject to the exclusive sovereignty of the United States. As much as 10,000 cubic feet per second has been withdrawn from Lake Michigan and diverted to the existing waterway. However, under a decree of the Supreme Court of the United States entered in 1931, and arising out of litigation between several States, the present maximum diversion is fixed at 1,500 cubic feet per second, plus an insignificant allowable pumpage. There is presently no legal impediment to the Supreme Court increasing the allowable diversion in the event conditions required and justified such a modification of its decree. Under the proposed treaty of 1938—and a treaty has the binding force of law—the amount of diversion would be limited to the present 1,500 cubic feet per second, save in case of emergency, and the existence of such an emergency, under the proposal, must be submitted to an international tribunal for adjudication should the Dominion of Canada object to the additional withdrawal.

Thus, and to this extent, the future of a vital avenue of transportation lying wholly within the United States is, in part at least, surrendered to a foreign sovereign jurisdiction.

(2) To the extent that it is either a primary or incidental purpose of the proposal to provide facilities for the generation of hydroelectric power, then it is objectionable and prejudicial to the interests of Louisiana and to the South as a whole in that electric energy, in the present state of development, cannot be economically nor feasibly transmitted except for relatively short distances—recognized authorities fix the maximum, under the most favorable conditions, at 300 miles. Practically the whole of this generating capacity would be on that segment of the waterway known as the International Rapids section; and the availability of the cheap power there generated would be restricted by transmission limitations to the Province of Ontario and the State of New York. Obviously the great volume of power so generated would have to find its principal market in industrial consumption; that market, as to the proportion allocated to the United States, being in an area that is presently one of the most highly industrialized in the United States. Much of this power would be so-called dump power—that is, surplus power, sold for whatever it will bring in a competitive market.

The State of New York, and many of its larger industrial cities, including the city of New York, are parties to those proceedings before the Interstate Commerce Commission, commonly known and referred to as the Southern Governors' cases, wherein the Southern States, including Louisiana, are attacking the centralization of industry in so-called official classification territory—which includes the State of New York—insofar as that centralization is the result of the creation and maintenance of artificial rate and transportation barriers against manufactured articles from the South, made from and with the raw materials and natural resources of the South, seeking markets in that most-densely populated section of the United States—official territory. Availability of dependable supplies of electric power, and the price thereof, are, in the absence of most unusual conditions, among the prime determinative factors considered in the location of industrial plants. In the Southern Governors' cases the State of New York and its interests are opposing, to the extent of their ability, the contentions of the southern interests.

Under such conditions the South generally, and Louisiana in particular, would not only receive no advantage from the projected waterway and power project, but would be actively prejudiced thereby, and would be called upon to pay their proportion of the construction and operating costs of the project, and possibly the deficits arising therefrom, while their own natural resources, fuels, minerals, and others, will continue to be transported to the pools of cheap power, and there consumed or processed, as the case may be.

In consideration of the foregoing, as well as other pertinent facts, which cannot be here set forth because of the limitations of space: Now, therefore, be it

Resolved by the board and the director of the Department of Public Service of the State of Louisiana, in session at its offices in Baton Rouge on this March 10, 1941, That we do hereby express our unalterable opposition to participation by the United States in the proposed construction of the St. Lawrence River-Great Lakes navigation and power project; and we respectfully urge upon the Members of the Congress from the State of Louisiana that they oppose any and all legislation, of whatsoever character, having for its purpose the construction of said project; and be it further

Resolved, That certified copies of this resolution be transmitted to all Members of the Congress of the United States from Louisiana.

I, Alex Grouchy, acting secretary of the Board of the Department of Public Service of the State of Louisiana, do hereby certify that the foregoing is a true and correct copy of a resolution this day unanimously adopted by the Board and the Director of the Department of Public Service of the State of Louisiana.

In faith whereof, I have hereunto officially signed my name and affixed the seal of the Department of Public Service of the State of Louisiana at Baton Rouge, La., this March 10, 1941.

[SEAL] ALEX GROUCHY,
Acting Secretary of the Board of the Department of Public Service of the State of Louisiana.

Reapportionment

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

RESOLUTION BY THE GENERAL ASSEMBLY OF IOWA

Mr. LECOMPTE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I desire to include a resolution adopted by the Forty-ninth General Assembly of Iowa, petitioning Congress to call a convention to consider amending the Constitution so that "Representatives in Congress shall be apportioned among the several States according to their respective numbers, counting the whole number of citizens in each State."

The resolution follows:

House Concurrent Resolution No. 19

Whereas section 2 of the fourteenth amendment to the Constitution of the United States provides that Representatives in Congress shall be determined by counting the whole number of persons in each State, excluding Indians not taxed; and

Whereas the apportionment of Representatives on this basis works a hardship on certain sections of the United States; and

Whereas certain other sections of the country have large numbers of persons who are not citizens of the United States; and

Whereas Congress shall, upon application of the legislatures of two-thirds of the several States, call a convention to consider amendments to the Constitution of the United States: Therefore be it

Resolved by the house (the senate concurring), That the Legislature of Iowa, duly assembled in Des Moines, Iowa, respectfully petitions the Congress of the United States to call a convention for the purpose of proposing amendments to the Constitution of the United States and that said convention, when so called, shall consider amending the first sentence of section 2 of the fourteenth amendment so that the same shall read as follows: "Representatives in Congress shall be apportioned among the several States according to their respective numbers, counting the whole number of citizens in each State"; be it further

Resolved, That a copy of this resolution be sent to each United States Senator and Representative from the State of Iowa, to the Speaker of the National House of Representatives, to the President of the United States Senate, to the Governors of the 47 States, and to the President of the United States.

I hereby certify that House Concurrent Resolution No. 19 was adopted by the Forty-ninth General Assembly of Iowa. Done at Des Moines, Iowa, this 15th day of March 1941.

A. C. GUSTAFSON,
Chief Clerk, House of Representatives, Forty-ninth General Assembly, State of Iowa.

A. A. A. Contracts

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

Mr. SPRINGER. Mr. Speaker, quite recently I have received a number of letters from people who are engaged in farming, in my congressional district, in which they have advised me that in some of the counties the A. A. A. Board which is now endeavoring to secure signers for the 1941 contracts is resorting to threats and unreliable propaganda in an effort to secure the farmers' signatures to such contracts. It has been my very definite understanding that the matter of signing such contracts for allotments was to be a matter which was left to the discretion of each farmer, and that in the event he desired to sign the same he would do it

of his own volition, and that the Board would have no power or authority to attempt to force our farmers to sign such contracts against their own free will and accord.

May I say, Mr. Speaker, that it is a very sad commentary which we face when the local A. A. A. Boards in their anxiety to secure a large number of signers to such contracts will resort to threats and trickery upon our farmers in an effort to secure such signatures. This is one matter which is left entirely to the discretion of each farmer, and he has the perfect right to either sign or reject such proffered contract. Those A. A. A. Boards which resort to threats and trickery upon our farmers in an effort to secure their signatures to such contracts are violating both the letter and the spirit of the law, and those who would engage in such ulterior practices in order to attempt to force our farmers to sign such contracts for 1941 should be replaced very promptly. The people of our country have but little freedom remaining, and our farmers still have the right to determine for themselves whether they desire to sign the Government contracts, or whether they desire to farm their own farms in the manner they may determine. These Boards which attempt to "high pressure" our farmers into signing such contracts, by resorting to threats, unreliable propaganda and trickery should be promptly removed; there is no place for such practices among the good people of our country today.

Mr Speaker, in extending my own remarks on this subject, I ask unanimous consent to include therein a letter which I have just received from one of the good farmers in my congressional district, which is pertinent upon this subject. I hope every Member of the House will read this timely letter, which follows:

ST. PAUL, IND., *March 16, 1941.*

Hon. RAYMOND SPRINGER.

I just wanted to call your attention to the threats and un-American propaganda the Decatur County A. A. A. Board is putting out to get farmers to sign the 1941 contract.

They are getting signers through threats of penalties on overproduction of wheat and corn.

This board is one-sided politically and unreasonable.

Some of the farmers can sign and get along all right, but others don't have the base and just can't afford to.

We want this kept voluntary.

Back President, Says Farnum

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

ARTICLE BY GEORGE R. FARNUM, FORMER ASSISTANT ATTORNEY GENERAL OF THE UNITED STATES

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George R. Farnum, of Boston, former Assistant Attorney General of the United States, which was published in the Boston Traveler of March 8, 1941:

[From the Boston Traveler of March 8, 1941]

BACK PRESIDENT, SAYS FARNUM—LEASE-LEND CONTROVERSY SEEN PARALYZING NATIONAL ACTION

(By George R. Farnum, Boston lawyer and former Assistant Attorney General of the United States)

Regardless of their personal opinions and political affiliations, most people want to see our Government steered through the present hurricane by a captain who is strengthened by the knowledge that he has the confidence and can depend upon the cooperation of his crew. They know in their hearts that this is not the hour to dangerously rock the boat by personal animosities, political bigotry, or violent partisanship. They cherish, of course, their right to censure by their votes and criticize by their speech their public officials. They know that the full and free exercise of this privilege is one of the best guaranties that democracy possesses. They see that where it is lost freedom is undermined and autocracy ultimately prevails. The President of the United States enjoys no immunity from the judgment of his fellow citizens. "The king can do no wrong" is not a part of the American tradition.

There is a type of criticism, however, which defeats its own purpose by its intemperance. It is a thoroughly bad state of affairs when, in the discussion of public questions, people cease to think for themselves, throw all restraint to the winds, and permit reason to abdicate to passion. Things have come to a deplorable pass when dissatisfaction with Presidential policies and methods is accompanied by contempt and hatred for the man who for the time being is the voters' choice as Chief Executive of the Nation. It is difficult for most people to respect an office if they despise the incumbent. If the Presidency of the United States falls into disrespect, it is but a short step to distrust in democracy itself.

The agitation over the lend-lease bill in Congress, in the press, over the air, and in private discussion has been characterized by a controversial violence and personal bitterness that is not conducive to clear and honest thinking, and is certainly not promoting our national unity and consolidating American opinion at the very crisis of one of the really momentous periods in modern history. If there ever was a time since the Civil War when the administration, in its aim to render America the impregnable citadel of democracy at home and the hope of democracy abroad, deserves the support of all loyal Americans, whether private citizens or public servants that time is right now.

In the Old World civilization is disintegrating at a frightful rate. The work of centuries is being ruthlessly destroyed. The ideals for which men have toiled and sacrificed for countless generations have been betrayed and repudiated. Might, exultant and brutal, has replaced right as the law of existence. America and her way of life are anathema to those madmen who have brought down the terrible calamity on the world. Their advance guards, their propagandists and spies, have long since penetrated our defenses. It is fatuous and suicidal at this fateful time to encourage these implacable enemies of democracy in the belief that our councils are divided, our purposes unsettled, and our public opinion vacillating on the vital issues of the hour. It is supreme folly to give them any impression that our President lacks the respect and trust of the American people and that, having paid him the unprecedented honor of a third term, they are not wholeheartedly behind him in his foreign policies. To deliberately stir up public resentment against him, to try to shake public confidence in his motives and judgment, or to paralyze vigorous national action at this crucial hour by filibuster or otherwise, as some of our Senators and other politicians are doing, is in effect, to betray democracy and play directly into the hands of Hitler and his allies.

Our problem today is to maintain unimpaired all our rights of free speech and corrective action, but at the same time to exercise them so as not to poison the spirit and undermine the morale of the people at large, weaken the hand of the administration when it should be steady in purpose and strong in action, and not lend "aid and comfort" to those who detest us as a people, despise our ideals, and plot our ruin. We will not surrender our constitutional privileges as free people. It is quite another thing, however, to voluntarily impose upon ourselves some rational restraint in their exercise in times of grave public danger.

Wendell Willkie, whose patriotism, statesmanship, and good sense no one can seriously impugn, has set a worthy example to his fellow Republicans as well as to the country at large. The growth of his popularity since the election, as shown by the recent Gallup poll, proves that the people realize this fact, however he may be regarded by some of our politicians.

Fiftieth Anniversary of the Norwich Sun

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

EDITORIAL FROM THE NORWICH (N. Y.) SUN

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Norwich (N. Y.) Sun of March 17, 1941:

[From the Norwich (N. Y.) Sun of March 17, 1941]

OUR FIFTIETH ANNIVERSARY

Just 50 years ago, or to be exact, on Monday, March 16, 1891, the first copy of the Morning Sun rolled off the press, to the great delight, evidently, of its then editor, Reed Campbell, the entire staff, and to residents of the community which it served. So today we are celebrating our golden anniversary in a very conservative manner and reminding our 15,000 readers that we are still going strong and that there is every reason to believe that the Norwich Sun will continue to thrive and to serve Norwich, Chenango County, and this entire area as faithfully during the next half century as it has during the past.

The first issue of the Morning Sun was of 6 pages, 7 columns in width. A news item of the issue of the second day stated that there were 17 columns of display advertising in the first issue, and that, of course, was interesting, even thrilling, to Editor Campbell and the new owners of this youngest daily newspaper. At the head of the editorial columns there was no indication as to who owned the newspaper, neither was there any indication as to its staff. Today the Federal statutes provide for the publication of newspaper ownership, and for the naming of its officials. This statute was

enacted so that financial and other responsibility might be established.

However, the following announcement appeared in the editorial column on page 2: "The Morning Sun will be issued every day except Sundays. It will be thoroughly independent, and especially so as regards politics and religion. It will publish the news from day to day in a truthful and concise manner and in every way try to advocate such needed reforms as will be of lasting benefit to every man, woman, and child in the beautiful village of Norwich. The office has been thoroughly equipped with new and modern presses, type, and everything necessary to make a first-class newspaper. The paper will be under efficient business management and the editorial writers will devote their entire time in making the Morning Sun a bright, interesting, and readable newspaper."

After a period of 50 years has elapsed, we would say that the policies as laid down by the management in the year 1891 were most commendable, and if today, a half century later, we can "follow up" we shall be happy and entirely satisfied. In the second issue of the Morning Sun there were compliments from probably 50 of the prominent citizens of Norwich, each of whom in a short terse sentence expressed themselves on the advent of a daily newspaper in the village of Norwich. The first of the testimonials was from the late Judge George W. Ray, who said: "The paper is very good, indeed." The only resident of Norwich now living, who at that time said a good word by way of commendation was J. Bennett Turner, who with Mrs. Turner, is vacationing in Florida this winter, and he expressed himself as follows: "The paper is all right and a credit to the town."

The Morning Sun continued under the management of Reed Campbell until his death in 1903, when it was transferred to the Norwich Publishing Co. under the management of William H. Clark. At that time the Chenango Telegraph, owned by Mrs. C. E. Merritt, was transferred to the same organization. That management has continued to the present time under its original president or by his heirs and associates down to this very day. Under the new management the name was changed to the Norwich Sun, and it became an evening newspaper. The Chenango Telegraph was changed from a weekly newspaper, established in 1829, to a semiweekly newspaper, and this publication has been issued on Tuesdays and Fridays since the two newspapers began their publication from the same office in 1903. The Morning Sun was first published in a one-story building still standing and in use on Mechanic Street, just off North Broad.

Today the Norwich Sun has a circulation of approximately 3,500, while the Chenango Telegraph has more than 1,000 on its lists. The plant has been greatly enlarged, and it is equipped with the most modern typesetting machines and other equipment obtainable. The management endeavors to give the best possible service to readers and to advertisers. While it is not the largest newspaper and job-printing plant in central New York, it is one of the most completely equipped. We appreciate the confidence which our readers place in us for the integrity of the news which goes out every day in the columns of the Norwich Sun. Patrons and subscribers who get our newspaper every day have learned to like it, and it has become a household word in practically every home in Norwich as well as in hundreds of other homes within a radius of 40 miles. We trust this reader-confidence will continue, and all may rest assured that we shall continue our efforts to make the Norwich Sun not only one of the brightest and best newspapers in the State of New York but the very best in any city the size of Norwich or in any county with a population comparable to Chenango.

The Wealth Escaping Taxation Is More Than That Upon Which Taxes Are Paid

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

Mr. PATMAN. Mr. Speaker, some time ago, I called attention to the fact that the Committee on Ways and Means, of the House, when it conducts hearings on the new tax bill, should give consideration to taxing intangible wealth.

A large number of people in our country own a tremendous part of the wealth of the Nation and pay no taxes whatsoever.

The individual States have endeavored to tax intangible property, but have encountered obstacles that could not be overcome. These obstacles will not confront the Federal Government in its efforts to tax such wealth.

I asked Mr. Colin F. Stam, chief of staff of the Joint Committee on Internal Revenue Taxation of Congress, to give me information as to the value of the intangible and tangible property in the United States.

Under date of March 11, 1941, he replied to me as follows:

It is very difficult to obtain a figure as to the amount of intangible property in the United States. However, from such a preliminary investigation as I have been able to make, it appears that a conservative figure would be around $250,000,000,000.

In regard to the tangible property upon which taxes are customarily paid to the States or local governments, a figure around $50,000,000,000 would appear to be approximately correct.

It will be noticed that the intangible property in the Nation upon which there is practically no taxes at all paid is five times as much as the tangible property upon which taxes are customarily paid to the States and local governments.

It is true that one pays income taxes, if subject thereto, on the income from intangible property. It should be remembered that tangible property pays both a capital levy and income.

Mr. Stam was requested to furnish me a break-down of the intangible property in the United States, and his reply is as follows and is self-explanatory:

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN PATMAN: In accordance with your request, I am submitting herewith a break-down of the intangible property in the United States. As you will note from the attached table, the figure we gave you the other day did not include bank deposits or cash or take into account any increase in Federal bonds since June 30 of last year. If these items are taken into account, it appears that the total figure can be safely estimated to be around $300,000,000,000.

Sincerely yours,

COLIN F. STAM,
Chief of Staff.

Intangible property in the United States

[In billions of dollars]

Stocks	96.8
Bonds and long-term obligations, and short-term obligations held by private interests; farm and urban mortgates owed by individuals	98.4
Privately held public securities (as of June 30, 1940)	54.8
Total intangible property	250.0

This estimate is very conservative. It does not take into account bank deposits or cash. Moreover, the Federal bonds have increased considerably since June 30 of last year.

Since deposits in commercial banks (eliminating interbank deposits, governmental deposits, and deposits of business concerns) are approximately $32,000,000,000, it can safely be estimated that the total figure after taking into account these items will be around $300,000,000,000.

The date submitted has been collected from various sources, including the Treasury Department, Commerce Department, National Resources Committee, Securities and Exchange Commission, Report from Twentieth Century Fund, and the Federal Reserve Board.

From this information we learn that six times as much property as we ordinarily and customarily pay taxes on in this country goes untaxed by the individual States because of their inability to properly reach this intangible wealth.

This information is submitted in the hope that the Committee on Ways and Means will give it consideration.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

RESOLUTION BY THE DETROIT-GREAT LAKES-ST. LAWRENCE SEAWAY COMMITTEE

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

RESOLUTION TO THE CONGRESS OF THE UNITED STATES FROM DETROIT GREAT LAKES-ST. LAWRENCE SEAWAY COMMITTEE APPOINTED BY THE HONORABLE EDWARD J. JEFFRIES, JR., MAYOR OF THE CITY OF DETROIT

Whereas a bottleneck of approximately 48 miles in the St. Lawrence River deprives the people of the United States of vital production and transportation facilities in the Great Lakes area; and

Whereas the deepening of the St. Lawrence Channel as advocated by President Roosevelt will enable us to make our full contribution to the present needs of our Nation and to participate in the post-war program of world rehabilitation and stabilization; and

Whereas our national defense requires full utilization of the potentialities of our 21 active shipyards on the Great Lakes; and

Whereas the deepening of the St. Lawrence Channel could be completed in time to aid

the present defense program, and reliable investigations reveal that the proposed deepened channel could permit passage of all ships except battleships and aircraft carriers; and

Whereas engineering surveys made by our Government have approved the feasibility of the Great Lakes-St. Lawrence seaway and power project and forecast a benefit to the entire Nation; and

Whereas the Great Lakes and the St. Lawrence River provide an unparalleled natural highway of over 2,350 miles from the heart of our Nation to the Atlantic Ocean; and

Whereas a deep waterway from our great inland industrial, mineral, and agricultural region is vital to our Nation and a bulwark of strength to our defense; and

Whereas the people of Michigan and the States adjacent to the Great Lakes possess a natural right to transport their industrial products, agricultural and mining commodities to the markets of America and the world in the most economical manner; and

Whereas the midwestern section of our Nation, which is a part of the Great Lakes region, produces more agricultural commodities and has more industrial production than any other section of the country; and

Whereas the Detroit industrial area and the State of Michigan are a part of the great midwestern section of our country in which 40,000,000 people live; and

Whereas the Great Lakes-St. Lawrence seaway and power project is not only a defense measure but also a means of bringing a new era to the country's most important agricultural and industrial region: Therefore be it

Resolved by the Detroit Great Lakes-St. Lawrence Seaway Committee, appointed by Edward J. Jeffries, Jr., mayor of Detroit, pursuant to request of the common council, That we do formally and respectfully request the Congress of the United States of America to enact legislation enabling the completion of the Great Lakes-St. Lawrence seaway and power project by removing existing barriers; and be it further

Resolved, That a formally attested copy of this resolution be sent to the President of the United States of America, to the Secretary of State of the United States, to the Senators and Representatives in our National Congress, and to the mayors of our important sister cities throughout the United States.

Respectfully submitted.

DETROIT GREAT LAKES-ST. LAWRENCE SEAWAY COMMITTEE,
W. C. COWLING, *Chairman.*

Approved for city of Detroit:
EDWARD J. JEFFRIES, Jr., *Mayor.*

Adopted March 10, 1941.

Congratulating General Hines

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

EDITORIAL FROM THE NATIONAL TRIBUNE

Mr. PATMAN. Mr. Speaker, Gen. Frank T. Hines has a very outstanding record as an administrator of one of the largest and most important departments in our national Government; a department that has more difficulties connected with its enforcement than any other department. General Hines, by reason of his native ability, education, training, and unusual poise and discretion, has been able to accomplish what probably no other person has accomplished in our national life. It is not known to the public generally, but nevertheless true, General Hines' life has been jeopardized upon many occasions because of his sincere and honest desire to do complete justice to everyone, safeguarding the rights of the Government and making sure that every veteran and others entitled to benefits under his administration receive them. General Hines has been guarded, but notwithstanding these efficient guards, mentally deranged veterans who unjustly harbored the thought that General Hines had treated them unfairly, have succeeded in reaching him for the purpose of doing him bodily injury, and upon one occasion in his office here in Washington, D. C., he was severely assaulted by a veteran armed with a deadly weapon; the wounds received in this assault will be with him as long as he lives. Very few people know or realize what General Hines has suffered in order to make the excellent record that he can now point to with pride.

The National Tribune, in the Thursday, March 13, 1941, issue carries a very commendable editorial, congratulating General Hines on his eighteenth anniversary of entrance into the service of the Government.

The editorial is as follows:

[From the National Tribune of March 13, 1941]

CONGRATULATIONS, GENERAL HINES

March 2 marked the eighteenth anniversary of Gen. Frank T. Hines' entrance into the civil branch of the Government as Director of the Veterans' Bureau. He was called to this post of duty by President Harding, who then needed a strong man as head of this important agency. The fine work of the general since succeeding to the directorship of veterans' care testifies to the excellent judgment exercised by President Harding.

The Veterans' Bureau then dealt solely with World War beneficiaries, but in 1930 the Pension Bureau and the homes for Volunteer soldiers and sailors were placed under General Hines' control and the Veterans' Administration was established. The general became Administrator of Veterans' Affairs, and, under this set-up, he administers the laws affecting the beneficiaries of all wars.

At the time of the consolidation it was necessary that General Hines receive a new appointment as Veterans' Administrator. This is the only time in his 18 years of service that action was required to affirm his original appointment.

General Hines has served under four Presidents—Warren G. Harding, Calvin Coolidge, Herbert Hoover, and Franklin D. Roosevelt. Since 1923 he has been on the job, and a difficult job it has been. In those 18 years he has earned the respect of his superiors in the Government, of Senators and Representatives in Congress, and, best of all, of the veterans and their dependents who are beneficiaries of the Veterans' Administration.

General Hines brought to his task a sympathetic understanding of veterans because he is one himself. He started his military career in the Philippines with the famous Utah Battery. He elected to remain in the Army and rose to be a brigadier general. In the World War he served as embarkation officer at Hoboken, N. J., and was responsible for transporting thousands of troops to Europe. Following the war he resigned from the Army to become head of a shipping company and remained in that position until called upon to assume his duties with the Veterans' Bureau.

During his long tenure of office, General Hines has seen many new hospitals for veterans constructed, as well as numerous additions to existing facilities. He now heads 91 hospitals and homes in all parts of the country, at the same time administering the disbursement of many millions of dollars to disabled veterans and their dependents. Since he took over, he has spent some five billions of dollars, yet there has never been a breath of scandal connected with his office.

In addition to those jobs, General Hines must make important decisions concerning the application of highly technical laws, particularly those affecting World War veterans. In this capacity he has shown the happy faculty of dealing as liberally as he believed possible in keeping with the intent of Congress. Some of his decisions, naturally, have caused adverse criticism, but, by and large, the justice of his opinions has proved highly satisfactory.

When called upon by committees of Congress to advise with them regarding proposed legislation, General Hines has not taken it upon himself to offer gratuitous criticism. Rather he has given them the benefit of his administrative experience and expressed the views of the executive branch of the Government.

It has been said that General Hines' job is a thankless one, and in a way it is. There are many veterans who are firmly convinced that they are entitled to aid from the Government which is denied them. Perhaps they are, but General Hines does not make the laws; his task is to administer them to the best of his ability. He has been blamed for many things in the 18 years he has been in office, but he always comes up smiling. It is because he realizes, we assume, that he has dealt honestly and justly with all who sought his aid.

Few men have held as important a position in the Government for the length of time General Hines has. It is only natural that a person in such a position would be wide open to criticism from many sources. There have been some questions raised from time to time about the administration of some of the veteran's laws, but, because of his frankness, his desire to be just, and his honesty of purpose, General Hines has always been prepared to make such corrections as were within his power, and he has done so.

Too frequently we are wont to criticize. Praiseworthy administration at times has not been fairly appraised. As he starts on his nineteenth year in high public office, the National Tribune wishes to join with others of his many friends in congratulating General Hines on his fine record. We want to assume the privilege of expressing to him our appreciation of the manner in which he has accomplished a huge task. He has a splendid record, for which he deserves the highest commendation. In wishing him well as he continues his administration, we bespeak not only our own views but also the views of an overwhelming majority of veterans and their dependents.

Importance of Industry in Times of Peace

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

Mr. CRAWFORD. Mr. Speaker, under leave to extend my remarks and to include therein certain letters, I now sub-

mit for the RECORD the correspondence to which I referred:

AUGUST 12, 1936.

Mr. R. E. FLANDERS,
President, Jones & Lamsen Machine Co., Springfield, Vt.

DEAR MR. FLANDERS: Do you think that business has received the "breathing spell" that President Roosevelt has promised for some time?

How do businessmen look upon the New Deal administration and its policies? Do you think that Mr. Roosevelt should be reelected?

Sincerely,

JOSEPH LEIB.

JONES & LAMSON MACHINE CO.,
Springfield, Vt., August 25, 1936.

Mr. JOSEPH LEIB,
President, the First Roosevelt for President Club, Washington, D. C.

DEAR SIR: In reply to yours of August 12, will say that while I have endeavored to support all the policies of the New Deal that seemed to me to be constructive, it has been increasingly difficult to do so.

In particular, medium- and small-size business has received a thrust in its vitals instead of the "breathing spell" promised by the President. The new tax bill, with its special tax on undistributed profits, prevents the growth of small companies and does worse than that. In our case, and in that of many companies similarly situated who exhausted their reserves and borrowed at the bank for maintaining employment during the depression, it taxes the funds used in paying back the borrowing, it taxes the funds used in expanded working capital for expanding operations and increasing employment, and makes it practically impossible either to pay dividends or lay aside reserves to meet future conditions of unemployment.

I can only conclude that there is no such thing as a "breathing spell" so long as Mr. Roosevelt is President.

Yours very truly,

R. E. FLANDERS.

FEBRUARY 19, 1941.

Mr. RALPH E. FLANDERS,
President, Jones & Lamson Machine Co., Springfield, Vt.

DEAR MR. FLANDERS: I was just going through my files and noticed your interesting letter of August 25, 1936, which ends as follows:

"I can only conclude that there is no such thing as a 'breathing spell,' so long as Mr. Roosevelt is President."

In view of this, I was wondering how a businessman looks upon the present situation in the political and business world.

Sincerely,

JOSEPH LEIB.

JONES & LAMSON MACHINE CO.,
Springfield, Vt., February 24, 1941.

Mr. JOSEPH LEIB,
National Press Building, Washington, D. C.

MY DEAR MR. LEIB: I have your letter of the 19th, to which I am glad to reply.

It strikes me that the importance of industry and the importance of increasing the production of industry has been more clearly seen as a war measure than it has as a peace measure. And, since we are now at war, much of the misunderstanding of the peacetime situation no longer holds.

I am not saying more than this publicly or privately because I am at the present time a part of the administration as Administrator in the Machines and Tools Group of the Priorities Division of the O. P. M.

Yours very truly,

RALPH E. FLANDERS.

Mr. Speaker, from the War Department records I learn that this concern has been given something near $467,000 of war orders. I bring this matter to the attention of our people in the hope that our business leaders will not get the thought fixed in their minds that industry is more important in times of war than in times of peace. It appears to me that this gentleman is in error in making his observation contained in his letter of February 24, 1941. I think it can be generally stated that the absence of industry in times of peace ultimately leads to social upheavals and that often these bad conditions based on the absence of industrial activity, employment, production and distribution of consumers' goods, greatly contributes to war.

Let us hope that none of our people will become too greatly influenced by war activities, and to the extent that they will acquire such a vested interest in war that they will be unwilling to return to the activities of peace, peacetime production, and all the blessings which peace can bring to our people and the other nationals of the world.

Vested interests often lead to much trouble and many times to great suffering of the general public. War tends to feed on war but after all, Mr. Speaker, if we correctly read the pages of history we find that war never pays dividends in the long run for anyone.

Tribute to Hon. Pius L. Schwert

EXTENSION OF REMARKS
OF
HON. WILBURN CARTWRIGHT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

Mr. CARTWRIGHT. Mr. Speaker, as a colleague of the late PIUS L. SCHWERT, of New York's Forty-second Congressional District, I was profoundly shocked by his untimely death on March 11.

During the time he served in the House I came to regard "Pi" as my personal friend. He was affable, generous, and considerate. In hundreds of little ways he found opportunities to pay daily kindnesses to those of us who worked with him. He had the cheery greeting and the ready smile that go so far to lighten the burdens we share, particularly in these strenuous days.

PIUS SCHWERT was another victim of overwork in this House. He worked with great seriousness and with unflagging devotion to his district and to his country. Elected to the House in 1938 to hold the seat vacated by the Honorable JAMES M. MEAD, who became at the same time the junior Senator from New York, he inherited many active tasks. He proved an eminently worthy successor to JIM MEAD. He overtaxed himself, however, and over a year ago felt the first warnings of physical fatigue. An outstanding athlete all his life and still a young man in his forties, he heeded the warning that his heart needed a rest. He took scrupulous care of himself for many months and returned to his desk in what he felt was perfect health. But the ordeal of last autumn's election campaign plus the heavy legislative duties since January sapped that precious reserve of vitality which he had so carefully built up with months of conscientious self-discipline.

The exemplary public career of PIUS SCHWERT was cut short with a swiftness that was tragic to us all. Many of us talked with him on his last day of service in this body. His last official act was to cast his vote for the lend-lease bill. He appeared in jovial spirits and gave no hint that he was in anything but the best of health. A few hours later, after delivering a brief and witty talk to a party of friends, he collapsed. A few moments later he died in the arms of his best political and personal friend, Senator MEAD.

Although my district in Oklahoma is far from the Forty-second District of New York, I have been told many times of the countless friends who were loyal to PIUS SCHWERT. An indication of this may be learned from the fact that upon his second bid for membership in this body his constituents returned him to Congress by a vote that was approximately three times that of his first election. He won friends easily, and he kept them permanently by reason of his tolerance and fairness and industry.

PIUS SCHWERT lived a full life of accomplishment. An officer in the Navy, a big-league baseball player, a storekeeper, a banker, a Member of Congress, and, above all, a devoted husband and friend, he achieved much in his 48 youthful years of life.

I pay tribute to the memory of my popular and beloved colleague. I extend my deepest sympathy to Mrs. Schwert and to the legion of friends who mourn their loss in his passing. The House has lost an able Member. The Nation has lost a public servant of the finest quality.

Program of Machinists' Union To Eliminate Strikes on Defense Projects

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

Mr. VOORHIS of California. Mr. Speaker, the following statement of action by the executive council of the International Association of Machinists speaks for itself, and I am pleased to include it with my remarks herewith:

The executive council of the International Association of Machinists assembled at Washington, D. C., for its biannual session on March 12 adopted a three-point program to eliminate strikes of its members on national-defense projects or in plants doing national-defense work.

The plan provides that whenever a controversy arises in a plant, on a project, or a job which affects the national-defense program that cannot be settled in conference between the representatives of the employer

and the employees, the following procedure shall be followed:

1. Mediation shall be invoked by calling upon the United States Bureau of Conciliation to attempt a settlement.

2. If the Conciliation Bureau, after being given a fair opportunity, does not succeed in adjusting the differences, the Director General of the Office of Production Management will be asked to intervene for the purpose of effecting a settlement.

3. Should the efforts of the Director General of the Office of Production Management also fail to bring about a settlement that is mutually acceptable, the union will agree to submit the issues in the controversy to arbitration. The only limitations placed on the offer to arbitrate are in controversies where the issues involve encroachments on the work jurisdiction of the International Association of Machinists or compromise the rights of workers set forth in the National Labor Relations Act; and in cases where the employer takes advantage of the time delay to practice intimidation and coercion on his employees in an effort to weaken or destroy the union in his plant.

The full text of the resolution adopted by the machinists, in which the three-point program for the elimination of strikes on defense work is set forth, follows:

Whereas for many years it has been the policy of the International Association of Machinists not to resort to strikes until all peaceful means for settling differences with management have been exhausted and an opportunity given to the Bureau of Conciliation, United States Department of Labor, to settle the dispute: Therefore be it

Resolved, That during the present national-defense program it is the position of the International Association of Machinists whenever members of the association are employed in plants or on jobs in which national-defense contracts are involved, any differences arising with management which cannot be settled by direct conference shall be treated as follows:

The Bureau of Conciliation, United States Department of Labor, shall be called upon to mediate such differences. If mediation does not effect an early settlement, the Director General, Office of Production Management, shall be requested to intervene at the earliest possible date to the end that there may be a settlement mutually acceptable. If no settlement by such means can be effected, and if the grievance involves issues other than work jurisdiction or workers' rights as set forth in the National Labor Relations Act, the grievance shall be arbitrated, provided the employer is sincerely cooperating to effect a settlement and is not resorting to coercion or intimidation in an effort to weaken or destroy unionism in his plant.

Strikes and National Defense

EXTENSION OF REMARKS
OF
HON. SAMUEL DICKSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

EDITORIAL APPEARING IN IL PROGRESSO ITALO-AMERICANO AND IN THE CORRIERE D'AMERICA

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Il Progresso Italo-Americano and in the Corriere D'America on March 16, 1941.

STRIKES AND NATIONAL DEFENSE

Since the institution of compulsory military service, the young men of America are gradually filling the military training camps. These young men form the nucleus of that powerful United States Army which will constitute the strongest guaranty of our homes, our families, and our goods. These young men, the flower of every race in the great American melting pot, have answered and continue to answer the country's call in the highest patriotic spirit. But the country has a twofold duty toward its armed forces. The first is that it must not disturb the sentiments of unity and harmony which stir these young conscripts, with manifestations of partisan differences or racial discriminations which are absolutely unjustified because there are no Americans more American than others and no one has the right to assume he is more patriotic than another.

Every subtle inquiry concerning national origins, every equivocal reference to what is happening on the other side of the Atlantic or Pacific, every ancient or recent prejudice against one class or another of native or naturalized citizens is detrimental to national solidarity. It is a speculation of the real enemies of America's united front; it is treason which must be denounced and severely punished without pity.

The other sacred obligation that we have toward the young men upon whom devolves the supreme duty of the Nation's defense is to equip them in the best possible manner and in the shortest possible time. They not only await the best armaments and abundant supplies, but also the most complete personal equipment in time of peace as well as in time of war.

The Government and Congress have not placed any limit on expenditures. Everywhere, in plants specializing in military production, constructive work is being speeded up. But, unfortunately, here and there strikes slow up production.

We are among those who have always favored labor's gains, who hold these gains sacred, and who recognize the right of labor to better its conditions still further, within possible limits. But in times of emergency and in the field of labor destined for the fastest production of the means of national defense we must be prepared for some sort of compromise which shall avoid a repetition of these strikes which are no longer popular.

Everyone must have learned with satisfaction that President Roosevelt is contemplating the creation of a Federal board of mediation supporting the work of the Office of Production Management, thus assuring it the continuity of work in every arsenal even should differences between the workers and the industrialists arise.

There was a special Labor Board during the World War. A new one must be created which shall still more effectively respond to the needs of the new situation.

We are confident that the President will organize this new Board so as to satisfy both the unions and the employers, without the need of coercive laws which would nullify existing labor legislation.

An enormous responsibility falls not only upon the Government and Congress but on the employers and the workers in the gigantic arsenal of American war production, which must be in perfect working order and must cooperate in reaching this goal. The people of the United States, the soldiers, sailors, and aviators of Uncle Sam await the undelayable realization of this duty of supreme national discipline.

GENEROSO POPE.

What Are Our War Aims?

EXTENSION OF REMARKS
OF
HON. HENRY C. DWORSHAK
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

EDITORIAL FROM WASHINGTON TIMES-HERALD

Mr. DWORSHAK. Mr. Speaker, last Saturday night the President called on Americans for an all-out effort until a total victory has been won against the Axis Powers. This national program will involve sacrifices on the part of every person, he stated, to preserve "liberties and fundamental rights," to which he pledged every national resource.

There is little doubt that the Chief Executive, under the provisions of the lend-lease bill, will receive wholehearted support, although there is little to indicate what objectives this country may have in mind following a military victory. And what is Great Britain fighting for? Both the President and Prime Minister Churchill have declared that the object is to crush Hitlerism. But that still doesn't answer the question in the minds of Americans.

The Washington Times-Herald recently called attention to this situation in the following editorial pointing out that there are a number of possible war aims:

WHAT ARE OUR WAR AIMS?

When H. R. 1776 was passed by the American people's duly elected Congress and signed by the people's duly thrice-elected President, the people committed themselves to a policy of giving Great Britain all necessary help within our power for the winning of Britain's war against Germany.

We don't see any logical course for Americans in general to take except to stand by the President as he uses the practically dictatorial war powers our elected Congress has thus given him. In fact, with the enactment of H. R. 1776 we have no choice about it.

But the question remains: What is Great Britain fighting to accomplish? What are we helping Great Britain fight to accomplish?

Prime Minister Churchill and President Roosevelt have said, in slightly different language, that the object is to beat Hitler and Hitlerism. But that still doesn't answer the question. How much of a beating are we to try to give Hitler and Hitlerism?

POSSIBLE WAR AIMS

There are a number of possible war aims for Great Britain, the United States, and such other nations as may join with them:

(1) The fight might be only to save the United Kingdom itself from invasion; it might be agreed that peace offers would be made and accepted as soon as Hitler showed himself to be convinced he never could successfully invade England. Perhaps only our Navy and air force would be needed for this.

(2) The object might be only to preserve the British Empire intact against the threats of Germany, Japan, and Italy to take choice pieces out of it. Perhaps only our Navy and air force would be needed.

(3) Or the aim might be to consolidate Britain's recent and prospective seizures from

Mussolini of all the Italian colonies in Africa as new parts of the British Empire. Perhaps only our Navy and air force would be needed.

(4) The objective might be to bring matters to a point, by British fighting and a flood of American supplies, where Hitler would be willing to call hostilities off and talk peace on terms of mutual advantage—a peace without victory. Perhaps only our Navy and air force would be needed.

(5) Or Britain may be expecting to fight until it can restore full sovereignty and independence to Holland, Belgium, Denmark, Norway, and occupied France, and/or Poland. Our Army as well as our Navy and air force would be needed for this.

(6) There is a growing school of thought, both in this country and Britain, which believes Germany should be taken apart and split into small countries, to remove it as a menace to mankind. We don't believe you can lick Germany without fighting; and this would take a lot of fighting—our Navy, our air force, and an A. E. F., much bigger than last time, to invade Europe.

(7) Britain, talking much about the rights of small countries to survive, may even be planning to accomplish aims 5 and 6, and also to take eastern Poland, Latvia, Lithuania, and Estonia away from Stalin and set them up in business again. Our Army, expanded to over 10,000,000 men, our Navy, and our air force would be needed.

LET US IN ON THE SECRET

Nobody in authority in England or America has yet stated which of these aims England is fighting for. We don't know.

All we know is that England is putting up a fierce fight in several parts of the globe and is making ready for an Armageddon at home if Hitler's men ever establish a bridgehead on an English shore. As to the terms of peace we want, we aren't informed.

Yet we have been asked to underwrite England's war efforts, whatever they are, and Congress and the President have most graciously consented to do so.

The more extensive the British war aims are, of course, the more it will cost us in money and men.

So far as we are informed, we are giving Britain a blank check to spend on any of the above war aims it may select. What, if any, are our own independent war aims?

The American Scene

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

RADIO ADDRESS BY JOHN B. HUGHES

Mr. VOORHIS of California. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following portion of broadcast delivered by John B. Hughes, Thursday, January 30, 1941, over the Mutual Broadcasting System, originating station, KFRC, San Francisco:

Things were booming in this American scene back in the days of World War No. 1—the factories and machine shops—the steel works and the logging camps were running wide open—wages were up, and a man could find work to do. Things were good on the land, too. Maybe we didn't say so, but we were the arsenal of the Allies then—and the food basket of the world. In the Dakotas they talked about the wheat crop in 1915—in the South the cotton crops meant cash—in the Southwest the cattlemen smiled, watching the cattle fatten on the grasslands—in the Cornbelt the farmers watched their bank accounts grow, four figures, even five, sometimes six figures. "Whatever grows best and brings in the most cash is the crop for me"—that was the attitude then—"when the land gives out move on to new land." By the time we found there was no new land—by the time we realized we had sucked the land dry—by the time the markets fell out from under us and we'd learned the ache that can follow prodigality, a decade and more had passed—and the weather we couldn't control combined with the things we might have controlled to send half a million farm families rolling down our highways seeking work that couldn't be found—left countless others on the old land that bled the bank accounts, and then the mortgage money, and finally all the credit—leaving only the relief rolls to turn toward for help. Well, not the relief rolls alone, for the Farm Security Administration stepped in and tackled the job of rehabilitation, which not only included the need for stabilizing our agricultural system, but the need for making some basic changes in traditional American thinking.

Although the Farm Security Administration is concerned with meeting the emergency presented by migratory farm labor, its less spectacular but equally important concern has been to rehabilitate these families who have a piece of land—which they either own or lease, but which does not support them, and which has failed them to a point where the family is forced to seek relief.

In fact, not until the farm family is forced to seek relief does the Farm Security Administration start to function in its behalf. Then it functions in several ways on a basic plan which has been called live-at-home farming, or the farm-and-home plan. Before it agrees to help the farm family, the Farm Security Administration insists that the family forget its old philosophy of squeezing money out of the land with a single cash crop, and adopt a plan that contains three basic points. First, the plan calls for home production of most of the family's food supply and livestock feed. Second, it calls for the development of two or more farm enterprises that will produce goods for the market. And finally, for the adoption of methods that will build up soil fertility.

These three points are designed to guard against the chief causes of farm failure. They assure the farmer food for his family and his livestock, whether he has a cash income or not from other crops. By developing several cash crops he cuts down the risk of a poor market; by crop rotation and correct planting methods he protects the land that supports him. Its curious that some American farmers forgot what the world's farmers have long known, that the rotation of crops and the use of fertilizers are necessary to keep the land fertile and replenished.

Most American farmers need advice before they can work out the farm and home plan. The Farm Security Administration provides experts who help the farmer work out details—who give the farmers advice on how to make a small farm self-sufficient. The farm and home plan calls for no particular crops, but a variety of crops; it calls for no particular size farm, except that the farm should be large enough to produce a living for the family, and does not require much farm labor, in addition to that supplied by the family. The plan covers household operations, as well as those of the farm. Home economists teach the farm wife how to prepare balanced diets; how to garden, to sew, to make mattresses and clothing; how to put up fruits and jellies—all the household operations that will help make the farm and family as self-sufficient as possible—how to produce a maximum amount of the family's daily needs so that the family can work on a small margin and still have a standard of sufficiency.

Knowing how to be self-sufficient is enough to return hope and confidence to any family, but the farm and home plan goes even further. It requires the family to keep records of what it earns and spends; teaches them to analyze the cost of farm and household operations, to make a balance sheet on the efforts of each year, and through analysis to plan for the future, to stand on their own abilities and knowledge and determination, to regain their rightful place in our national economy.

There isn't time here to tell of all the ramifications of the farm-and-home plan—of its variations on a basic theme—of the way it spreads from family to family as they get together for mutual consideration of problems and the exchange of experience and information. There isn't time here to quote the figures that prove the plan a palpable force in raising the standard of living in family after family to the number of a million families helped in the last 5 years—and at such a little cost. In the cities relief is estimated to cost an average of $800 per family a year—in the rural areas relief costs $350 and upward per year per family. But rehabilitation—counting all losses on loans, the cost of supervision, and every other item of expense—costs only about $72 a year per family—and it is not relief—is self-liquidating to an estimated 90-percent return on all loans made to the small farmers working under the direction of the Farm Security Administration.

Surely here is our democracy in action—the justification of the faith we hold in the American way of life. In this way, and to this extent, we prove our responsibility has not been shirked—that we can and will deserve our heritage, preserve our right and pride, in our American scene.

Maj. A. N. Phillips

EXTENSION OF REMARKS

OF

HON. LE ROY D. DOWNS

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

ARTICLE FROM THE STAMFORD (CONN.) ADVOCATE

Mr. DOWNS. Mr. Speaker and my colleagues, under permission granted me, I wish to insert the following article from the Stamford Advocate of March 15, 1941, relating to former Congressman A. N. Phillips, of the Fourth District of Connecticut:

[From the Stamford (Conn.) Advocate of March 15, 1941]

PHILLIPS OFFERS SERVICE IN ARMY IN ANY CAPACITY—WIRES MAJOR GENERAL PAYNE OF FORTY-THIRD DIVISION OF HIS WILLINGNESS TO AID

Former Congressman A. N. Phillips, Jr., offered himself to the armed forces today in a telegram to Maj. Gen. Morris B. Payne of the Forty-third Division now at Fort Blanding, Fla.

Willing to do anything in the Army from kitchen police up or down, the former National Guard major said, he asked General Payne to advise him when and where to report.

Major Phillips enlisted twice before in the National Guard, the first time while a student at Yale in 1916, when the Yale Battery and the Stamford Battery of the National Guard trained in Pennsylvania for service on the Mexican border, then in 1917 for service in the World War.

OFFICER IN WORLD WAR

The Yale Battery did not get to the border, despite its protests in a signed declaration, but was sent back to New Haven. After enlisting for the World War, Private Phillips was sent to Plattsburg, N. Y., officers' training school and won a commission as a second lieutenant. He served with the A. E. F. in France

Later, he reorganized the National Guard in the southwestern section of Connecticut and won appointments that elevated him to the rank of senior major of the National Guard in the State. He served about 8 years and resigned because of the press of business.

While in the National Guard, he was a crack rifle shot, having been a member of the Third Battalion State championship rifle team.

His private affairs have been arranged, he said, today, and his physical condition is good, so that he is ready for service again.

Defense Aid Appropriation Bill, 1941

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

Mr. WOLVERTON of New Jersey. Mr. Speaker, today this Nation is faced with a situation that can very quickly become even more serious from the standpoint of continued national peace and security than it is now. The precarious position in which we now find ourselves is in large measure due to the foreign policy that has been pursued by this Nation. As a result of this policy, we are placed irrevocably on the side of Britain. If Britain succeeds in holding off the Axis Powers, we can feel a degree of safety. If, however, Britain falls, then no one can foretell how long or to what extent we are safe. Faced with this situation, it seems both logical and sensible to support Britain as a means of protecting and making more certain and sure our own safety. On this basis the expenditure of $7,000,000,000 provided for in the appropriation bill, now before the House, is an expenditure for our own defense though part, or all of the defense material, is used on the British front or anywhere else where its use makes possible a victory for the democracies.

Whether we like it or not, the fact now is that the defense of Britain is our own defense. We may regret that such is the case. We may disagree with the foreign policy which has been pursued by the President and which has brought us to our present status, but the fact remains we are now in a position that demands that aid be extended to Britain and other democracies, if our own peace and security are to be strengthened. I wish that our foreign policy had been of a character that would have kept this Nation free and clear of any and all possible involvement, but it has not. Therefore, as I stated when presenting my views to the House when the lend-lease bill was before us for consideration, we are faced with a condition and not a theory. The question before us is not what should have been our foreign policy. Nothing worth while can be gained by a discussion of that subject at this time. The time has passed. The only question that is now appropriate is to consider what should or can be done now to help this Nation to strengthen our defense, prevent actual participation, keep the war away from our shores and our boys at home.

There is nothing that concerns our people more at this time than the fear that war may come to our shores, and that it will be necessary for our boys to become engaged in the war. The people of this Nation are unanimous in their support of any and all legislation that will prevent either of these conditions from happening. The question of cost does not enter the mind of the people. They are willing to expend billions in money to avoid it. That, in my opinion, was the reason there was such a display of national unity in support of the lease-lend bill, and of this present appropriation bill that is larger than any single appropriation bill to come before Congress. The people of this Nation want to avoid war; they want to keep it away from our shores and our boys at home. It seems they are willing to pay any price in dollars that will provide for us national security and peace.

The appropriation bill now under consideration by the House is offered as a means to help make effectual our defense and our peace. The purpose and intent in this respect was clearly and forcibly stated by the Secretary of State, Cordell Hull, when he appeared before the Appropriations Committee of the House in support of the bill. He said:

Our safety and the success of the course upon which we have set ourselves demand the courage and the wisdom to go full out in furnishing adequate material aid to the nations whose defense is necessary to our defense. When we do this, we take the most effective step possible in the circumstances to keep war away from our hemisphere, from our own Nation. Doing this, we act in defense of our homes, our institutions, our liberties, our way of life.

Furthermore, it should be emphasized that the purpose of all this preparation for defense is not to create a situation that will necessitate the use of our boys in foreign war but to eliminate even the possibility of such a course. Time and again the President has given us his assurance that American boys will not be sent abroad to fight. In his address delivered at Philadelphia on October 23, 1940, the President said:

We are arming ourselves not for any purposes of conquest or intervention in foreign disputes. I repeat again that I stand on the platform of our party: We will not participate in foreign wars, and we will not send our Army, naval, or air forces to fight in foreign lands outside of the Americas, except in case of attack.

Again, on December 29, 1940, in a fireside chat, the President gave similar assurance. He said:

There is no demand for sending an American expeditionary force outside our own borders. There is no intention by any member of your Government to send such a force. You can therefore nail any talk about sending armies to Europe as deliberate untruth.

What could be plainer or more explicit? How could a more definite promise to keep our boys at home be expressed? I have accepted this statement of intention by the President at its face value. I believe in such a policy 100 percent. If there is to be any change, it will not be upon my part.

The President, members of his Cabinet, and other high officers in the administration have made it clear that the lend-lease bill, and the pending appropriation bill in support of it, are defense measures, the purpose of which is to keep the war away from us and our boys at home. On this basis I give my wholehearted support. The objective is laudable and undoubtedly represents the desire of our people.

Veterans Demand Fair Treatment

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

RESOLUTION OF ALLIED VETERANS' COUNCIL OF DEARBORN, MICH.

Mr. HOFFMAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following resolution from the Allied Veterans' Council of Dearborn, Mich.:

Whereas we the Allied Veterans' Council of the city of Dearborn, composed of the veterans and legionnaires of the Detroit metropolitan area, are in quorum assembled; and

Whereas it has come to the notice and attention of this body that a series of malicious and libelous, false and slanderous, fictitious and untrue statements have been published in a news magazine known as Friday and circulated in the Detroit area, about and concerning, and related to the Ford Motor Co., Mr. Henry Ford, Mr. Edsel Ford, Mr. Harry Bennett, Mr. William Cameron, and divers other persons associated with the said Ford Motor Co.; and

Whereas upon occasions too numerous to contain in this resolution, the said Ford Motor Co. and hereinbefore-named persons have kindly and gratuitously assisted our group both as an organization and as individuals, upon occasions when assistance from other sources was refused; and

Whereas the said Ford Motor Co. does, humanely and without consideration, now employ members of our group who are barred from employment in other places of industry

by reason of either old age or physical disability incurred, in many instances, while serving in the United States Army in France and in other wars of our country; and

Whereas the said magazine Friday, on page 6 of an issue dated January 31, 1941, does specifically and maliciously and libelously, state:

"Besides a network of spies, undercover men for all sorts of assignments and the common brand of factory stool pigeon, Bennett has carefully organized for Ford a private army of men who saw action in France during the World War—men capable and experienced in the use of machine guns, men needing no training.

"The technique of organizing this division was the same as the method of getting factory stool pigeons. I have testimony of veterans employed at Ford's right now. They are willing to take the witness stand before any governmental investigation body to tell of this private army estimated to number 5,000 men."

Now, therefore, be it

Resolved, That we, the members of the said Allied Veterans Council, of the metropolitan area of the city of Detroit, in quorum assembled, do hereby demand that the editors, publishers, and person or persons controlling the policy of the said magazine Friday, immediately, publicly, and in print as prominent as that which created these libels, fictions, misstatements, and falsehoods, retract and correct the said libels, fictions, and misstatements within a reasonable time after receiving notice of this resolution; and be it further

Resolved, That copies of this resolution be sent to each of the United States Senators from the State of Michigan; the various Representatives of the State of Michigan in Congress; the Attorney General of the United States; the national commander of the American Legion; the national commander of the Veterans of Foreign Wars; Mr. Henry Ford, Mr. Edsel Ford, Mr. Harry Bennett, Mr. W. J. Cameron, of the Ford Motor Co.; and the magazine Friday in which these statements appeared.

Made this 17th day of February, in the year of our Lord one thousand nine hundred and forty-one.

WM. BUSHAW,
Commander.
EARL O. SMITH,
Junior Past Commander.
ROBT. H. HYNETT,
Adjutant.
EARL O. SMITH,
Junior Vice Commander, Post No. 134, Veterans of Foreign Wars.
JESSE L. HILL,
Commander, Post 173, American Legion.
WALTER DUNN,
Commander, Post 364, American Legion.
LEO C. MARKEY,
Commander, Post 1494, Veterans of Foreign Wars.

A Tribute to the Brave Spartans

EXTENSION OF REMARKS
OF
HON. ROBERT L. RAMSAY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

Mr. RAMSAY. Mr. Speaker, on a hillock above the narrow pass of Thermopylae, stands in heroic size a marble lion—fit emblem of intrepid courage—and at its base is found the inscription:

Go tell the Spartan, thou that passeth by,
That here obedient to their laws we lie.

To this shrine of Spartan valor, the Spartan mother brings her son, and reading the message which the dead sends to the living, recounts the story of Leonidas, the young king, and his Spartan band who gave up their lives in order that their country's liberty might live.

This same sentiment, ancient to Greece but ever new, still survives and continues to live. Twenty-three centuries have not extinguished their right of liberty and freedom of speech, and the privilege to participate in the kind of government that shall control their people.

Let us this day pause and rejoice with the subjugated nations and peoples of Europe, that the ancient cradle of democracy is again showing to the people of the world how to achieve, how to hold, and how to acquire their liberties as upheld in arms by the founders of civilization itself.

So today, we in America are glad to pay our tribute of respect to the Grecian people for their bravery and courage in again holding high their torch of liberty and carrying it safely to victory, against the greatest enemies of free government that the world has ever known.

What America Expects of Today's Youth

EXTENSION OF REMARKS
OF
HON. MELVIN J. MAAS
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

RADIO ADDRESS BY ADMIRAL HAROLD R. STARK, CHIEF OF NAVAL OPERATIONS, UNITED STATES NAVY

Mr. MAAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Admiral Harold R. Stark, United States Navy Chief of Naval Operations, in honor of the ninety-fifth anniversary of charter day of Bucknell University, delivered over Mutual Broadcasting System network, on the subject What America Expects of Today's Youth:

President Marts and gentlemen of Bucknell College and your guests, I regret I could not have joined with you in your anniversary celebration in New York tonight, but I do consider it a great honor to be asked by you to speak on the theme you have chosen, namely, What America Expects of Today's Youth.

I have spent most of my life at sea working with young men drawn from the length and breadth of our land. For these young men the Navy demands the best in material that science, research, and mechanical ingenuity can devise, but the Navy realizes that even more important than material is the character of the youth who make up its fighting strength, where discipline, cheerful obedience, intelligence, sound bodies, and wholesome minds are essential to the individual and to the team play required.

Recent history gives merciless proof that any country which makes ready only for material defense is preparing itself for defeat. Hope of security also demands the upbuilding of national character into more heroic stature.

We talk much of our material production, of bottlenecks, strikes, etc. We have need also to check up on our spiritual progress—our national character.

The character of our youth is the bedrock upon which the country must build for the future. It will always constitute our first great line of defense.

If we are to depend on our youth to carry on and maintain those things which are dear to us we must give them an ideal.

Youth is a time for ideals and if these ideals are to endure they must be sound, must inspire faith and allegiance, must command loyalty. If they do this, then the running start which youth gets in its teens and early 1920's will serve as a firm foundation which will guide them aright in the confused issues of the present day, and the tougher days ahead.

I cannot help contrasting, for a moment, youth's situation today with what I faced in my school days.

In those days there was a reasonable measure of security in the world. The father of a family could lay down general directives for his children based on his own years of experience and observations in a world fairly well stabilized. He could plan for their careers and make provisions for their guidance. A young fellow plotted his future, with some certainty that, granted good behaviour and average good fortune, he could steer the course he had set for himself.

It is not that way now. The world is not secure any more, in anything. Social revolution, and industrial revolution, and new ideologies have precipitated vast social and military convulsions and are now tearing the old world to pieces, and even threatening the democratic institutions of the Western Hemisphere.

In our own country we face great uncertainties, and more disturbing dangers than ever confronted our fathers. The events in Europe and Asia and Africa and the measures for security which we in our Republic are now taking, will affect, in one way or another, the life of every person alive today in this country.

No one can tell just what the future holds. But it must be plain to all of us that in these times, and in more critical times to come, every American must be prepared to sacrifice for the common good.

Some undoubtedly will have the privilege and the honor of serving our country in arms. All, in whatever work engaged, will find a large proportion of their energies diverted, directly or indirectly, to national, rather than to individual needs. All must hold themselves ready to meet this changed life with courage, and to give the best that is in them for our country and all that we hold dear.

In times like these, people want something to hold to, something that stands firm in a changing world. And, therefore, I am going to ask you to think about character; to think about the age-old fundamental human virtues of courage, loyalty, perseverence, generosity, sacrifice, initiative, enthusiasm, the Golden Rule, common sense, hard work, and honesty. These are the elemental things that make character. They were good when man did his fighting with bows and arrows. They are good now, in the vast complexity of modern life.

We live in the machine age, but if all the power plants go out, and all the gadgets cease to function, we will still be men and women, and it is character upon which we will stand or fall.

If we are to expect much of youth we must give them much in their early training. The all-encompassing great essential is character and if our youth have that, and love of country, they will give what America expects, that is, continuance and security of those things which have made us great as a Nation, and which, if guarded, will make us greater—and preserve our way of life.

Our way of life is not something static. It is something adaptable to changing conditions as time goes on. But, its foundation of freedom, individual initiative, equal opportunity, freedom of speech, the Bill of Rights, the obligation of the individual, self-discipline, fair play, and a square deal, are as important now as when our forefathers fought and won them for us.

Our way of life will continue only if our youth and the oncoming generations believe in it. Therefore, that way of life must be the beacon light whose path shines out as so much brighter, so much better and richer than any other way, that our youth will be willing to give their all to see that it endures.

Abraham Lincoln referred to America as "the last great hope on earth."

To help nurture and sustain that hope, I should like to see hanging in every school and in every college and in every home of the United States the American's Creed, so forcefully and beautifully written by William Tylor Page:

"I believe in the United States of America as a government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign nation of many sovereign States; a perfect union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

"I therefore believe it is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies."

What a nation this would be if every boy and every girl were reared with an intense loyalty to that creed—loyalty that would carry on through life.

I previously mentioned loyalty and courage and some of the elemental points of character. I should like to touch on just a few of them very briefly. They are simple to comprehend but difficult to stick to unless and until solidly welded into character.

I shall speak of courage first. It is a military virtue, but it has a wider application. It is the thing that stiffens your backbone when you are afraid—afraid of being hurt, afraid of tomorrow, afraid of failure, afraid of being afraid. Courage is more than the absence of fear.

To set one's course and to follow it, regardless of personal consequence—that is courage.

As for loyalty, the loyal man serves; he does not merely follow his own impulses. This is well exemplified in one of the greater social passions such as patriotism. It fixes our attention upon a course, bids us look outside ourselves to serve that cause, makes it one of the keystones of our life, our will, our devotion. It comes first, regardless of strain or labor; it sacrifices in the service of the ideal.

Loyalty means giving one's self to the cause, and the art of giving is learned by giving.

Perseverance is the ability to take it when it hurts—to hang on when 'twould be so easy to quit. It is refusal to be licked. It was exemplified when John Paul Jones, with his ship apparently hopelessly beaten, was called upon to surrender and replied, "I've not yet begun to fight."

Sacrifice. I like to think of this all-essential virtue in the words of the late Theodore Roosevelt, who said, "There never was a service worth rendering that did not entail sacrifice, and no man renders the highest service if he thinks overmuch of the sacrifice."

Common sense is the capacity to see and take things in their right light. It is the exercise of sound judgment. It is the saving salt of realism. It looks facts squarely in the face and deals with them according to the means at hand. It cuts the cloth to suit the garment.

There is no substitute for common sense, nor is there any for hard work. As for honesty, I like the old saying that "An honest man is the noblest work of God."

Some of the other homely virtues that go to make up character are: generosity, tolerance, charity, patience, kindness, courtesy, giving of one's self to help another, looking for the good rather than the bad—realizing that there is a "window in every life if we can only open it," remembering that it takes only a moment to administer a rebuke but a long time to forget it.

Youth is born with certain tendencies but their character is something which they make themselves as they go along—and it is by their character that their associates will judge them. It is by their character that they will succeed or fail.

If, in their bringing up, youth are indulged in the soft ways of life they will ultimately fail, and the Nation with them.

There can be no compromise between self-indulgence and self-preservation.

Last year a young man asked me if a conscientious hard-working person could reach the top without influence, or, as he put it, "pull." I told him, "Yes." "Pull," which is to say favorable influence exerted at critical times, has its place in human affairs—but the best that "pull" ever does is to get a man an opportunity. It can't do his job for him. If his character doesn't lift him through, the influence is wasted and the opportunity will go to the next man.

The uncertainty, the insecurity in the world of today, will not appear so disturbing to the present generation as to the older one, because youth of the present day are being brought up in its atmosphere, and it may be that they are fortunate.

The calls that will be made upon them will stimulate their energies and draw from them qualities they may not even know they possess.

Their forefathers won the things that have made the American way of life, by self-denial, by hard work in peace, and by hard fighting in war.

If our youth have the traits of character I have touched upon, and I have an abiding faith that they have, they will maintain our way of life at all costs.

The youth of this generation will bear a heavy share, for they not only have to deal with the uncertain present, but also with a more uncertain future.

They may be proud that their generation has the opportunity to serve in such a critical period in the world's history.

If their actions are directed by courage, armored with hope, sustained by determination, enthusiasm, and the will to sacrifice and the will to win, our country will have nothing to fear from any enemy, within or without, and they will justify their lives, and their heritage, and will carry forward.

In the successful accomplishment of difficult tasks youth will also gain the greatest of all treasures—that inner reward that comes only from difficult tasks—well done.

Defense Aid Supplemental Appropriation Bill, 1941

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

Mr. DONDERO. Mr. Speaker, this is a grave hour. We in this House owe a duty to one country only—our own United States. I assert at the very outset that I have voted for every appropriation for national defense. Covering a period of the last 5 years successive incidents have occurred in this Nation which have led up to this very hour when we are considering the appropriation of the most gigantic sum ever asked of the Congress of the United States when the Nation was at peace with the world.

As far back as 1937, when the President of the United States urged that aggressor nations be quarantined, the road on which we are traveling today was charted. Since that time a special session of the Congress considered and passed, and at the same time emasculated, an admirable piece of legislation designed to keep the United States at peace—namely, the Neutrality Act. In that special session an amendment to that law was passed by the Congress lifting the embargo on arms. That step brought us a little nearer to the vote we are about to take this afternoon on the question of adding another heavy burden to the taxpayers of this Nation, the appropriation of $7,000,000,000 for the defense of Great Britain.

The 1940 election turned primarily on the policy of the present administration and the President to keep America out of war.

Shortly before the election the people of this country were amazed when they were confronted with a proposal to draft the young manhood of America and adopt a policy from which our ancestors fled in the proposal and passage of the compulsory military training bill, less harshly known as the Selective Service Act. The passage of that bill brought us one step closer to this crucial hour.

The election of the President for a third term turned mainly and was influenced mostly by the repeated assurance that America was to be kept free from war. Then, before this year was a month old, came the most unneutral proposal ever presented to Congress, when the lease-lend bill came before this body. The word "neutrality" left the American tongue. Everyone knew that no longer was the United States to remain a neutral nation, for our very navy yards and harbors were offered for the repair and outfitting of the ships of war of belligerent nations. It was a step toward war. And

when that bill was before this House more than 6 weeks ago I said then, and repeat now, that in my judgment it was a step that would lead to war. Today is the last and final step.

We are asked to take from the people of our country the colossal sum of $7,000,000,000 and with it produce the sinews of war for a foreign country. When this bill is passed, and undoubtedly it will be passed by a large majority, we will have committed an act not only to drive the United States closer to the precipice of war and with accelerated speed hasten it along the road to national bankruptcy and ruin.

This is but the beginning of a demand for other huge sums of money to feed the relentless god of war. This week we will be asked to vote for four and a half billion dollars more to provide tanks and airplanes for our own defense. I shall support that bill and vote for it.

I cannot vote for this measure (H. R. 4050) on the ground that it is in the defense of the United States. Thus far nearly $40,000,000,000 have been provided from the resources of this Nation for wild expenditures, wasteful and extravagant projects, all in the name of national defense. No one in this House can foretell where the end will be, but this much I am sure, that if America follows the course it now pursues that ultimate financial and economic collapse will be the lot of the American people. Life in the United States and the standard of living we once knew will be things of the past, and will be known no more. The resources and credit of this Nation are not unlimited. The time will come, and it is not far distant, when the resources and the credit of this Nation will be exhausted, and then, when we are weak and helpless, subversive interests, which have grown so rapidly in the last 6 or 7 years, encouraged by the acquiescence or indifference of government, will take advantage and assert themselves by overturning the Republic of the United States. This is not a pleasant prophesy, my colleagues, but it falls very fairly within the realm of possibility.

We are asked by the President for unity. We can have unity in this country when loyalty and demand for unity in building a national defense is exerted and enforced by the President and officials high in the administration of the Federal Government. The President demands speed and speed now. In the face of incredible conditions in the world, Republicans and Democrats alike join him in that necessity, but there has been no speed and there will be no speed in the production of national-defense material while the President permits and refuses to act with promptness and decision in putting an end to destructive and inexcusable strikes in defense industries. Every daily newspaper has carried the news to the American people of strikes in defense industries from one end of this land to the other. They increase instead of decrease and for 2½ months or more this Government has remained impotent and seemingly unwilling to take a determined stand to prevent radicals, among honest American labor, from retarding the production of the very things for which we are asked to vote today, the astronomical sum of $7,000,000,000. American labor is just as loyal and patriotic as any other group in this land. It desires to do its part. The condition existing in our production program, which even officials high in the Government now admit, has retarded and held back that program. Destructive and unnecessary strikes are the work of subversive and radical interests who do not have the welfare of this Republic at heart.

It is difficult, indeed, to ask the Representatives of a sovereign people to surrender their conviction and their judgment to provide this vast sum of money for a foreign government in the face of this fatal policy and failure to insist that the industry of this Nation engaged in the manufacture of defense articles shall go forward without labor disputes of one kind or another.

It has been shown on this floor that England has five and a half billion dollars in securities in the Western Hemisphere. In my judgment, those resources should be first used in the purchase of the materials that would be provided under this bill and the taxpayers of England bear the burden as long as they have the money with which to buy. The legislation before us takes no notice of that, but asks the American people, already overburdened with debt and governmental expenses, to assume the additional load provided in this legislation.

In discharging my responsibility and duty to the people of my district, for whom I speak, I cannot surrender my conscience and my conviction and vote for this bill. Come what may, I take my stand in the firm belief that a vote for this measure would be a contribution to the destruction of our Republic. I realize full well that the die has been cast; that the Government, by a majority vote in this Congress, has committed itself to a policy of "all-out aid," not alone for the Government of England but for all other democracies in the world.

I am in sympathy with aid to Britain, but I do not take the view that England is fighting America's war. If such is the case, I would be ashamed of America, for if it is our war then we should be at England's side, not only with materials but with manpower, for the manhood of America has never been wanting when the defense of our country was at stake.

I am fully aware that my vote against this bill, and those who will join me in a negative answer to this proposal, may become the target for abuse and criticism, similar to that leveled at a small and courageous band who served this Nation in this body in 1917 and who had the courage of their convictions and voted against war. Hysteria ruled the land then. We see more clearly now in retrospect. The whole picture presents itself. The entire effort was futile and empty. We neither fought a war to end war nor did we make the world safe for democracy. I fear it is too late now to draw back. The fatal decision has been made. This bill will not keep America out of war and neither will it keep war out of America. In my judgment it will plunge our beloved land into the conflict.

May a benevolent Providence, who has given us this favored land, guide us in our steps as we walk humbly toward our destiny.

Within Our Gates

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

ADDRESS BY GEORGE ELLIS TO KIWANIS CLUB OF ARDMORE, OKLA.

Mr. CARTWRIGHT. Mr. Speaker, I ask unanimous consent to have printed in the RECORD a very timely and impressive address by George Ellis, a student of Ardmore High School, Ardmore, Okla., made at a recent meeting of the Kiwanis Club of Ardmore. My information is that his talk was based on his own research on espionage and sabotage in this country. It shows that the youth of America are thinking today, and are seriously concerned about un-American elements within our gates.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In a fertile valley, between the sun-kissed hills of yesterday reflecting a marvelous past, and the mist-enshrouded peaks of tomorrow with some ominous shadows, lies this country of ours. We are the last frontier of democracy and have become a world citadel of liberty, equality, and justice. Each citizen dares express his own thoughts and exercise every privilege guaranteed by the Constitution of the United States. But wait. Danger ahead, if we too freely extend to evil forces our long-cherished rights of free speech and public assembly.

In all the pages of history, there is no parallel to the war now raging in Europe. Germany warned of a secret weapon, then after the fall of Austria, the rape of Czecho-Slovakia and Poland, the collapse of Norway, Belgium, and The Netherlands, climaxed by the fatal weakness of France, it dawned upon the world that the secret weapon was but a state of mind, brought about by long-conceived espionage and propaganda. Hear the words of Hitler: "We need armies but we shall not use them as in 1914. The enemy peoples must be demoralized; mental confusion, contradiction of feeling, and panic—these are our weapons."

We wondered how Germany could penetrate America and make these weapons effective. The course lay open. Friendly nations grant to ambassadors, consuls, their families, and servants, freedom from arrest and from search and seizure of papers and property. This is diplomatic immunity. Unfortunate for us today, an old treaty with Germany extends a more favored protection than to any other nation. To Hitler and his saboteurs, this immunity has offered a splendid cloak to conceal an undercover warfare against us, through the 25 German consulates in the United States.

Everywhere they have been beehives of Nazi activity, presided over by the most astute, cunning, and ruthless emissaries Germany could muster. Now, mind you, the only duty of a consul is to assist his countrymen in business and travel, yet today there is no business, nor any travel, between us and the Germans. When the late war began, the English travel bureaus closed, but not so with the Nazis, who have swarmed about the consulates. The fraud is apparent.

Heading this organization in Germany is Ernest Bohle, not even German-born, but a citizen of Bradford, England, just as Hitler comes from Austria, Hesse from Egypt, Darre from Argentina, and Rosenberg from Russia—all powerful political figures in the Reich and worthy members of that band of conspirators that plotted war on democracy in Germany 15 years ago. This, my friends, is the Nazi International, the handmaiden of the war machine. So successful has it been that we behold eight nations prostrate.

Suave Herman Scholz is consul at Boston and an intimate friend of Himmler, head of the German Gestapo. There is Tannenberg, handsome adviser of the Embassy at Washington; Albert Mueller, at New York, and Friedheim Draeger, formerly with the German Legation at the capital of Mexico. He is the man who in 1939 signed himself leader of the Nazi Party in America, the fuehrer of the American bund, whose membership could not be reached by a Government subpena, being protected by diplomatic immunity. Finally, Ignatz Griebl was convicted of espionage, the court declaring him to be head of the greatest spy ring ever found in the United States. He had delivered to Germany plans of our newest destroyers, a coding machine for the Navy, and blueprints of 12 airplane types.

At New Orleans is Baron von Spiegel, a former submarine commander in the German fleet, now supported by a staff of 110, where formerly there were but 39. Why? Arrived this year, by way of Japan and Russia, comes Von Wegerer, with 20 packing cases, supposed to contain Nazi propaganda, but protected by diplomatic immunity.

Manfred Zapp, in New York, son of a German steel baron, is head of Trans-Ocean News Service, which operates over the whole Western Hemisphere, and particularly in South America. Fritz Zeiglein announces himself "German consul general" and founded the German Professional Alliance, which served as a shelter for those who fled from the bund after conviction of Griebl, because orders came from Germany for a more subtle approach.

Once the German consular work at Philadelphia was done by an American lawyer, in his spare time, where now reigns Eric Wedels, a former Nazi diplomat in Canada, with two other Germans of consular rank and the usual band of satellites. In recent years the number of German agents in New York has increased from 38 to 118, and the entire groups in the United States have more than trebled. Again, we ask why?

The most wily of them all is Fritz Wiedemann at San Francisco, head of all German agents in Central and South America. He chose his own field, and selected our west coast as being most ripe for German penetration. He was the superior officer of Hitler in the first World War.

Every German-born citizen in this country has been tabulated. Every one is known who may be depended upon in time of peril to set a bomb, blow up an arsenal, or destroy a factory.

The F. B. I. is now studying 6,000 cases. Time was when complaints of espionage and sabotage numbered about 35 in a year. Now they mount as high as 3,500 in a single day. Evidence in Germany is reported of complete knowledge of American industry and all its plants, classifying every workman politically, racially, and by religion—a more complete record than could be given off-hand by the owners themselves. One of our highest military authorities, seeking details of our coast defenses, was unable to find satisfactory evidence in this country. Does it not amaze you that he found what he had been seeking in a magazine published in Germany?

Last summer in New Jersey the Federal Bureau of Investigation followed from a bund meeting five members to Picatinny Arsenal, largest in the United States, where 2 months later a great blast occurred; 12 were followed to the National Guard Service and 3 to the Hercules powder plant, where later the greatest explosion in America's industrial history killed 52 men.

The last World War began quickly. Espionage and sabotage were not planned years in advance, as we find them now. Only two inexperienced Germans, with meager funds and no organization, Von Papen and Von Rielen, operated in America, yet 76 factories, railroad terminals, and freight ships were bombed.

The Dies committee is uncovering activities that are startling—things of which a sleeping America never dreamed. Be it said to the everlasting credit of one Oklahoma county attorney that our prison shall hold for 10 years one who has preached the downfall of our Government. Would that this court scene might be enacted in every one of the 3,000 counties in the land. The juries are ready to convict. The curtain is ready to rise upon a stage set to astound the American audience. Let us lift it high in a vast, concerted action of patriotism.

With the shadow of the swastika over Mexico, the infiltration in Brazil and the Argentine, the activities in Bolivia, the attack on us is going in full blast. From such a far-flung scheme could it be possible to exclude the richest prize of all—the one great democracy that has such striking force, once aroused? To see that it be not aroused comes this army of spies and saboteurs from the Reich, armed with that choice diplomatic treaty.

Picture the devastation that would follow a concerted attack upon our arsenals, railroads, factories, docks, powder plants and our every industry, by 10,000 agents, placed by this band of trained saboteurs that has operated these years, sowing seeds of treason, sedition, and death. "For the Fatherland and the Fuehrer" would they shout, and gladly would they go down in the maelstrom of horror, could they but carry with them to destruction by fires, bombings, and murders, more treasure and more human lives than ever were lost in any catastrophe of war.

Thus the ground has been prepared and sown. The subversive efforts are bearing fruit. In far away German archives rest the plans in safety, against that day when they shall open as a book before the German Board of Strategy, revealing the full picture of American power and weakness in machines, men, and fortifications.

It is for us to stand guard at the gates that have already swung too wide; for us to say, "Out with the consuls and their every entourage." Close the doors of these false travel bureaus. Amend that favored diplomatic treaty to conform to the needs of the hour. Drive from our midst this former superior officer of Hitler at San Francisco; this submarine commander at New Orleans; the ally of the German Gestapo at New York; and all their like and all their kind. Free the very air from the contamination of their presence, for it breeds only death. Obliterate the snaky trail they have traced to the very heart of our defenses and our power, lest we lose at one fell stroke all that we have, all that we are building, all that we hope to achieve in the years to come. Let us stand guard over the ramparts we watch that the rays of every dawn shall disclose, gallantly streaming, the "Broad stripes and bright stars."

Reasons Why Federal Reclamation and Water-Conservation Program Should Be Carried Forward

EXTENSION OF REMARKS
OF
HON. CHARLES H. LEAVY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

Mr. LEAVY. Mr. Speaker, I desire to submit for the consideration of my colleagues in Congress certain pertinent facts in connection with the Federal reclamation and Great Plains water-conservation programs.

This matter of land reclamation and water conservation and utilization affects the entire Nation, and directly affects the western half of the United States. We will shortly be considering the Interior appropriations bill, which carries the funds for Federal reclamation. These appropriations have been opposed heretofore by some Members of Congress who did not have a full appreciation of the importance and significance to the national welfare that the reclamation program means when it is fully understood.

There is almost a unanimity of opinion in the conclusion that we must spend the tremendous sums we are now appropriating for national defense. To make a military defense establishment an effective agency, we must certainly maintain a domestic production economy in the best and most effective condition. No greater calamity could befall the western half of the United States than a curtailing and crippling of the present policy and program being carried forward by Federal reclamation. In fact, the critical times actually call for a substantial expansion of this program, and it is with the hope that Members of Congress will familiarize themselves more fully with this important governmental activity, that I submit the following facts, to justify a continuation of the Federal reclamation and Great Plains water-conservation programs, with expansion to include gravely needed projects:

First. Drought and agricultural maladjustments have driven more than three-quarters of a million persons from the Great Plains in 10 years.

Second. At least 150,000 Great Plains families have migrated westward to the Mountain and Pacific States and tightened the population pressure on areas without surplus irrigated land.

Third. Census reports show 501 of 650 counties in the Great Plains had a net population loss of 753,554 from 1930 to 1940.

Fourth. In contrast, 277 out of 309 counties to the westward had a net population gain of 1,941,601. The increase was twice the national average.

Fifth. Uprooting of Great Plains families and their migration westward with other destitute groups swelled Federal relief costs to more than 2½ billion dollars in 7 years in 17 States affected.

Sixth. These relief payments per family of $5,000 to $6,000 would be sufficient to provide an irrigated farm on which a family would be permanently self-supporting and able to repay the cost.

Seventh. The impact of the migrations is particularly heavy on rural areas needing additional irrigation and which are far from defense industries. Similarly, the Great Plains areas are distant from arms-producing centers.

Eighth. Although climatic and crop conditions in the Great Plains show some improvement, there is still most distressing migration westward, in some sections as heavy as in 1939. In addition, many established farm areas in the West face water shortages.

Ninth. Shortages of power vital to the national defense are imminent in several areas where reclamation projects are under construction or can be quickly launched.

As from 3 to 8 years are required to build a multiple-purpose irrigation and power project, the program here proposed looks to securing long-range objectives as well as meet immediate needs, as follows:

(a) Employment on construction of 35,000 to 40,000 workers, mostly unskilled, who otherwise would be on relief, without detriment in any way whatever to national-defense accomplishment.

(b) Supplemental water and settlement opportunities to give security to 150,000 farm families now in the West and rehabilitation of 30,000 families who otherwise would be forced to migrate from the Great Plains and similar areas.

(c) Support in nearby cities and towns for two to three times the farm population and supplementary food supplies for the Nation.

(d) Adequate power facilities for any emergency and future needs of the West.

(e) Irrigated farms for support of industrial workers in western centers when present emergency ends. An implemented settlement program for industrial workers and returning soldiers would prevent a recurrence of the serious economic upheaval experienced at the close of the last war.

To accomplish these results at an expenditure in reimbursable funds of less than a third of the 7-year Federal relief outlay in the 17 arid and semiarid States a 10-year program of appropriations is urged, as follows:

Seventy-five million dollars annually for construction of reclamation projects.

Ten million dollars annually, supplemented by W. P. A. and C. C. C. labor allocations, for small projects in the Great Plains and similar areas.

About one-half of this outlay would be repaid by power and the remainder by water users.

Commissioner of Reclamation John C. Page, before the Tolan migrant committee at Lincoln, Nebr., in September, summarized what could be accomplished by continuance of reclamation appropriations of reimbursable funds for 10 years at approximately the present rate of around $75,000,000 annually, supplemented by diversion of relief funds for the Great Plains type of projects.

Results he confidently predicted were:

First. Irrigated farms where 40,000 to 50,000 families would be self-sustaining.

Second. Supplemental water for farms for 85,000 families now facing water shortages.

Third. Rehabilitation in the Great Plains and similar areas of 20,000 to 25,000 farm families.

In addition to the above, these developments would support in nearby cities and towns two to three times the farm population.

Highways for Defense

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

RADIO ADDRESS OF HON. JENNINGS RANDOLPH, OF WEST VIRGINIA

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered last night over the radio:

HIGHWAYS FOR DEFENSE

An outstanding lesson in Germany's amazingly successful blitzkrieg is the importance of an adequate and integrated system of highways. From the day he attained power until he struck his first devastating blow Hitler had some of the best engineering brains of Germany constructing a network of superhighways on a scale the nation had never seen, coordinating it with the development of rail-, water-, and air-transportation systems. It was this system that made possible the gigantic expansion of German armaments in the few short years that followed Hitler's march into the Rhineland. And when Poland's hour struck it was the broad, perfectly constructed roads right to the border which enabled his swiftly moving mechanized hordes to accomplish what military men considered an utter impossibility.

NARROW ROADS HAMPER ALLIES

In Hitler's headlong rush to the French coast it was again the superhighway system that transported his unending stream of tanks and motorized troops in contrast with the relatively inadequate system of narrow roads used by the French and British. The Allies were slow in their initial advance through Belgium to meet the Germans, and then were "bottlenecked" without supplies or reinforcements when the narrow roads were choked with fleeing humanity and blasted by Stuka bombers. It was the story of one- and two-lane roads, vulnerable to attack, against a vast system of six- and eight-lane superhighways.

In relation to our industrialization, size, and strength, our highway system today is little better than were those of the conquered countries. Nearly one-third of our 75,000 miles of strategically important highways do not at the present time meet even the minimum requirements of the War Department. Some of it is too crooked, some too steep, some too light in construction to stand military transport. During maneuvers last fall of the District of Columbia National Guard, centering in the West Virginia mountains at my home town of Elkins, heavy trucks carrying antiaircraft guns had to be rerouted from the main highway between Washington and Elkins because in that 230-mile strip of excellent road there were two bridges over which the trucks could not pass. This condition is duplicated in all parts of the country; maneuvers in Texas this year showed that only 25 percent of the roads used were adequate to handle even the comparatively light 10-ton tanks and 155-millimeter howitzers, which were the heaviest equipment used. What would we do if the coming heavy tanks were rushed into this possible invasion site under conditions of actual warfare?

NEW HIGHWAY BILL NEEDED

This Congress must meet the responsibility of preparing and passing supplemental legislation to provide for an immediate program of constructing highways adequate for our national-defense requirements. This should be in addition to the regular biennial Federal-aid highway measures. I believe that the Federal Government should bear the brunt of this cost, perhaps as much as 80 percent, instead of the 50 percent borne under our regular Federal aid to States. I believe the Federal Government should bear this high ratio of the expense because such a program is as essential to our rapidly expanding defense effort as are new manufacturing facilities.

We need transport and more transport, particularly since the Federal Government has at long last recognized the need for decentralizing defense industries. Five years ago I advocated such a plan; today, factories by the score for production of aircraft, munitions engines, nitrates, and other sinews of war preparedness are being located in Illinois, Kansas, Iowa, Missouri, Ohio, Kentucky, West Virginia, and other interior States.

Industrial mobilization, plus an increasing peacetime traffic, already threatens to overtax our present transportation system. Highway problems are more serious in America than ever before, due in part to the staggering total of 32,000,000 motor vehicles now in use. Railroads, with equipment depleted by depression years, may soon feel the pressure of transporting defense materials. Waterways have been steadily improved in recent years, but still fall far short of carrying their share of the load. Commercial aviation, with emphasis on passengers and speed, grows in importance daily, but cannot the automotive industry, which grew to its present giant stature with the growth of highways, lend its facilities to speeding defense transport, provided we build the roads to carry the trucks? Our transportation network must be strengthened at every point.

STUDIES BEGAN 20 YEARS AGO

Some 20 years ago the War Department began studies of our highway needs, which are being modified today to meet the new tempo of modern war. We realize that we must revamp our conception of minimum requirements. Testimony before the House Roads Committee, of which I am a member, revealed that there are some 6,390 miles of highway in the New England States alone that should be rebuilt, widened, or relocated. There are also 506 bridges that should be widened or rebuilt. And these recommendations, which will cost an estimated $388,223,000, are based only on our immediate peacetime needs to better traffic conditions and promote highway safety. The cost of building New England's highways to serve the

dual purpose of civil and military use would probably reach the staggering total of $600,000,000. At this time it is impossible to estimate accurately how many billions will be needed for necessary highway expansion and improvement through the entire Nation.

President Roosevelt now has under consideration a comprehensive report from the Federal Works Agency which is the result of a comprehensive study made by the Public Roads Administration of our highway defense needs. It is believed that this broad program will take the form of a recommendation to Congress and that legislation will be formulated for important defense road improvements. It is proposed that $150,000,000 be used for so-called access roads, with the total cost being borne by the Federal Government, due to the fact that these roads would be used almost entirely for military and navy reservations and defense industry sites. It is proposed also that $100,000,000 is required on strategic roads where there would be replacement of substandard bridges and correction of critical deficiencies. On these projects the cost would be borne by Federal and State governments. It is believed that so-called tactical roads should be constructed at a cost of approximately $25,000,000, and these would be used regularly in maneuvers of the Army.

Yesterday Congress received from the President a $6,000,000,000, 6-year public-works program prepared by the National Resources Planning Board. It is noteworthy that one hundred and twenty-four million of this amount would be set aside for transportation.

How can we pay this gigantic bill?

In the first place, we can abolish the present pernicious practice of diverting funds from Federal gasoline and other automotive taxes to uses other than highway construction and maintenance, and under the same terms levy such additional taxes as are found necessary for this building program.

There is a place for high-speed toll roads, such as the Pennsylvania Turnpike, where revenues are far in excess of advance estimates. Roads of this character have tremendous military value. If properly located, they are sound financial risks and can be financed through loans and the issuance of bonds.

SUPERHIGHWAY BILL DISCUSSED

I have reintroduced this year a bill to provide for transcontinental motor transportation, the facilities for national defense and promotion of public safety. This measure (H. R. 3973) looks toward the construction of a superhighway system. One of these would extend in approximately a straight line from near Boston, Mass., to near San Francisco, Calif.; two would extend from the Great Lakes region and New York to Florida; one from the Canadian border in Minnesota to Laredo, Tex., connecting with the Pan American Highway to Central and South America; one from Jacksonville, Fla., in a direct line to San Diego, Calif.; and one between San Diego, Calif., and Vancouver Island. There are, of course, many other sections of the country where highways of this general nature should be built.

It is highly desirable at this particular time that plans be consummated to construct a superhighway between Washington, D. C., and Baltimore, Md. The National Resources Planning Board has estimated that a $7,000,000 highway between these two cities is badly needed. It is my considered judgment that the Nation's capital and the first city of Maryland need such a road, and a program should be worked out at once to make its construction possible. Washington will increasingly become the planning center of our governmental defense program, and the Baltimore area is rapidly assuming major importance as a territory engaged in the production of preparedness materials. The building of such a road is long overdue. Surely the construction of this link would open the way for an extension into New York and the New England States.

Recently, on the House floor, there was held an interesting and informative discussion on the feasibility of superhighways in this country. I was gratified at the reaction. It will be remembered that the House Roads Committee in May 1937 held the first hearing on this subject. I hope that in the near future a definite Government plan can be evolved for the building of these roads. Charles Upham, noted highway builder, told me only today that superhighways in many parts of the Nation are urgently needed.

We will need close cooperation from the various States. Many of these political subdivisions, knowing that the Federal Government condones it, have continued to use their gas revenues for almost every purpose but that originally intended. Were these funds returned to their proper uses, these States would have little difficulty in sustaining their present schedules of construction and maintenance and joining hands with the Federal Government in this greatly needed military program. These and other important problems will be considered in formulating legislation.

AMERICA MUST ACT NOW

There are those who contend that these improvements should be treated from a long-range standpoint, that we should approach them with the ease of a peacetime stride. I cannot agree with their sentiments in this respect.

I do believe we should eliminate the elements of rush and reckless emotional haste, but I emphasize the need for immediate and thorough action. It is quite obvious that our military experts believe that America is closer now to warfare on her own soil than at any other time in her recent history. May God spare us this reality. In the meantime, our wisdom dictates that we take stock of our highway deficiencies and begin a program that will modernize our national road system and make it the finest for peacetime service and at the same time a highly developed and definitely efficient adjunct for our national defense.

Defense Aid Supplemental Appropriation Bill, 1941

EXTENSION OF REMARKS

OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

Mr. McMILLAN. Mr. Speaker, I hope the congressional leaders in the House will not think that I am trying to retard the progress of the present appropriation bill which we are considering; however, I do want especially the leaders of the House to know that we people of the South are looking for and expecting their aid in securing a sufficient amount of the national-defense industry and national air fields to properly protect our coasts. We all know that the Atlantic and Gulf coasts of the United States are the most vulnerable points on the face of our Nation to all foreign enemies at the present time.

I agree with the President that we should not interfere with the military leaders in designating the most-strategic points throughout the United States where air bases, firearms, and other factories will be built under the present national-defense program. However, we do feel that up until this date there has been some discrimination made by the national-defense officials. Practically all of the great airplane factories, powder plants, and other national-defense projects have been built in the already highly congested industrial centers of the New England States.

I expect to vote for the President's request for an appropriation of $7,000,000,000 before Congress adjourns this afternoon. However, before voting for this appropriation bill I want to register my protest against the manner in which contracts have been awarded for national-defense projects up until the present time.

I represent approximately 360,000 red-blooded Americans, and they are practically 100 percent behind the President in his national-defense program and his foreign policies. We, however, expect in return to receive proper consideration from the President and the Congress of the United States for having our shores properly protected against any eventualities. In my opinion, the people of the South are the most peace-loving people in the world. However, when it has been proven to them that our liberty and country is in danger they are willing to give their last penny and, if necessary, their lives to protect the same. We all hope that it will never become necessary for any of our citizens to fire a gun during this war or any other wars. However, we are going to prepare ourselves for any eventuality. The citizens in my district expect me to let Congress know just how they feel regarding the lend-lease bill and other matters pertaining to the welfare of the Nation, and that is the only reason I have begged a few minutes of the precious time we have allotted to consider this $7,000,000,000 appropriation bill this afternoon.

I know the chairman of the Appropriations Committee is anxious for the House to pass the $7,000,000,000 appropriation bill for Great Britain in sufficient time to send the same to the Senate this afternoon, therefore I will refrain from making any further remarks regarding this program at the present time.

War for the United States

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

ARTICLE FROM THE NEW YORK TIMES

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following article from the New York Times of today:

[From the New York Times of Wednesday, March 19, 1941]

AID-ALLIES POLICY HELD BID FOR WAR—AMERICA FIRST GROUP ISSUES STATEMENT DENOUNCING "TRIAL BALLOON" OF COMMITTEE—CONVOY PLAN IS OPPOSED—RECRUITING BY BRITISH HERE AND FIRM STAND BY UNITED STATES IN FAR EAST ALSO ASSAILED

The America First Committee charged yesterday that the statement of policy issued Monday by the Committee to Defend America by Aiding the Allies contained recommendations that would get the United States into war.

The Aid Allies Committee had recommended that American naval vessels convoy ships to England if necessary; that legislation be enacted granting right to the British to recruit men here, and that the Government announce a firm stand in the Far East.

POLICIES ARE DENOUNCED

These declarations were denounced by the America First Committee in the following statement:

"Americans are now wondering what the next step will be toward war. They need not be in any doubt. Whenever the Government is preparing some new forward movement to war, the Committee to Defend America by Aiding the Allies is used to send up the trial balloon. Yesterday this committee, which speaks for the war groups in America, issued a new program. These men are not satisfied with the lend-lease bill and the $7,000,000,000 gift to Britain. They now demand more. Most important, they demand that American naval vessels shall convoy ships to Britain; that the British Army shall be permitted to recruit here American soldiers for the English Army; that the Government shall announce that it will aid England to defend Singapore and the Dutch East Indies.

"On December 28, 1940, William Allen White, organizer of that committee, said: 'It is not true even remotely that we favor repealing that portion of the neutrality law which forbids American ships to carry contraband of war into the war zone. That would lead us into war and our organization and I personally are deeply opposed to it.' Senator GEORGE, in the debate on the lend-lease bill, declared emphatically that convoying would mean outright war. Is this not a perfect example of how the American people are being deceived into one step after another? The committee which only 3 months ago declared it was opposed to convoying because that meant war is now demanding it.

"CHURCHILL'S WORDS RECALLED

"As to changing the law to permit Americans to enlist in the British Army and to allow the British Army to start recruiting here—what becomes of the solemn assurance that England does not need men? Winston Churchill in 1914 wrote Earl Grey, British Foreign Minister, urging him to arrange to get plenty of Americans in the British Army. He said 'nothing will bring America in on our side quicker than some American blood spilled in Europe.' Churchill himself tells this in his own book, The World Crisis.

"Here is a plan to get our ships with their sailors into the warring water and American soldiers into Northern Africa and Greece. It is a plan to have American ships sunk and American blood spilled as the final prelude to an American expeditionary force. When will the American people be aroused to the dangers that are being arranged for them? The lease-lend bill was called 'all-out aid to Britain,' but apparently it is not enough. Churchill said, 'Give us the tools and we'll finish the job.' The Government is giving them $7,000,000,000 worth of tools. Now they are preparing to ask for men. The America First Committee is opposed to all of these dangerous proposals."

Proposed Dam on the Savannah River

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, we are now considering before the Rivers and Harbors Committee what is known as the proposed Clarks Hill Dam on the Savannah River between the States of Georgia and South Carolina, and I want to point out briefly what this development would mean to the people of those States.

In addition to other benefits to be derived from this development, including flood control, navigation, and national defense, this project would produce 444,000,000 kilowatt-hours of firm power a year. What we mean by firm power is power that can be produced the year round. In other words, power that can be produced constantly without reference to fluctuation in the flow of the stream.

It would also produce 100,000,000 kilowatt-hours of secondary power a year; that is, power that can be produced by the floodwaters during what we call the rainy season, which, in that country, covers about 6 months in the year—from November to April, and extending at times to the 1st of June.

It comes just at the time when extra power is needed and when the use of electricity is increased in every home and in every business establishment. It is not waste power, and should never be referred to as "dump" power. It is merely increased production, and can be easily absorbed by the area served.

The experts testified before the committee that this firm power could be produced at 2.77 mills a kilowatt-hour and the secondary power at 0.5 mill a kilowatt-hour. This would amortize that part of the development charged to power within a period of 40 years. Remember that seven-eighths of this entire development is to be charged to power and that if this entire output were sold at these rates—2.7 mills a kilowatt-hour for the firm power and one-half mill a kilowatt-hour for the secondary power—it would amortize that part of the investment charged to power within 40 years and would amortize the entire development in 46 years.

Expert engineers appearing before the committee on yesterday testified that this power could be transmitted 100 miles at a cost of 0.75 mill a kilowatt-hour, which, added to the cost of production, would make this firm power cost 3.52 mills a kilowatt-hour laid down wholesale 100 miles from the dam, and the secondary power cost 1.25 mills a kilowatt-hour laid down wholesale 100 miles from the dam.

In this connection I might state that this is less than any municipality pays for power purchased wholesale from the T. V. A. anywhere from Knoxville, Tenn., to Macon, Miss.

Knoxville, which is within a few miles of the Norris Dam, paid 4 mills a kilowatt-hour wholesale for its electricity purchased from the T. V. A. during the month of December 1940; and Macon, Miss., the most remote municipality that purchases wholesale power from the T. V. A., paid 6.92 mills for its electricity purchased wholesale from the T. V. A. during the month of December 1940. Both of these municipalities distributed this power at the T. V. A. yardstick rates, as did all the other municipalities and cooperative associations purchasing T. V. A. power throughout that area.

If the people throughout the States of Georgia and South Carolina had received their electricity at the T. V. A. yardstick rates, last year, the people of Georgia would have saved $12,460,000, and the people of South Carolina would have saved $5,910,000.

These experts testified that this power could be transmitted 150 miles at a maximum cost of 1 mill a kilowatt-hour. That means that it could be laid down in Savannah or Atlanta, Ga., at Charleston or Columbia, S. C., or at other points within that range at 3.77 mills a kilowatt-hour for the firm power, and at 1.5 mills a kilowatt-hour for the secondary power.

They also testified that this power could be transmitted 250 miles at a cost ranging from 1.25 to 1.5 mills a kilowatt-hour. A 250-mile radius from this dam would cover the entire States of both Georgia and South Carolina. That means that this power could be laid down at any point in either one of those two States at a maximum of 4.27 mills a kilowatt-hour for the firm power and 2 mills a kilowatt-hour for the secondary power.

That means that we could supply power not only to every town but to every farmer in those two States at the T. V. A. yardstick rates or less and at the same time take care of all expenses, including money paid in lieu of taxes equal to the amount of taxes paid by private power companies, and amortize the entire investment within 46 years, and could amortize that part charged to power in 40 years.

In other words, this development in the long run would not cost the United States Government a single dollar. But on the other hand, it would add hundreds of millions of dollars to the national wealth.

It would force private power companies to bring their charges down to the proper levels and reduce light and power rates to the people of the States of Georgia and South Carolina, even on the present load, by more than $18,000,000 a year—or the value of 360,000 bales of cotton a year at $50 a bale.

But it would do more than that; it would double the consumption of electricity throughout that area, add to the comforts and conveniences of every home,

including every farm home, stimulate industry, and lift untold burdens from the shoulders of the merchants and other commercial consumers of electricity throughout those two States.

Tribute to William Jennings Bryan

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, March 20, 1941

ADDRESS BY HON. CLYDE L. HERRING, OF IOWA

Mr. HILL. Mr. President, yesterday was the anniversary of the birthday of the late William Jennings Bryan. The Senate was not in session, but tribute to him would be timely and deserved on any day. In many ways he was the John the Baptist who proclaimed the New Deal, and, with the exception of Franklin D. Roosevelt, no man in our time has held a greater place in the hearts of the common people of America than did William Jennings Bryan.

In 1936 the distinguished Senator from Iowa, Mr. HERRING, delivered an able and beautiful address in Lincoln, Nebr., on William Jennings Bryan, The Man of the Future. In appreciation of the address and as a tribute to Mr. Bryan, I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

William Jennings Bryan is dead. His grave is strewn with flowers and his memory adorned with ecomiums. Little more than a dozen years have elapsed since his brave attempt to vindicate the doctrine of the church—the view of the fundamentalists—that man is ascended from angels, not descended from monkeys.

He died on a pleasant summer day, July 26, 1925, after what appeared to be a losing battle. Nothing could have been more consonant with his unusual life than his unusual demise, since throughout his existence, with few rare exceptions, William Jennings Bryan appeared to be battling on the losing side.

His family, whom he loved and who loved him, prepared to bury him, while his enemies complacently prepared to bury his ideas. William Jennings Bryan was expected to become a part of America's past—a milestone on the tortuous path of American democracy.

He believed what he believed, whether another man agreed with him or not. Principle was to him the important thing. The course once determined, he then sought converts.

So his faith in the soul of man. He could not accept the scientific explanation of creation because it did not square with his religious concepts, with his belief in the immortality of the soul.

What appeared to be a losing battle is turned into victory. The spirit, the ideas, the soul of William Jennings Bryan continue to direct the actions of men as when he stood before an audience and exhorted them to act in their own behalf. The immortality of his soul is demonstrated by the fact that William Jennings Bryan is still the inspirer of men, and the principles for which he stood continue to be the ideals for which men strive. He is not to be left in the past of the United States. Bryan belongs to the future of America.

From a poor boy in Nebraska to cosmopolite and world traveler he moved with the lightning-like rapidity of our times. He accumulated during his busy, fruitful life upwards of a million dollars which he left as a limited inheritance to members of his family, charity, and friends. To the people of the Nation he left a greater inheritance in ideas and ideals, the fulfillment of which is a major task belonging to our generation and to others which shall come after us.

Although elected to Congress but twice, Bryan was a busy legislator throughout his 40 years of active public service. To chronicle all of the legislation, State and national, for which he was responsible would consume infinite time and serve no useful purpose. Suffice it to say that he was able to amend the United States Constitution successfully on four separate occasions. The first was the direct election of United States Senators after a comparatively brief "lobby" of only 23 years—from 1890 to 1913. He helped to write the Income Tax Law of 1894, which a year later was declared unconstitutional. He only required 19 years to secure the necessary constitutional amendment—also in 1913.

In a nation where repeal is still being celebrated, I should not wish to put undue emphasis upon the passage of the eighteenth amendment, but all of us are aware of the great part which Bryan played in bringing about its adoption.

The nineteenth amendment, giving the franchise to women, received his hearty and consistent support.

He was largely responsible for the creation of the office of Secretary of Labor, which he hoped would serve to abolish government by injunction, prohibit child labor, and secure an 8-hour day.

Since the days of the Spanish-American War (for which he organized a regiment) he advocated independence for the Philippines. Congress in the first months of Wilson's administration adopted a resolution embodying the declaration which he had written into every Democratic national platform from 1900 down to 1912. We have witnessed in recent years the first fruits of that effort.

It was Bryan's insistence that the "sovereign right to issue money" be made a part of the Currency Act—a right which had been surrendered to national banks, that secured the passage of that act.

During his brief service of 2 years as Secretary of State in the Wilson cabinet he originated 30 treaties with other nations, revised the Federal Reserve Act, composed the Japan-California controversy, and offered effective opposition to the proposal of American bankers to loan money to China.

Disagreeing with his colleagues on the interpretation of the *Lusitania* disaster, he resigned as Secretary of State only to reenter the political scene as author of the famous slogan, "He kept us out of war," which elected Woodrow Wilson to a second term.

Despite his pacifism and avowed support of the ideals of peace, he nevertheless volunteered his services to his country, which, however, because of age were not accepted.

It was this strange admixture of pacific idealism and fearless militancy which accounted for the uncommon number of successes in his career, sometimes as conciliator—more often as combatant. He believed with Henry Ward Beecher: "I need no armor save the justice of my quarrel."

Bryan arrived at maturity at a time as epic-making as our own. Civil War he had been spared, save as memory would carry him back to the tales told him in infancy. He lived through the great industrial revolution which followed the war, when the machine lured men from the land into mill and factory, and the railroads and the saloon were developing that dual strength which was to affect all succeeding elections for a long period of years to come.

The death of William Jennings Bryan's father, Judge Silas Bryan, probably affected the agrarian revolt more than any other single factor. Had he lived, Bryan would have gone to Oxford, England, to complete his post-graduate studies. His death, and the discovery that two notes of $15,000 each endorsed by Judge Bryan for friends in whom he had faith, and who failed that trust, completely changed the currents of life for young Bryan. He gave up the idea of Oxford and turned a "young man's fancy" to the practical problem of becoming self-supporting. His next years were full of struggle and hard work but they were spent fruitfully, and under the inspiration of a great and romantic love, which dominated his life to the very end.

Friendship brought William Jennings Bryan to Lincoln. The irrepressible spirit of the "pioneer" caused him to resolve to return and make Lincoln his home. The assurances given him that the West offered great opportunities for young men were more sanguinely enthusiastic than real. Always a thoughtful student of American politics—Bryan realized that Nebraska — although agrarian — was hopelessly Republican. Democrat that he was he took into account his political extinction—there would be no place in Nebraska for a Jeffersonian Democrat, but there might be a place for a good lawyer.

"He who waits for a situation entirely favorable never does anything." Bryan moved to Lincoln. He could not afford to bring his wife and baby, and so he came alone, using his office for home as well as place of business.

He proved the wisdom of the adage "Our doubts are traitors, and make us lose the good we oft might win, by fearing to attempt."

Success doubtless appeared to be "just around the proverbial corner," but the fact is, it came quickly and with comparative ease. In a Republican State young Bryan was able to rouse a militant minority, which went into party convention with banners streaming, and a battle cry of confidence which roused even the delegates themselves. In 1890, to his complete astonishment, he had been elected to Congress from a Republican State on the Democratic ticket.

It has been said that Bryan was 20 years ahead of his time. An examination of the platform upon which he was elected will reveal that he is more likely to have been a century ahead of his time. His attack upon the McKinley tariff bill was vehement. His opposition to the development of "trusts and monopolies" was so far-sighted the American people are only now beginning to comprehend the significance and purport of his words. His championship of labor, and the right of the farmer to receive a just price for his produce made him a "first pleader" in the cause of human justice, and afforded the arguments upon which to base the rationalization of public opinion.

With equal force and eloquence he attacked the willingness of legislators to become "subsidized tools" of economic groups of especial and unequal privilege, which sought "unjust economic advantage over their fellows through the securing of sub-

sidies and other preferential treatment." He advocated the abolition of special privilege. He demanded that corporate greed be curbed, declaring: "a private monopoly is indefensible and intolerable."

Realizing the importance of honest elections by voters, free from the influence of bribery or intimidation, Bryan advocated the adoption of the Australian ballot system, which made voting secret, and thereby encouraged the expression of conviction and freedom of conscience. Every American who votes enjoys the privilege of secret balloting, forgetful of the crusader, who forced it upon unwilling political bosses.

The Federal Reserve System, the Federal Trade Commission, the Interstate Commerce Commission, and lastly the Security Exchange Commission were all outgrowths of ideals and principles advocated by William Jennings Bryan. He supported the rural-credits law, the Farm Loan and Joint Stock Land Bank Act and urged the guaranty of bank deposits. Long before the fitful days of depression, when the 20,000 ragged soldiers and their friends marched on to Washington in the latter days of the Hoover administration—demanding payment of their bonus—Bryan urged liberal pensions for disabled veterans, an obligation which the country has been slow to recognize, even after nearly 46 years of propaganda by him.

Consistent in his demand for the remonetization of silver, he fought the gold standard and its advocates in Wall Street, and died leaving the obligation to carry on with Senators WHEELER and THOMAS and a handful of silver colleagues in Congress. Great progress has been made since his death. The fight for free silver goes on.

The several Western States whose internal economy is in large measure dependent upon the mining industry have renewed hope that they may once more attain a degree of prosperity and economic self-sufficiency.

His opposition to "inordinate gifts of public lands" to absentee landlords is inextricably interwoven with the "free homestead" movement and the development of our great railroad systems.

The abolition of political caucus and secret conclave and the introduction of the primary system, initiative, referendum, and recall, the compulsory publication of campaign contributions before elections—these and other changes in the functioning of democracy under our elective system can be traced to the early pronouncements of William Jennings Bryan.

He died still advocating that "sound system of public highways" and "public ownership of the means of transportation and communication," which had been the cherished dream of John Quicy Adams during his administration, the fulfillment of which is promised sometime in the not-too-near future.

Striving to raise the American standard of living and wages, Bryan forcefully advocated immigration laws restricting the "importation of pauper labor," "arbitration in labor disputes," "abolition of government by injunction," and "recognition of the right of labor to collectively bargain." He gave his unqualified support to every piece of legislation having for its object the safeguarding of life and property in industry, as well as laws affecting "employer's liability" and "workmen's compensation," including maritime legislation regulating wireless and other safety devices.

Critical of the growth of monopoly, he nevertheless believed in the development and extension of the electrification system, which would bring within reach of home and pocketbook, the benefits derived from hydroelectric power.

He was in harmony with all that is good in our age—he was the avowed enemy of all that is bad. Nor was his vision obscured. He could examine any phase of social, political, or economic organization, and point out the sound and useful features in contrast to the dangerous and unsound practices.

Satisfied with the traditional policies of democracy, Bryan stood ever willing and eager to grasp the new and untried—if the new and untried could square with his logic and reasoning. He demonstrated what to many seems an irreconcilable point of view—if you are for tradition you cannot be for change, and vice versa. He used experience as his yardstick of measurement for what was sound, and necessity as his measure for what is necessarily experimental.

With all of the notable achievements of his ideas the bulk of his program remains unfulfilled. He is still the man of the future.

Nor was he without potency in the life of the Republican Party. He provided the "shock engagement" which tested that party's strength, and brought to the fore the leadership, which controlled it for upward of three decades. I refer, of course, to the late Theodore Roosevelt, who but for William Jennings Bryan, would have had a somewhat different career.

At a time when "big business" was "small" as compared to today, but when the leaders of industry were possessed of egos, somewhat distended, Bryan issued a challenge to all who were contending for inordinate profits on the one hand, and the exploitation of the farmer and labor on the other. In a country of 21-cent wheat and a subsistence living standard, Bryan laid down the gantlet to "organized greed," and it was picked up and flung in the faces of the people, whose champion he had become, by Mark Hanna, greatest political influence of his day, and regarded by all beholders as invincible.

National elections up to the campaign of 1896 had been what might be termed, in the light of subsequent events, child's play. With the advent of the "young upstart" from Lincoln, Nebr., as the Presidential nominee of the Democratic Party, Mark Hanna, railroad magnate, and overlord, took his road-crossing sign seriously. He stopped, looked, and listened. As "President maker" he nominated William McKinley on the Republican ticket and gave out the word: Bryan must be defeated at any cost—the cost was $4,000,000 in the Republican campaign coffers—an unheard-of sum. Although Coxey's army had marched on the Nation's Capital 6 years before—they were a handful of men, compared with the millions, whom the silver-tongued orator might have stampeded into a war on the "sovereignty of gold" and "the divine right of monopoly."

The campaign of 1896, while it brought defeat to the Democratic Party and its young candidate, caused such furor that it forced a compromise from Mark Hanna in the following campaign—the compromise—the acceptance of young Theodore Roosevelt as McKinley's running mate for a second term.

But for Bryan, Roosevelt would have received no such consideration. Once elected, fate conspired to elevate him from the Vice Presidency to the Nation's Chief Executive.

Going beyond party boundary, Roosevelt proceeded to adopt as his war cry many of the "radical and revolutionary planks" of the Democratic Party, and for 30 years thereafter he hammered away, sometimes effectively, sometimes not, but always at some part of the Bryan program, seized upon by a great opportunist, quick to see the value of the ideas and the benefits of the strategy.

Had Bryan's father not died when he did there would have been no organized agrarian revolt. If McKinley had not been shot, it is doubtful if "Teddy, the Trust Buster," would ever have been President.

Upon such events does the destiny of empire depend.

The platform of William Jennings Bryan in 1896 had provided ample campaign material for successive years. Numerous planks have been incorporated into the Constitution, and the statutes of our land, but the great plan of William Jennings Bryan remains unfulfilled—the emancipation of the American farmer and the American laborer, and the world launched upon an intelligent program of enduring international peace.

William Jennings Bryan may be dead—but his ideas and his ideals march on—and until they are translated, in their most comprehensive meaning, into the economic, social, and political life of America—William Jennings Bryan will continue to be—the man of the future!

Why Continually Cater to Cotton?

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

Mr. MURRAY. Mr. Speaker, the never-ending number of bills introduced in Congress in regard to cotton and the huge sums of money annually appropriated from the United States Treasury for cotton should prompt every Member of this House to seek information about this crop.

First, let us note where cotton is grown and which States lead in the production of cotton:

[U. S. Department of Agriculture, Agricultural Marketing Service, Washington, D. C.]

COTTON REPORT AS OF DECEMBER 1, 1940

The Crop Reporting Board of the Agricultural Marketing Service makes the following report from data furnished by crop correspondents, field statisticians, and cooperating State agencies. The final total ginnings for the season will depend upon whether the various influences affecting the harvesting of the portion of the crop still in the field will be more or less favorable than usual.

State	Acreage for 1940 crop	Yield per acre		Production (ginnings) 500-pound gross-weight bales	
	Left for harvest	Average, 1929–38	1940 (Dec. 1, estimated)	Average, 1929–38	1940 crop (Dec. 1, estimated)
	Thous. acres	*Lbs.*	*Lbs.*	*Thous. bales*	*Thous. bales*
Missouri	405	337	448	270	380
Virginia	31	269	385	37	25
North Carolina	833	278	425	658	740
South Carolina	1,242	251	374	820	970
Georgia	1,946	218	251	1,175	1,020
Florida	66	151	145	34	20
Tennessee	735	250	335	472	515
Alabama	1,980	215	191	1,200	790
Mississippi	2,545	239	241	1,619	1,280
Arkansas	2,104	224	350	1,283	1,540
Louisiana	1,126	225	194	709	455
Oklahoma	1,846	135	209	812	805

State	Acreage for 1940 crop	Yield per acre		Production (ginnings) 500-pound gross-weight bales

D. A. MCCANDLISS,
F. H. WHITAKER,
V. C. CHILDS,
H. H. SCHUTZ,
Crop Reporting Board.

Approved:

CLAUDE R. WICKARD,
Secretary of Agriculture.

It is evident from the above table that one State, California, has had an average annual production over a 10-year period of 513 pounds per acre and a 1940 production of 723 pounds per acre, while another State, Texas, has had an average annual production during the same 10-year period of only 149 pounds per acre and a 1940 production of only 185 pounds per acre.

It should be pointed out at this time that the cotton acreage has been partially frozen by recent legislation, and a new producer would be compelled to pay a domestic penalty or domestic tariff of 3 cents per pound if cotton were offered for sale having been grown on other than acreage allocated under the A. A. A. This fact, no doubt, will have a tendency to keep cotton acreage from moving westward into regions evidently more suited to efficient cotton production, like Arizona, New Mexico, and California.

The acreage, production, and price of cotton from 1900 to 1940 are shown in the following official table:

Cotton: United States—Acreage, production, price per pound, and value, 1900–1940, by years and 5-year averages

[U. S. Department of Agriculture, Agricultural Marketing Service, Crop Reporting Board]

1940 [3]	25,073	24,078	12,686	9.40	595,720

[1] St. average. [2] Weight average. [3] Preliminary.

The preceding table shows the following:

First. Although there has been a gradual reduction in cotton acreage there has not been the proportional reduction in the amount of cotton produced.

Second. That as late as 1925 cotton lint had a value of $1,578,674,000, and 15 years later, or 1940, this crop has only an estimated value of $595,720,000. It is interesting to note that during the past 8 years of the New Deal the average price per pound has been 10.18 cents with a total value of $5,055,982,000; during the last 8 Republican years cotton averaged 13.58 cents per pound with a total value of $8,121,544,000; during the last 4 Republican years the average price was 9.6 cents and the last 4 years of the New Deal it averaged only 8.8 cents per pound.

Third. A gradual decline in the price per pound and in the total value has governed since 1930 when the Democrats got control of the House of Representatives. Since that time there is little evidence of constructive cotton legislation.

Fourth. The 9.4-cent price average under the New Deal must have some relationship with the subsidies from the United States Treasury, which include (a) the export bounty, (b) the storage-charges subsidy, and (c) the cotton given away and charged up to the taxpayers of the country, (d) the soil payments, and (e) the parity payments.

Fifth. The reduction in acreage is not reflected in a reduction of production as the per acre yield is rising due to fertilizer subsidized out of the Federal Treasury or due to better cultural practices.

WHEN COTTON FINDS A MARKET

Following is a table giving the export figures on cotton for the past 40 years:

Raw cotton (excluding linters): [1] *United States exports in crop years, 1901–40*

[U. S. Tariff Commission, Washington, February 1941]

Yearly average or year [2]	1,000 bales [3]	1,000 pounds	1,000 dollars
1901–05	7,097	3,548,500	334,256
1906–10	7,850	3,925,000	437,582
1911–15	9,318	4,659,000	537,044
1916–20	5,920	2,960,000	765,515
1921	5,745	2,986,592	591,312
1922	6,184	3,173,853	600,130
1923	4,823	2,503,343	639,199
1924	5,656	2,907,304	906,566
1925	8,005	4,120,059	1,049,065
Average, 1921–25	6,083	3,138,230	757,254
1926	8,051	4,133,590	922,737
1927	10,927	5,649,742	855,788
1928	7,542	3,928,688	820,105
1929	8,044	4,209,338	847,409
1930	6,690	3,517,652	657,727
Average, 1926–30	8,251	4,287,802	820,753
1931	6,760	3,566,464	420,972
1932	8,708	4,596,391	339,940
1933	8,419	4,447,675	342,699
1934	7,534	3,982,246	421,406
1935	4,799	2,518,674	325,683
Average, 1931–35	7,244	3,822,290	370,140
1936	5,973	3,133,646	383,537
1937	5,440	2,844,295	372,923
1938	5,598	2,988,187	306,586
1939	3,327	1,756,184	170,682
1940	6,192	3,265,812	343,944
Average, 1936–40	5,306	2,797,625	315,534

[1] Linters included prior to 1921.
[2] Years ended June 30 prior to 1921; July 31 thereafter.
[3] Equivalent 500-pound bales prior to 1921; running bales thereafter.

Source: U. S. Department of Commerce, Statistical Abstract of the United States; Cotton Production and Distribution; Monthly Summary of Foreign Commerce of the United States.

A study of this table reveals the following facts: First. That the exports of cotton have not been as greatly reduced by the World War II as is generally believed. Second. The 1940 exportation of cotton was comparative in bales to that of all of the years since 1921 with the exception of the years 1925, 1926, 1927, 1929, 1932, and 1933, when it was somewhat higher. It is not the amount that was exported which is so discouraging as it is the value of the same as shown

in the last column of the table. Here we find a gradual reduction in the value of cotton exported, ranging from the 1921–25 5-year average of $757,254,000 to the 1925–30 of $820,753,000, then to the 1931–35 average of only $370,140,000 and finally to the 1936–40 5-year average of only $315,534,000. Third. In 1940 an export bounty of millions was paid in order to obtain even the $343,944,000 worth of exports and in fairness this export bounty of $52,584,456 should be deducted from the $343,944,000. Fourth. We must also take into consideration that some 650,000 bales of cotton were bartered for rubber from Britain and that probably 400,000 bales of this barter are reflected in the 1940 exports of 3,255,812 bales. The subsidized cotton exports would reduce the total normal exports very materially, which fact is self-evident.

The extent of export bounties paid out of the Federal Treasury for 1940 is shown in the following table taken from the 1940 Report of the Surplus Marketing Administration:

Export encouragement programs conducted during the fiscal year 1940

Export program	Quantity	Unit	Expenditure [1]
Cotton and cotton products.	[2] 6,335,358	Bales	$40,940,402
One variety cotton.	12,592	Bales	54,455
Wheat	18,572,354	Bushels	5,659,339
Wheat flour	16,447,496	Bushels	4,426,451
Corn	25,282,000	Bushels	758,460
Butter to the Canal Zone.	239,207	Pounds	8,753
Winter pears	123,737	Boxes	[3] 49,675
Walnuts	38,001	100-pound bags.	[3] 152,004
Red Cross export:			
Raisins	750,000	Pounds	1,500
Prunes	800,000	Pounds	8,480
Pork products.	2,517,273	Pounds	141,620
Wheat products.	13,283,840	Pounds	233,060
Corn products.	1,250,000	Pounds	12,625
Rice	559,990	Pounds	25,200
Evaporated milk.	1,911,215	Pounds	110,851
Dry skim milk.	25,0008	Pounds	1,575
Total			52,584,456

[1] Figures reported subject to revision when all obligations incurred have been liquidated.
[2] Represents total declared for export.
[3] Estimated.

It is noticeable that the ever-present appearance of our friend, cotton, has had the benefit of a $40,994,857 subsidy of a total of $52,584,456 expended in this program, or 78 percent of the money. With all these subsidies it must be borne in mind that cotton represents only a small percentage, less than 10 percent, of our national agricultural income.

DIVERSION PROGRAM

During 1940, $4,361,972 Federal funds were spent for diversion programs of some agricultural products, as is shown by the following table from page 14 of the Annual Report of the United States Department of Agriculture for 1940:

WIDER OUTLETS FOR SURPLUSES

Search for wider outlets and new uses for agricultural commodities in which surpluses exist was continued during the 1940 fiscal year through diversion programs. These programs dealt with surpluses of such commodities as cotton, peanuts, sweetpotatoes, dates, figs, fall and winter pears, dried prunes, walnuts, Puerto Rican coffee, and fluid milk.

Diversion of agricultural commodities to by-products and new uses, quantities, and expenditures, fiscal year 1940 [1]

Program	Quantity	Unit	Expenditure
Cotton:			
Diversion to cotton bagging.	13,361	Bales	$302,825
Diversion to paper	1,066	Bales	33,505
Diversion to insulation.	1,046	Bales	180,000
Wheat: Diversion of Pacific Northwest wheat to livestock feed.	11,647	Bushels	8,054
Coffee: Puerto Rican, to United States.	4,200,000	Pounds	200,000
Peanuts: Diversion to peanut oil.	34,671	Tons	1,280,843
Sweetpotatoes: Diversion to starch.	272,881	Bushels	54,577
Fluid-milk utilization:			
Boston, Mass.	19,064,921	Quarts	305,337
Chicago, Ill.	18,035,487	Quarts	701,306
New Orleans, La.	271,498	Quarts	18,894
Dates: Diversion to byproducts.	1,626,438	Pounds	49,608
Figs: Diversion to stockfeed.	3,059	Tons	51,457
Winter pears: Diversion to new markets.	203,071	Boxes	[2] 81,040
Prunes: Diversion to stockfeed.	5,176	Tons	104,443
Walnuts: Diversion to shelling.	272,761	100-pound bags.	990,044
Total			4,361,972

[1] Figures reported subject to revision when all obligations incurred have been liquidated.
[2] Estimated.

Of the foregoing total, $516,330 was spent for cotton directly and $1,280,843 was spent for the diversion of peanuts, which crop was increased, due to the reduction in acreage of cotton by the Administration.

The peanut-diversion program on the 1940 crop will likely reach $12,000,000. At election time mattress making and distribution was very generously promoted, especially shortly before election.

The following table reveals where the A. A. A. payments were distributed in 1940 and shows that six cotton States received 27 percent of the funds and one State over $50,000,000 of the $451,000,000 disbursed:

[1] Leading cotton States.

Payments under the 1935 program were made mostly in 1936; those under the 1937 program mostly in 1938; and those under the 1939 program mostly in 1939.

Agricultural Adjustment Administration, Feb. 24, 1940.

The following figures from the Administrator of the A. A. A. shows the parity payments as to crops for 1940:

The latest estimates of parity payments under the 1940 program are as follows:

Cotton	$96,183,000
Corn	48,824,000
Wheat	56,666,000
Rice	1,359,000

I wish to point out that cotton, representing less than 10 percent of the national farm income, obtained 47 percent of the parity fund, which percentage is about the average for the past several years. Note that the rice farmers received $1,359,000 for their crop, which has a national production annual value of only $35,000,000.

Mr. John T. Flynn, in the Washington Daily News on February 26, 1941, and March 7, 1941, is rather critical of the manner in which the domestic and foreign cotton business has been conducted by the New Deal. His articles are as follows:

[From the Washington Daily News of February 26, 1941]

PLAIN ECONOMICS

(By John T. Flynn)

NEW YORK, February 26.—HENRY WALLACE, now Vice President, has spoken his piece to the farmers to bring them along in the war drive. The bogey he holds out before them is the loss of their foreign markets when the war is over and totalitarianism takes possession of the world.

He put particular emphasis on the cotton farmer, whose foreign markets he said would be destroyed.

First of all, it is a fairly safe bet that no matter what Hitler does he will never do as much to destroy the foreign markets of the American farmer as HENRY WALLACE has done.

As a matter of fact, Mr. Wallace told the farmers, when he started in to save them as Secretary of Agriculture, that they had to make up their minds to curtail their crops on the theory that their foreign markets were gone. He did more than any other man to induce the farmers themselves to throw away their foreign markets.

He proceeded to apply a group of policies designed to raise farm prices above the world levels in the world market. The foreign market for cotton had certainly suffered severely. But Mr. WALLACE managed, by his price policies, to ruin most of what was left of it. If there is any foreign market left for the American grain and cotton farmer, certainly it is not Mr. WALLACE's fault.

He draws a picture of how Hitler will go to the Argentine and offer farmers there a price for their wheat, and if the Argentine isn't satisfied he will threaten to buy from the United States. Mr. WALLACE seems to be afraid that we might be able to sell some wheat that way.

His theory is that there will be only one buyer for the products of South America, and that will be Hitler. Or, at least, he insists that the dictator countries will be the only buyers for South America's products.

Of course, there are some of her products that North America buys. As for those we do not want, the dictator countries have been for a good while the only buyers. There will not be much change there. There has been no place for South America to sell certain of her products save to Germany, Italy, and Japan.

Mr. WALLACE, having succeeded in ruining the foreign market for our own farm products, is now collaborating with British propagandists to ruin the foreign markets of South America. Does he imagine he is rendering a service to American hemisphere unity by this policy?

[From the Washington Daily News of March 7, 1941]

PLAIN ECONOMICS

(By John T. Flynn)

NEW YORK, March 7.—Somehow or other the American farm problem is about to intrude itself on Congress. And the intrusion seems geared in a manner to cause some scrapping—if Congress ever permits itself to be diverted from more important subjects, like settling the affairs of Malay and Indochina, to deal with so trivial a matter as the American farm problem.

As matters stand, the Government has an immense amount of cotton and wheat on its hands. It has been making loans to farmers on the cotton and wheat they cannot sell. So there is hanging over the market a tremendous surplus which cannot be used here, while people in other lands perish of starvation or go unclothed.

The farmer has sort of ambled along, not through any settlement of his problem, but practically entirely by getting money from the Government. The Government has handed out billions. But the problem remains the same.

At the moment the Government owns about 6,183,000 bales of cotton outright and has, besides, cotton as collateral for $283,000,000.

Now, to make matters worse, new crops are abundant and the surplus promises to be greater than ever. So the farm Congressmen and the Agricultural Department have cooked up some more bills.

The basis of all these bills is control—control of crops, prices, surpluses, etc. And, like all control measures, it is always found that the first controls are inadequate and must be buttressed by more controls.

The new bill will provide for quotas, taking wheat, for instance, on farmers raising over 200 bushels or planting to 10 or more acres. The quotas having been fixed, farmers who exceed their quotas will be subject to penalties—loss of benefits, etc., but also to money penalties—and now, such is the course of control, to criminal action. So that the farmer who exceeds his quota may be sent to jail for a year or fined $5,000.

Thus the whole tendency is toward tighter, more drastic, more comprehensive regulation and control, beginning with loss of benefits for the recalcitrant and ending with jail sentences for them.

Another proposal, of course, and as inevitable as the penalty provision, is to pay the farmers more money—to establish parity prices and pay them 100 percent of that. There is plenty of dynamite, financial and social, in all these devices. But there apparently is no solution of the farm problem in them.

MR. WICKARD'S OPINION

Mr. Wickard, Secretary of Agriculture, states that "the South will grow more of those products even if it gets quite a bit of its cotton market back." By "those products" he refers to crops generally produced in the Corn Belt. An article taken from the Washington Sunday Star of February 23, 1941, in reference to his speech at the National Farm Institute at Des Moines, Iowa, on this subject is as follows:

WICKARD SAYS SOUTH WILL SOON COMPETE WITH CORN BELT—SECRETARY HOLDS TREND WILL GO ON EVEN IF COTTON MARKETS ARE RESTORED

DES MOINES, Iowa, February 22.—Secretary of Agriculture Claude R. Wickard predicted here today that the southern farmer whose cotton and tobacco markets have been choked by the European war will expand production of crops generally produced in the Corn Belt.

Secretary Wickard spoke at the National Farm Institute, which is considering economic preparedness and agriculture.

"Here in the Middle West," Mr. Wickard stated, "We might as well recognize that all indications are that the South in the future will grow more hogs, raise more corn and wheat, and produce more livestock and dairy products generally.

"The South will grow more of those products even if it gets quite a bit of its cotton market back."

Mr. Wickard said he knew that a lot of middle-western farmers look none too favorably on this trend; yet, he continued, "a sizable increase in southern production of food and feed crops is desirable from every standpoint."

The Secretary said he thought there was little likelihood "that we will produce too much meat, butter, cheese, milk, and other dairy products in the market to come.

"I have an idea," he continued, "that all we produce in the South and elsewhere will be needed."

The administration is evidently at as much of a loss as ever to solve this cotton problem. It seems to be about right where it was 10 years ago. The following article from the Christian Science Monitor of February 5, 1941, would justify such a conclusion:

WICKARD SEEKS COTTON PLAN SUGGESTIONS

WASHINGTON.—Secretary Claude Wickard sought suggestions for a long-range cotton adjustment program from representatives of organized farmers, processors, distributors, labor, and the public.

The Agriculture Department Chief and assistants prepared to lay the problem of "too much" cotton and shrinking export markets before the Agricultural Advisory Council, an organization formed in 1939 to advise the Secretary of farm problems arising from the war.

Aides said Secretary Wickard would ask council members to express themselves on various proposals intended to place southern agriculture on a firmer foundation. Because of the loss of European markets for cotton and tobacco, southern farmers have been hardest hit by the war, officials said.

PROPOSALS SCHEDULED

Proposals up for discussion, said aides of Mr. Wickard, included:

Further reduction in A. A. A. cotton-acreage program to bring production more nearly in line with market requirements. The 1941 cotton-planting goal has been set at about 26,000,000 acres. The acreage formerly averaged 40,000,000.

Expansion of programs for distributors of cotton goods among needy persons.

Inauguration of an export-subsidy program which would make American cotton fully competitive in world markets. South American cotton has been underselling American cotton in several important markets, including Canada.

Greater governmental inducements to shift from production of cotton to food, feed, and livestock in the South. The Department is offering southern farmers $28,000,000 this year for shifting more cotton land into production of foods for farm-home consumption. This offer is in addition to regular soil-conservation and parity payments.

PEG PRICES

Employ the Government commodity-loan program to peg cotton prices at higher prices. The American Farm Bureau Federation, which was expected to be represented by its president, Edward A. O'Neal, has gone on record for loans at 85 percent of parity.

Members of the council include Oscar Johnston, president, National Cotton Council; Daniel Tobin, American Federation of Labor leader; Van A. Bittner, Congress of Industrial Organizations leader; Mayor Fiorello LaGuardia, of New York City; Louis J. Taber, master of the National Grange; Claudius T. Murchison, president of the Cotton Textile Institute; M. W. Thatcher, Farmers' Union official; John D. Miller, president of the National Cooperative Council; W. L. Clayton, Houston, Tex., cotton exporter; former Gov. Bibb Graves, of Alabama; and Barry Bingham, Louisville, Ky., publisher.

Further evidence of the complexities of this cotton situation is shown in the following article by Mr. Charles E. Harner, Associated Press market writer, in the Washington Evening Star on February 13, 1941:

BRITISH TRADE PLANS COMPLICATE AMERICAN COTTON PROBLEM — UNITED STATES HOLDS SURPLUS EQUAL TO ENTIRE YEAR'S OUTPUT

(By Charles E. Harner)

NEW YORK, February 12.—Great Britain's mighty effort to maintain world trade and supply herself with fighting materials is recognized in trade circles as complicating the United States' No. 1 farm problem—cotton.

Recognized experts among the cotton traders point out that the United States Government holds 11,663,000 bales of cotton, a full year's production, and that Great Britain requires heavy shipments of the fiber; but:

1. The British are buying cotton from Brazil and Peru, as well as from Egypt and India.

2. The United States buys cotton from Brazil.

3. The British are shipping Welsh coal to Brazil and even to the United States.

Great Britain, it was reported, has contracted to buy half Peru's exportable surplus of 50,000 bales of long-fiber cotton, and last year took almost one-third of Brazil's 984,000-bale export.

At the same time, United States manufacturers purchased 12,000 bales of Brazilian long-fiber at prices said to be considerably lower than North American quotations for similar high-grade cotton. The general level of Brazilian cotton is about 1½ cents a pound under United States prices.

Thus far in the 1940–41 cotton year England has bought 44,000 bales from Brazil and the United States has bought 8,000.

FIND BARTER NECESSARY

Cotton and shipping men canvassed today concerning this situation explained it by saying the British were endeavoring to pay for raw materials as they fight; that they were engaging in barter operations with such countries as need manufactured goods and, at the same time, keeping their steamships operating on regular routes.

American shippers said that, for example, United States vessels nowadays were running to South American ports with extremely light cargoes—sometimes actually in ballast—but were sailing north with their holds jammed to capacity and even with deckloads. Their cargoes are raw materials destined, in many cases, for transshipment at New York and Boston to Canada.

British vessels, operating in the Southern Hemisphere in competition with the Americans, make it a point to carry from their home ports Government-designated cargoes at almost any price. Their chief allotment, it was said, is coal and coke for the use of Brazilian industry and North American steel mills in the Baltimore area.

In both cases the British freighters return across the Atlantic with full supplies of cotton, coffee, and manganese from Brazil and steel products from the United States.

"It's a pay-as-you-go process," said one shipping man. "And it's also a smart preparation for the resumption of world trade when the war ends."

Textile industrialists were interested in the Manchester report that Sir Percy Ashley, cotton controller, has asked English spinners to curtail their production to permit numbers of workers to leave the looms for munitions making.

MILLS NEAR CAPACITY

It was suggested in some circles that such curtailment might increase the demands upon American textile manufacturers, but it also was asserted that the American mills already were operating near capacity—in some cases on a three-shift basis—and would have a limited opportunity to fulfill export commitments.

The American cotton-growing industry—from which some 10,000,000 Americans depend for all or part of their living—has been hard hit by the war-forced curtailment of exports, now cut to 16 percent of last year's poor market and the worse since the War Between the States. Only a few years ago the United States exported as much as 60 percent of its raw cotton production.

Some alleviation of this condition was furnished by the Government's barter of surplus cotton for British-grown rubber, but 400,000 bales of that agreement already have been shipped, leaving about 250,000 more to go.

Because of the great oversupply in the United States and the disappearance of foreign markets—Germany and Italy formerly were among the United States' best cotton customers—agitation has arisen to include cotton provisions in the lease-lend bill.

Proponents of this plan assert that England is the natural outlet for this cotton, in view of her present needs and the short transportation required.

Some cotton men discount discouragement at the present domestic surplus, asserting that the whole world will demand every available bale of cotton when the war ends, pointing to the skyrocketing market which followed the termination of the World War.

CONCLUSIONS

In making deductions in connection with cotton and cotton farmers, I try to do so in as unbiased and nonpolitical manner as possible. To me the cotton problem is a national problem and not a sectional or a political one. My deductions are based, not only upon reading and studying, but upon some first-hand experience and countless conversations with Representatives and others interested in the cotton problem.

First. There is a grave danger that the United States will never regain its export market, as the South American countries undersell even our present low price, which is not much over 50 percent of parity. We are producing 12,000,000

bales of cotton annually with a normal domestic consumption of only 7,000,000 bales. It does not solve the problem to remind our majority party that their cotton program was responsible for our losing the export market. We can grant to the argumentative that the present administration did, by its program, do great harm to the export-cotton business, but the fact that we have to face is that we are producing 5,000,000 bales more cotton annually than we use domestically.

Second. The cotton interest cannot expect the United States Treasury to continue forever to (a) subsidize the growing of cotton; (b) furnish 100-percent subsidy to people to grow cotton; (c) spend millions of dollars on export bounties for cotton; (d) pay millions of dollars annually for storage of cotton in excess of all evident economic requirements; (e) spend millions of dollars for a diversion program annually for cotton; (f) appropriate funds to discover new uses for cotton; and (g) pass legislation which compels industry to use the crop for the reason that cotton interests feel that someone should be compelled to use it to rid them of their surpluses, surpluses actually created by a Federal subsidy.

Third. Cotton farmers and cotton interests must face the fact that farmers in other sections of the country have had to meet this same type of a problem. Wisconsin passed from grain growing to livestock and dairying through necessity. Potato producers throughout a large part of Wisconsin today face a serious situation. Potato-disease control and other factors are being studied, but the production in many areas is still most discouraging.

Fourth. There have not been as many foreclosures on farms by the F. C. A. in the Cotton States as in some other sections of the country. The delinquent loans in parts of Wisconsin on January 1, 1940, were over 50 percent, which is a higher percentage than in the cotton country. Of course, Wisconsin had small soil checks and very little in parity payments throughout the greater part of the State. The 42-percent reduction in the tariff on cheese by the present Administration did not help the situation either.

Fifth. The press quotes Secretary Wickard as saying that we can expect to see more livestock, hogs, and dairy products produced in the South. Whether these livestock products are grown on the millions of acres not needed for cotton or whether they are to be continually imported brings up another question. Up to the time the tariff was removed by the Tariff Act of 1913 under President Wilson we were on a beef-exporting basis, and ever since that time we have been on a beef-importing basis, as is shown in the following table:

Tariff rates on beef cattle and beef products since the Tariff Act of 1897

[U. S. Tariff Commission, Washington, Mar. 10, 1941]

	Cattle	Beef		Tallow	Hides, raw or uncured
		Fresh or frozen	Canned		
Tariff Act of 1897	$2 per head,[1] or $3.75 per head,[2] or 27½ percent ad valorem.[3]	2 cents per pound	25 percent ad valorem.	¾ cent per pound	15 percent ad valorem.
Tariff Act of 1909	do	1½ cents per pound	do	½ cent per pound	Free.
Tariff Act of 1913	Free	Free	Free	Free	Do.
Tariff Act of 1921 (emergency tariff).	30 percent ad valorem	2 cents per pound	25 percent ad valorem.	do	Do.
Tariff Act of 1922	1½ cents per pound,[4] or 2 cents per pound [5]	3 cents per pound	20 percent ad valorem.	½ cent per pound	Do.
Tariff Act of 1930	2½ cents per pound,[6 7] or 3 cents per pound [8 10]	6 cents per pound	6 cents per pound, but not less than 20 percent ad valorem.	do.[9]	10 percent ad valorem.

[1] If less than 1 year old.
[2] If 1 year old or over and valued at not more than $14 per head.
[3] If 1 year old or over and valued at more than $14 per head.
[4] Weighing less than 1,050 pounds each.
[5] Weighing 1,050 pounds each or more.
[6] Weighing less than 700 pounds each.
[7] Under trade agreement with Canada, effective Jan. 1, 1936, cattle weighing less than 175 pounds each were dutiable at 1½ cents per pound on entries not in excess of 51,933 head in any calendar year. Under the new Canadian agreement, effective since Jan. 1, 1939, the reduced rate applies to cattle under 200 pounds each and the tariff quota is increased to 100,000 head per calendar year. Entries in excess of tariff quotas are subject to original tariff act rate of 2½ cents per pound.
[8] Plus 3 cents per pound import excise tax (sec. 2491 (a), Internal Revenue Code).
[9] Weighing 700 pounds each or more.
[10] Beef cattle weighing over 700 pounds each were dutiable under the first Canadian trade agreement at 2 cents per pound on entries not in excess of 155,799 head in any calendar year. Under the new Canadian agreement, the tariff quota was increased to 225,000 head and the rate reduced to 1½ cents per pound. Entries in excess of tariff quotas are subject to original tariff act rate of 3 cents per pound.

Sixth. The United States, as a whole, might be better situated if the cotton interests produced the 700,000 head of cattle imported under the New Deal rather than to be getting subsidies for producing 5,000,000 bales of cotton for which there is no evident profitable market.

Cattle and beef: United States imports and exports, annual averages by 5-year periods, 1900–1938, and for calendar years 1939 and 1940

[U. S. Tariff Commission March 1941]

Period[1]	Imports			Exports		
	Live cattle	Beef and veal		Live cattle	Beef and veal	
		Fresh, chilled or frozen	Canned and pickled or cured		Fresh, chilled or frozen	Canned and pickled or cured
5-year average:	*Head*	*Pounds*	*Pounds*	*Head*	*Pounds*	*Pounds*
1900 to 1904	100,000	398,000	(2)	448,000	307,405,000	115,276,000

If these cotton interests are not going to be able to continue forever to obtain huge annual sums in farming the United States Treasury, they might be interested in supplying part of the pork now being imported. Statistics are as follows:

United States imports of hogs and hog products, 5-year averages, 1900–1938, and annual, 1939 and 1940

Period[1]	Quantity					Value				
	Hogs, live	Fresh pork	Hams, shoulders, and bacon	Other pork	Lard	Hogs, live	Fresh pork	Hams, shoulders, and bacon	Other pork	Lard
5-year averages:	*Thousands*	*1,000 pounds*	*1,000 pounds*	*1,000 pounds*	*1,000 pounds*	*1,000 dollars*	*1,000 dollars*	*1,000 dollars*	*1,000 dollars*	*1,000 dollars*

1940	55	1,421	1,756	675	----------	3	267	478	225	----------

[1] Fiscal years 1900 to 1918, inclusive; 1915–18 is a 4-year average; calendar years, 1919–40.
[2] Less than $500.
[3] Not reported separately until 1923 when 108,000 pounds valued at $48,000 were imported.

Source: Official statistics of the U. S. Department of Commerce.
Note this 36,316,000 pound import of hams, shoulders, and bacon that might be produced by cotton farmers now getting Federal subsidies for crops not needed for our own economy.

Seventh. The following table shows the agricultural exports and the competitive and noncompetitive agricultural imports:

Total value of United States foreign trade in agricultural products

Year	Exports	Imports[1]	
		Not produced at all in the United States	Supplementary agricultural imports
1920	$3,443,000,000	$1,092,000,000	$2,157,000,000
1921	2,114,000,000	584,000,000	735,000,000
1922	1,884,000,000	773,000,000	834,000,000
1923	1,820,000,000	934,000,000	1,094,000,000
1924	2,110,000,000	927,000,000	984,000,000
1925	2,136,000,000	1,339,000,000	1,001,000,000
1926	1,817,000,000	1,443,000,000	973,000,000
1927	1,885,000,000	1,225,000,000	996,000,000
1928	1,863,000,000	1,145,000,000	955,000,000
1929	1,693,000,000	1,201,000,000	1,017,000,000
1930	1,201,000,000	768,000,000	701,000,000
1931	821,000,000	561,000,000	447,000,000
1932	662,000,000	372,000,000	296,000,000
1933	694,000,000	367,000,000	365,000,000
1934	733,000,000	408,000,000	413,000,000
1935	747,000,000	483,000,000	589,000,000
1936	709,000,000	547,000,000	695,000,000
1937	797,000,000	711,000,000	868,000,000
1938	528,000,000	479,000,000	477,000,000
1939	655,000,000	592,000,000	526,000,000
1940	517,000,000	742,000,000	543,000,000

[1] Preliminary.

It is only fair to point out that $52,000,000 in export counties were paid from the United States Treasury so our net agricultural exports were in reality only $465,000,000.

Possibly the United States as a whole would welcome the time when the cotton States would produce a greater share of the agricultural products consumed in this country. The foregoing table shows the amounts being imported. If the cotton States produced these products now being imported, they would not be continually figuring out new schemes to extract money out of the United States Treasury. By producing and processing these products in this country they would be contributing a larger share toward the expenditures of the Federal Government than they are now doing. You will note in the above table that 25 percent of the time, or 2 years out of 8 New Deal years, our imports of competitive agricultural products exceed our total agricultural exports. Why subsidize cotton when we have no use for cotton and import agricultural products which we need in our own economy?

Eighth. We are importing large amounts of flax and other grains which can be grown in the United States. We import 50 percent of the wool utilized in the United States, so why not produce more wool and less cotton rather than depend to such a large extent on the crop continually harvested from the Federal Treasury?

Ninth. Cotton interests cannot expect to continually knock at the door of the United States Treasury and obtain moneys out of proportion to the value of the crop and out of line with the amounts obtained by producers of other crops. If other crops are to be provided parity, then, of course, cotton is entitled to its 16 cents per pound, but this must, in fairness, be based on the 7,000,000 bales domestically consumed. The less fertile land can be put into forests and the rest devoted to crops which will produce a profit for the owner. The sooner the cotton interests wake up to this fact the better for them and for the general public. Out of the 320,000,000 acres of crop land in the United States, there is plenty of room for the cotton farmers who really want to farm.

I repeat, cotton interests cannot expect constant subsidies for the bales of cotton not needed in this country and for which no evident profitable home can be found.

North Dakota Raises the Food With Which All Wars Are Won but Cannot Obtain a Government Contract to Furnish That Food

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

LETTER FROM THE MANAGER OF THE NORTH DAKOTA STATE MILL AND ELEVATOR

Mr. BURDICK. Mr. Speaker, North Dakota's share of defense contracts is exactly nothing. Only two States have been left out in the entire Union, North Dakota and Montana.

Is there anything about North Dakota and her industries that can contribute to the national defense? Yes; the greatest industry of all. That industry without which no war can be won by any power on earth—food. North Dakota is one of the greatest food-producing States in the Union. For the years 1939 and 1940 North Dakota produced 22.43 percent of all hard-spring and durum wheat, and during the same years North Dakota produced 11 percent of all wheat produced in the United States.

The Government is now contracting for flour, and while North Dakota raises the wheat and has a State-owned mill which is capable of manufacturing the flour, yet North Dakota has not secured a single contract for the purchase of flour by the Government. In my judgment North

Dakota will not receive a single contract unless the regulations of the Government as to the content of the flour required is changed. Hard-spring wheat is the best flour wheat known, and it makes the best flour in the world. The Government specifications are such that cheap wheat can be used in the manufacture of flour and which wheat can be purchased on the market for 16 cents per bushel less than the market value of North Dakota wheat. For this reason North Dakota cannot compete on Government contracts.

Mr. Speaker, I desire to set forth herewith a full report on this matter supplied by the manager of the North Dakota State Mill and Elevator.

STATE MILL AND ELEVATOR,
Grand Forks, N. Dak., March 18, 1941.

In re flour purchases by Government agencies.

Hon. USHER L. BURDICK,
House Office Building,
Washington, D. C.

DEAR MR. BURDICK: The following information is enclosed so that you will understand our problem in bidding on flour for use by Federal agencies:

1. Page 28, February 7, 1941, issue of The National Week showing "How our States look in proportion to their share of defense contracts."

NOTE.—Nothing reported for Montana, New Mexico, and North Dakota.

2. Number of bushels of wheat grown in the United States for the years 1939 and 1940.

3. Number of bushels of hard spring and durum wheat grown in North Dakota for the years 1939 and 1940.

4. Hard wheat flour specifications issued by the Federal Government.

5. Blended flour specifications issued by the Federal Government.

6. Soft wheat flour specifications issued by the Federal Government.

Hard spring and durum wheat grown during the years 1939 and 1940 averaged 22.43 percent of all wheat raised in the United States.

During the years 1939 and 1940 North Dakota raised an average of 11 percent of all wheat grown in the United States.

Many mills grinding southwestern wheats have been able to buy hard winter wheat for the past several years at an average of 16 cents per bushel less than dark northern spring wheat at Minneapolis. This means their wheat cost is 72 cents per barrel of flour less than ours.

Wheat prices at Duluth and Minneapolis terminals are based on weight and protein. Government loans are all based on weight and protein and are higher on hard spring wheat than hard winter wheat.

Federal purchases of flour should be apportioned according to the percentage of wheat grown in the several States.

A specification should be issued by the Federal Government covering flour made from hard spring wheat. This flour should be milled in the State where it is grown so that no southern soft or hard wheat can be mixed with the hard spring wheat. The protein in the specification of hard spring wheat should not be less than 12.6 percent and not over 0.5 percent ash. Please note the low protein in the Government specifications covering hard wheat flour (No. 4, attached), blended flour (No. 5, attached), and soft wheat flour (No. 6, attached). We are unable to purchase hard spring wheat to make flour with a protein as low as specifications covering hard wheat flour No. 4.

Government specifications are very low. That is, they are possible of fulfillment by using the cheapest and lowest-grade wheat obtainable. We repeat, many mills can buy this low protein wheat at an average of 16 cents per bushel, or 72 cents per barrel less than our wheat cost. You can readily see that we are not going to be able to secure a single contract unless a new specification is issued covering flour made from northern spring wheat.

All employees of the State mill, terminal elevator, powerhouse, and feed mill are members of the American Federation of Labor.

Bread made from Hard Spring wheat contains a greater amount of protein essential for muscle building. Not only is the protein in a greater amount but it has a quality of gluten superior to southern wheat which enables the baker to produce a better texture loaf of bread, conducive to good digestion. Not only is our Hard Spring wheat flour more nutritious but it has a superior flavor. It contains more essential vitamins than low-protein wheat flour.

In issuing a new specification, apportioning Federal purchases according to the percentage (11 percent) of wheat grown in our State and having the mills in the State grind this wheat into flour it will enable North Dakota mills to secure their share of this business. On all contracts secured by the State mill a direct benefit will accrue to every citizen of the State of North Dakota.

This letter and information is being sent to all North Dakota Members of Congress. Please meet and discuss this problem and present the information to the President or to the people who are authorized to act for him.

The President is interested in having these contracts placed so that labor in all States will receive its share of Government expenditures. The President is interested in having industry make a reasonable profit over the cost of production. The President is also interested in having an industry owned by the State secure its just share of this business. The State mill can be classed with T. V. A. and other governmental agencies as a yardstick with which to measure milling costs.

Please feel free to call upon us if additional information is needed to properly present this matter to the officials at Washington.

The people of North Dakota will appreciate your efforts in their behalf, as any business secured by the mill will be a direct benefit to every citizen in this State.

With kind personal regards, I remain

Very truly yours,

R. M. STANGLER,
General Manager.

Number of bushels of each kind of wheat grown in the United States for 1939–40

Kind of wheat	Year	Number of bushels	Percent
Hard Winter	1939	309,300,000	41.16
Soft Winter	1939	206,413,000	27.48
Hard Spring	1939	120,674,000	16.06
Durum	1939	35,083,000	4.66
White Winter and Spring	1939	79,965,000	10.64
Total		751,435,000	100.00
Hard Winter	1940	315,077,000	38.58
Soft Winter	1940	219,557,000	26.88
Hard Spring	1940	161,357,000	19.76
Durum	1940	35,799,000	4.38
White Winter and Spring	1940	84,908,000	10.40
Total		816,698,000	100.00
Average for years 1939 and 1940		784,066,500	

Number of bushels of hard spring and durum wheat grown in North Dakota for years 1939 and 1940

Kind of wheat	Year	Number of bushels
Durum	1940	27,082,000
Hard Spring	1940	69,972,000
Total		97,054,000
Durum	1939	27,918,000
Hard Spring	1939	51,150,000
Total		79,068,000
Average for years 1939 and 1940		88,061,000

HARD-WHEAT FLOUR SPECIFICATION ISSUED BY THE FEDERAL GOVERNMENT, WASHINGTON, D. C.

Type A, hard-wheat flour, shall be made from sound hard wheat, free from smut and weed seeds; shall be strong, high ground, well dressed, and of a good creamy-white color; shall be capable of yielding a loaf of good volume, texture, odor, and taste. Shall be not lower than a straight grade; shall contain not more than 13.5 percent moisture, determined by the vacuum-oven method or other method of test which the Association of Official Agricultural Chemists may consider as equivalent. Shall not exceed 0.52 percent of ash, not less than 11 percent of protein (N×5.7). The flour shall be capable of absorbing not less than 58 percent (by weight) of water. The ash, protein, and absorption will be computed on a basis of 13.5 percent of moisture.

BLENDED-FLOUR SPECIFICATION ISSUED BY THE FEDERAL GOVERNMENT, WASHINGTON, D. C.

Shall be made from blends of sound hard wheats or blends of sound hard wheats and soft wheats, all of which are free from smut and weed seeds. Shall be high ground, well dressed, of good creamy-white color, and capable of yielding a loaf of good volume, texture, odor, and taste. Shall be a long-patent grade; to contain not more than 13.5 percent moisture, determined by the vacuum-oven method or other method of test which the Association of Official Agricultural Chemists may consider as equivalent; shall not exceed 0.48 percent of ash and not less than 10 percent of protein (N×5.7). The ash and protein will be computed on a basis of 13.5 percent moisture.

SOFT-WHEAT FLOUR SPECIFICATION ISSUED BY THE FEDERAL GOVERNMENT, WASHINGTON, D. C.

Shall be made from sound, soft wheat, free from smut and weed seeds. Shall be high ground, well dressed, and of a good white color. Shall be a long-patent grade and shall contain not more than 13.5 percent moisture, determined by the vacuum-oven method or other method of test which the Association of Official Agricultural Chemists may consider as equivalent; shall not exceed 0.45 percent ash and not more than 9.5 percent of protein (N×5.7). The ash and protein shall be computed on a basis of 13.5 percent moisture.

Removals from W. P. A. Rolls

REMARKS
OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

Mr. O'BRIEN of New York. Mr. Speaker, this morning I am introducing

a bill to repeal the provisions of law relating to the compulsory removal of certain individuals from the rolls of the W. P. A.

It seems almost incredible in this day and age with the gigantic defense program under way in this country that any man should find it impossible to secure a job, but such is the case. Many men are not able to secure jobs because of physical imperfections and incapacity, for in many States insurance companies insist on high physical standards for employment. These men, therefore, experience discrimination in industry, but they have got to be taken care of somehow.

I fully realize it may be late at the present time to hope to repeal that provision in current law, but I sincerely hope it will be given utmost consideration when the W. P. A. relief bill for the next fiscal year is presented to the House.

The Menace of Communism in America

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

Mr. PITTENGER. Mr. Speaker, announcement of the appointment of a Mediation Board yesterday comes at an important time in the development of our national-defense program. Coincident with that announcement was a speech made on the floor of the House by the Honorable MARTIN DIES, chairman of the Committee on Un-American Activites. If Mr. DIES' charges are true, then the new Mediation Board has a tremendous responsibility and that must be met today and not at some distant date in the future. There is no doubt about the correctness of the charges made in Mr. DIES' speech yesterday. The Communists representing the government of Stalin are active in this country. Their purpose is to cripple and ruin our national-defense program. Mr. DIES has made a notable contribution to the cause of natonal defense in pointing out that a well-known Communist, Kenneth Eggert, organizer in Toledo, Ohio, was transferred to Inglewood, Calif., and is responsible for a strike being carried on in an industrial plant engaged in the manufacture of war materials.

Undoubtedly, the Communists are active all over the United States. As Mr. Dies indicates, they do not operate in the open, but they have organizations of respectability, either do their work for them or they operate under such a cloak.

This speech yesterday gives a picture which everyone in America should carefully consider. There is no escape from the conclusion that deadly enemies are within our gates and that there is as much danger to America from enemies in this country, as there would be from any foreign foe. In my opinion, the time arrived quite a while ago when people should take a stand for or against American institutions. We must rid this land of communism and of those traitors who are working on a deliberate plan of sabotage and destruction of the national-defense program.

The House of Representatives may well feel proud of the fine work which the Committee on Un-American Activities has performed. The announcement yesterday indicates that we should increase the appropriations for this committee and authorize and direct it to proceed full-speed ahead in uncovering the treacherous and disloyal enemies of the Republic. We should then take such measures as are necessary to require the proper Government officials to bring such offenders before the courts for punishment. The Dies committee should have the full cooperation of every Member of this House in taking steps as rapidly as possible to meet the situation disclosed by Mr. DIES in his speech on the floor yesterday.

Agreement With Canada on St. Lawrence Waterway Development

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

Mr. PITTENGER. Mr. Speaker, the newspapers yesterday carried a story which is of tremendous importance to the American people. They tell us that an agreement was signed on that day by officials representing Canada and the United States for development of the St. Lawrence waterway project which will make it possible for oceangoing vessels to come from the Atlantic seaboard into the Great Lakes. This is a hopeful sign. No one can stop the march of civilization and progress.

Volumes have been written upon the advantages that will come to the people of Canada and to the people of the United States when this great engineering project is accomplished.

Objections to the signing of this agreement yesterday will come from powerful lobbies which are operating to defeat the plan. Enemies of the seaway have been active and are boastful in their claims that they can prevent this development. We shall see.

Almost from time immemorial every argument against the St. Lawrence seaway development has been answered time after time and the fallacies exposed to the public.

Those groups which may not show their hands in this fight against the seaway project have been the beneficiaries from the bounties of the Congress of the United States and their activities in view of the great favors that they have had in the past ought not be tolerated by the present administration.

Selfish and sectional interests should not prevail over a project that will be of lasting benefit not only to our present generation but to generations yet unborn.

The President of the United States is quoted yesterday as writing Prime Minister King in part as follows:

> I am sure that you will agree with me that while our countries must put forth the maximum immediate defense effort, we must also prepare for the possibility of a protracted emergency which will call upon the industries on both sides of the border to meet constantly expanding demands. The combination of advantages offered by the St. Lawrence project makes it imperative that we undertake it immediately.

The newspaper items also indicate that President Roosevelt informed Prime Minister King that the time factor should not be considered an objection to undertaking this project at this time.

In other words our national-defense program will run over a period of years and vessels are now being constructed, but they will not be completed before the St. Lawrence waterway project is ready for use.

The Great Lakes States have a special interest in the announcement because the opening of the waterway would make possible an expansion of our shipbuilding program in the Great Lakes area.

This will mean also that additional factories will be constructed in the Great Lakes area and employment made possible for thousands of people in that section.

Racial Discrimination

REMARKS

OF

HON. U. S. GUYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

Mr. GUYER of Kansas. Mr. Speaker, my attention has been called to the gross discrimination against Negroes to be exercised by North American Aviation, Inc., which will operate the bomber assembly plant in Kansas City, Kans., in violation of the spirit of fairness toward one of the most loyal and patriotic groups of citizens in the United States. The Negroes are and always have been loyal in both peace and war. You do not find them striking in munitions plants or other defense work. While our other people strike and retard all sorts of defense work these loyal citizens keep on the job and thus promote defense operations. Now they are protesting against this, another act of discrimination against them. What purpose has the State in creating great schools for the technical training of these people if they are to be prevented from using their skill in the national defense? This is in conflict not only with simple justice but the principle followed

in the authorization for training of defense workers, which provides that:

No trainee under the foregoing appropriations shall be discriminated against because of sex, race, or color (Public, No. 812, 76th Cong., H. R. 10539).

Like provision is contained in Public, No. 783, which provides against discrimination on account of "race or color." The civil-service law makes like provision against such discrimination.

J. H. Kindelberger, president, North American Aviation, Inc., which will operate the bomber plant now being erected at Kansas City, Kans., is reported in the Kansas City Star of March 17, 1941, as saying that Negro workers "will be considered only as janitors and in other similar capacities." He is reported as saying:

While we are in complete sympathy with the Negro, it is against the company policy to employ them as mechanics or aircraft workers. We use none except white workers in the plant here in Inglewood and the plant in Dallas, and we intend to maintain the same policy in Kansas City. There will be some jobs as janitors for Negroes. Regardless of their training as aircraft workers, we will not employ them in the North American plant.

Dr. W. M. Blount, Kansas City, Kans., writes:

To our way of thinking, such a statement was ill-timed, un-American, and undemocratic at a time when our country is offering all of its resources to preserve democracy in the world and at a time when unity should be the slogan of every liberty-loving American.

Such a statement is not only an insult to the Negroes of Kansas but to the 12,000,000 Negroes of America, and should be an insult to every liberty-loving American citizen.

We doubt whether Hitler himself could have made a more vicious statement. The colored people have always been loyal to the American flag; we have never produced a traitor nor a slacker. We have always been willing and ready to fight and defend this country. We are willing to fight at this time, but we also want to work to make an honest living as any other true American citizen.

We feel that the name of Kansas shall still be the symbol of equality and justice. We learned that there is a Federal statute recently enacted which forbids discrimination in defense work because of race, creed, or color. This company has large defense contracts. This is or will be a flagrant violation of that statute.

We are asking you to use the influence of your high office to see that the colored American of Kansas gets a square deal.

W. M. BLOUNT.

Negro students of the Sumner High School and the Kansas City, Kans., Junior College, wired:

Negroes of Kansas City, Kans., protest reported announcement of J. H. Kindelberger, president of the North American Aviation Co. that Negroes will be employed in North American bombing plant in Kansas City, Kans., as janitors only. We regard Kindelberger's action as unpatriotic and un-American—a violation of the policies of the National Defense Commission. The national defense program can only be effective through cooperative work of all citizens, both black and white. We, the students of Sumner High School and Sumner division of the Junior College of Kansas City, Kans., wish to voice the protests of our school as well as of our race against this very undemocratic practice. Action should be taken against this discrimination immediately.

As a remedy for this situation I want to urge the passage of H. R. 3994, now referred to the Committee on the Judiciary. It provides among other things:

It shall be unlawful for any person administering any department of the Government or subdivision thereof, and for any person administering any agency supported in whole or in part with funds appropriated by the Congress to discriminate against any individual, in the use of facilities at the disposal of such agency or in the dispensation of benefits administered through such agency, or in the execution of any of his administrative duties, because of such individual's race, color, or creed.

This should become the law of the land and it would end this unfair discrimination against Negroes.

Wool in National Defense

EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, March 20, 1941

RADIO ADDRESS BY HON. D. WORTH CLARK OF IDAHO

Mr. CLARK of Idaho. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a radio address delivered by me entitled "Wool in National Defense."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is an ironic comment on the chaotic condition of the present-day world that some 50,000,000 sheep grazing peacefully on our hills and in our valleys provide this nation with an indispensable wartime commodity—wool.

Today, probably more than at any time in our history, the nations of the world, locked in the most titanic and tragic war of all times, are safeguarding their supplies of wool as they safeguard their high explosives and other engines of death—but for an exactly opposite reason. Wool spells health, and in many cases continued life, to civilian and military forces alike, as bitter experience has taught in past wars.

It is a matter of military record that where wars have been fought in northern and temperate zones, lack of an immediately available supply of wool and wool products has been an important contributory cause of defeat. The last World War furnished an example of this. The inability of Germany and her allies to obtain a sufficient supply of wool uniforms for the fighting forces and wool clothing for the civilian population was an important factor in impairing the stamina and destroying the morale of the defeated countries. History may well repeat itself in the present war.

Today the need for wool in the Axis and conquered countries is daily becoming more acute. They are cut off by the British blockade from their foreign sources of wool on which they must depend. The clothing ration of civilians in the Axis and conquered countries are rigidly limited, and even the rags from worn-out clothing, blankets, and other articles have become most precious assets. They are carefully hoarded to be ground up into fiber again for refuse.

GERMANY HOARDED WOOL AS WAR WEAPON

Despite her grievous lack of foreign exchange, Germany before the war accumulated huge reserves of Australasian and South American wools. She remembered her cold, dispirited, illy clothed army and her half-starved and half-frozen civilian population in the last months of the World War. Insofar as was possible, Germany determined to guard against a like fate in any future war. The supplies she accumulated have until now enabled her to clothe her army. Even at the outbreak of hostilities, however, the uniforms of the private soldier contained only 70 percent new wool and 30 percent adulterant cellulose fibers, with a resultant loss in both their service and their protective qualities. The officers' uniforms contained 90 percent wool and 10 percent adulterant synthetic fibers.

The situation in Italy is equally bad, if not worse. Stringent laws, in effect long before Italy entered the war, require that all materials containing wool contain also cellulose or casein fibers. The civilian population of Italy has long been on rigid clothing rations. The uniforms of her armed forces contain large percentages of adulterants; and when the history of the Greek campaign is known, there is little doubt it will be found that insufficient and improper clothing played an important part in the failure of the Italian Army, despite its modern armament, to fight successfully in the bleak and mountainous Greek terrain.

UNITED STATES HAS BEST-DRESSED ARMY AND NAVY

In view of the primary importance of wool to both the armed and civilian populations, it is a pleasure to be able to report to the parents, relatives, and sweethearts of our military and naval forces that the present Army and Navy is the most warmly clothed and best-clothed military force in our history. Not only does every article of their equipment represent well-made, durable clothing of the best grades of wool, they represent also especially fine grades of wool carefully made into materials which in most cases are higher in quality than those prevailing in civilian life. This includes uniforms, overcoats, underwear, socks, and, last but not least, the important army blanket in which the permanent-warmth qualities found only in wool are so vitally important to health.

During the 12 months ending December 31, 1940, uniform equipment for our great peacetime Army required 248,000,000 pounds of wool, or more than 50 percent of the total 1940 American wool clip. Additional uniform equipment now on order, on which delivery is to be completed by August of this year, will consume an estimated additional 175,000,000 pounds of wool.

EIGHTEEN SHEEP REQUIRED TO CLOTHE A SOLDIER, SEVEN FOR NAVAL FORCES

It requires approximately 146 pounds of grease wool for the peacetime uniform equipment of every man in the United States Army. This represents the wool of approximately 18 sheep. It requires on an average of 60 pounds of wool for the uniform equipment of every enlisted man in the United States Navy, or the wool of 7 sheep. Present indications are that our land and sea forces by the end of 1941 will number approximately 2,000,000 men. To properly clothe this huge force will require the wool of between 25,000,000 and 30,000,000 sheep.

The vast purchases made by the Army up to and including December 1940 provided only for the initial issuances, and for maintenance and reserves, for an Army of some 1,500,000 men for a period of 12 months. If the present tragic and chaotic conditions in this world should unfortunately draw us into war, the wool requirements for every member

of the United States Army would be practically doubled. Basing its conclusions on conditions such as those which prevailed in France in 1918, Army officials estimate that it will require approximately 279 pounds of wool for every man in the fighting forces. This represents the wool clip of approximately 35,000,000 sheep.

ARMY ORDERS IN TEN TO TWENTY MILLION UNITS

As an example of what a titanic task it is to clothe a great army, and the indispensable part which wool plays in military preparedness, might I recite briefly a few of the wool items purchased by the War Department during 1940 alone? These figures do not include supplies being ordered for 1941, which will increase the amounts quoted about 50 percent. Here are some of the 1940 purchases: 5,000,000 blankets, 3,000,000 pairs of gloves, 13,000,000 pairs of socks, and 3,500,000 undershirts, 3,500,000 drawers, 30,000,000 yards of uniform materials, 14,000,000 yards of flannel shirting and 10,000,000 yards of overcoating. The uniform materials and shirtings all had to be manufactured into garments in carefully graded sizes to fit men of widely varying builds from every part of the country.

The specifications for the Army selectee and the naval recruit's wardrobe are the result of careful and long experiments to determine the best materials and best constructions. Every article is subjected to careful inspection before it is accepted. The very strictness of the Government's examination makes manufacturers especially careful in fulfilling Army contracts and guaranteeing what the trade calls "perfect deliveries."

As a result, when the American soldier or sailor steps out on parade today, his uniform and other clothing equipment are superior in many particulars to the uniforms furnished officers during the World War.

There is no desire to make a dandy or a drawing-room pet out of the men in our Army or Navy. Quite the contrary is the case. Army and Navy officials are not only convinced that good and durable uniforms of excellent quality which wear well and fit well are an essential in maintaining the high morale of any armed force. They believe that when these young men at the beginning of their earning and spending careers, return to civil life, the appreciation for clothing of good and substantial character which they have gained during their military service, will provide a most desirable permanent asset for retail merchants who sell them clothing, and for the wool growers who provide the raw material for that clothing.

NAVY SAYS MORALE REQUIRES GOOD WOOL UNIFORMS

The reasons for the insistence of both the Army and Navy upon wool as the basic fiber for uniforms were succinctly stated to me by Rear Admiral Ray Spear, Paymaster General of the Navy and Chief of the Bureau of Supplies and Accounts, and Maj. Gen. Robert C. Richardson, Jr., formerly Commandant at West Point and present director of the Bureau of Public Relations of the United States Army.

Admiral Spear said:

"Among the large consumers of wool, the one least known to the sheep-raising industry is our Navy. In order to build and maintain the good health and high morale necessary in an efficient naval service, it is basically important that the personnel be well clothed and well fed and, as a result, our Navy, although far removed from rural communities, is one of the farmers' best customers. The standards of our naval service are necessarily high and it is, therefore, not surprising to find that our blue jackets are equipped with uniforms and blankets made from virgin wool, which is admittedly the best in appearance, weight, and warmth and, in the final analysis, the most economical. I am sure that it will be gratifying to every American wool grower to know that it requires about 60 pounds of grease wool to outfit each naval recruit, and that the responsible naval officials very wisely prohibit the use of shoddy, waste, and other adulterants in the manufacture of woolen fabrics and blankets intended for the men in our first line of defense."

ARMY DEMANDS WELL-DRESSED SOLDIERS

Maj. Gen. Robert C. Richardson, Jr., director of the Bureau of Public Relations of the Army, was equally explicit in emphasizing the importance of wool in national defense as an essential in maintaining the morale and fighting strength of our armed forces. I quote him:

"When the Army brings into its ranks the selectees, the military authorities regard themselves as trustees of the boys' physical, mental, and moral education. They look upon the selectee as a ward of the Army whose whole life it is hoped to influence for the better by his service with the colors. Parents of our young soldiers should have no apprehension regarding the care of their young men, for the military authorities are leaving no stone unturned to provide these boys with clothing of excellent quality—warm in winter and cool in summer—with the best of food—and to surround them with an atmosphere of clean, healthy living."

In view of the importance of wool to the people of this Nation for both civilian and military purposes, it is natural to ask where is the vast supply coming from to meet our present demands and to meet any abnormal requirements that might result from a further extension of our great national-defense program.

The United States is the second largest wool-growing country in the world. The American wool-textile industry is probably the largest in the world in point of production capacity and modern equipment. Between 400,000,000 and 500,000,000 pounds of grease wool are produced annually in this country, the greater portion of which comes from the mountain States of the West, and from Texas. Our domestic production of wool, even in peacetime, is not sufficient to meet all our needs. We are, and always have been, importers of wool.

A BILLION POUNDS OF WOOL AVAILABLE

Fortunately, we have immediately available from Argentina and Uruguay an annual wool clip of over 450,000,000 pounds of apparel wool. Due to wartime conditions, we are at this time practically their sole remaining market. In Australasia there are vast supplies available so long as the ocean lanes remain open. American wool manufacturers are buying large quantities of these wools, some of which are going into American Army uniforms.

A large part of the 233,000,000 pounds of wool we imported in 1940 came from our South American neighbors. We are continuing to make large purchases from them. The wool which we buy provides our friends to the south of us with a market for one of their most important commodities. In return, it provides us with an indispensable essential in our national-defense program. Finally, to prevent any shortage of wool due to unforeseen circumstances, there is now being stored in warehouses throughout the United States, 250,000,000 pounds of Australian wool as a strategic reserve to be used in the event any bottleneck or shortage develops in the normal markets.

It will be seen from the foregoing that there is immediately available in our own clip, in South American supplies, and in the Australian reserve a total of more than 1,000,000,000 pounds of wool, sufficient to meet fully all our civilian and military requirements during the present year.

Despite abnormal demands for national defense, prices of wool today are on an average about equal to the best prices paid in 1939. They are far below the prices which prevailed during the World War when wool supplies were controlled by the Government, and during peacetime periods of national prosperity.

Wool growers have pledged their utmost assistance to the Government in keeping wool prices at reasonable levels. Thanks, therefore, to our great storehouse of available wool, and to reasonable price levels, our armed forces and our civilian population face no danger of being forced to forego the healthful protection of wool—which is so essential to our peacetime civilization and so indispensable as a factor for victory in time of war.

Proposed Arkansas Valley Authority

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, March 20, 1941

ADDRESS BY HON. CLYDE T. ELLIS, REPRESENTATIVE IN CONGRESS FROM ARKANSAS, OVER BLUE NETWORK, NATIONAL BROADCASTING CO.

Mr. NORRIS. Mr. President, one of the most logical and fair addresses I have heard for some time over the radio was delivered on March 17 by Hon. CLYDE T. ELLIS, a Representative in Congress from the Third District of the State of Arkansas, on the subject of the Arkansas Valley Authority bill now pending both in the House of Representatives and in the Senate. I ask unanimous consent that the address may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PROPOSED ARKANSAS VALLEY AUTHORITY

To build now our defense against enemies and potential enemies from without the United States and to build now our defense against enemies and potential post-war enemies from within, whether they be individuals or conditions—that is the twofold task supreme in the mind of every true American.

We are sacrificing our resources today to aid other peoples in saving their democracies—and ours. Surely we can afford to prepare now also for a sufficient utilization of those resources to cushion the shock of the inevitable chaos that shall accompany peace.

This second World War is only the immediate pain of the present. Behind it all is a world revolution, a revolution of hopeless, poverty-stricken masses inspired by demagoging maniacs, against the capitalistic system and democracy.

Democracy is not a static thing. It must live and grow. It must give hope and inspiration. It must work.

As a contribution toward these ends—defense now and later and as a tool for aiding the masses to enjoy the rich, dormant resources of four great river basins—the Arkansas Valley Authority is proposed.

I quote the first paragraph of identical bills pending in both Houses of Congress:

"SECTION 1. The drainage basins of the Arkansas, St. Francis, Red, and White Rivers contain natural resources capable of providing products useful for the general welfare during times of peace and for the national defense during times of war or emergency. It is the purpose and policy of this act to provide for the fuller development and utilization of these resources through plans, projects, and activities for or incidental to the promotion of navigation, the control and prevention of floods, the safeguarding of navigable waters, and the reclamation of public lands, in order to aid and protect commerce among the several States, strengthen the national defense, conserve the water, soil, and forest resources of the Nation, and promote the general welfare of the United States.

It is called the Arkansas Valley Authority only because the Arkansas happens to be the largest of the four rivers.

Averaging 400 miles in width and extending from the Mississippi more than 1,000 miles westward to the crest of the Rocky Mountains, covering 300,000 square miles with a population of 9,000,000 people, the Authority would embrace all or part of eight States: Arkansas, Louisiana, Missouri, Oklahoma, Kansas, Texas, New Mexico, and Colorado—seven times larger than the Tennessee Valley Authority.

Nowhere is there a domain richer in all the basic elements essential to a prosperous economic life. Its fertile soils have produced much of the Nation's wheat, corn, cotton, rice, sugar, fruits, and other agricultural products. Its lands have produced much of our cattle, hogs, sheep, and poultry. A large portion of the country's oil, gas, coal, all the world's supply of helium, and 95 percent of our bauxite ore, raw material for aluminum, are there. Many other minerals are there and in commercial quantities, including lead, zinc, mercury, manganese, antimony, phosphate and even silver, gold and diamonds. From this area comes annually a large percent of the Nation's forest products.

But we may as well face the facts. With all these, our people are poor—very poor. The latest census figures, for example, show the per capita income of Arkansas at only $244 or less than half the $536 per capita average for the Nation as a whole. All the other seven States are comparatively low.

Low income takes its toll in living standards, in education, in health, in migration victims and in countless other ways. As long as such low incomes persist, this region will never provide its proper market for the automobiles of Michigan; the farm machinery of Illinois; the shoes, hats, electrical appliances and other products of the North and East.

And why, these conditions? There are many and varied reasons dating back into our historical development along the lines of an agricultural and raw materials economy. But that is history. The conditions facing us now—the problems with which the Authority is designed to deal—are those of waste—waste of natural resources and particularly those of soil, water, and manpower.

The waters of these basins are bleeding white the lands of the great Southwest. We've seen only the beginning of the plague of the Grapes of Wrath. The loss of a seat in the House of Representatives for each Oklahoma and Kansas, and possibly Arkansas, is only one of the many warnings of trends that spell disaster. To ignore these trends is to admit defeat; to conquer them—and they can be conquered—is to open new frontiers and a new era of hope and prosperity for approximately one-tenth of the United States.

Rivers are tools to either build or destroy the democracy.

LET US TURN FOR A MOMENT TO THE EROSION AND DUST-CONTROL PROBLEMS

Each year hundreds of thousands of our people living on millions of acres of these lands are forced into the grim realization that their soils have been literally blown or washed from beneath their feet.

Already more than 28,000,000 acres in these basins have been essentially ruined by erosion for any further cultivation or grazing. That would supply 230,000 families each with a 100-acre farm. But that is gone. Approximately 95,000,000 additional acres are from 25 to 100 percent ruined. These lands were in productive use, for cultivation or grazing, less than one century on the average. What can this continued devastation of soils mean to a nation with millions of unemployed and with new frontiers in demand? What will the next century bring? Authorities agree that in these four basins practically all erosion can and must be stopped, else we shall build ourselves a huge American desert.

The Soil Conservation Service and the Agricultural Adjustment Administration are each doing splendid work in soil conservation, but there is duplication of effort and lack of unified planning.

FLOOD CONTROL

Eroded lands encourage floods. The ever increasing direct flood damage in these valleys is estimated by the War Department to have reached the staggering sum of $9,000,000 annually.

Flood waters accumulate in the alluvial plains of the lower valleys and destroy all in their wake, but whose floods are they? They don't originate with those who are their victims and who pay for them with their crops, their livestock, their businesses, their homes, and even sometimes their lives. The floods of New Mexico, Colorado, Kansas, Texas, Oklahoma, and Missouri can all rage down upon Louisiana and Arkansas at once. And yet there are those who preach the doctrine of laissez faire; that the democracy must keep hands off.

The United States Army Engineers have spent millions over the past two decades in exhaustive studies and surveys of these basins. A total of 35 reservoirs to cost an ultimate $400,000,000 are already constructed, under construction, authorized by Congress, or recommended by the Chief of Engineers and the Secretary of War.

The 12 dams constructed, or already under construction, will provide a total of 6,000,000 acre-feet of flood storage—6,000,000 acres saved from 1 foot of water.

Control of floods involves, also, soil building and soil control. Here again the Soil Conservation Service, the Agricultural Adjustment Administration, the Forest Service, the Bureau of Reclamation, and the Army Engineers are doing a most excellent job, but there is much duplication of effort and lack of coordinated planning.

We have learned from experience in the Tennessee Valley and elsewhere that an overall authority is necessary to operate these dams even for flood control alone.

IRRIGATION

Aid to irrigation is one purpose of the A. V. A.

Rumblings of disapproval have been heard from certain individuals of Western States, lest it interfere with vested water rights. Since the passage of the Reclamation Act in 1902 the Federal Government has spent billions in the West to reclaim arid lands, to irrigate them, and to turn them into rich and fertile fields. The South and East and North have always supported the program, believing in progress and in the development of the Nation as a whole. Such projects as Roosevelt Dam, Coolidge Dam, Bonneville, and Grand Coulee, and even the later projects of Conchas and Caddoa on the Arkansas in New Mexico and Colorado, all stand out as everlasting monuments to the determined effort of the Federal Government to open the West.

The water rights of many Western States are older than the States themselves. Water rights are property rights, and the due-process clause of the Constitution specifically guarantees that no person shall be deprived of his property without due process of law.

Alarmists have alleged that the waters of the upper Arkansas are desired by the people of the lower Arkansas for power and navigation. If water were needed in the lower Arkansas for these purposes it would be needed most in the dry season and in the dry season the Arkansas River is practically dry a few hundred miles east of Colorado.

There are no suitable power sites on the main stem of the flat, meandering Arkansas, and the tributaries of the lower Arkansas, properly controlled, would furnish sufficient water, if that were the only problem, for navigation to Tulsa, Okla., or above.

President Roosevelt, in several conferences on this measure, has made it plain to western congressional leaders that every water-right will be fully protected and they have been requested to write their own ticket on irrigation. Not a drop of water that is needed for irrigation in the upper valleys should ever be permitted to waste itself down the rivers to the sea. Water is life to the upper valleys but it is death to the lower valleys.

The Bureau of Reclamation and the Army Engineers are each performing excellent service in this field but there is duplication of effort.

DRAINAGE

The people of Arkansas, Louisiana, and Missouri have spent endless millions through their levee and drainage districts, without much help from the Federal Government, to drain their fertile lowlands and to keep them drained, only to have their accomplishments periodically torn asunder by "somebody else's water from somebody else's State."

NAVIGATION

These rivers are all navigable for short distances and they were once navigable for greater distances but "somebody else's sand" has filled the stream beds until navigation is perishing. For as long as man has sailed the seas, navigation has been the cheapest transportation and wherever it has been encouraged it has brought with it increased rail and motor transportation.

T. V. A. has made the Tennessee one of the world's busiest lanes of water traffic. The channel was far from complete a year ago, but the developments there had increased traffic from 20,000,000 ton-miles in 1935 to 91,000,000 ton-miles in 1939. New industries are moving in and other types of transportation are rapidly increasing.

When the four rivers of the A. V. A. are brought under control, channel developments, no longer subject to flood hazards, will become permanent and flood waters released from the dams during the dry season will make each river navigable for several hundred additional miles.

POWER

The authority will be authorized to generate and distribute electric power.

The 9,000,000 people of the A. V. A. basins are laboring under power rates so high that electricity is barely more than a luxury; so abominably high that millions cannot afford it, and so high that commerce and industry, in our highly competitive economy, can never experience normal growth. Conservative estimates of the Army Engineers are that more than 4,000,000,000 kilowatt-hours can be produced annually, economi-

cally, and feasibly at these multi-purpose dams. This power, supplemented by additional power from steam plants run with the area's cheap gas, oil, and coal would be sufficient to supply every home, urban and rural, every commercial establishment, and every industry at a rate even cheaper than that of T. V A.

To the extent that the Authority can make available large amounts of cheap electricity, it holds the key to the regeneration of life there. It is the genesis of new hope.

The Federal Power Commission reports an imminent and impending shortage of electricity in the area.

The pressing demand of the defense program for electric power throws into bold relief the hydroelectric projects which A. V. A. will construct. Many electrochemical and electrometallurgical industries vital to the defense require huge amounts of cheap electricity. Aluminum is only one.

These industries always locate near the source of cheap power, and that is why more industries have lately grown up in the Tennessee Valley than T. V. A. can supply. Practically none of the new defense industries have come to the A. V. A. basins and thus our economy is thrown further out of balance. Barrier No. 1 against these States obtaining defense industries, and against their proper industrial, commercial, and agricultural growth is the total lack of reasonable power rates.

The latest compilation of figures shows that for that year the people of Arkansas used a half-billion kilowatt-hours, for which they paid nearly $12,000,000. Under the T. V. A. rates, just across the river, they would have paid $6,000,000 for the same amount and they would have saved nearly $6,000,000. This $6,000,000 is the overcharge paid by the people of Arkansas as tribute to the absentee-owned, Wall-Street-controlled, Power-Trust monopoly.

In Louisiana during the same year the people were overcharged $9,500,000 by comparison with T. V. A. rates.

The people of Missouri were overcharged $21,000,000.

The people of Texas, $31,000,000.

The people of Oklahoma, $11,500,000.

And during the same year, the people of Kansas were overcharged by comparison with T. V. A. rates ten and one-half million dollars. The people of New Mexico, one and one-half million dollars, and the people of Colorado, eight and one-half million dollars. The total overcharges paid that one year by the people of those 8 States by comparison with the T. V. A. rates was seventy-nine and one-half million dollars. Think of it, seventy-nine and one-half million dollars annually. That would pay for all 35 dams now planned in 5 years.

The power rates in each of these States are from two to three times higher than in the T. V. A., and, mind you, the T. V. A. is reimbursing the States, the counties, municipalities, and school districts for all tax losses.

The average T. V. A. residential consumer is using, due to the low rates, 1,425 kilowatt-hours of power annually as compared to 950 for the Nation and 720 for the A. V. A. region. The consumer in Tupelo, Miss., can use 100 kilowatt-hours per year for $2.25, but in Harrison, Ark., a typical A. V. A. town supplied by one of the big companies, the same amount of power costs him $4.30 as compared with the $2.25. A commercial user in Little Rock must pay $67 for 1,500 kilowatt-hours monthly but in Knoxville the same power costs not $67 but $22.

From power sales alone last year T. V. A. netted $4,300,000 after paying tax equivalents and providing depreciation.

Yes, Tennessee lost a Member of Congress under the reapportionment of 1931 but she is gaining one under the reapportionment of 1941. T. V. A. came in the meantime.

Two A. V. A. dams now under construction will produce 300,000 kilowatts of firm power. If these and others can be tied into an integrated transmission system and peak power built into firm power, facilitated by steam, this can be doubled and the rates still further reduced. If the 35 dams already on the way are to be of maximum benefit for the control of floods, aid to drainage, navigation, and irrigation, and for power production, they must be interconnected for systematic and scientific operation. That is a major objective of A. V. A. and that is the alternative of waste.

RECREATION

It is now the Government's policy to construct permanent recreation pools in flood-control reservoirs. Multipurpose reservoirs with higher permanent levels for power are even more ideal for recreation. The most popular tourist attraction is water. The lakes of the A. V. A., like those of the T. V. A., would become valuable recreation centers.

PUBLIC WORKS

This vast A. V. A. domain has enjoyed very little of the permanent New Deal construction. If this proposal becomes law, not much new work would be begun during the defense program, but it would be ready to go when the war is over. I think I am at liberty here to quote President Roosevelt. His words were substantially these: "This war will be over one of these days, and then what are we going to do with millions of unemployed? We've got to get this Authority and other projects set up now."

Each dam will provide an average employment for one to two thousand men for 2 to 4 years.

We could help the democracies win this war and yet lose all. Make no mistake about it, the forces of destruction are at work among us, and they thrive on insecurity and inequality of opportunity.

This program will, in the end, cost the Nation not a penny and, in addition, will have brought all those tremendous benefits. Returns from power alone will pay the total cost.

WHAT IS THE NATURE OF THE PROPOSED AUTHORITY?

Drafted at the direction of President Roosevelt, it naturally follows closely the plan of the T. V. A., but with material changes—changes based upon T. V. A.'s experience and that fit it into a slightly different topography. It is, in plain language, an agency to assist a courageous and hard-working people in their efforts to build for themselves a higher standard of living.

Rivers know no boundaries. They cannot be trapped and confined within rigid, imaginary lines. Their waters and their watersheds, irrespective of State lines, are geographic entities.

It is obvious that the planning and direction of such an integrated development can be advanced only through an exercise of the powers and extension of the assistance of the Federal Government. It is essential that it be carried on not by remote control from Washington but by an agency—an agency operated by a board or a director, close to the people and their problems and in daily contact with them. Only if an agency operates in the field—at the grass roots—can it hope to deal adequately with local problems as they arise, with full knowledge of all the facts, and without irksome, if not fatal, delays. The Arkansas Valley Authority is designed as such an agency, "a Government corporation," to borrow a phrase from the President's speech proposing the T. V. A., "clothed with the powers of government but with the flexibility of a private corporation." What better paragon could we seek than T. V. A.? After 7 years of struggle and litigation against bitter opposition it has emerged as the world's outstanding monument to democracy successfully at work.

STATES' RIGHTS

It is claimed by some that the authority would infringe upon States' rights.

Certain special interests throughout the Nation are condemning the recent decision of the United States Supreme Court in the New River case because it recognizes the necessity of the Federal Government manifesting some control over the entire basin of a navigable interstate stream. Any State that would deny the Federal Government the right to bring such a stream under control must assume the responsibility of controlling the stream itself, free from Federal assistance. This no State has done, and obviously no State can do. To assist a region of people in doing what no State or States can do is not an infringement of States' rights. That is the purpose of the Federal Government.

CONCLUSION

Therefore, as an agency to turn our rivers and basin waters from instruments of destruction into tools of democracy; to end wasteful erosion; to control devastating floods; to reclaim and irrigate new lands and to drain others; to aid navigation; to develop for the people from their God-given natural resources an abundance of cheap power; to open new havens of recreation; as an agency to utilize for a little while some of our own idle money to employ our own idle manpower to conserve and develop our own idle resources for a deserving people at a time when they shall need every encouragement; and to help preserve the democratic way by also stressing the economic side of democracy, the Arkansas Valley Authority is submitted for your approval.

Vermont and the Union

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, March 20, 1941

ADDRESS BY HON. SAMUEL B. PETTENGILL

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on Vermont and the Union, delivered by Hon. Samuel B. Pettengill before the Vermont Society of the District of Columbia on March 14, 1941, and before the Governor and General Assembly of the State of Vermont at Montpelier, Vt., on March 20, 1941, on the occasion of the one hundred and fiftieth anniversary of the admission of Vermont into the Union.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

VERMONT

Oh, Vermont, where spring, the laggard, lingers hand in hand with June,
Opens buds with chary fingers, lest the summer come too soon:
And the April rains still scatter, truant lads among the hills,
Till the woodlands echo laughter of a thousand baby rills.

All thy days are spanned with sunshine, from Monadnock's distant dome,
Like an eastern pleasure palace, till the sun goes westward home.
Where Old Granite lifts a shoulder and a rugged pine-topped crest,
In a silhouette of splendor 'gainst the flaming of the West.

Oh, Vermont, thy pasture uplands rise so green to June's blue sky,
All thy valleys cup so gently where the winding rivers lie!
And my heart is yearning after one green hill and cottage tower,
For I know the little hollow where rose laurel is in flower,—

Where the wood thrush sings her matins, and her Angelus at eve,
And the cowbells' mellow music with the little night sounds weave
That sweet symphony of twilight which is mine to treasure still
Tho' an exile from my little laurel-slippered, star-crowned hill.

—*M. S. A.*

Your speaker should have been Calvin Coolidge, the man who went from Plymouth Notch to become Governor of the great Bay State, with whose people and history we are so intimately connected; who went from Massachusetts to discharge the duties of the greatest office in the world; who understood both State and Nation; who carried into public office principles to which America must return; who now sleeps on the quiet hill he loved so well—it is he who could have stated best the significance of the event we celebrate.

Or, not to mention distinguished Vermonters now living, but going to an earlier generation, how proud we would be if on this rostrum stood today Edward J. Phelps, orator, of Bennington; George F. Edmunds; Justin S. Morrill, Stephen A. Douglas, Lincoln's great adversary; or many another who made Vermont an envied and beloved name.

I am, however, deeply honored that you have asked me here. I was born on the far Pacific, but from the time I was 6 years old I was nurtured on your soil, and in my veins runs the blood of four generations of Vermont men and women who did not flinch from life because they found it hard, who lived without serious fault, and who died in the peace of God. I am proud of that inheritance.

It has been my fortune to have been in every State of the American Union. I have spoken publicly in at least 28. I do not say (out loud) that Vermont is better than its sister States. I do say that it is different. And wherever I have been, and whenever it has been known that I am Vermont bred, strangers have told me, with a light in their eyes and warmth in their handclasp, that they, too, trace back to some forebear from Vermont. I wonder if you fully realize the immense good will you enjoy everywhere in this land. It is a jewel that has no price.

On February 18, 1791, the following act of Congress became part of the supreme law of the land:

"An act for the admission of the State of Vermont into this Union.

"The State of Vermont having petitioned the Congress to be admitted a member of the United States—

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, and it is hereby enacted and declared, That on the 4th day of March 1791 the said State, by the name and style of 'the State of Vermont,' shall be received and admitted into this Union as a new and entire member of the United States of America.

"FREDERICK AUGUSTUS MUHLENBERG,
"Speaker of the House of Representatives.
"JOHN ADAMS,
"Vice President of the United States and President of the Senate.
"Approved February 18, 1791.
"GEORGE WASHINGTON,
"President of the United States."

One hundred and fifty years ago, therefore, the 4th of this month, and 2 years and 1 day from the date of the convening in New York City of the First Congress under the Constitution of the United States, Vermont ceased to be an independent nation and became the first of a great galaxy to be added to the 13 original stars of the American flag. The year 1791 is further memorable by the adoption of the first 10 amendments, or Bill of Rights, to the Constitution of the United States, among which was one particularly congenial to the Green Mountain Boys: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people."

Vermont was not carved out of Federal territory nor was it fragmented from another State, like West Virginia. Previous to its admission to the Union it had been a soverign Nation. Only the State of Texas ever enjoyed a similar status. To the fact of its previous independence and the way it was won may be traced much of Vermont's character and philosophy of government. It had stood on its own feet before 1791 and it has stood on its own feet since. It regarded the Nation as a bond of common strength, "a watchdog to be fed and not a cow to be milked," to quote Marshal Petain, of what was France. Although the State, in party division, has been labeled Republican, it has been, in fact, as strongly Jeffersonian in its fundamental attitude toward centralized power as any State in the Union.

On January 16, 1777, a convention of township delegates meeting at Westminster Courthouse unanimously voted "That the district of land commonly called and known by the name of New Hampshire Grants, be a new and separate State, and for the future conduct themselves as such."

On the same day Nathan Clark and Capt. John Burnham, of Bennington, Ebenezer Hoisington, of Windsor, Jacob Burton, of Norwich, and Col. Thomas Chittenden, of Williston, were appointed to draft and report a more formal declaration of independence.

This they did on the following day and to the following effect:

"That the district of territory, comprehending and usually known by the name and description of the New Hampshire Grants, of right ought to be, and is hereby declared forever hereafter to be considered, as a free and independent jurisdiction, or State; by the name, and forever hereafter to be called, known, and distinguished by the name of New Connecticut, alias Vermont. And that the inhabitants that at present are, or that may hereafter become resident, either by procreation, or emigration, within said territory, shall be entitled to the same privileges, immunities, and enfranchisements, as are allowed; and on such condition, and in the same manner, as the present inhabitants, in future, shall or may enjoy; which are, and forever shall be considered to be such privileges and immunities to the free citizens and denizens, as are, or, at any time hereafter, may be allowed, to any such inhabitants of any of the free and independent States of America. And that such privileges and immunities shall be regulated in a bill of rights, and by a form of government, to be established at the next adjourned session of this convention."

This declaration was adopted without dissent. It was also voted to inform the Continental Congress "of the reasons why the New Hampshire Grants had been declared a free State, and to pray Congress to grant said State a representation in Congress," etc. It was also voted that a "Committee of war be appointed on the east side of the mountains, to be in conjunction with the committee of war on the west side of the mountains, to act on all proper occasions." The convention then adjourned to meet at Windsor on the first Wednesday in June.

The notification "To the honorable the Continental Congress" of the action taken at Westminster is a noteworthy state paper, not only because it summarizes the case for independence on high and commanding ground, but because it portrays the plucky determination of a wilderness community of not over 30,000 souls to form a "free and independent State." I quote as follows:

"Your petitioners, by virtue of several grants made them by the authority aforesaid, have, many years since, with their families, become actual settlers and inhabitants of the said described premises; by which it is now become a respectable frontier to three neighboring States, and is of great importance to our common barrier Ticonderoga; as it has furnished the army there with much provisions, and can muster more than 5,000 hardy soldiers, capable of bearing arms in defence of American liberty.

"That shortly after your petitioners began their settlements, a party of land-jobbers in the city and State of New York began to claim the lands, and took measures to have them declared to be within that jurisdiction;

"That on the 4th day of July 1764, the King of Great Britain did pass an order in council, extending the jurisdiction of New York government to the Connecticut River, in consequence of a representation made by the late Lieutenant Governor Colden; that for the convenience of trade and administration of justice, the inhabitants were desirous of being annexed to that State;

"That on this alteration of jurisdiction, the said Lieutenant Governor Colden did grant several tracts of land in the above-described limits to certain persons living in the State of New York, which were at that time in the actual possession of your petitioners; and under color of the lawful authority of said State, did proceed against your petitioners as lawless intruders upon the Crown lands in their province. This produced an application to the King of Great Britain from your petitioners, setting forth their claims under the government of New Hampshire and the disturbance and interruption they had suffered from said post claimants under New York. And on the 24th day of July 1767 an order was passed at St. James' prohibiting the Governors of New York, for the time being, from granting any part of the described premises on pain of incurring His Majesty's highest displeasure. Nevertheless, the same Lieutenant Governor Colden, Governors Dunmore and Tryon, have, each and every of them, in their respective terms of administration, presumed to violate the said royal order by making several grants of the prohibited premises and countenancing an actual invasion of your petitioners by force of arms to drive them off from their possessions.

"The violent proceedings (with the solemn declaration of the supreme court of New York that the charters, conveyances, etc., of your petitioners' lands were utterly null and void) on which they were founded reduced your petitioners to the disagreeable necessity of taking up arms as the only means left for the security of their possessions. The consequence of this step was the passing of 12 acts of outlawry by the Legislature of New York on the 9th day of March 1774.

* * *

"Your petitioners having had no representative in that assembly, when these acts were passed, they first came to the knowledge of them by public papers, in which they were inserted. By these, they were informed, that if three or more of them assembled together to oppose what said assembly called legal authority, that such as should be found assembled to the number of three or more, should be adjudged felons: And that, in case they or any of them should not surrender himself or themselves to certain officers appointed for the purpose of securing them, after a warning of 70 days, that then it should be lawful for the respective judges of the supreme court of the province of

New York, to award execution of death, the same as though he or they had been attainted before a proper court of judicatory. These laws were evidently calculated to intimidate your petitioners into a tame surrender of their rights, and such a state of vassalage, as would entail misery on their latest posterity. * * *

"The convention of New York have now nearly completed a code of laws for the future government of that State; which, should they be attempted to be put in execution, will subject your petitioners to the fatal necessity of opposing them by every means in their power.

"When the declaration of the honorable, the Continental Congress, of the fourth of July last past, reached your petitioners, they communicated it throughout the whole of their district. * * *

"And for the mutual support of each other in the maintenance of the freedom and independence of said district or separate State, the said delegates did jointly and severally pledge themselves to each other, by all the ties that are held sacred among men, and resolve and declare that they were at all times ready, in conjunction with their brethren of the United States, to contribute their full proportion toward maintaining the present just war against the fleets and armies of Great Britain.

"To convey this declaration and resolution to your honorable body, the grand representative of the United States, were we (your more immediate petitioners) delegated by the united and unanimous voices of the representatives of the whole body of the settlers on the described premises, in whose name and behalf, we humbly pray, that the said declaration may be received, and the district described therein be ranked by your honors, among the free and independent American States, and delegates therefrom admitted to seats in the grand Continental Congress; and your petitioners as in duty bound shall ever pray.

"New Hampshire Grants, Westminster, January 15, 1777.

"Signed by order, and in behalf of said inhabitants.

"JONAS FAY,
"THOMAS CHITTENDEN,
"HEMAN ALLEN,
"REUBEN JONES."

Due to objections strongly made by New York, Congress on June 30, 1777, dismissed the foregoing petition and stated:

"That the independent government attempted to be established by the people, styling themselves inhabitants of the New Hampshire grants, can derive no countenance or justification from the act of Congress declaring the United Colonies to be independent of the Crown of Great Britain nor from any other act or resolution of Congress."

The Green Mountain Boys were thus confronted with the following situation: They were at war; at the Canadian frontier were armies of the most powerful empire in the world; at their west was the great State of New York hostile to their claim; and at Philadelphia was a Government of Thirteen States which refused to recognize their right to be free.

In the midst of such vast difficulties most men would have flinched and fled. But—

"Two things have failed not since first the dawn began,
"The beauty of the wild green earth and the bravery of man."

Vermont was beautiful, and her men were brave. Having set their plow to its furrow they turned neither to the right nor to the left, nor to the rear. Forward was the only word they knew.

Meeting at Windsor in pursuance to their previous resolve, they proceeded to form a constitution. While they were in their seats came the terrifying news that Ticonderoga had evacuated before the army of Burgoyne. This exposed their very homes to the ravages of Indians and redcoats. Nevertheless they stuck to their post until the Constitution had been adopted July 2, 1777. A month later, August 16, Vermont, Massachusetts, and New Hampshire troops, under the command of General Stark, engaged Burgoyne and his redcoats (most of whom, by the way, were Germans) at the Battle of Bennington and halted His Majesty's ambitious plan to drive south to the mouth of the Hudson and cut America in two.

Small wonder Burgoyne wrote, "The Hampshire grants in particular, a country unpeopled and almost unknown in the last war (French and Indian) now abounds in the most active and most rebellious race on the continent, and hangs like a gathering storm on my left."

Thus, amidst the clash of arms and the birth pangs of a nation ranging from Boston to Savannah, the little nation of Vermont established its sovereignty. From 1777 to 1791, a period of 14 years, Vermont owed allegiance to no power on earth but the Lord of Hosts and the God of Battles.

The constitution which they adopted was notable in at least five particulars:

1. It was the first American constitution to abolish slavery, thus firmly meeting the issue that had been avoided in drafting the Declaration of Independence at Philadelphia the previous summer.

2. It was the first to provide for universal manhood suffrage, without any property qualification.

3. It required every man of the age of 21, as a condition to being a "freeman" and to vote as such, to take an oath that when voting, "touching any matter that concerns the State of Vermont, I will do it so, as in my conscience, I shall judge will most conduce to the good of the same, as established by the Constitution, without fear or favor of any man." This oath to support constitutional government preceded the Dies committee by 160 years. Our forebears were not so soft-headed as to tolerate disloyalty to their fundamental law.

4. The constitution immediately called for the establishment in each town of schools "for the convenient instruction of youth * * * making proper use of school lands thereby to instruct youth at low prices." Here was a beginning, in a wilderness settlement, and in the midst of alarms, of the great public school system of this country. Again the men who gathered at Windsor had Horace Mann's great concept in their brains 17 years before he was born.

And, fifth, the Constitution contained this memorable paragraph, which ought to be required reading by every American every day of their lives:

"That frequent recurrence to fundamental principles, and a firm adherence to justice, moderation, temperance, industry and frugality, are absolutely necessary to preserve the blessings of liberty, and keep government free. The people ought, therefore, to pay particular attention to these points, in the choice of officers and representatives, and have a right to exact a due and constant regard to them, from their legislators and magistrates, in the making and executing such laws as are necessary for the good government of the State."

I shall touch on this later.

Until the first election could be had the supreme executive, legislative and judicial power of the State was exercised by the council of safety, which was in turn an outgrowth of committees of safety organized in the various townships. Although this small body of men had absolute power their record is one of the few instances in human history when absolute power has been exercised firmly but with moderation. In all the years of conflicting claims between settlers and land-jobbers, and despite the passionate and unyielding determination to hold the homes they had carved from the wilderness with infinite toil, it is to the eternal credit of these sturdy men that no murder was committed and no human life lost in a controversy lasting 26 years. They maintained their homes against New York State sheriffs and writs of ejectment more by the psychology of fear than by force. A few men were whipped, some fences were torn down, a few log houses burned, gun shots were heard at night, threats were made, and big words used, but there was less actual bloodshed than in a single brawl in a frontier saloon. The record is a remarkable instance of men being reverent of law and human life even when they defied the will of their King or the Governor of New York, or the Continental Congress.

The first Government under the Constitution began business March 18, 1778, when the first General Assembly met at Windsor. It was largely a Government on foot or horseback, for the legislature met successively at Windsor, Bennington, Windsor, Bennington, Windsor, Manchester, Westminster, Bennington, Windsor, Bennington, Charleston, New Hampshire, Bennington, Windsor, Manchester, Rutland, and Norwich, during a period of 6 years. Judge Wendell Phillips Stafford is authority for the statement that the ark of government had 15 temporary resting places before it finally found its seat at Montpelier.

I must shorten the story. The war dragged on. Royalton was burned by Indians. The dauntless leader, Ethan Allen, was captured in Canada and taken in irons to England. Vermont repeatedly solicited admission into the Union and the adjustment of the boundary line disputes. Congress, to keep the good will of New York, procrastinated and refused. Then new misfortunes crowded upon the young State. Sixteen townships, east of the Connecticut, asked to join. The Assembly voted to admit them. This was a mistake. New Hampshire, heretofore a friend of Vermont, resented the act. New Hampshire and New York joined hands. They negotiated to divide Vermont between them at the watershed of the Green Mountains. They solicited the support of Congress. Congress undertook to decide the fate of Vermont.

The year was 1781. It was the supreme hour in Vermont's fight to live. New Hampshire to the east, New York to the west, and Congress to the south, all hostile. Canada and Indian massacres to the north. Great Britain across the sea. It was "the world against Vermont, and Vermont against the world."

Then came the cry of undying defiance to one and all. Vermont denied the power of Congress to judge her right to exist. Then came words that prove when men are fit to be free. It is Ethan Allen speaking to Congress: "We are as resolutely determined to defend the independence of Vermont as Congress that of the United States; and rather than fail we will retire into the desolate caverns of the mountains and wage war with human nature at large." This was indeed a time "when men grew tall."

Not only words, deeds. New Hampshire's settlements on the Connecticut and New York's east of the Hudson wanted to join this dauntless State. Vermont annexed them and asked no one's leave. It doubled her territory at a stroke of the pen.

This act of reckless bravery, of impudence even, brought Congress to its senses. It said, "Give up this new territory and you may enter." General Washington counseled Governor Chittenden to the same effect. Vermont voted to withdraw from her new territory. New York, however, remained obstinate, and by ceding public lands to Congress maintained pressure on Philadelphia.

So for 7 years longer Vermont went her sturdy way. New York would not recognize her; Congress would not admit her. But the war with George III was over. Vermont was

free from invasion from the north. She did not now particularly care whether she joined or not. Congress and the 13 States were loaded with debt. Vermont was debt free. She had paid as she had fought. Consequently settlers thronged to her, a point to be remembered today. As stated in Williams' History, written a century and a quarter ago: "Encouraged by the mildness of the government, the smallness of the taxes, the fertility and cheapness of the land, large additions were annually made to their numbers and property by the accession of inhabitants from other States." While chaos threatened the other States Vermont prospered. She coined money, opened post offices, fixed standards of weight and measures, maintained a mild and frugal government, and sawed wood. She pursued happiness while worry pursued others. So may it be now and forevermore.

Finally, however, Kentucky "wanted in" as we say in Indiana, and New York and the North suddenly found it desirable to balance her votes in Congress with votes from Vermont. They now practically asked Vermont to join, and as Judge Stafford puts it, Vermont said, "That if it would be any accommodation to the Union she didn't know but that she would."

And so she did, March 4, 1791, 150 years ago. And they lived happily ever after.

Nevertheless, Vermont has continued obstinate when she thought she was right. Years later Congress passed the fugitive-slave law. But nary a slave on the "underground railroad" to Canada through Vermont was turned back to southern masters.

And so Vermont proved her mettle and became the fourteenth star in Old Glory. She gave the first blood of the Revolution; received the first surrender of a British flag; was first to seize and sell the property of Tories; first to prohibit slavery by bill of rights; first to answer Lincoln's call for volunteers; in proportion to population had a greater percentage of soldiers killed in action than any other State, and never surrendered a battle flag. In the Spanish-American War when her quota was only a battalion she gave a regiment—and Dewey.

Vermont has never had much of the trappings of wealth or power. But "if you know how precious freedom is you would defend it with axes," as the Spartans said when the king's satrap ridiculed their arms.

Vermont had men. In the great struggle between North and South she sent one-tenth of her population, more than one-half of her able-bodied men. At Gettysburg came Sedgwick's order, "Put the Vermonters in front and close up the column."

I have sketched the story of 1791. But has it no meaning for the days in which we live—days in which democracies have grown fat? Has not Vermont a message for soft living? Are we to grow mendicants or men? Are the bread and circuses of modern Caesars to be the food of coming generations? Or is American manhood still to be honored? And where and how is manhood nurtured? On government handouts and deficits? Or by frugal spending, plain living, and hard work?

The latter, I submit. And here is proof. Who's Who in America is recognized as a fair measure of men's achievement. Some years ago an analysis was made of the place of birth of those who had won recognition in that index of accomplishment. Per 100,000 of population Vermont led every State, New Hampshire second, Maine third, Massachusetts fourth, Connecticut sixth, and Rhode Island eighth, the 6 New England States in the first 8 of 48. In a similar publication, Men of Science, Vermont again ranked first, New Hampshire second, Massachusetts third, Connecticut fourth, and Maine tenth, 5 New England States in the first 10.

Perhaps the uplifters and the bleeding hearts on the Potomac can do a better job of breeding Americans than Vermont and New England. But it remains to be proved.

Notable as is her past, I believe Vermont has a great future if she will "put her feet in the tracks of her forefathers where she may neither wander nor fall," as Edmund Burke once said. I will tell you why. This Nation is marching nonchalantly toward bankruptcy. For 11 years the Nation has lived beyond its means, and the end is not yet. So with States and cities. A pleasure-mad people who give votes to politicians in exchange for tickets to the public's treasure refuse to tighten their belts and do with less. It is a shocking fact that New York City's debt today is greater than that of the entire Nation plus the 48 State governments in 1914. Property in great cities is being torn down or abandoned to avoid taxes. There is a turn in the tide. Of the 10 largest cities in America, 5 declined in population this past decade. The tinsel is leaving the fleshpots. The prodigal son is thinking of home.

If, therefore, Vermont remembers that "the mildness of her government and the smallness of her taxes" once drew settlers from debt-ridden States, it may well recur again. I believe, too, that if those responsible for the administration of your schools and colleges let it be known that you will not tolerate the teachings of "pinks who would be red if they were not yellow," but insist that loyalty to constitutional government, as set forth in your freeman's oath, must be taught, whatever else is not taught, that fine youngsters and their parents will cross your frontiers.

In a day of mass emotion, radio, and moving-picture and Government propaganda, of headline thinking and thoughtless living, let Vermont repeat to the Nation the words in the introduction to her State Papers of 1823:

"The general diffusion of intelligence constitutes the life of a free government. Upon every department of such a government the people exert an unremitted influence, and stamp on all its measures the impress of their own character. Called upon to act, they should become accustomed to think; and though they cannot ordinarily possess extended and comprehensive views of other systems of government, they should at least understand their own. The whole science of government consists in a knowledge of the practical operation of principles. With the science thus understood, the citizens of every free government owe it to themselves and their posterity to become familiarly acquainted. The preservation of their political institutions depends, under Divine Providence, on themselves."

At a time when communities and States are abdicating their responsibilities; at a time when we hear the tread of returning Caesars and their boast that the individual has no rights which the State is bound to respect, let these words of 1823 be held in remembrance.

The "preservation of our political institutions depends, under Divine Providence, on ourselves." And on no one else. And when we are seeking within our midst the open enemies of the Republic, let us assert the truth—that the most dangerous enemy to free institutions, the worst of "fifth columnists," is the indifferent and apathetic citizen, the hitch hiker in government.

If government is to be kept within bounds, if the tyrannies against which our fathers fought are not to return to curse our sons, government must be kept close to the people. As Mr. Coolidge said:

"No method of procedure has ever been devised by which liberty could be divorced from local self-government. No plan of centralization has ever been adopted which did not result in bureaucracy, tyranny, inflexibility, reaction, and decline. * * * The States should not be induced by coercion or favor to surrender the management of their own affairs."

Jefferson, the elder Coolidge said: "What has destroyed liberty and the rights of man in every government which has existed under the sun? The generalising and concentrating all cares and powers into one body, no matter whether the autocrats of Russia or France or the aristocrats of the Venetian Senate."

Local self-government. This is the glory of the New England Town Meeting, the most perfect instrument to keep government free and frugal and honest. Although not adapted to large areas, one of the cleanest winds blowing in these murky days is the old town-meeting idea applied to broader problems—where both sides are certain to be heard. There are always two sides to a question. But let us not think that the side is not important. There are two sides to flypaper, but it makes some difference to the fly which side he lights on. And so with principles of government.

And if government is not to be tyrant and master it must be kept poor. Jefferson wrote, "We must make our selection between economy and liberty or profusion and servitude." And Coolidge, the modern Jefferson, said:

"I favor the policy of economy, not because I wish to save money, but because I wish to save people. * * *

"One of the first signs of the breaking down of free government is a disregard by the taxing power of the right of the people to their own property. It makes little difference whether such a condition is brought about through the will of a dictator, through the power of a military force, or through the pressure of an organized minority. The result is the same. Unless the people can enjoy that reasonable security in the possession of their property which is guaranteed by the Constitution, against unreasonable taxation, freedom is at an end. * * *

"I am for economy. After that I am for more economy."

It has seemed in recent years when public debt is held of no importance because "it is owed to all of us;" when deficits are glorified as "net contributions to national purchasing power;" when there has seemed no end to our ability to mortgage the patrimony our fathers saved for us, that Jefferson and Coolidge were the fiscal relics of a foolish age. But be not deceived. God is not mocked. Whatsoever one soweth, that shall he also reap.

Today, lean, hard men are on the march. Millions of Japanese, willing to live on naught but rice and fish, filled with a fierce religion which makes it life's greatest glory to die for the Emperor; millions of Italians struggling, as they say, to escape the prison of their own sea; millions of Germans who, despite the worthless word of their Fuehrer and despite their ruthless crushing of little states which asked only to live as friendly neighbors, are, as a people, capable of any sacrifice for their fatherland, willing to work 60 hours a week for meager living—these are they who challenge the modern democracies grown soft and fat and corrupt and contented. Rotten city governments. Mendicant State governments. Spendthrift National Government. Their war cry is "Charge it on the cuff." Their slogan is "Less work, more pay; produce less and have more." Their shibboleth is "Bigger pensions for everybody." Upon their banner is that strange device, "Special privileges for all." In this sign they conquer—for a time.

It is needless to say that all this is the exact opposite of the hardy self-reliance that has made Vermont an honored name since the time when, like yellow jackets tearing from their nests, the Green Mountain boys hurled defiance at one and all—and paid their way as they went.

None of this new dogma fooled Calvin Coolidge. He never worshipped this modern Baal. He remained steadfast to the gods of the hills, contemptuous of the gods of the valleys to which sloth and ease threw incense.

Eighteen years ago, and it seems a strange prophecy today, this greatest son of old Vermont had this to say to his countrymen:

"We have come to our present high estate through toil and suffering and sacrifice. That which was required to produce the present standards of society will ever be required for their maintenance. Unless there is an eternal readiness to respond with the same faith, the same courage, and the same devotion in the defense of our institutions which were exhibited in their establishment, we shall be dispossessed, and others of a sterner fiber will seize on our inheritance."

Ladies and gentlemen, in 1791 Vermont joined the Union. In 1941 the Union should join Vermont.

The Southern Economy in the Defense Program

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, March 20, 1941

ADDRESS BY CHESTER C. DAVIS

Mr. HILL. Mr. President, I have before me a copy of the address of Hon. Chester C. Davis, member of the National Advisory Commission, delivered before the Southern Governors' Conference in New Orleans on March 15 last, on the subject The Southern Economy in the Defense Program. I wish to call particular attention to these words from Mr. Davis' address. He said:

It is significant that our greatest success in expanding industry in the South, both before and since the beginning of the defense program, has been in two directions. One was the shift of the textile industry nearer to the source of raw material and labor supply. The other has been in the immediate Tennessee Valley area. Within recent months the Tennessee Valley Authority and Tennessee Valley Authority power have brought an aluminum industry, an ammonia industry, and the manufacture of explosives to Tennessee and Alabama; there would have been precious little defense industry in these States without Tennessee Valley Authority facilities. The development of the Tennessee Valley was largely the product of southern initiative and imagination. It should be an object lesson to the South in what a genuine industrial development requires.

I ask unanimous consent to have the entire address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

You have asked me today to talk about the role of the Southern States in the defense program; and on the relation of war and our defense effort to the peculiarly difficult problems which you have faced in this part of the country in recent years. I believe it is necessary for me to begin with this second phase of my topic—with some consideration of the economy and economic problems of the cotton South. I do this because to me it is self-evident that a strong and effective participation in the work of national defense proceeds from a sound and properly organized economic life. Energies which must be devoted and absorbed completely in the struggle for existence cannot be diverted to defense activity.

The South has come through difficult years, and there are difficult days ahead. But if it is to be an effective participant in the work of defense, it must have an economic organization which makes effective use of southern manpower and material resources. An economic organization that holds the great mass of the people struggling to grow one crop which, under existing and prospective conditions cannot produce a decent American standard of living for many of them, does not make full and effective use of resources.

The South is an agrarian economy—its living, or the vast part of it, has been derived directly from the soil. Traditionally the farmer has organized his operations and planned his output independently of his neighbor. He has taken the market-determined price for whatever supply resulted from the combination of individual decision and crop yields. Nowhere else in our economic system in recent times has there been the same dependence on the free, uncontrolled, and competitive market.

During the aggressive expansion of the nineteenth and early twentieth centuries this economic isolation of the farmer was not a serious disadvantage. His market both at home and abroad expanded as rapidly—sometimes more rapidly—than his ability to supply it. But since the World War the American farmer has been living in a contracting market. European countries during the post-war period no longer financed our railroads and our industries, and we no longer serviced our debt with wheat and cotton. With controlled immigration and latterly a slower rate of population increase, our domestic market has been growing less rapidly than before. The free market of the farm producer reflected the full burden of this new situation—and reflected it directly on the producer. The farmer could not, as could industry, control or check the downward movement in his prices and gradually adjust his supply to the new situation. He had to take the rap.

As I see it in broad outline, during the last 8 years we have made some progress in meeting the fundamental situation—the farmer has managed, and nowhere with such unanimity of action as in the Cotton Belt—to develop a measure of control over his production and the price at which it sells.

Agriculture has gained a measure of protection from the vicissitudes of uncontrolled production in the free market. This protection together with the expansion of domestic demand which has taken place in recent years has put some farmers in a reasonably favorable position. Some 2,000,000 persons have found employment during the past 12 months; it is fair to assume that nearly all of these have increased their purchases of food. The market for beef, lamb, pork, milk, butter, eggs, and cheese—all luxury items for many Americans—again is expanding.

But the position of the 2,000,000 farms which produce cotton, and of the 10,000,000 people who live on these farms, is very different. These and the tobacco and wheat producers do not face an expanding market; rather, they now face adjustment to a still further contraction in their existing market. Before the war—the present war—we were holding our own against our old cotton competitors, Egypt and India. And in spite of the increasing use of cotton substitutes the world consumption of cotton was increasing. In 1914 the world consumed about 20,000,000 bales, and after the interruption of the World War it again reached this figure in 1923. By 1936 world consumption had climbed up to some 30,000,000 bales. The world still likes cotton, and I think this is important. However, as you well know, strong new competitors have arisen in South America, Africa, and China. These new competitors probably have a staying power in world markets at least as great as ours. Finally, the war for the time being has slashed off the greater part of our overseas market in its entirety.

Obviously if southern manpower, land, and resources are to be used most effectively in the period ahead, vigorous and imaginative action is necessary. Steps must be taken which will provide a supportable livelihood for those whose markets were in the path of the aggressors; we must find a useful outlet for the manpower which in the past produced for these markets; and, if possible, we must work toward a solution which will leave the South prosperous and secure when the present period of crisis is over.

To begin we must take for granted, I think, that the South is going to continue to grow cotton and that the world in the future will purchase a part of it. Even were we told tomorrow that not another bale of American cotton would ever leave the country, we could not at once place ourselves on a purely domestic basis. But I see no reason why we should make any such assumption. We are still part of the world. Our policy of aid to Britain, so firmly supported in this part of the country, shows the extent of our participation in the world community. This policy means that we intend in the future to participate in the world community. On the economic level it means we will continue to supply the world with a part of its cotton.

In both the immediate and the indefinite future the South will be living with its great staple crop. It follows that cotton prices must provide a supportable return to those who produce it. We must continue with measures which will make cotton growing remunerative particularly in those areas and for those people with no ready alternative. We must do this even though, temporarily, we may accumulate surpluses even larger than those we now have. I should like to add here that I hope we do not spend too much time worrying about the size of this surplus. Many of you will disagree with me, I know, but I must insist that the problem of our cotton stocks is in part a state of mind. Were they half as large as they are, we would still worry; were they half as large again, we would not worry much more. We can develop and in some measure we have developed machinery so that a 12,000,000-bale carry-over bears little more heavily on the producer than a 10,000,000-bale carry-over. Let us count on this machinery of loans and storage, or the equivalent of this machinery, to protect the producer from the price-depressing effects of our surplus. And as for the surplus let us not during this crisis worry too much about something that every other industrial country would consider a great asset.

But to make cotton reasonably profitable to live with is only a first step. It still leaves us with idle hands and idle lands. It still leaves us with the curse of a one-crop economy.

We must have a better-balanced agriculture. You all know the difficulty in the past which has faced those who have talked of the diversification of southern agriculture. It has been the question of alternatives. We have wanted to diversify our cotton acreages but with what? Other things besides cotton were plentiful, too. Now this situation is changing. There are alternatives.

We are entering a period of expanding domestic demand for dairy products, meats, and vegetables. We face a period when the South can increase its production of foods without raiding the markets of other areas. As the Nation's food requirements expand in months ahead, I feel that we must look upon the South as a new and important part of the Nation's larder. By so doing, we will save ourselves from uneconomical and perhaps, in the long run, unnecessary expansion in the present meat and dairy areas. But particularly we will leave the South with a better balanced agriculture for an increased and better-balanced home consumption. In all our agricultural programs, both State and national, we should give close attention to expanding the food resources of the South. The time has come, I think, when we can approach this matter as a truly national objective on which all can agree. To the extent we are successful we will accomplish the second great step, the diversification of the agricultural economy of the South.

There are several further steps in a complete program, but there is one which I should like to stress in particular. Diversification of agriculture is but one step in a larger process—the process of diversifying an economy. A diversified economy is one which combines both agriculture and industry. Full adjustment and full balance in the southern economy will not come until a part of the agricultural population has found an effective and useful employment through southern industrial expansion. This is the great step which is necessary if the South is to become a strong and effective part of our national economy. It is the step which must be taken if the full power of the South is to be made available and used in the defense effort. It is one of the purposes to which this association of Governors of the Southern States is dedicated.

There is no easy road to industrial development. In modern economic society the tendency is to a centralization rather than to a decentralization of industrial production. The British Empire has developed with a small industrial core on the British Isles and a vast world hinterland from which it draws food and materials, and to which it ships finished products. Somewhat similarly the United States has developed its own industrial core in the North and Northeast with its own agrarian empire in the South and West.

In the case of both Britain and the United States this pattern of industrial concentration has been deeply influenced and confirmed by war. The era of industrial expansion in Europe, which historians term the industrial revolution, coincided with the Napoleonic Wars. England entered these wars with a substantial head start in its industry and while the Continent suffered under a succession of military campaigns, English industrial production continued intact. England became the banker and in measure the arsenal for her continental allies. By the time peace came she had far outstripped her industrial rivals across the Channel. She was able, as we know, to maintain this leadership for more than a century.

Very similarly in the United States the War between the States found the North with a nucleus of industry which was greatly expanded to supply its armies. The antebellum South, using its agricultural advantages, had specialized on cotton, tobacco, and sugar. Its industry was undeveloped and it was destroyed or rendered ineffective particularly after Sherman's campaigns. Northern industry was confirmed in its head start, and it too has maintained that lead.

The Great War brought a new period of expansion—one far in excess of that of the war of the 1860's. During the Great War we expanded existing industries and we located our new war industries close to the present centers of industrial activity. The result reinforced the industrial concentration of the Northern and Northeastern States. I might add also that this policy created some very serious subsidiary problems. So great was the congestion of industrial activity in the northeastern triangle that in 1918 the War Industries Board was forced to suspend for a period all further war orders in a selected group of Northeastern States. The task of supplying fuel and food to these areas had gone beyond the capacity of the railways and the ability of the main rail gateways to handle freight. Acute labor shortages developed in spite of mass migration into the northeastern area. At the same time manufacturers outside of the area had a labor surplus and idle plant capacity. In many cases they were unable to use this labor and plant because of their inability to get materials which were tied up under priorities in the eastern areas.

I stress these matters for I believe the current flows strongly in the United States toward a concentration of industrial enterprise and it is vital that we watch this current in time of war. People in the South and West have looked at times upon their labor force and their raw material resources and have assumed that the logic of events would cause them to be used—that if they waited, industry would employ these resources. I can't help thinking that they were too optimistic. I have had some recent experience with this problem.

When the National Defense Advisory Commission was organized last summer, I expressed the view that new industries required under the defense program should not be located in areas where existing industries essential to defense are now concentrated, when there was any possibility of placing them elsewhere without sacrifice of speed and efficiency. It was clear that this was the only way in which new reservoirs of unemployed labor and resources would be tapped without uprooting families and shifting them thousands of miles into communities, where ebbing of the armament effort would leave them stranded.

The plans, such as they were, which had been made prior to the emergency for maximum war production were not based on such a principle. In carrying out the program we have made some progress toward decentralization, but I have been far from satisfied. I am afraid that in the defense effort up to date we have followed the same pattern of regional concentration that was followed in 1917 and 1918. Then, as I have said, we handicapped our effort by shortages of labor and transport and left an aftermath of overbuilt and overconcentrated industry. I am afraid that we will again reap some of the same harvest of economic and social consequences.

In the period between June 1 of last year and January 31 of this year some seven and one-half billions of defense contracts have been let. These exclude contracts for ship construction and supplies where obviously seaboard States must dominate the picture. Of this total, only slightly over a half billion, or approximately 7 percent, have been placed in the 11 States of Alabama, Georgia, North Carolina, South Carolina, Oklahoma, Florida, Arkansas, Tennessee, Mississippi, Louisiana, and Texas. This 7 percent of the total compares with a value of manufactures in 1937 in these States of slightly over 11 percent of the national total. These figures are for defense contracts. Up to March 1 plans have been completed for the construction of some 302 new facilities for defense production. Of these, only 24, valued at $166,271,860, have been located in the 11 States I have just listed, as compared with 302 at a cost of $1,574,523,000 in the rest of the country. These, as I say, were the new facilities and included many plants where I had hoped we would have a special freedom of choice in finding favorable locations in accordance with the broad pattern of decentralization. I am far from satisfied with the showing, and, as I have said on other occasions, I feel equally dissatisfied with the results in the rural areas of the West.

In part, our hands were tied by the compelling need for speed. But there were other reasons. The line of least resistance was to place business and locate industry in existing industrial areas. Those of us who were interested in a larger decentralization of this effort found ourselves placed largely in an advisory role. An adviser whose advice runs counter to established lines of procedure is pretty sure to have some difficulties. Industrial management has thought largely in terms of doing the new business of war production on the old stand. On occasions they stoutly opposed any shift from their existing areas of operation. We were faced with inertia and conservatism. We found people unable to visualize the vast productive power the United States could release were we able to mobilize the reservoirs of manpower now partially or ineffectively used throughout the South and West.

I think there is another reason perhaps more important than the ones I have cited. I was interested and I was somewhat shocked a few days ago to see a tabulation of the distribution of defense orders to date not as between areas but between industrial concerns. Included in the tabulation were eleven and one-half billions of prime contracts awarded between June 13 of last year and February 15 of this year. This tabulation includes all types of contracts. Of this vast total, between one-fifth and one-quarter had gone to 2 groups of companies of closely interconnected ownership. Between 40 and 45 percent had gone to 6 closely interconnected groups. And a total of 80 percent has gone to 62 companies or interrelated groups of companies. There is rich food for thought in these figures. I believe they are closely related to the mediocre success we have had in apportioning a part of this new defense industry to the States represented here today. Our defense contracts are being absorbed by a small handful of concerns. The very smallness of the number threatens to be a serious bottleneck on the full use of our industrial and human resources. It is a bottleneck which must be broken.

Fortunately, serious work has been undertaken and is now under way to try to spread this work. A Nation-wide organization is being set up under the Office of Production Management which seeks as its primary purpose to get as large a portion of the work covered by these prime contracts scattered throughout the country into the plants and factories of subcontractors as is possible. This is going to require a lot of attention and a lot of hard work. I attended a conference this morning at the New Orleans branch of the Federal Reserve banking system on this very subject. I have just told Governor Dixon, your chairman, that Commander Simpson of the United States Navy is in the city today and is available to tell your conference of the steps that have been taken and will be taken to distribute production under these defense contracts. I hope he will have an opportunity to meet with you.

For the South the lesson is clear. Your area has been waiting for industry to come and use its manpower. I am afraid it is going to be a long wait, and one which will only provide a few crumbs from the concentrations of existing enterprise. Nothing short of the most vigorous and most positive efforts to achieve recognition of your labor reserves and labor resources will suffice.

But more than this is required. The time has come, I think, for the Southern people to join together and start on the hard route to industrialization—that of industrializing themselves. It is significant that our greatest success in expanding industry in the

South, both before and since the beginning of the defense program, has been in two directions. One was the shift of the textile industry nearer to the source of raw material and labor supply. The other has been in the immediate Tennessee Valley area. Within recent months, the T. V. A. and T. V. A. power have brought an aluminum industry, an ammonia industry, and the manufacture of explosives to Tennessee and Alabama; there would have been precious little defense industry in these States without T. V. A. facilities. The development of the Tennessee Valley was largely the product of Southern initiative and imagination. It should be an object lesson to the South in what a genuine industrial development requires.

In the first stages of the defense program, I must frankly say, important opportunities have been missed. I had hoped that we might use this surplus manpower, or ineffectively employed manpower, of the South and make it a part of our full labor-power potential. I had hoped we might use this labor near home and thus avoid moving folks across the country to supplement a labor supply which, in some of the large urban centers, is already running short. I had thought that this might open the way for a better balance between industry and agriculture for the future. The farmer who depends only on one crop is never in a very secure position. As I have suggested, the same is true on a larger scale of those parts of our country—those States and regions—which depend only on agriculture. They, too, are one-crop areas, and they lack the stability and security of better-diversified areas. The job in the future will have to be done better than it has been done in the past.

Now, in conclusion, as I look back over what I have said this afternoon, I realize that little of it was new to you. You have been thinking and saying these things yourselves, some of them for years, some during recent months. We must continue to say them, patiently and persistently, until they are translated into accomplishment. We must not permit temporary set-backs to discourage us as we stand shoulder to shoulder on these principles.

The Lend-Lease Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, March 20, 1941

RADIO ADDRESS BY MRS. DWIGHT W. MORROW

Mr. SMATHERS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a radio address on the subject of the lend-lease bill, recently delivered by one of New Jersey's most distinguished citizens, Mrs. Dwight W. Morrow.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am speaking in favor of the lend-lease bill to urge its immediate passage without weakening amendments or strangling clauses. The bill has been before Congress for 56 days. Technicians, experts, politicians, officers of government, the active heads of our fighting force, and men of affairs have given testimony about it. I am none of these. Why then should I add to this babel of tongues? I have no expert advice, no new strategy to offer, but I am concerned over the honor of my country. I believe the bill should be passed, first, to give Britain, who is fighting for our democratic faith, the assurance of victory. Second, to give the United States the assurance of security. Third, to fulfill a moral obligation assumed by our country. The American people have declared in favor of aid to England. We cannot decently go back upon our word.

Further, I believe the bill should pass by a majority large enough to show the President the great popular support which exists here for the policy of aid to Britain. We have a chance to show national unity in a time of great crisis. The opponents of the bill argue that it will involve us in war, that it gives the President dictatorial powers, and that it sets aside our real task which is to perfect democracy at home.

As to the first argument it assumes that something we may do will irritate Hitler. I use that trifling word purposely. To the point of his making war upon us. All his actions show that he makes war when it suits him. The strictest observance of neutrality has not saved those countries which he desired to attack. I cannot see that to do stingily, badly, and late, what we have already promised to do will make us more vulnerable than to give aid generously, efficiently, and promptly. It is a difference of degree, not of kind.

As to the second argument that the bill confers dictatorial powers upon the President, I would call your attention to a few things that the bill does not do. It does not give the President power to declare war. The President already has sufficient constitutional power to precipitate war if he wished to do so. It does not give the President power to write a check for anything he wants to spend or power to give the Navy away.

The bill does add to the powers of the President, but note these powers are to be used within the United States in the one field of regulating American production and distribution of war materials for our own forces and for those nations whose defense is deemed vital to our defense.

The third argument is that we should stay at home and strengthen democracy here before we try to help it overseas. This has a noble sound. Let us examine it. I am aware of the grave inequalities in our democratic system. We deny certain rights to whole classes of our people; great masses of them, too, suffer constantly from a sense of insecurity in getting work in youth, in getting aid in old age. These abuses should be corrected. Will they be if the lend-lease is defeated? Both opponents and advocates of this bill agree that we ought to defend ourselves, that we ought to prepare for that defense on so large a scale that when it is ready we should have nothing to fear from anybody. This huge defense plan means a military economy for the United States for an indefinite future. An ever larger regulation and control of industry and manpower. A lowering of the standard of living. And inevitably a checking of generous treatment of the underprivileged.

No; this plea lacks reality. If we do not help England we must spend even more time and money on our own military equipment. The underprivileged will not benefit.

As I have listened to the arguments against this bill I have said to myself Is Hitler hypnotizing this country? He appears to have the power to mesmerize his opponents into apathy. Britain only awoke after the shock of Dunkerque, while France never wholly threw off his hypnotic power.

Unlike the famous slogan of a French doctor, "Every day in every way I am growing better and better," the Fuehrer says again and again no democracy can help, no democracy can work, America can't help, America is too late, her people are divided, she is rich, fat, and weak. Can we be paralyzed by such words? Will we accept this opinion of ourselves given by a man who scorns all democratic prophesies? And yet division and delay are here with us.

The majority of Americans want a British victory, first because of what Great Britain stands for, all the liberties we love, the way of life we honor. Second, because of what she stands against—aggression and ruthless force. Third, because if America allows Britain to be defeated and her victory is dependent upon American supplies, she will have deliberately helped to remove the last barrier between herself and Nazi world domination. Then America will be forced either to appease or fight. I believe the bill should pass because it gives Britain the tools with which to win. We have not been asked for manpower, but we should give munitions and supplies of all kinds—food, money, guns, airplanes, ships—everything that will not impair our own safety.

The bill, I believe, should pass because it will heighten England's morale. I shall not enlarge upon the gallant resistance of the English people. But, of course, they are trusting to us. The morning after Mr. Roosevelt made his speech at the beginning of January a new slogan ran through Great Britain, and the next day they chalked on the walls of their bombed buildings, "We are not alone." They thought we were really with them. How terrible if we give them too little and too late.

And yet the Senate minority is denying the American people the chance they want to help Britain, for a measure which is demanded by all responsible officers of Government and by responsible men of both parties, which has been considered for 56 days, cannot be brought to a vote. This is against the cardinal principle of democracy, where the will of the majority is supposed to rule. While men and women whom we have promised to help, endure and die, we haggle and compromise, hesitate, hold out hope with one hand and draw it back with another. The danger is immense. Every hour counts. Yet at this very moment Senators are droning on.

What a spectacle we present of a democracy. Are we the descendants of the men and women who crossed the Plains in covered wagons, and, despite all hardships, conquered the wilderness, or are we weaklings illustrating a dictator's views on how a free people work? If this picture of fear and hesitation is a true one of the United States, I can only say, in the words of the Old Testament, "Tell it not in Gath, publish it not in the streets of Askelon, lest the daughters of the Philistines rejoice."

Efficiency and Democracy

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 20, 1941

STATEMENT BY W. C. PICKETT

Mr. BYRD. Mr. President, I have been much interested in a most informing

and valuable statement made by Hon. W. C. Pickett, Special Assistant to the Attorney General of the United States, with respect to increasing the efficiency of our governmental organization. I ask unanimous consent to have it inserted in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The future of the people of the United States is at stake in a race between time and the development of efficiency in government. Industrial efficiency we have, commercial efficiency we have, but efficiency in government we have not—regardless of political administrations—and the lack of it menaces America with economic and social crises. The efficiency of our people in industry and commerce is accompanied by a constant increase in their interdependence, adding to the demands upon government. This constantly increasing burden necessitates increased governmental efficiency if we are to assure the avoidance of undemocratic changes in the form of our Government.

The basic reason for efficiency in other fields and inefficiency in government is the driving force of self-interest which promotes efficiency in the one instance and inefficiency in the other. The problem of how to promote better and more efficient government is the problem of harnessing the driving force of self-interest so that it will impel us toward the objective and not away from it. At the present time it is possible for individual and group interests to be opposed to the national interests and to be promoted at the expense of the common welfare because of the lack of complete and accurate information concerning governmental operations on the part of the electorate and the legislative and executive branches of the Government.

The Government of the United States has become an organization so large and engaged in activities so numerous and varied that no individual can ever acquire an intimate knowledge of what it is doing and how well it is being done. The President of the United States necessarily acts upon many matters concerning which his own personal knowledge is incomplete. He must rely upon the knowledge and judgment of subordinates, and assume that their recommendations are based upon considerations of national welfare, uninfluenced by hidden conscious or unconscious motives of personal or group advantage. The national scandals in our history have been the result of this necessity of reliance by the President upon subordinates who, in these fortunately rare instances, proved venal. Lesser officials of the Government are likewise forced to act frequently upon matters of national importance without complete personal information and lesser scandals, more frequently occurring, reflect the same unfortunate necessity of reliance by Cabinet officers and other officials upon the knowledge, judgment, and integrity of their subordinates.

Less sensational, but far more important to the Nation than the occasional resultant scandal, is the toll exacted as the result of the formulation of national policies on the basis of information which may be the best available at the present time, but which is nevertheless inadequate. An increase in the reliability and an enlargement of the scope of the information upon which national policies are formed by the President and his official family would serve well the interests of the Nation.

The legislative branch of the Government is likewise the victim of inadequate knowledge of many matters concerning which it is necessary for it to act. This well-known fact is no reflection upon the industry or intelligence of the legislators, because even within the field of a single important phase of government it is physically impossible for any legislator to gather personally the information requisite to the understanding of the subject which he should have in formulating legislation respecting it. He must accept the representations and opinions of individuals in whose knowledge, judgment, and integrity he has confidence, and in many instances must rely upon the representations of subordinate, nonelective Government officials, whether or not he has confidence in them. Yet every Member of Congress is required to form and register some opinion by voting or refraining from voting upon legislation affecting every phase of governmental operations. An increase in the reliability and an enlargement of the scope of the information upon which legislation is based would serve well the interests of the Nation.

Every election requires the voter to register his convictions with respect to governmental policies, directly or indirectly, and ordinarily he is even less conversant than Government administrative or legislative officials with the facts upon which opinions with respect to such policies should be based, and he is invariably subjected to the further confusion of propaganda and counter-propaganda of rival candidates, of rival organizations, and individuals and groups interested in promoting individual, group, or class interests. An increase in the reliability and an enlargement of the scope of the information upon which the electorate might form its opinions with respect to national policies would serve well the interests of the Nation.

The present lack of complete and accurate information concerning governmental operations is thus a basic national deficiency. It is responsible for many administrative and legislative evils and constitutes a potential threat to democratic government. The deficiency may be corrected by the compilation, organization, analysis, and publication of such information periodically, under such circumstances as will provide every possible assurance of intelligent completeness, accuracy, and freedom from even the suspicion of bias. Such service would require access to Government records and, therefore, could not be accomplished by any private organization. Its general acceptance would require an obvious possession of the qualities of personal integrity, high intelligence, and freedom from bias of the individuals participating in it. It may be provided by the creation, under the authority of the Constitution of the United States, of a National Advisory Council, completely independent of control by the executive and legislative branches of the Government, and subject to judicial control only to the extent that the executive and legislative branches are now so subject.

The proper functioning of such an advisory council, established with proper authority, properly limited, would result in greatly increased governmental efficiency. The intelligent compilation, organization, analysis, and publication of the facts relating to governmental operations would provide the basis for the formulation of sound national policies and avoid expensive experiments induced by lack of information on the one hand and self-interest on the other. Petty corruption and padded pay rolls could not withstand the disclosure of such investigations, nor could incompetence in office remain undisclosed. The overlapping activities of various Government agencies would be brought into bold relief. Even the threat of a searching, nonpolitical analysis of its activities would have a most salutary effect upon every Government office in avoiding those practices which presently promote individual and group interests at the public expense and in the aggregate exact a terrific toll. The individual interests of Government officials and employees would tend increasingly to coincide with the national interests.

A plan based upon an amendment to the Constitution of the United States to provide for the establishment and permanent maintenance of a coordinate branch of the Government to be known as the National Advisory Council should contain such provisions as these:

1. It shall be the duty of the council to ascertain and publish information affecting the operation of the National Government to the extent that such ascertainment and publication will, in the opinion of the council, be in the public interest.

For that purpose the council shall have the power—

(a) To examine all records of any branch of the Federal Government and to investigate all acts of any employee of the Federal Government affecting the performance of official duties; to procure from any other source evidence of matters affecting the operation of the Government of the United States; provided that (1) upon order of the President information held by the President to be confidential on the grounds of military, naval, or diplomatic secrecy shall be withheld from the council while such grounds exist, and (2) the power of the council to compel production of evidence from private sources shall be the same as the power of Federal courts to compel production of evidence.

(b) To publish any of its findings, together with conclusions drawn therefrom and opinions based thereon, when such publication is deemed by a majority of the council to be in the public interest; provided that (1) publications of the council shall plainly distinguish, so far as practicable, between facts and conclusions or opinions; (2) upon request of the President, or upon resolution of either House of Congress, the council shall investigate any matter affecting the operation of the National Government and, if so requested, publish its findings regardless of whether the council deems such publication to be in the public interest. (3) All material ordered by the council to be published shall be submitted to the President prior to its publication, and during a period of 15 days the President shall have the power to veto the council's order for publication in whole or in part. Publication contrary to the President's veto shall be made only upon a repassing of the order to publish by a two-thirds vote of the council members, and after consideration of any reasons assigned by the President for his veto. (4) The publication of any report by a majority of the council shall also include in the same document any other report by a minority of the council.

2. The provisions of the Constitution governing the qualifications, appointment, tenure, and compensation of the Chief Justice and Associate Justices of the Supreme Court of the United States shall govern the qualifications, appointment, tenure, and compensation of the chairman and associate members of the Council, except as otherwise specifically provided in this amendment.

3. The Council shall consist originally of a chairman and four associate members, and be increased in size to not fewer than 10, nor more than 20, associate members, as Congress may from time to time prescribe. Not more than five members of the Council shall be appointed by any one President.

4. No member of the Council, during his tenure of office, or for a period of 1 year thereafter, shall be eligible for any other public office, and no member shall receive for his services any emolument from any source whatever other than the compensation to be paid to him as a member of the Council.

5. All information procured by the Council in the course of official investigation shall be confidential, except when published as herein provided, and no member of the Council, either during or after his tenure as such member, shall divulge any information procured by reason of his official position.

The very existence of such an Advisory Council would lessen the tremendous strain of office upon the President, for while his responsibilities would not be decreased, he would be aided in the intelligent discharge of his duties by the factual reports and opinions of the Council, and by the practical elimination of anxiety concerning malfeasance in office on the part of his subordinates. It cannot be doubted that our Chief Executives have been personally free of participation in any degree in the scandals which have sometimes been linked in history with their administrations. Moreover, it is reasonably clear that timely knowledge on the part of the President of the malfeasance in office of trusted subordinates has been lacking in such instances, although the belief is widely held that suspicion of betrayal may have been responsible for the sudden death of one of our Presidents.

One of the very important benefits of the Advisory Council would be the impartial development of the facts which would make possible a coordination of governmental operations to reduce the cost of government without interfering with its essential services. The numerous attempts—public and private—which have been made in an effort to do this, testify to the general appreciation of the need of such action, the accomplishment of which has heretofore been balked by the fact of conflicting personal and group interests, making difficult the ascertainment of the proper means of accomplishing an admittedly desirable result. The force of the opposition to proposals to reorganize the administrative branch of the Government would be effectively reduced if the proponents of such reorganization were armed with information developed by an agency obviously free from reasonable attack upon the grounds of bias or inadequate appreciation of the problem.

It would be speculative to say that the cost of government in any administration would ultimately be reduced by not less than 20 percent as the result of the elimination of the overlapping functions of various Government bureaus, discontinuance of appropriations for obsolete agencies, and reduction of appropriations for obsolescent agencies, the avoidance of costly legislative and administrative experiments as the result of a scientific marshalling of information, the virtual elimination of graft and of the padding of pay rolls by personal politics, but no informed student of the subject of governmental operations can doubt that the savings would be tremendous.

An independent body, served by high intelligence and character, gaining experience in its own work with the passage of the years, protected by every constitutional guarantee and by the alertness of an informed electorate, the Advisory Council would contribute tremendously toward a purity and efficiency hitherto unknown to government by eliminating vast, but now effectively hidden, waste originating in the self-interest of countless subordinates, in the self-interest of forces to which both subordinates and higher officials are subject, and in the simple lack of the requisite information for the formulation of sound national policies. The National Advisory Council, as a coordinate branch of government, free of the dangerous drug of power, but armed with the means of ascertaining what needs to be known, and charged with the duty of informing the executive, the legislative, and the electorate, would be truly a sentinel of our liberties.

The New York Stock Exchange

EXTENSION OF REMARKS

OF

HON. JOHN A. DANAHER

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, March 20, 1941

ADDRESS BY THEODORE S. WATSON

Mr DANAHER. Mr. President, on March 11 there was delivered over the facilities of radio station WMCA in New York an address by Mr. Theodore S. Watson, which I feel is of such public importance that I ask unanimous consent that it be printed in the Appendix of the RECORD. I personally have formulated no definite conclusions as to whether or not the problems raised by Mr. Watson and the solutions he suggests are fundamental and compelling. I do say that his broad personal experience in the New York Stock Exchange entitles the statement of his position to great respect, and it is my hope that we can elicit the judgment and thereafter the comment of competent observers. If there can thus be laid the foundation for better collaboration between the stock exchange and the Securities and Exchange Commission, I have no slightest doubt that a stronger and healthier market situation will result, surely a desideratum in these trying times, when popular confidence must be maintained at peak. It is my thought that Mr. Watson's viewpoint should be submitted to stock-exchange firms, bankers, insurance companies, and Government agencies concerned with our fiscal situation, and accordingly I present his address entitled, "The Role of the New York Stock Exchange as the Capital Market Place in Our National Economy and Its Relation to Our Democratic Traditions."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"Democracy Goes to Town and Wall Street Takes It" sums up an unusual event that took place last Wednesday. The president of the New York Stock Exchange in his valedictory talk told the members of the Exchange in no uncertain terms what they should have realized years ago. The response has been astonishing. There are encouraging signs that the members are thinking for themselves instead of letting some one else do it for them.

As a partner for 20 years of one firm which for 16 years had held memberships on the Exchange and successfully financed new corporations now grown large, I may speak with an inference in my favor. That experience caused me long ago and prior to 1934 to publicly urge changes in the administration of the Stock Exchange. The failure of any business to effectively regulate its own affairs leads to legislation. Wall Street's inability to correct the abuses of the few, including some of the privileged, led to the enactment of the Securities Exchange Act in 1934 which created the Securities and Exchange Commission as the people's regulatory agency.

It has taken Wall Street 6 years to learn that the Securities Exchange Act of 1934 expressed and still expresses the national will. It is one statute which will remain on the statute books. I agree with the observations of the Stock Exchange's president that no changes in the act itself are necessary and that revision will not now increase the volume of trading.

It is surprising to me to read one die-hard writer assert that changes in the act are necessary, "Unless, indeed, the S. E. C. is to attain the objective of certain of its present and former members, namely, to abolish organized exchanges or to reduce them to mere functions of transfer."

That statement goes beyond fair comment. The record disproves it.

The Securities and Exchange Commission officially recognized in a release dated January 27, 1938:

"The vital and public role of the stock exchange in the Nation's economic affairs."

Would it appear from reading that statement that the people's regulatory agency is anxious to abolish the New York Stock Exchange? That statement by the S. E. C. was issued in connection with a report on the the reorganization and administration of the exchange which had been prepared by the stock exchange's own committee.

This report declared that the exchange in its evolution had assumed a public character. It made certain recommendations for the democratization of the exchange.

That 1938 report was approved. The committee's recommendations were carried out. This was the first step toward making the exchange a truly public institution.

Now, let us take a 1941 inventory. Before doing so, keep in mind the three elements—the Nation is one, the second is the people's regulatory agency (S. E. C.), and third, the exchange itself.

It is essential that we recognize that the exchange is a national institution. Eighty-five percent of its business for the public comes from outside of the city of New York. Including the business of the New York Curb Exchange, it does 90 percent of the business done on all the 20 registered securities exchanges in the country.

Such a national institution should serve the whole Nation. It should afford the people an auction market for the ready conversion of capital investments into cash.

But the New York Stock Exchange is not functioning as the national market place. The volume of trading is dwindling, tremendous blocks of securities listed on the exchange are being sold off the floor of the exchange even at prices higher than quoted on the exchange. In its present state it serves chiefly as a guide to prices, not as the market place.

Such a situation has elements detrimental to the Nation's welfare. It is imperative that the people's regulatory agency (S. E. C.), and the exchange work harmoniously together to serve the Nation.

The vital national market place can be the New York Stock Exchange if it is managed as a national and public institution. Many of the retiring exchange president's suggestions should be immediately carried out—the number of the board of governors decreased, the number of committees reduced, and more responsibility placed on the paid staff. And there should be associate memberships, the proceeds from the sale of which would be used to decrease the number of full memberships.

As I first urged in the early 1920's brokers should have separate organizations to act as underwriters and dealers in order that customers' securities and free-credit balances

will not be subject to the risks incurred in an underwriting business. And as its chief executive officer there should be a hard-hitting independent man with experience who can effectively merchandise the services rendered by this national and public institution. Thus the democratization of the exchange as started in 1938 must be furthered so that the exchange will be responsive to the public needs and reflective of changing conditions.

I am confident that once the exchange is known to be an independently managed national and public institution the friction points between the exchange and the S. E. C. will be eliminated. You will then not hear about S. E. C. seeking power to regulate internal rules affecting only the members.

In that connection I would like to digress. Past actions of the S. E. C. have encouraged the development of the 17 local exchanges situated outside the city of New York. Local exchanges have been granted freely the right to trade on an unlisted basis in securities listed on the New York Stock Exchange. This has been attributed to a desire to eliminate an undue concentration of control over wealth said to exist in New York. There would not be such a desire if the Exchange were an independently managed institution of the character I have mentioned. And I am sure that students recognize that those actions which emphasize sectionalism fall right into line with a basic Nazi formula for destroying a country. It is dissension—playing one faith against another, one class against another, one section against another. At such a time as this when the emergency calls for a unified nation, nothing should be done to encourage the development of sectionalism.

But to continue. After the friction points between the Exchange and the people's regulatory agency—S. E. C.—have been removed, public confidence in the national market place will be restored, the volume of business will increase, and prices will more truly be reflective of the Nation's judgment.

You may then expect the S. E. C. to help establish the Exchange as the national market place. It can do so by clarification of its rules and simplification of its procedures. It is to its advantage that there be such a market because regulation is easier and they can spot more readily and more quickly stop the operation of any stock-market manipulator than if he is operating in the over-the-counter market.

There is another advantage to the S. E. C. Since 1935 it has been administering the Public Utility Holding Company Act. A duty was imposed upon it to bring about the corporate simplification of public utility holding companies. In pursuance of such duty, S. E. C. has directed certain companies to pursue financing through the sale of common stock rather than by issuing obligations with fixed charges.

In a report prepared under S. E. C.'s auspices for the Temporary National Economic Committee, the desirability was emphasized of checking the prevalent trend of industrial financing through the issuance of debt.

Thus we have the S. E. C. urging common-stock financing. However, it is not now easy to raise capital through the sale of common stock. Last year American corporations raised only $135,000,000 of new money by stock financing, yet in the depression year of 1931 the figure was $311,000,000. Investors cannot be induced to buy new common-stock offerings when the markets for seasoned stocks wither away. Thus it is to S. E. C.'s advantage that there be a strong, healthy market. If individuals are to be encouraged to invest their savings in common stocks there must be public confidence in the market. So I say that when the exchange is independently managed as a national public institution, then S. E. C. must cooperate. It will contribute to the positive job of diverting savings into channels needing capital.

This is to the advantage of the Government itself, inasmuch as a Nation-wide campaign to sell defense bonds will be commenced May 1 and a vigorous national market is essential if the Government expects its citizens to purchase a substantial amount of the bonds.

It is, therefore, in the public interest that the exchange be made into a national market place.

The standard of conduct for the people's regulatory agency—the S. E. C.—is clearly set forth in the Securities Exchange Act of 1934. Congress stated that "transactions in securities * * * upon securities exchanges * * * are affected with a national public interest," and Congress said that S. E. C. must measure its actions by whether they are "necessary or appropriate in the public interest or for the protection of investors."

Once the exchange is run by men who recognize the national and public character of the exchange, and who will themselves insist upon the maintenance of fair and honest markets, will prevent manipulation and sudden and unreasonable fluctuations of security prices and excessive speculation, then the S. E. C., in observance of that standard imposed by Congress, will, in my opinion, permit self-regulation and devote its energies to effectively administering the other five acts.

I am confident that the Government does not seek to be the operator of the New York Stock Exchange, nor does the S. E. C. seek to be more than a policeman—but it will be unless the exchange is made truly a national public market place independently managed and maintained in the public interest.

Fortification of Guam

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 20, 1941

ARTICLE BY MAJ. GEN. WILLIAM C. RIVERS, UNITED STATES ARMY, RETIRED

Mr. SHIPSTEAD. Mr. President, I ask to have printed in the Appendix of the RECORD an article by Maj. Gen. William C. Rivers, United States Army, retired.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Los Angeles Evening Herald and Express of March 3, 1941]

OPPOSES FORTIFICATION AT GUAM—GENERAL RIVERS BRANDS MOVE STRATEGIC ERROR

(By Maj. Gen. William C. Rivers, United States Army, Retired)

(Maj. Gen. William C. Rivers, United States Army, retired, takes issue in the following article with the proposed expansion of defense facilities at Guam, holding such a move to be a strategic error—creation of an exposed and advanced western salient that could not be held.)

NEW YORK, March 3.—Fortifying Guam has two aspects.

One is the strategic phase: That a base at Guam would aid our own defense. Congress cannot build a base at Guam, because Guam is too far—almost 4,000 miles—from our great base at Hawaii. The radius of action of a fleet is but about 2,500 miles. Therefore, all that Congress can build at Guam would be an exposed, untenable advance salient. Military history is full of the troubles and misfortunes of distant and exposed salients. Only a globe will show how far Guam lies off the normal straight steamer route from our west coast to Japan and the Orient.

Also, Guam is 1,500 miles farther from the west coast than Japan is. Hence, the location of Guam prevents its being of value to defense of our west coast.

Guam is in the midst of many Japanese islands, many of which have good submarine and airplane harbors. The erection of a great fortified salient at Guam would project our own line of defense far into the western Pacific. Admiral William D. Leahy said to the House Naval Committee:

"The defense line runs from the Aleutian Islands to the Hawaiian Islands, to Samoa, and to the Panama Canal," and "the Navy which America now has, and the Navy which it will have when it is increased by this bill will be seriously inadequate to the task of sending a naval force to the Philippines."

The projection of our defense area so far in the Western Pacific would seem a threat to Japan, which lies so near Guam. The Filipino people earnestly desire the independence we have so frequently promised them.

The political aspect of making a great fortified salient at Guam would be the demand to hold the Philippines as some sort of a dominion. Japan will, in any event, always get much of the trade in the Philippines. But Japan will not annex the Philippines after 1946.

SALISBURY STATEMENT

Making great forts at places such as far-off Guam reminds one of a statement of Salisbury when Prime Minister. Kitchener, then head of the Egyptian Army, had asked for funds to construct strong points on his line of march toward Khartoum. Salisbury cabled to Cromer, then British agent in Egypt, that if not watched, soldiers were liable to ask for funds with which to garrison the moon as a defense from an attack from Mars.

My long residence in the Far East convinces me that it is unwise to provide for fortifying Guam and Wake Island. This unnecessary action would entail a colossal financial burden on the American people. It would also prevent our giving aid to any nation on the east of South America if they should need our aid in defending South America.

Possible Participation in War

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 20, 1941

EDITORIALS FROM THE CARBON COUNTY NEWS, RED LODGE, MONT.

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the RECORD several editorials from the March 14 issue of the Carbon County News, of Red Lodge, Mont., which bear on the possible participation of our country in the present war in Europe.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Carbon County News, Red Lodge, Mont., of March 14, 1941]

IF THIS IS OUR WAR—LET'S DECLARE IT

It's time to quit quibbling.

It's time to be honest with ourselves.

Is this our war, or isn't it?

If it really is our war, then we should do the only honorable thing. We should declare war.

If it isn't our war, we should stay out of it.

The issue is narrowed down as simple as that.

If this is our war—and the Carbon County News has consistently declared that it isn't our battle—then we should stop hiding behind Britannia's skirts.

Of course, if we decide that it's our war, then we might just as well resign ourselves to recurring European battles forever and ever.

We might just as well conclude that all our forefathers made a mistake when they came to America to escape those perennial European disputes. They might as well have stayed home.

As long as there is a strong America there will be European countries seeking that reserve strength for their own ends. When we capitulate to Europe's demands we cease to be strong.

It was true in the last war; it looks like the same story in this one.

Is this our war, or are we to establish here in the Western Hemisphere an example of democracy? The decision must be ours. There are no two ways about it.

Which?

LET'S HOPE THEY'RE RIGHT

As expected, the United States Senate, by a vote of 60 to 31, Saturday put final approval on the administration's lease-lend bill.

They did this with a rubber-stamp Senate despite valiant opposition on the part of such men as WHEELER, WALSH, TAFT, LA FOLLETTE, JOHNSON, and a few new additions to the senior legislative body.

This new act which places this Nation's future at the mercy of Presidential whims poises America so precariously near to war that every conscientious citizen should use what Democratic influence left him to see that backers of the bill fulfill their promise that the act was purely a defensive measure and would in reality keep us further from war.

All logic would indicate they are wrong, but the entire welfare of this Nation rests on the premise that the majority Senators are right. Now that the bill has passed and is a law, we trust, as good Americans, that the expressed goal of the bill will be realized. If so, we will readily admit that we are wrong.

Responsibility for this extreme measure rests on the shoulders of the 60 Senators, but responsibility for the country's fate now rests squarely on the shoulders of President Roosevelt. With the powers granted him he can toy with this Nation as he likes. We can only hope he arises to the emergency and that he has the character to keep this Nation intact and strong, and that he will heed the people's mandate last November 5 to keep us out of war.

THE SUPREME EFFORT

Barring superhuman and, we must admit, unexpected sagacity on the part of President Roosevelt, only an aroused American public can now keep us from the brink of actual war.

The powers granted in the lease-lend bill, coupled with recent warlike tones of Roosevelt's speeches, lead us to fear the worst. The Carbon County News has repeatedly warned that the course of this Nation's ship of state was hurrying pell-mell into a repetition of the 1917 turn of events and that war, either declared or undeclared, would be the inevitable result.

If the last November 5 election was a mandate to help England, as proponents of the lease-lend bill so argued, then it was even more a mandate that no American boys would be sent to fight in a European war. Both Roosevelt and Willkie won thunderous applause on that latter campaign promise.

But what has happened? What do the signs unmistakably indicate?

A bill has been passed giving aid to England beyond the dreams of Great Britain; in fact provisions of the bill make this country more generous in her aid than component parts of the Empire involved in war. And now already we are hearing talk of England needing and asking for men.

Shadows of the impending storm are seen in recent utterances in the British House of Commons in which it was clearly stated that England needs men.

So goes the cycle. At first, England needed destroyers. She got them by Presidential decree. More, more, and more she wanted: airplanes, war goods of all description. She got in the lease-lend bill more than she had reason to hope for.

Isn't it logical that men, that actual participation in the war, is the next demand to be placed before the American administration? No one can blame England. Encouraged by the lease-lend bill, committing this Nation to acts of undeclared war, she can now go the whole way.

Not even President Roosevelt will take this Nation into war, however, if the people are overwhelmingly against such action. America is not Europe and the people, once aroused, are a force to be reckoned with. The fiber of the American people is not of the stuff to take kindly to dictatorship unless the administration reflects the wishes of the people.

Senator BURTON K. WHEELER has indicated he will carry the fight to the people themselves, that he will elaborate on the effects of the lease-lend bill with one view in mind, to keep us out of what he believes would be a disastrous involvement in war.

It seems to us the administration has placed too much emphasis in recent months on sending our resources to England, and not enough emphasis on strengthening the resources of America. Things aren't going as planned in the defenses of the Nation, and we would like to see a little Presidential activity in stepping up our defense program.

Help or no help for England, this Nation's best insurance for the future is a strong military defense. Such a program seems to us the No. 1 goal toward which all people should put forth a supreme effort.

Already we have become so involved in this war that the Axis Powers will seek retaliation, making defense necessary. We think we have gone too far, but the fact remains that our neck is stuck out and will need some protection when the Axis ax falls.

That is why we have advocated caution in sending so much of our defense material to England. We are just naive enough and nationalistic enough to believe that we should think of our own country first when it comes to self-preservation.

ARE WE LOSING OUR IDENTITY?

Because we are opposed to provisions of the so-called lease-lend or war bill which would permit President Roosevelt to send American Navy vessels to Britain, thus precipitating this country into a war, we have been termed anti-British by individuals too old to fight and lacking in imagination of what a war would do to this country.

We are not anti-British. If there must be a victor in this war, we hope the British win. If they do win, however, we hope Winston Churchill won't impose a peace that will bring another war, as Britain and France did last time. We refer to the Treaty of Versailles which we did not ratify.

We are not anti-British; we are simply pro-American.

England we hold our friend, though she hasn't always been so, but we consider America our mother.

We would not countenance injuring our mother, to say nothing of killing her, to help our cousin and occasional friend, Britain, which has gotten herself into two major wars in the last 27 years and expected us to pull her out of it each time.

We do not consider it our duty, now or ever, to back up Great Britain every time she gets herself into a dogfight over the decaying carcass of Europe. If Britain gets the impression—for the second time in the last 25 years—that we'll run to her aid every time she gets into a mess, then, to put it bluntly, we're in for a hell of time ahead.

As the Washington Times-Herald puts it: "We'll wind up by losing all identity with our past—which, incidentally, contains some periods when all was not amity between this country and Britain."

To those who want war, we simply rest our case. If this be treason, make the most of it.

The Weapon of Food

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 20, 1941

EDITORIAL FROM BOSTON EVENING TRANSCRIPT

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Boston Evening Transcript of March 13, 1941, entitled "The Weapon of Food."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Boston Evening Transcript of March 13, 1941]

THE WEAPON OF FOOD

Force may or may not conquer Hitler. But force by itself certainly is not going to bring victory for the cause of freedom. It never has, and it never will. It may bring a temporary hollow victory; it may bring a truce till the opposing powers of force recuperate. But force alone will never bring permanent peace, spiritual progress, or economic prosperity.

Statesmen are often prone to consider force their only weapon. There are other weapons even more powerful. Let us consider the weapon of food. Although the problem has its moral aspect, let us here consider it only from the point of view of strategic statesmanship.

Britain says no food shall go through the blockade to the conquered peoples of Europe. We are all familiar with the argument. It will be stolen by the Nazis. Or its equivalent will be saved by the Nazis. And in this age of chemistry, food materials are also converted into war materials.

The argument is easy to accept when one is fighting for life. The misfortunes of others fade into the background. But America has less excuse for short-sightedness than has Britain. Britain is too close to the bombs to have perspective.

The argument is not sound when examined in the light of self-interest and strategic expediency of winning the war. The policy enunciated by Britain may well spell her defeat unless it is changed.

Victory and an ultimate peace which is worth fighting for, which is worth any fractional part of the sacrifices we and the entire next generation must make, are absolutely dependent upon a reasonable degree of world unity when peace comes.

Does anyone think for a minute that the Belgians, the French, or the Norwegians, or the Dutch will come rushing under the banners of the Anglo-American order, if America and Britain have refused them food and they have seen their wives, their children, their mothers, their fathers die of starvation or its attendant diseases? When such food as they did have was Nazi food and Britain and America refused even to try to send any?

Not for one minute!

Can anyone possibly assume, after Britain survives the threatened invasion, that these same peoples are going to rise up and welcome a British rescue party when there are vacant chairs at every family hearth because America and Britain refused to allow food to go through the blockade? Of course, they are not. These peoples are going to hate Britain, and they are going to hate America. And in their hate, they are going to accept the Nazi hand that fed them, even though scantily.

It is no use to argue that the food would not get through and would aid the enemy. Very likely it would be diverted to Germany. But in refusing to make the attempt, Britain and America are adopting a policy which may well spell ultimate defeat in this war, to say nothing of destroying any possibility of creating a world order thereafter which is worth any part of the effort.

By refusing to send food, we put Germany in a position to say quite truthfully to the conquered peoples that Britain and America allowed them to starve as a military necessity, and to say that she herself has done all the feeding. The Nazi propagandists would hardly express it so politely. And Britain and America could make no acceptable reply whatsoever.

Suppose, on the other hand, we do send food. It will either get there for the purpose intended or it won't. If it does, the beneficiaries are our friends for life. During the progress of the war, as well as thereafter, this is worth more in a military way than all the "billions for defense." If it is not used as intended, then shipment should be stopped.

At this point the shoe goes on the other foot. The Nazis, instead of Britain and America, become the goat. We sent the food. We tried to feed. All the hate will then be directed at the Nazis who stole it. Enough news will get through, by underground channels, so that the Nazis or anybody else cannot hide it. From the strategic viewpoint, the attempt is more important even than the actual amount of food which gets through.

In America's hands lies the decision. Today, we have the ultimate power. Britain has asked our unlimited aid. We have agreed to place our entire national economy behind her, realizing that it is also in our interest. At 4 o'clock Tuesday afternoon, America became entitled to express her will in the conduct of the war. Whether we do so or not, we will now be held jointly responsible for policies pursued.

We should tell Britain immediately that food is going to be shipped and that we hope it will be shipped with her aid. But shipped it's going to be.

Mr. Hoover is ready to do the job. The Society of Friends is known to have the confidence of all the European peoples. Whether we agree or disagree with Mr. Hoover politically, we are unanimous that he, more than anyone else in this world, is best equipped to undertake the task.

Mr. Hoover and a few food ships will do more to win the war for a new world order than the combined British and American Navies will ever do by force alone.

Let every person with a tongue and a pen speak up. Now is the time. Next year, next month, next week will be too late. As long as we are free, every citizen shares the responsibility for what America does.

Let's realize that, in the end, it's love, not hate, that it's food, not bombs, that it's freedom, not force which conquers.

Communists in the United States

REMARKS

OF

HON. MARTIN DIES

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

Mr. DIES. Mr. Speaker, yesterday I stated to the House that from time to time pertinent information would be given the House with reference to Communists who are in charge of some labor unions and who have instigated strikes. I do not have the time this morning to read this statement, but it deals with another union. It deals with one of the important strikes of the country and gives the record of certain of the leaders of that organization, records that cannot be denied or disputed.

In addition, I present a further record of Kenneth Eggert, who was sent to the west coast to instigate a strike in a bottleneck industry, and who is seeking to sabotage the national-defense program in that area.

I propose that we continue to read the records of some of these men until the time comes when we can get action.

I also hold in my hand a photostatic copy of a list of members of the German-American Bund and the occupations they hold in the United States. They are working in key industries of this country. Eight months ago we submitted to the Federal Bureau of Investigation a list of more than 2,000 German Bundists who are working in the national-defense industries of this country. In Chicago the German Bund was composed entirely of citizens of the German Government, and they hold key positions in some of the national industries in Chicago. These people must be driven from our national-defense industries.

Yesterday on the floor of this House I called attention to the critical situation which has arisen in the aircraft industry on the Pacific coast, due to a piece of deliberate sabotage engineered by a leading Communist Party member sent to the Pacific coast from Toledo.

Today there is an important sequel to the facts which I presented yesterday. This sequel is as important as the original set of facts.

When we began our investigation of the strike situation at the Harvill plant in Inglewood, Calif., we established the fact that the strike leader there was one Kenneth Eggert who has recently been the section organizer for the Communist Party in Toledo, Ohio. We further established the fact that Eggert was sent to the Pacific coast by the Communist Party for the express purpose of sabotage of our national-defense program.

In typical Communist fashion, Eggert then attempted to conceal his identity by a change of his name. When approached by our investigator in California a few days ago, Eggert loudly proclaimed that he was not Eggert but Eckert. Of course, there is no way of telling, many times, what a Communist's real name is. The Communist Party, being a conspiratorial organization, practices concealment by the use of aliases. What we do know, however, is that the man on the Pacific coast who declared to our investigator that his name was "Eckert" is the same man who operated in Toledo, Ohio, under the name of "Eggert." His real name may be either of these or something entirely different.

After having made a feeble attempt to deny his identity, Eggert or Eckert last night admitted his Communist Party affiliation. I hold in my hand a telegram from our California investigator stating that Eggert or Eckert has made this admission.

It is also highly important that the California president of the C. I. O. Diecasters Union attempted to conceal the true facts in this case by stating to the press yesterday that "he did not know a Kenneth Eggert, named in Washington today by Representative MARTIN DIES as a Communist." This statement made by John Marcotti, California president of the C. I. O. Diecasters Union, was in effect a falsehood. Marcotti knows Eggert or Eckert very well and has been actively working with him in the Harvill strike.

This case illustrates one of the difficulties which we face in our investigation, but what is even more important it illustrates something of the menace to our national security which arises from the tactics of the Communist Party. Those tactics are everywhere characterized by concealment, subterfuge, intrigue, lying, fraud, and the use of aliases.

There are those who have been hoping for a long time that the C. I. O. would take effective measures to purge its ranks of the Communists who have penetrated it so all-pervasively. That hope seems to have been a fond illusion. Instead of stating to the public that Kenneth Eggert or Eckert would be removed promptly from his leadership in the Harvill strike, the president of the C. I. O. union undertook to shield him and to destroy the facts in the case.

From all over the country, we have reports based upon thorough investigation by our committee's agents, which reports reveal that the Communist Party was never more active and never more successfully active than it is today in its program of sabotage. The party is engaged in a highly organized effort to undermine

the very foundations of our national security.

This morning, I call to your attention another situation which vitally affects our national-defense program. For weeks there has been a strike at the International Harvester plants in the vicinity of Chicago. The union involved in this serious stoppage of our defense program is the C. I. O. Farm Equipment Workers Organizing Committee. Negotiations in that case are now deadlocked. The strike has been going on for weeks. Both the union leaders and the strike leaders at International Harvester are known Communists. Here are just a few of the facts in this case:

Dewitt Gilpin, a leader of the strike at International Harvester, has been a regular correspondent for the Communist Party's Daily Worker for many years. He was also connected with the American League Against War and Fascism. Gilpin is the educational director of the Farm Equipment Workers Organizing Committee. As long as these C. I. O. unions retain known Communists in such important posts as those of educational director and strike leaders, just so long must the verdict stand that these unions constitute a menace that we dare not ignore. In coddling these unions and their Communist leaders on the shabby pretext of friendship for organized labor, we do organized labor a great disservice, but what is more important we take a viper to the bosom of our national security.

I could, if time permitted, give you in detail the Communist records of all the leaders of the strike at International Harvester. Those records are not guesses or hearsay. They are indisputably factual.

LOS ANGELES, CALIF., *March 19, 1941.*
Representative MARTIN DIES,
Chairman of the Un-American Activities Committee, House of Representatives, Washington, D. C.:

Negotiations for the settlement of differences between my company and the United Automobile Workers of America, Local No. 683, completely broke down when Kenneth Eckert from Toledo, Ohio, entered the negotiations. Your statement regarding a man named Eggert indicates beyond doubt he and Eckert are one and the same. Eckert refused to abide by negotiations completed prior to strike and entered first negotiations meeting unprepared to present claims for union, further delaying this vital national-defense industry strike. Our inability to furnish die-cast parts to the aircraft industry threatens to stop producton of military aircraft on Pacific coast. We refuse to negotiate with such radical elements and lawbreakers who ignore local antipicketing laws, nonloitering laws, and injunctions of the Superior Court of State of California.

H. L. HARVILL,
President,
Harvill Aircraft Die Casting Corporation.

Eggert tonight admitted party affiliation. No picture available due to "goons." He drives tan Buick coupe, 1941 Ohio license No. 9900C.

STEEDMAN.

The Securities and Exchange Commission Demands Disintegration of the Commonwealth & Southern

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, at last the Securities and Exchange Commission is beginning to function as Congress intended, and to enforce the Holding Company Act, as the law provides. From the morning paper we notice that the Commission is going to compel the dissolution of the Commonwealth & Southern, that "Grecian horse" that Wendell Willkie helped to create.

Of course, Mr. Willkie bailed out in time with his Wall Street parachute, using the Republican Party as a fire escape; and he is now using national defense as a storm cellar to escape the righteous wrath of an outraged public opinion, while the American people are left holding the bag. [Laughter and applause.]

The Securities and Exchange Commission is demanding that this law be complied with, and that this vast, useless holding company known as the Commonwealth & Southern be dissolved.

Mr. RICH. Will the gentleman yield?

Mr. RANKIN of Mississippi. I yield for a question.

Mr. RICH. This national-defense question has taken the gentleman down the road, and he is one of them that is riding along, if he will look at his vote of yesterday. He has gone down the chute.

Mr. RANKIN of Mississippi. Now there is a Daniel come to judgment. He is one of the victims of this utility racket and does not seem to realize it.

Mr. RICH. I am trying to save this Nation. I am not trying to save Mr. Willkie.

Mr. RANKIN of Mississippi. That is not necessary; if he does not take care of himself, Wall Street will look after him.

In the creation of the Commonwealth & Southern these manipulators combined four companies, the Allied Power & Light Corporation, the Penn-Ohio Edison Co., the Commonwealth Power Corporation, and the Southeastern Power & Light Co., which had total ledger-value securities on their books of $340,896,260.27. They put these companies all together and organized the Commonwealth & Southern and put these same securities on the books of the new corporation that same day at $872,101,832.19—a write-up of $531,205,571.92.

With one stroke of the pen they inflated those values, or watered them, if you please, by more than $531,000,000, and then proceeded to sell securities against those inflated valuations. That is what is known as thievery within the law. Anybody without the protection of Wall Street who had perpetrated such a fraud and used the mails in connection with it would have been prosecuted without stint or limit.

We passed the Holding Company Act for the purpose of breaking up these far-flung holding companies, and I am glad to note that the Securities and Exchange Commission proposes to carry out the provisions of the law and compel the Commonwealth & Southern to divest itself of control of operating power companies in different sections of the country.

I hope they speed up this proceeding and then follow the same course with the Electric Bond & Share and every other one of these large holding companies that are now operating in violation of the Holding Company Act.

Under permission granted me to extend my remarks in the RECORD, I insert a release issued by the Securities and Exchange Commission giving a synopsis of this case, including the Commission's order.

The matter referred to follows:

[United States of America, before the Securities and Exchange Commission. At a regular session of the Securities and Exchange Commission, held at its office in the city of Washington, D. C., on this 19th day of March, A. D. 1941. In the matter of the Commonwealth & Southern Corporation and its subsidiary companies, respondents. File No. 59-8]

STATEMENT OF TENTATIVE CONCLUSIONS OF THE COMMISSION AND NOTICE OF AND ORDER RECONVENING HEARING PURSUANT TO SECTION 11 (B) (1)

Pursuant to respondents' request and the Commission's undertaking in its opinion dated June 1, 1940, there are set forthwith hereinafter the tentative conclusions of the Commission as to the action which the respondents should take under the provisions of section 11 (b) (1) of the Public Utility Holding Company Act of 1935. In view of the fact that these conclusions are expressed prior to the taking of testimony, as a result of the request of the respondents made at the outset of the hearing, the views here expressed must of necessity be entirely tentative in character.

To aid the Commission in arriving at its conclusions, the Commission directed its staff to prepare a report setting forth informative data with respect to the holding-company system of the Commonwealth & Southern Corporation and suggesting the application of the pertinent provisions of the act. Such a report has been prepared and has been filed as a part of the public proceedings in this case; copies of the report will be furnished to the respondents simultaneously with the issuance of this statement.

I. APPLICABLE STATUTORY PROVISIONS

For convenience, we repeat here the full text of the principal statutory provisions applicable to the present proceedings.

Section 11 (b) (1) of the act provides:

"(b) It shall be the duty of the Commission, as soon as practicable after January 1, 1938:

"(1) To require by order, after notice and opportunity for hearing, that each registered holding company, and each subsidiary company thereof, shall take such action as the Commission shall find necessary to limit the operations of the holding-company system of which such company is a part to a single integrated public-utility system, and to such other businesses as are reasonably incidental, or economically necessary or appropriate to the operations of such integrated public-utility system: *Provided, however,*

That the Commission shall permit a registered holding company to continue to control one or more additional integrated public-utility systems, if, after notice and opportunity for hearing, it finds that—

"(A) Each of such additional systems cannot be operated as an independent system without the loss of substantial economies which can be secured by the retention of control by such holding company of such system;

"(B) All of such additional systems are located in one State, or in adjoining States, or in a contiguous foreign country; and

"(C) The continued combination of such systems under the control of such holding company is not so large (considering the state of the art and the area or region affected) as to impair the advantages of localized management, efficient operation, or the effectiveness of regulation."

The Commission may permit as reasonably incidental or economically necessary or appropriate to the operations of one or more integrated public-utility systems the retention of an interest in any business (other than the business of a public-utility company as such) which the Commission shall find necessary or appropriate in the public interest or for the protection of investors or consumers and not detrimental to the proper functioning of such system or systems.

Section 2 (a) (29) is as follows:

"(29) 'Integrated public-utility system' means—

"(A) As applied to electric utility companies, a system consisting of one or more units of generating plants and/or transmission lines and/or distributing facilities, whose utility assets, whether owned by one or more electric utility companies, are physically interconnected or capable of physical interconnection and which under normal conditions may be economically operated as a single interconnected and coordinated system confined in its operations to a single area or region, in one or more States, not so large as to impair (considering the state of the art and the area or region affected) the advantages of localized management, efficient operation, and the effectiveness of regulation; and

"(B) As applied to gas utility companies, a system consisting of one or more gas utility companies which are so located and related that substantial economies may be effectuated by being operated as a single coordinated system confined in its operations to a single area or region, in one or more States, not so large as to impair (considering the state of the art and the area or region affected) the advantages of localized management, efficient operation, and the effectiveness of regulation: *Provided*, That gas utility companies deriving natural gas from a common source of supply may be deemed to be included in a single area or region."

Interpretation of clause (B)

In our statement of tentative conclusions issued January 18, 1941, in the proceedings similar to this involving the United Gas Improvement Co.[1] we tentatively concluded that the standard established by clause (B) of section 11 (b) (1) meant that a holding company might continue to control an integrated public-utility system or systems additional to the "single" integrated public-utility system referred to in section 11 (b) (1) only if all such additional system or systems are located in the same State or States in which the "single" system is located, or in States adjoining thereto.[2] We follow this tentative conclusion as to the interpretation of clause (B) and have used it in reaching the tentative conclusions hereafter set forth with respect to the holding-company system of the Commonwealth & Southern Corporation.

II. THE PROCEEDINGS TO DATE

The Commonwealth & Southern Corporation registered as a holding company under the Public Utility Holding Company Act of 1935 on March 25, 1938. On March 6, 1940, we issued a notice of and order for hearing pursuant to section 11 (b) (1) of the act with respect to the Commonwealth & Southern Corporation and its subsidiary companies. We then stated that it appeared that the Commonwealth & Southern Corporation holding-company system was not confined in its operations to those of a single integrated public-utility system and to such other businesses as were reasonably incidental or economically necessary or appropriate to the operations of such a system within the meaning of the act.

Subsequent thereto the Commonwealth & Southern Corporation and various of its subsidiary companies requested that they be furnished with a statement of the Commission setting forth the Commission's tentative conclusions with respect to what action the Commission tentatively believed would be required by section 11 (b) (1) of the act. The respondents' request was similar to that made by the respondents in the similar proceeding involving the United Gas Improvement Co. and the Commission, by memorandum opinion filed June 1, 1940 (Holding Company Act release No. 2083), stated that it would grant the request in the same manner as it had undertaken in the United Gas Improvement Co. matter.[3] The proceedings have been held in abeyance pending the preparation and issuance of the Commission's statement of tentative conclusions.

III. APPLICATION OF STATUTORY STANDARDS

The notice of and order for hearing in itself shows that the present holding-company system of the Commonwealth & Southern Corporation is engaged in extensive electric and gas operations in a number of States scattered in different parts of the United States. The extent to which these operations are scattered is particularly shown by the maps included in that notice, and the nature and character of the operations are described in more detail in the staff report. Various nonutility businesses are also conducted by certain of the subsidiaries of the Commonwealth & Southern Corporation.

In the light of the facts as they now appear to us, we proceed to set forth our tentative conclusions as to the application of the statutory standards to the Commonwealth & Southern Corporation and its subsidiary companies.

Effect of clause (B) of section 11 (b) (1)

The interpretation which we have tentatively adopted of clause (B) of section 11 (b) (1)[4] necessitates the following conclusions:

(a) If one or more of the properties of Consumers Power Co. (located in Michigan) is considered as the "single" system, there cannot be retained under common control therewith any of the southern properties of the holding-company system (i. e., any of those located in Mississippi, Alabama, Georgia, Florida, or South Carolina) nor any of the properties located in Illinois or Pennsylvania.

(b) If one or more of the properties of Alabama Power Co. is considered as the "single" system, there cannot be retained any of the northern properties of the holding-company system (i. e., any of those located in Michigan, Illinois, Ohio, or Pennsylvania) nor any of the properties located in South Carolina.

(c) If one or more of the properties of Georgia Power Co. is considered as the "single" system, there cannot be retained under common control therewith any of the northern properties of the system nor any property located in Mississippi.

(d) Properties of Ohio Edison Co., located in the neighborhood of Akron and Youngstown, Ohio, are interconnected with and form a single integrated public-utility system with the electric properties of Pennsylvania Power Co. Consequently, since the Pennsylvania properties may not be retained under common control with any property located in Michigan, the eastern properties of Ohio Edison Co. may not be retained under such control within the requirement of clause (B), unless they are separated from the Pennsylvania properties, a result which would not appear to be economically sound.

Application of size standard of sections 2 (a) (29) and clause (C) of section 11 (b) (1)

Under the size limitation contained in section 2 (a) (29) and in clause (C) of section 11 (b) (1), no single integrated public-utility system, nor any combination of such systems permitted to be retained under common control, may be "so large (considering the state of the art and the area or region affected) as to impair the advantages of localized management, efficient operation, and the effectiveness of regulation." We do not deem it necessary at this time to suggest tentative conclusions as to whether the properties now owned and operated either by Consumers Power Co., Alabama Power Co., or Georgia Power Co. are as to any one of these respective States too large for localized management, efficient operation, or effective regulation. We believe it suffices for the present purpose to reach the tentative conclusion that each of these State-wide areas either exceeds, or in any event approaches, the maximum size which can be so retained consistently with the statutory requirements. In this connection it may be observed that each of these three companies serves an area over the major part of the States served. Even within such areas it may be difficult to find that management can be localized or to conclude that regulation can be effective over companies which dominate whole States. In any event, we conclude that no substantial amount of utility property may be retained under common control with properties now constituting either those of Consumers Power Co., Alabama Power Co., or Georgia Power Co.

If our tentative conclusion on this point stands, the effect will be to make impossible the retention under common control with Consumers Power Co. any of the other properties of the holding-company system, or the retention under common control with any of the properties of Alabama Power

[1] *In the Matter of The United Gas Improvement Company* (File No. 59-6, Holding Company Act Release No. 2500).

[2] Some of the considerations upon the basis of which the Commission reached the tentative conclusions then adopted were set forth in a memorandum dated January 8, 1941, to the Commission from the Public Utilities Division, which memorandum was made public at the time of the issuance of our statement of tentative conclusions in the United Gas Improvement Company matter (Holding Company Act Release No. 2500); copies of this memorandum are available on request.

[3] For the Commission's views as to the considerations leading to the issuance of this statement, see *In the Matter of United Gas Improvement Company* (Holding Company Act Release No. 2065).

[4] Requiring that all additional systems be located in States adjoining the State where the "single" system is located; see *In the Matter of The United Gas Improvement Company* (footnote 1, supra).

Co., either any of the northern properties or any property now owned by Georgia Power Co.[8] or South Carolina Power Co. Similarly, there could not be retained under common control with the properties of Georgia Power Co. either any of the northern properties or any properties of Alabama Power Co., Mississippi Power Co., or Gulf Power Co. We leave open for further consideration the question of whether any of the properties now owned by Mississippi Power Co. or by Gulf Power Co. might be retained under common control with any of the property now owned by Alabama Power Co.; similarly we leave open for further consideration the question of whether any property now owned by South Carolina Power Co. may be retained under common control with any property owned by Georgia Power Co.

The various properties of Central Illinois Light Co., Southern Indiana Gas & Electric Co., and the two separated properties of Ohio Edison Co. (the Akron-Youngstown area and the Springfield area) are widely separated to distance and are not coordinated with each other. We tentatively conclude because of the distances separating these properties and the lack of present interconnection or coordination between them, no combination of any of these properties may be retained under common control consistently with the statutory requirements of localized management, efficient operation, and effective regulation.

Application of clause (A) of section 11 (b) (1)

Under the provisions of clause (A) of section 11 (b) (1) no additional system can be retained under common control with the "single" system unless such additional system "cannot be operated as an inedependent system without the loss of substantial economies which can be secured by the retention of control by such holding company of such system."

Consumers Power Co., Central Illinois Light Co., Southern Indiana Gas & Electric Co., Ohio Edison Co., and Pennsylvania Power Co., each have their own officers. With the exception of the Pennsylvania-Ohio interconnected system, they are operated separately and are not coordinated in their physical operations. The only common element of operations is the fact that each of these companies obtains service from the same service company and is controlled by the same holding company. Similarly, the Springfield Division of the Ohio Edison Co. operate separately and is neither interconnected nor operated with the remaining property of that company.

Under these circumstances we tentatively conclude that neither the properties of Central Illinois Light Co., Southern Indiana Gas & Electric Co., the Springfield Division of Ohio Edison Co., the interconnected Pennsylvania-Ohio property, nor the Akron-Youngstown Division of Ohio Edison Co., nor Pennsylvania Power Co. considered separately, could qualify for retention as an "additional system" to those of Consumers Power Co., or as additional systems to each other (except as to the interconnected Pennsylvania-Ohio group), under the limitations imposed by clause (A) of section 11 (b) (1).

For the purposes of this statement we do not deem it necessary to consider the application of clause (A) to any of the Southern properties of the holding company system.

[8] A minor exception to this conclusion involves the Credille property owned by Georgia Power Co. and located in Georgia which is interconnected with and operates with the properties of Alabama Power Co.; another possible exception involves the gas property located in Phenix City, Ala., which is interconnected with and operates on a coordinated basis with the Columbus City gas property of the Georgia Power Co.

Other businesses

With the consent of the respondents we have already directed Tennessee Utilities Corporation to sell the various transportation and other properties which it owns, such sale to be completed on or before July 1, 1942.

The General Corporation and Transportation Securities Corporation conduct, either directly or through subsidiaries, ice, transportation, and other businesses located in various States. Certain of the utility subsidiaries of the holding company system also themselves operate, either directly or through subsidiaries, certain transportation, water, ice, heating, and other businesses other than electric or gas utilities. We conclude that none of such businesses are reasonably incidental or economically necessary or appropriate to the operations of any of the electric or gas utility properties controlled by the holding company system or by any of its subsidiaries, and are therefore not possible of retention within the holding company system of a registered holding company.

The Commonwealth & Southern Corporation (New York) is a mutual service company rendering services to all of the various subsidiary companies of the holding company system. In view of the conclusions hereafter reached, we conclude that the business of this service company, as presently constituted, is not reasonably incidental or economically necessary or appropriate to the operations of any of the utility properties.

Tentative conclusion as to holding company

Summarizing the foregoing, we conclude tentatively that, if the property of Consumers Power Co. is considered as the "single" integrated public utility system, the Commonwealth & Southern Corporation can retain no other properties; that if the "single" system is located in Alabama, no other properties can be retained with the possible exception of those located in Mississippi and Florida; and that if the "single" system is located in Georgia, no other properties can be retained with the possible exception of those in South Carolina. From this it would seem to follow that the Commonwealth & Southern Corporation cannot continue to control more than one of its major units of property.

V. ORDER RECONVENING HEARING

It is hereby ordered that—

1. The hearing heretofore commenced in this proceeding shall be reconvened on April 3, 1941, at 10 o'clock in the forenoon of that day at the offices of the Securities and Exchange Commission, 1778 Pennsylvania Avenue NW., Washington, D. C., in such room as may be designated on such date by the hearing-room clerk in room 1102, before the officer of the Commission heretofore designated to preside at the hearing previously commenced, or before such other officer as the Commission may hereafter designate. The officer so designated to preside at such reconvened hearing is hereby authorized to exercise all the powers granted to the Commission under section 18 (c) of said act and to a trial examiner under the Commission's rules of practice.

2. At the outset of said hearing, to be reconvened as aforesaid, the respondents and other parties in interest shall be given an opportunity to be heard with respect to the statements of fact contained in the aforesaid report of the Public Utilities Division, heretofore filed as part of the public proceeding in this case, and all such persons shall have an opportunity and are invited to state at that time any differences which they may have with respect to any of the facts contained in said report of the Public Utilities Division, and all such persons shall have an opportunity to be heard with respect to the allegations contained in paragraphs 1 to 47, inclusive, of the aforesaid order of March 6, 1940.

3. At such time the respondents shall state what properties they believe constitute the "single integrated public-utility system" to the operations of which they believe their holding-company system should be limited, as provided in section 11 (b) (1) of the Public Utility Holding Company Act of 1935, and said respondents shall also state what other systems, if any, they claim to be entitled to retain as additional systems pursuant to the proviso embodied in clauses (A), (B), and (C) of said section 11 (b) (1), and shall state what other businesses they claim are reasonably incidental or economically necessary or appropriate to the operations of such integrated public-utility systems as said respondents wish to retain.

4. At such time said respondents and all other parties in interest shall be given an opportunity to be heard for the purpose of showing cause why an order should not be entered pursuant to section 11 (b) of said act, requiring—

(a) The divestment of control by the Commonwealth & Southern Corporation of either:

(1) Its northern properties, comprising all of its utility assets located in the States of Michigan, Illinois, Indiana, Ohio, and Pennsylvania; or

(2) Its southern properties, comprising all of its utility assets located in the States of Mississippi, Alabama, Florida, Georgia, and South Carolina;

(b) The divestment of control by the Commonwealth & Southern Corporation of all of the utility assets owned by Central Illinois Light Co. and of the utility assets comprising the interconnected electric facilities owned by Ohio Edison Co. and Pennsylvania Power Co.;

(c) The divestment of control by the Commonwealth & Southern Corporation, if, pursuant to clause (1) of paragraph (a) above, it divests itself of its northern properties, also of either:

(1) The utility assets owned by Alabama Power Co., Mississippi Power Co., and Gulf Power Co.; or

(2) The utility assets owned by Georgia Power Co., and South Carolina Power Co.

5. At such time consideration will also be given, and respondents and all other parties in interest shall have an opportunity to be heard, with respect to the time and manner for disposition of any other issues presented in these proceedings.

It is further ordered that the Secretary of the Commission shall serve notice of the said reconvened hearing by mailing a copy of this order, together with a copy of said report of the Public Utilities Division, dated March 10, 1941, by registered mail to The Commonwealth & Southern Corporation, to each of the attorneys of record herein, and to each of the interveners herein, and that notice of the reconvening of said hearing is hereby given to the said respondents and interveners and to all other persons, including the security holders and consumers of the said respondents, to all States, municipalities, and political subdivisions of States within which are located any of the utility assets of any of the companies of the Commonwealth & Southern Corporation holding-company system, or under the laws of which any of the respondents are incorporated, to all State commissions, State securities commissions, and all agencies, authorities, or instrumentalities of one or more States, municipalities, or other political subdivisions having jurisdiction over any of the businesses, affairs, or operations of any of them, such notice to be given by publication of this order in the Federal Register and by publication of this order as a general release, distributed to the press and mailed to the mailing list

for releases issued under the Public Utility Holding Company Act of 1935.

It is further ordered that jurisdiction be and is hereby reserved to separate, either for hearing, in whole or in part, or for disposition, in whole or in part, any of the issues or questions which may arise in these proceedings, and to take such other action as may appear conducive to an orderly and economic disposition of the issues involved.

By the Commission.

[SEAL] FRANCIS P. BRASSOR,
Secretary.

New Industries for the New South

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

ADDRESS BY DAVID E. LILIENTHAL

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by David E. Lilienthal, Director, Tennessee Valley Authority, at the Southern Scientist Symposium held at Mobile, Ala., March 20, 1941:

Seven years ago the Tennessee Valley Authority began its program of industrial research. Our purpose was to uncover new opportunities for the development by businessmen and farmers of the resources of the South. This pioneering activity of the T. V. A. has developed, year by year, until today it is the most extensive regional public research development in the country. These efforts have produced practical results, new industries, newly invented products and equipment, in profitable use in private business.

You and I are gathered here because of our common interest in southern economic development through science and technical skills. Since one example is usually worth an hour's generalization, for my part in the discussion I can do no better than to set out, as specifically and concretely as possible, some of these practical and tangible results of T. V. A. industrial research. Since this is a program in action, such a description of what has been done and why it has been done will, I trust, be stimulating to you as you plan for the future expansion of technical research in the South.

There are certain principles upon which we in T. V. A. have proceeded in this work. Because of the limitation of time today, I shall simply state these propositions without spelling out the supporting reasons. A decade or so ago the way some of these principles might work out would have aroused no end of controversy; that is no longer true today. Even the past few years have brought a great change in this respect. Five years ago I spoke at commencement at the University of Alabama on some of these underlying propositions. Even in the brief span of those 5 years there has come a marked degree of agreement upon these principles.

THE FIVE PILLARS SUPPORTING THE T. V. A. INDUSTRIAL RESEARCH PROGRAM

The T. V. A.'s industrial research program rests mainly upon these five propositions:

(1) It is in the interest of the entire country that the income of the South be greatly increased above its present low level.

(2) An increase in the income of the South requires a drastic change in our way of making a living, a greater reliance upon the manufacturing or processing of the raw materials of the South, and less reliance upon shipping those raw materials out of the region in their raw state or only partly processed.

(3) An industrial development program for the South should so far as possible originate in southern needs and opportunities and be directed toward meeting southern problems. To be truly successful, our industrial development cannot merely ape that of other regions of the country.

(4) Industrial development that drains and exhausts our basic resources, that puts the whole region in the red, is bad business, even if it shows a paper profit to a limited number for the time being.

(5) New industries for the new South must come from a partnership of the scientist, the engineer, and the businessman.

COTTONSEED-MACHINERY INVENTION AS ILLUSTRATION

To illustrate the T. V. A.'s research program, I have chosen one project: The development of a new method of obtaining oil from the cottonseed. This one illustration will throw light upon the content and methods of the entire effort. There are many others—a new quick-freezing machine which a few days ago we licensed for commercial use to a firm in Alabama; a method of producing alumina from the clays of the South; the list is long and covers many fields. I have chosen the cottonseed process because in this one illustration there are embodied probably more phases of the T. V. A.'s procedure than in any other single illustration.

The first development of this project was a new device for the cooking of cottonseed under pressure. The result is a drastic improvement in the yield and quality of oil from cottonseed. This machinery has gone successively through the laboratory and the pilot plant stages; the machinery has now been manufactured under license by a number of private firms and has been purchased and is in use in 13 cotton-oil mills in six States of the South. Businessmen and the association of the cottonseed industry have pronounced the development a practical and financial success.

Let me carry you through the various steps in this development. First of all was the problem that led to the research. It seems to me important that souhern research originate in problems peculiar to the South. That was notably true in the case of this project. For the cottonseed-oil industry is substantial in size. There are in the South some 420 cotton-oil mills. Their purchases of cottonseed and the methods of marketing the resulting product exert a strong influence on cotton agriculture and the fortunes of all who depend upon cotton for a livelihood. And the fate of southern soil fertility is tied up with the cottonseed-oil industry. It is in the cottonseed meal rather than in the cotton fiber that the three major mineral elements conained in commercial ferilizer are to be found: Phosphorus, potash, and nitrogen. The more cottonseed meal sold and used outside the Cotton Belt, the more of these essential plant nutrients we ship out and lose each year. Therefore, the southern farmer must continually buy in commercial fertilizer, the very same plant nutrients that are contained in the cottonseed meal. But ordinarily what he nets from his cotton crop is not enough to buy back anything like the quantities of plant food elements which he ships out. And so our soil declines in fertility, and the economic opportunity of those who depend on the land—and that means all of us—shrinks.

Over the South as a whole, the general practice is for a large proportion of the cottonseed meal to be marketed outside the South. This export of cottonseed meal over the last 75 years has been one of the major causes of the exhaustion of the soil of the Cotton Belt, and in turn, of low income. If this meal can be fed to livestock in the South, as much as 80 percent of the fertilizing value of the meal may be returned to the soil rather than being continuously drained from the soil by export.

And so to improve the chance of profit by these cotton-oil mills—they are, typically, small local industries—is a matter of great concern. If the cottonseed extraction business could be put on a paying basis in the South, benefits would result not only to them but to the entire region.

The cotton-oil industry has been in considerable difficulties. Hundreds of the small mills have been operating for years at a very low rate of return. The equipment used in the extraction of cottonseed oil has not been improved for over 50 years. If it is to survive, if it is to be able to provide local opportunity to return plant nutrients to the soil, the small southern cotton mill must have earnings sufficient to improve its equipment and keep up with the technical advance of the industry.

Here, then, is a typical southern problem for industrial research. The results that have been reached—the practical, tangible results that you can see and weigh and appraise—were achieved through the teamwork of scientists, engineers, and businessmen. This is how the project proceeded from an idea to a manufactured product bought and sold in the marketplace.

For a number of years, begining in 1929, laboratory research on this problem of improving cottonseed oil extraction methods went forward at one of our southern universities. The work in the laboratory was on a very modest scale; but it showed pretty conclusively that the laboratory process, if fully developed and applied, had great practical potentialities. But you cannot determine costs nor solve practical operating difficulties in test tubes. And you cannot convince businessmen that a new process will be profitable and justify private investment on the basis of laboratory results alone. What is required is that the preliminary experiments be advanced to the semicommercial scale. In other words, a so-called pilot plant must be constructed and operated. The Tennessee Valley Authority, having made some contribution to the laboratory work, at this point joined with the University of Tennessee College of Engineering in the work of designing and building a pilot plant pressure cottonseed cooker, in which the new process discovered in the laboratory could be tried out at full-plant scale. At this stage, leading operating executives in the coton-oil industry, who had been following this research with interest, agreed to supply additional equipment at their expense, such as crushing rolls, a huge press, a high-pressure hydraulic pump and accumulator, and other equipment.

The example we have been discussing indicates one way—not the only way by any means—of overcoming the handicap that businessmen of this region suffer in the initiation of new enterprises that depend upon research. The concentration of existing industry in the Northeast carries with it a similar concentration of research facilities in that region. In this and other cases T. V. A. has helped in bringing research to the place where businessmen could see possibilities of profit, and could therefore see their way clear to carry the financial burden involved in the research.

The net result is that the South now has a completely equipped pilot plant for mechanical processing of cottonseed and other oil-bearing products. This establishment includes not only excellent laboratory apparatus and competent laboratory personnel but also a fully equipped cotton-oil plant capable of turning out 18,000 pounds of meal and 6,200 pounds of oil per day. With this equipment, the practical difficulties and

problems of actual operation in this industry could be resolved, and data to estimate costs and profitability could be obtained. This work required a year of pilot-plant operation and experimentation.

The problem that we next faced was how to get these results into use; how to bridge the gap between a successful piece of industrial research and its use at a profit by private industry, especially when this involves a new process and new machinery. This problem was solved through the services of a nonprofit research corporation, the directors of which are prominent businessmen. This corporation agreed to act as the agent of the T. V. A. and the University of Tennessee in commercializing the new invention. The research corporation licensed three machinery manufacturers to build these new pressure cookers for cottonseed mills—the Davidson-Kennedy Co. of Atlanta, the V. D. Anderson Co. of Cleveland, Ohio, and the French Oil Mill Machinery Co., of Piqua, Ohio. Each of these companies received assurances that no other manufacturer would be given more favorable terms and each pays a modest license fee into a revolving fund. This fund may be used for further research.

The use of the financial income derived from public industrial research to carry on further research is an interesting aspect of this program. The principle has been used successfully on a large scale by an institution known as the Research Corporation of New York. While the revenues in the early stages of the T. V. A.'s work are small, in the long run they will undoubtedly be substantial and will permit other industrial research uncovering additional opportunities for industrial processing of southern products.

Now we come to the final stage of this story: The sale of this new machinery by these private manufacturing concerns to cotton-seed mills. Among the southern mills in which this equipment has recently been installed are Taylor Oil Mills, at Moultrie, Ga.; Delta Products Co., Wilson, Ark.; Terminal Oil Mill, Oklahoma City, Okla.; the P. M. B. Self Mill at Marks, Miss., and nine other cotton-oil mills in the South.

As I have said, there are many other results of the T. V. A. cooperative industrial research program which could be cited. Some of them were carried on wholly in T. V. A.'s laboratories, the total expense being borne by the Federal Government. One example is the production of alumina from clays; another is the production of an almost 100-percent plant food, known as potassium metaphosphate. Both of these are carried on through various stages at the national laboratory T. V. A. operates at Muscle Shoals. In most cases, however, the research involves cooperation between T. V. A.'s technicians and the various research institutions of the South, public and private. For we in the T. V. A. are persuaded that the best results are obtained by such joint activities between this Federal regional agency and the established State and communnity institutions of the South.

I am attaching to this paper as an appendix a fairly comprehensive list of these research projects, some of which are in early stages and some of which, such as the cottonseed-processing machinery, are actually in use in private enterprise.

Every instance of technical research that leads to practical results for the people of the South must go through somewhat the same steps as those I have outlined. And that is true whether the research is conducted by a private concern or by public institutions. Let us go over those steps again.

First, there must be a valuable idea. Whether the invention is carried on in a solitary way by an Edison or the Wright Brothers, or whether it emerges from a huge modern laboratory like du Pont's or A. T. & T. or T. V. A., we begin with an idea. In the case of southern research projects, the idea, it seems to me, should be directed toward the solution of some specific southern problem to fill some characteristically southern need. The utilization of the fast-growing southern pine for newspaper print, the discovery of a commercial product which can be made from the southern sweetpotato—this is the kind of problem toward which all of our research activities in this field may well be turned.

Then the new idea must be explored in a laboratory—explored from every possible viewpoint. A research worker in that laboratory must try it out in various ways. He must sometimes reject ways which have no apparent use at the moment. He must determine upon some industrial utilization which seems practical. Then he must conduct many, many tests in order to be assured of its practicability. These operations are ordinarily carried on in scientific or engineering laboratories.

There can't be too much support and stimulation given to the ideas of these men in the research field. What goes on in one laboratory stimulates the workers in others, and the problems are so extensive and so great that large numbers of inspired research men everywhere throughout the South are needed.

But after the men in the laboratory have discovered a new product or process, the job is only one-third done. The next one-third of the job ordinarily consists of solving the engineering problems. If it is a new product, such as making a plastic from cottonseed hulls (like this sample I have in my hand, made on a T. V. A. cooperative research project), a man working in a laboratory must produce some of it in order to see what kind of machinery is going to be needed to make the product in quantities. If we are talking about a completely new process, there is frequently the job of actually designing the necessary machinery. In the case of the new process for extracting cottonseed oil, to which I have previously referred, mechanical engineers had to design, build, and test a pressure cooker.

The next third of the job, and I am inclined to think it is much more than a third in most cases, is for the businessman. It is the job of finding where and how to break into the business world with the new product or process and make a commercial success of it. This means he must be able to make a profit in so doing, and that is a long story, as many of you well know. It takes the special skill and judgment that only good businessmen have; and it takes faith, and often courage, and always patience and persistence.

Consider, for instance, the cottonseed cooker to which I have referred. After the Davidson-Kennedy Co., of Atlanta, had been completely convinced of the feasibility of the pressure-cooking process, and had actually seen a successful cooker, made by T. V. A. engineers, in operation, there was plenty more to do. They had to put their engineers to the job of changing the design of the cooker so that it would synchronize with the other customary process machinery for cotton-oil mills which they also manufacture. While the pilot plant cooker was large enough for the smallest mill, Davidson-Kennedy had also to build larger equipment; and this required that the engineers do more design work. The Davidson-Kennedy Co. then had to test their own design to make sure that no mistakes had crept in, and this involved selling several cookers, on approval, to oil mills, guaranteeing to take them back without cost in case they should fail to perform according to expectation. The company then had to get out photographs and catalogs of the new equipment. It had to call all its salesmen in and convince them of the soundness of the idea, for unless they were convinced they would be poor hands at convincing potential buyers. The Davidson-Kennedy Co. had to arrange with its directors to finance the cookers which were to be sold on approval and which would bring them no money for some time.

In this process of commercialization of a new development, particularly where inventions are involved, there is often the need for some practical channel of contact between public research and private business. One such channel of contact is well illustrated in Georgia, which has an Industrial Development Council. This organization is a corporation, nonprofit in character, under the leadership of prominent businessmen. It can receive inventions from public research agencies, and has provision to accumulate a fund from royalties on such inventions. Out of this fund it can finance further research. In addition, it can do the job of liaison between public research and private business.

The task of building southern income, the task of expanding southern manufacturing based upon materials and resources found in our own area, calls for teamwork between these three groups of workers: The scientists, the engineers, and the businessmen.

Here in the South we have men and institutions that can grow and develop to meet the very great, almost overwhelming, opportunities and problems of sound industrial development. No one of these three teammates can win this game alone. The scientist without the businessman will be carrying on research which will have no practical consequences for the people of the South. The engineer without his partners would be futile and useless, and the businessman without the aid of his technical brethren would make slow progress indeed. But when all three work together, we can look forward with confidence to the future.

We need not and should not rely upon any one method of stimulating new industries in this region. We need more public research by our State institutions and by the T. V. A.; we need more private research by industries having a long-time interest not only in their own business but in the foundations of all business in the South.

So far as the T. V. A. is concerned, we stand ready, willing, and eager to extend to every person and every southern institution, public and private, State and local, the fullest measure of cooperation in all such efforts that lies within our power.

There is one thought that is in the mind of every one of us at this grave time of actual danger to our country. That thought is the defense of our shores and the preservation of our freedom, without which nothing has meaning to us. It goes without saying that such a program as I have been describing is an integral part of a program of industrial preparedness and a means of increasing our national vigor. For whatever we do to strengthen the South will strengthen the entire Nation.

APPENDIX[1]

T. V. A. INDUSTRIAL RESEARCH—RESEARCH DEVELOPMENTS NOW IN COMMERCIAL USE (AS OF MARCH 1941)

A. Developments of new and improved methods for local processing of the region's raw materials

1. Immersion process and equipment for quick-freezing fruits, vegetables, fish, and meats.

2. Improved pressure cooker for cottonseed and other vegetable-oil seeds.

---

[1] Most of the following research developments have been conducted in cooperation with the region's engineering and agricultural experiment stations or State geology departments and have been tested in the field in cooperation with the State agricultural extension services and private operators.

8. Electric cabinet for aging hams and other meats.

4. Improved method of refining kaolin, in cooperation with private producer, and surveys of kaolin deposits in North Carolina.

5. Surveys of vermiculite deposits in North Carolina, with subsequent new mining developments by private producers.

B. Developments to encourage soil conservation and increased farm income

1. Furrow seeder for planting fall grains in hillside lespedeza sod.

2. Barn hay dryer to increase feeding value of hay and reduce weather losses.

3. Small thresher for recovery of grain and legume seed on small acreages.

4. Improvements to Lespedeza harvester with a self-raking type of feed pan for recovery of seed on small or rough acreages.

5. Community walk-in type refrigerator for use by rural groups.

6. Milk coolers for small dairy farms.

7. Irrigation systems, adapted to Tennessee Valley farm conditions.

8. Sweetpotato curing by electric heat, adapted to Tennessee Valley farm conditions.

9. Electric hotbeds, adapted to Tennessee Valley farm conditions.

10. Lespedeza seed scarifier of improved type.

DEVELOPMENTS STILL IN RESEARCH STAGE (AS OF MARCH 1941)

1. Portable quick-freezing machine of 100 to 200 pounds' hourly capacity.

2. Growing and development of suitable varieties of fruits and vegetables for quick-freezing and testing of such products on the experimental freezing machine.

3. Partial extraction of protein from cottonseed, prior to processing for oil and meal, for use in industry.

4. Microscopic studies of vegetable-oil seeds. New uses for peanuts.

5. Growing fiber flax suitable for processing and commercial uses.

6. Processing of southern flax to produce fiber suitable for spinning and weaving on cottol-mill machinery. Suitable equipment has been developed in laboratory, and pilot plant has been constructed to test processes on semicommercial scale.

7. Development of processes and equipment for new and wider uses of wood and other forest products: Automatic wood-burning dehydrator, portable wood fuel preparing apparatus, slow combustion wood-burning stove, and improved gas producer for converting wood and charcoal into fuel for internal-combustion engines.

8. Development of economical method for converting sawdust and waste wood into gas producer fuel.

9. Methods for small-scale low-cost production of paints from local materials for southern rural uses.

10. Development of automatic feeding device and control, for small feed grinders.

11. Extraction of magnesium metal and compounds from North Carolina and Georgia olivine, for use in airplane construction.

12. Tests on vermiculite concrete mixtures to determine physical properties and best mixtures for maximum strength and thermal insulation values, for wider use in building construction.

13. Development of new plastic material using mica from mica schist (large reserves in Georgia and North Carolina) and synthetic resin, for use in electric appliances.

14. Beneficiation of Georgia manganese ores.

The Public Life of R. Walton Moore

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

ADDRESS BY HON. JOHN W. FLANNAGAN, JR., OF VIRGINIA

Mr. FLANNAGAN. Mr. Speaker, on Tuesday evening, March 11, 1941, the Fairfax County Chamber of Commerce held a memorial service in honor of one of its distinguished charter members, the late Hon. R. Walton Moore, of Fairfax, Va., late Solicitor of the Department of State, and from 1919–31 a Member of this House. The meeting was presided over by Mr. Herbert Williams, president of the chamber of commerce, and former State Senator John W. Rust introduced the speakers. Resolutions drafted by Senator Rust, John W. Brookfield, and John T. Blincoe were adopted. The meeting was addressed by Senator TOM CONNALLY, of Texas; Hon. S. OTIS BLAND, of the First Congressional District of Virginia; Hon. John S. Barbour, of Fairfax, one of the most distinguished members of the Virginia bar and for years a member of Judge Moore's law firm, and myself. Under leave to extend my remarks in the RECORD I include the address I delivered on the occasion:

R. Walton Moore, take him all in all, was probably the greatest Virginian of his day. Versatile of mind, he mastered the law, delved deep into the philosophies of government, understood the social, economic, and political aspects of history, and became a master upon the public stage where, for over half a century, he played a leading part in the development and advancement of the social, economic, and political life of his community, the State, and the Nation.

During his long and eventful life, other Virginians, from time to time, vied with him for honors. There were those who burst forth like meteors and as suddenly disappeared; some with brilliant one-track minds who went far in their particular field, but contributed little to the public good outside of their narrow sphere; others, unable to adjust themselves in a changing world to new thoughts and new conditions, developed a static complex that hampered and limited their public service; while still others, after years of honest, courageous service, fell prey to the ravages of age and passed into Shakespeare's seventh age of man of "Second childishness and mere oblivion, sans teeth, sans eyes, sans taste, sans everything"; but Judge Moore, his body unshaken by age, his eye undimmed by time, his character as stainless as a Damascus blade, his mind holding its mental vigor and splendor, completed his public service, his activities still as broad as human needs, his trust and confidence in the future of democracy still unshaken, with a heart and mind still attuned to the public good, with a spirit of humor still sparkling and scintillating, with a freshness still akin to youth, and amid surroundings in which only the select could survive. Yes, when at last he dropped behind the western horizon, like the sun, his courageous heart still faced the east, and faced it with all the hope and confidence and buoyancy that was his when the morning of his life was yet young.

Like all strong men, Judge Moore was a man of deep convictions. He was not a negative character. He stood for something. That something was advancement of democracy along lines that would bring the greatest good to the greatest number. He believed in progress. There was nothing static in his make-up. And so he was not afraid of progressive democracy but shuddered to think what would happen if our democracy ever grew static. He believed that men, if rightly led, had the capacity not only to preserve democracy but to develop democracy to the point where the blessings of free government, like the snows of heaven, would fall upon all classes alike. He not only believed in democracy but, unlike many in high positons during his day, lived his democracy. And his innate love for the foundation stones of democracy, for liberty and freedom and equality, his abiding confidence that men are capable of self-government and would not only preserve but extend the liberty, freedom, and equality that is ours by reason of our democratic heritage, naturally generated in him a freshness of life that age could not destroy, a perennial youthfulness that time could not age, and caused him to ever live in the present and look hopefully to the future.

These convictions, these views that Judge Moore entertained were not of mushroom growth; they were not picked up from current trend and adopted to satisfy fickle public favor, but were part and parcel of the very man himself. They were born in him as courage is born in the lion. They were a part of his bold, courageous, democratic heritage. Back in the formative period of our country his ancestors entertained the same views with respect to the great cornerstones of democracy—with respect to freedom and liberty and equality. They, too, believed that governments derive their just power from the consent of the governed and must grow and develop in keeping with the ideals, the desires, the needs, and the demands of the governed.

On his maternal side his ancestor, Lewis Morris, of New York, signed that immortal document which declares:

"We hold these truths to be self-evident, that all men are created equal, that they are Endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness.—That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed.—That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness."

On his paternal side his ancestor, Jeremiah Moore, a Dissenter during the days when religious intolerance hung like a blight over a land that had been dedicated to freedom, rather than surrender that freedom, served a term in jail for the then high crime—as Judge Moore on one occasion expressed it to me—"of preaching the glorious gospel of Jesus Christ without a license."

Oh, I like to think that one of the acorns from these mighty oaks of the early American political and religious forests, fell into

the fertile democratic soil that was prepared by their sacrifices, their hardships, their sufferings, yea, their blood, and grew into the giant oak of the Virginia forest of my day, R. Walton Moore.

Heritage is a great thing. I like to contemplate our family heritage, our religious heritage, our democratic heritage, our American heritage. Oh, my friends, the heritage of the humblest American means more, because it has real values back of it, than the heritage of the most exalted of any other nation of the world. And as long as the American people respect and revere the heritage that is theirs, so long will this Republic exist.

That a man with such a background, so richly endowed with a strong versatile mind, with vision, with faith in the democratic way of life, with buoyancy and youthfulness of spirit, with "such humor as distils from blessed gods," and who by study and industry had improved these God-given talents, should be called to public service is but natural.

Let me chronicle the calls that came from the people: State Senate of Virginia, 1887–90; Cleveland Presidential elector, 1892; Virginia Constitutional Convention, 1901–2; and Congressman from the Eighth Congressional District of Virginia, 1919–31.

There were other calls, too, that came from the people, even to the chief magistracy of his State, to which circumstances would not permit him to respond.

May I pause at this point to call attention to the fact that he was never defeated in a contest before the people, and that he voluntarily retired both from the Virginia Senate and the United States House of Representatives.

He was not only called by the people to service, but he was frequently called by those in authority to assist them in rendering better and more efficient service in their administration of public affairs. I do not know of a man who gave so freely of his time to such service, most of which was gratuitous.

Let me chronicle these calls to which he responded:

Assistant General Counsel, United States Railroad Administration, 1918–19.

Assistant Secretary of State, 1933–37.

Counselor of Department of State, 1937–41.

Acting Secretary of State, November 7, 1936, to January 13, 1937.

Member, board of visitors of University of Virginia.

Member, board of visitors of William and Mary College.

Member Virginia State Board of Education.

Member, board of directors of Episcopal High School.

Director, Madeira School for Girls.

Member Executive Committee Virginia Cooperative Association and chairman of the Department of County Councils.

President, Virginia State Bar Association, 1911.

Vice president of Virginia Historical Society.

Member of the Board of Regents, Smithsonian Institution, 1922–41.

Member George Washington Bicentennial Commission, 1930–33.

Chairman, Fredericksburg Battlefield Park Commission.

Chairman, Board of Trustees, Export-Import Bank of Washington, 1934–41.

Chairman, Board of Trustees, Second Export-Import Bank of Washington, D. C., 1934–36.

Member of the Department of State Committee on International Civil Aviation, 1935–38.

Chairman, Interdepartmental Committee on Civil International Aviation, 1935–38.

Chairman, United States-Canada Aviation Conference, Washington, D. C., 1938.

Member of the International Joint Commission, United States and Canada, 1939–41.

Member, Central Committee of the American Red Cross, 1936–41.

Second vice president, Washington National Monument Society, 1937–41.

Member, Board of Foreign Service Personnel, 1934–37.

Member, Board of Examiners for the Foreign Service, 1934–37.

Member, Foreign Service School Board, 1934–37.

The above recitation of the public elective and appointive offices held by Judge Moore demonstrates the versatility of his mind, the reach of his abilities. As was said by Secretary Hull in a press release under date of February 8, "His interests knew no narrow bounds; his abilities carried him to ever wider fields of service." His was not the one-track mind. It was too broad and versatile to be confined to any particular phase of the public service to the exclusion of all others. While it may be said he had a particular flair for education, history, and public improvements and betterments, his talents were in nowise exclusively directed to these particular fields. He browsed all over the public domain, and wherever he browsed he contributed something to the public good. Nor was there anything spectacular in his public service. Upon the public stage he never blazed forth like a comet to excite the people by some colorful statement or spectacular act. Tinkling cymbals and sounding brass were foreign to his nature. Rather, his public life was patterned after the North Star, giving men the true direction.

Here in this historical town where he spent his entire life he was, from early manhood, one of the leaders in your religious, civic, and public affairs. And when his influence commenced to spread until it covered the State, the Nation, and affected world affairs, and great demands were made upon his time, he still never became too busy to participate in the affairs of the community. He never outgrew his home people. He never grew too big for Fairfax. Truly a mark of greatness, because you will ever find that the man who is too big and important to mix and mingle with the home people and participate in local affairs is usually too small to render higher service. And so we find Judge Moore actively participating in local affairs here in his home town to the end. Senior vestryman in Truro Episcopal Church, deeply interested in the local schools, charter member of the Fairfax Chamber of Commerce, one of the organizers of your volunteer fire department, instrumental in establishing the health department for Fairfax County, contributing from his own funds $1,000 as the county's share to supplement State funds for the first 2 years, and never too busy to point out to the stranger your many historical treasures, among them the wills of George and Martha Washington.

And he left his impress upon his native State that he loved so well. No Virginian during his day ever served her with greater ability, with more fidelity and pride. In young manhood as State senator from the Fairfax district, although he only served one term, his poise, his soundness of judgment, his sincerity, his devotion to the public good, won State-wide recognition, and he became from that time on a State figure in the truest sense. At the noonday of his life he was again called upon by the people of his section to represent them in the State constitutional convention and as chairman of its legislative committee he rendered a service excelled by no member of that historic convention which was composed of the best minds of the Old Dominion. While this was the last elective State office that he held, his interest in the welfare of his State never abated and is testified to by the long line of distinguished services he rendered in other than elective positions: Member of the board of visitors of the University of Virginia; member of the board of visitors of William and Mary College; member of the board of directors of the Episcopal High School; member of board of directors of Madeira School for Girls; member of the Virginia State Board of Education; president of the Virginia State Bar Association; vice president of the Virginia Historical Association; and member of the executive committee of the Virginia Cooperative Association and chairman of its department of county councils.

In recognition of his distinguished services to the State, the Virginia General Assembly at its last session, by resolution unanimously adopted, extended to Judge Moore an invitation to address the assembly. The resolution was agreed to January 31, 1940, and reads as follows:

"The Honorable R. Walton Moore, of Fairfax County, Counselor of the State Department and one of Virginia's most distinguished and beloved statesmen, has served this State in the Senate from 1887 to 1890 and in the Constitutional Convention of 1901–2, besides making many other notable contributions to the Commonwealth.

"He has also served the Nation with equal distinction both in the House of Representatives and in the Department of State, being the only Virginian who has acted as Secretary of State since John Tyler. Since few men now living have a more comprehensive and exact knowledge of Virginia traditions and since there is no one from whom those who are trying to carry on these traditions could learn more: Now, therefore, be it

"Resolved by the house of delegates, the senate concurring, That the General Assembly does hereby invite the Honorable R. Walton Moore to address a joint assembly of the members of the General Assembly, to be held immediately after the joint Democratic caucus on Tuesday, February 6, 1940, at 3 p. m., in the hall of the House of Delegates."

No higher tribute could have been paid a Virginian.

In 1919, Judge Moore, now in his sixtieth year, entered the national field as a Representative from the Eighth Virginia Congressional District in the United States Congress. No man ever entered the House better prepared. He brought with him maturity of age, experience, a deep and broad knowledge of history, and an intimate acquaintance with governments, past and present, acquired through actual experience and long and careful study. From the beginning of his congressional career, without going through the apprenticeship the congressional freshman is scrupulously required to serve, he took his rightful place among the leaders of Congress and became identified, more or less, with all of the various and varied deliberations of the House. Becoming a member of the Foreign Affairs Committee, he played an important part in the World Court fight, and, I think, envisioned what we are going through today as a result of partisanship and politics defeating President Wilson's great effort to insure world peace. He also bitterly opposed the administration policies in Mexico and Nicaragua under President Coolidge and gave considerable thought and time to an extensive study of our foreign-debt situation. He took an active part in the preservation of our history and historical sites, and rendered signal service as chairman of the Fredericksburg Battlefield Park Commission, as a member of the George Washington Bicentennial

Commission, as vice president of the Washington National Monument Association, and as a member of the Board of Regents of the Smithsonian Institution. After leaving the House, by special act of Congress, he served on as one of the Regents of the Smithsonian Institution until his death. And that his services in Congress contributed largely to the improvement and embellishment of our Capital City and its environs is well known. The Arlington Memorial, Key Bridge, Chain Bridge, the George Washington Memorial Highway, and the New House Office Building are largely children of his vision and untiring efforts. Joseph Sinnott, likewise a Virginian in whom all Virginians take pride, the veteran Doorkeeper of the House, a fine judge of men with an excellent opportunity to judge, and who, during his connection of over 50 years with the House, has seen hundreds of Members come and go, stated to me the other day that, in his opinion, R. Walton Moore was the greatest Member to sit in the House during his entire service. Few, if any, will question dear old Joe's judgment.

Entertaining the views he did with respect to democratic government, it would have been strange indeed if Judge Moore had not enthusiastically championed the cause of progressive democracy as preached by the greatest leader of democracy since the days of Thomas Jefferson, Franklin Delano Roosevelt, because both the record of the President and the record of Judge Moore show that they were firm believers in the fundamental principle that governments should rest upon the consent of the governed and should ever be administered, in the light of the conditions and problems of the present, so as to promote the happiness, the security, and the general welfare of the governed.

In his excellent address on Zachary Taylor, delivered before the Institute of Public Affairs at the University of Virginia on July 4, 1934, Judge Moore clearly and forceably enunciated Jefferson's theory of government and, inferentially to say the least, justified his own position in supporting the Roosevelt administration. Said Judge Moore:

"This incident reminds us of the frequency with which there is appeal to the authority of Jefferson, and often by those on both sides of a controversy. This is ascribable to the fact that Jefferson was an unflinching liberal who always thought freely and acted freely. He was fixed in adherence to the fundamental principle that government should rest upon the consent of the governed, but he was equally fixed in adherence to the principle that the administration of government at any given time should be controlled by conditions then existing, so as to promote the interests and opportunities of the people. He was like a planet that moves on a definite course, but an unresting planet that never ceases in its forward progress. If the political philosophy of Jefferson is thus rightly indicated, I do not believe in this year 1934, when the conditions are so entirely different from what they were when Jefferson was laid to rest at Monticello, that any man has any warrant whatever for any measurably positive opinion that Jefferson, if he were now here, would find fault with the present governmental program put into effect by the action of Congress and the Executive, and, therefore, I do not believe anyone is entitled to assert that the program operates to sacrifice what we are accustomed to speak of as Jeffersonian democracy. * * * I am satisfied that should some highly qualified student from a foreign land, coming to this country without much knowledge of our political system, make a very thorough fresh examination of the books and documents mentioned in order to determine what was Jefferson's philosophy, and whether or not, if now on the scene, he would condemn the administration's program as contrary to that philosophy, he would be obliged to give a negative answer to that question. It is not to be implied from what I am saying that any citizen for a single moment is to be denied the right of adverse criticism should he believe such criticism wise at this fateful juncture, but I do deny his right to assume that Jefferson, were he now living, would endorse the criticism. In my judgment, it is easier to assume that the program would have his approval."

That Judge Moore was by heritage and intellectual conviction a Jeffersonian Democrat there can be no question. That he and President Roosevelt were in accord on fundamental principles of government there can be no earthly doubt. And that he considered the President a great exponent of Jeffersonian democracy is equally as clear, not only from the excerpt I have read from the address on Zachary Taylor, but from many other statements contained in his written word—one other I shall make reference to—and from his spoken word to many of his friends and acquaintances. On July 5, 1937, Judge Moore again addressed the Institute of Public Affairs at the University of Virginia. On this occasion he was speaking on avoidance of international war and preservation of international peace, and in the course of his address again emphasized the similarity in the beliefs of Jefferson and Roosevelt. Said Judge Moore:

"It is unmistakably clear that peace is likewise the master passion of President Roosevelt, whose fundamental beliefs are so much in accord with those of Jefferson."

And so we find that early in the Roosevelt administration, although in his seventy-fourth year, he was invited to become Assistant Secretary of State, succeeding Raymond Moley, which position he held except for the short period he served as Acting Secretary of State until January 13, 1937. On January 13, 1937, Sumner Welles, also an Assistant Secretary of State, was named Under Secretary to fill the post vacated by William Phillips, who resigned to become Ambassador to Italy. Upon the elevation of Mr. Welles to the Under Secretaryship Congress revived the title of Counselor of the Department of State, unused since the World War, and Judge Moore was appointed to this post, with rank and pay coequal with the Under Secretary, which position he held until his death on February 8, 1941.

He was peculiarly fitted for service in the State Department. A deep student of history and public affairs, he brought to the Department a wealth of information, tempered with the practicality of the experienced politician.

As was said editorially by the Washington Star on February 9, 1941:

"A scholar, an accomplished lawyer, an ardent patriot, a keen student of the theory of government and social progress, he was an ideal counselor on foreign affairs in the stress of a period of gravest concern to American civilization."

It is probably during this period—1933–41—that Judge Moore rendered his greatest public service, a service, I am afraid, that too few know about. During this period I was more or less intimately associated with Judge Moore, as frequently we discussed not only the problems that confronted my district and our native State, but the many serious and complicated problems that confronted our Nation. It is this service that I desire to emphasize.

Prior to the advent of the Roosevelt administration, Judge Moore and the President had been close personal friends for many years. Judge Moore had also served in Congress with Secretary Hull. Here a close friendship, based not only upon mutual confidence and trust but upon mutual respect each had for the other's learning, sound judgment, and general knowledge of domestic and international affairs, had grown up.

That the President and Secretary Hull relied, and relied heavily, upon the judgment of this quiet, unassuming, elderly Virginian, there can be no doubt. The great service that he rendered around the council table when important and momentous questions were up for decision and when from the richness of his experience, the fullness of his knowledge, and the soundness of his judgment, the answer came, others, I am constrained to believe, on more than one occasion reaped glory and fame that were rightly his. Of these things, of course, the general public knew nothing, and Judge Moore would have been the last man in the world to have even hinted that he played a leading part in the solution of any of these great problems, because he was never a glory seeker. He was only seeking to serve the land that he loved, and which his forefathers had helped establish, in her greatest hour of need. I once heard a homely expression, that frequently comes to mind when I think of Judge Moore: "The bigger they are, the less they strut." Yes, my friends; humility and humbleness have ever been the true badges of greatness.

Judge Moore's work as Assistant Secretary of State was described as follows in 1936:

"One Assistant Secretary of State is charged by the Secretary of State with certain important assignments relating to such matters as supervision of the Legal Division of the Department, the international traffic in arms, ammunition, and implements of war; the neutrality policy of the United States; the settlement of the general and special claims, United States and Mexico; and international civil aviation. He is chairman of the Export-Import Bank and of the Interdepartmental Committee on Civil International Aviation, and a member of the Board of Examiners for the Foreign Service, the Board of Foreign Service Personnel, and the Foreign Service Officers' Training School Board."

Judge Moore's work as Counselor of the Department of State was described as follows in 1940:

"The Counselor of the Department of State is one of the two principal assistants to the Secretary of State in the discharge of his various functions, aiding in the formulation and execution of the foreign policies of the Government and the reception of representatives of foreign governments and in work of a highly responsible character. He gives especial attention to such phases of our foreign relations as may be assigned to him by the Secretary of State. In the absence of the Secretary of State and the Under Secretary of State he becomes Acting Secretary of State."

Judge Moore played an important part in the recognition by the American Government of the Soviet Government of Russia, and his presentation of the matter over the National Broadcasting Co. on the night of November 22, 1933, is clear and forceful and convincing. This broadcast was arranged by the Washington Star, one of the leading newspapers of the Capital City, and was so well received that it was gotten out by the Star in pamphlet form and widely distributed. He also played important parts in neutrality and arms embargo legislation. The important part he played in these questions was given particular recognition by Secretary Hull in his press release, heretofore referred to, of February 8, 1941. Said Secretary Hull: "As an authority on constitutional law and international law his counsel was invaluable in such matters as recognition and neutrality, particularly the multifarious questions connected with the latter subject."

On November 6, 1936, President Roosevelt issued the following Executive order:

"EXECUTIVE ORDER

"DESIGNATION OF R. WALTON MOORE, ASSISTANT SECRETARY OF STATE, TO ACT AS SECRETARY OF STATE

"By virtue of and pursuant to the authority vested in me by section 179 of the Revised

Statutes of the United States (5 U. S. C., sec. 6), I hereby authorize and direct R. Walton Moore, Assistant Secretary of State, to perform the duties of the Secretary of State during the absence of the Secretary of State.

"FRANKLIN D. ROOSEVELT.

"THE WHITE HOUSE, *November 6, 1936.*"

Upon the issuing of this order, a Virginian, for the first time in 92 years, held the office of Secretary of State. The last Virginian to hold the No. 1 post in the Cabinet was Abel P. Upshur, who served—1843–44—as Secretary of State under President Tyler. Moreover, upon the elevation of Judge Moore to the Secretaryship two Virginians now occupied posts in the Cabinet, the other Virginian being the congenial, lovable, capable, efficient Claude A. Swanson, Secretary of the Navy, who, prior to his Cabinet post had been a member of the House of Representatives from the Fifth Virginia District for 14 years, Governor of Virginia for 4 years, and United States Senator from Virginia for 23 years. From the days of Tyler to Roosevelt no two Virginians ever occupied Cabinet posts at the same time. And it is quite a coincidence that under Tyler two Virginians, Abel P. Upshur, Secretary of State, and Thomas Walker Gilmer, Secretary of the Navy, occupied at the same time the same Cabinet posts occupied by R. Walton Moore and Claude A. Swanson under Roosevelt. It may be of interest to note that on February 28, 1844, President Tyler, along with several members of his Cabinet, went down the Potomac on the gunboat *Princeton* to see Commodore Stockton's "peacemaker" throw a 200-pound ball. One of the guns on the *Princeton* exploded, and though the President miraculously escaped, both Secretary Upshur and Secretary Gilmer were killed.

The occasion for the appointment of Judge Moore as Acting Secretary of State was brought about by Secretary Hull's trip to South America to attend the Inter-American Conference for the Maintenance of Peace, which was held at Buenos Aires, and he served as Acting Secretary from November 6, 1936, until January 13, 1937. While nothing of a startling nature took place during this period, Judge Moore discharged the duties of Secretary conscientiously and with efficiency and maintained at all times the best traditions of the high office. All of the nine press releases made by him during his short incumbency, except one, deal with the civil war in Spain and are models in diplomatic pronouncements.

To show the youthfulness that remained with him to the last, his progressive spirit, even at the risk of trespassing upon your patience, permit me to briefly review his aviation activities. Judge Moore may well be called the father of international aviation.

As the principal State Department officer in charge of the Department's activities in the field of international aviation, Judge Moore exerted great influence in the development of United States international air services during the 7 years that he served the Department.

Recognizing the growing importance of international aviation, Judge Moore suggested to the President the formation of an interdepartmental committee to coordinate the handling of these matters. Such a committee was formed in July 1935 at the President's direction, and Judge Moore became chairman, a post which he held throughout the life of the committee. As chairman of this committee, which was known as the Interdepartmental Committee on Civil International Aviation, he presided over meetings held with official air missions from Great Britain, Canada, the Irish Free State, France, Germany, and the Scandinavian countries. These missions all came to Washington to discuss the establishment of trans-Atlantic air services, and the present trans-Atlantic service is an outgrowth of those conferences, which began late in 1935. In addition to the special aviation mission, Judge Moore conferred frequently with high foreign officials who came to Washington on matters dealing with international aviation.

Under the leadership of Judge Moore, the Interdepartmental Committee on Civil International Aviation also took a prominent part in the development of domestic aviation legislation. As early as 1935 a study was undertaken of existing aviation legislation to determine in what way it might be improved. Two years later Judge Moore was appointed to the Interdepartmental Committee on Civil Aviation Legislation which, after extensive hearings, sponsored the enactment of the Civil Aeronautics Act of 1938. Upon the creation of the Civil Aeronautics Authority under the provision of that act, Judge Moore felt that there was no further need for the Interdepartmental Committee on Civil International Aviation, and at his suggestion the committee was disbanded.

Judge Moore's great interest in the practical as well as the theoretical side of aviation is indicated in his flying activities. He was a passenger on a demonstration flight of the German dirigible *Hindenburg;* he made one of the first flights to Bermuda when the air service from New York was inaugurated, in his eightieth year, namely on June 24, 1939, he was one of the passengers on the *Yankee Clipper* of the Pan American Airways, the first airship to cross the Atlantic in regular commercial service, and he held the distinction of being the oldest man ever to fly the Atlantic.

His ambition to fly the Pacific was never realized because the pressure of official duties would not permit him to be absent from Washington long enough to justify such an extensive trip.

The prominent part taken by Judge Moore in the development of international aviation was recognized at the testimonial luncheon given in honor of his 80th birthday anniversary by his friends of the Department of State and Civil Aeronautics Authority at the Carlton Hotel, at which time he was presented with a tooled-leather folder, bearing the inscription:

"Yours was the wisdom, like that other distinguished Virginian, George Washington, that guided our fledgling wings to 'happy landings' on both sides of the Atlantic. On the occasion of your birthday we salute you, sir."

That he did render an unselfish and outstanding service, both the President and Secretary Hull testified to in letters, both carrying the date of his death, to his sister, Miss Helen Moore:

THE WHITE HOUSE,
Washington, February 8, 1941.

MY DEAR MISS MOORE: In the sorrow which has been laid so heavily on you and your sister, please accept this assurance of deepest sympathy, in which Mrs. Roosevelt joins. Your brother was an old and devoted friend whose passing is a personal grief.

A faithful and efficient public servant, always wise in counsel, he was also a cultured and courtly gentleman, who was greatly beloved and who will be widely mourned.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

MISS HELEN MOORE,
Fairfax, Va.

DEPARTMENT OF STATE,
Washington, D. C., February 8, 1941.

DEAR MISS HELEN: Mrs. Hull and I wish you and Miss Margaret and Mrs. Keith to know of the profound feeling of personal loss which we have experienced on learning of the death of Judge Moore, to whom we were deeply attached and who holds a lasting place in our affection. He was a true and loyal friend for a period of more than 20 years. The wide range of his talents and interests gained for him an enviable position and a preeminent record in many fields of endeavor—in law, in historical science, education, and various branches of public service. He was a man of sterling character and worth whose generous spirit and gentle nature endeared him to all. The world has suffered grievously in the passing of one of its most distinguished citizens.

We in the State Department have lost one of our ablest associates, a patriot and a statesman who was universally loved, admired, and respected.

Mrs. Hull and I extend to you and to all the members of the family our deepest sympathy in this sad hour of your bereavement and grief.

Sincerely yours,

CORDELL HULL.

MISS HELEN MOORE,
Fairfax, Va.

Secretary of State Hull on the day Judge Moore died also issued a press statement to which I have already made several references. Coming from a man in whom the whole country has such unbounding confidence and who knew Judge Moore so intimately for years, and who is so conservative in his statements and never given to fulsome praise, I cannot refrain from quoting the statement in full:

"I make the announcement of the death of Mr. R. Walton Moore with a sentiment of deep personal sorrow. By his passing from this life I have lost a dear friend and the country has lost one of its ablest citizens, whose long years have been spent in faithful service to its welfare. His interests knew no narrow bounds; his abilities carried him to ever-wider fields of service. From State legislator he entered upon a distinguished legal career of national scope, followed by more than a decade of service in the House of Representatives. The third and final phase of his career began in 1933 when he came to the Department of State as Assistant Secretary. As counselor of the Department since 1937 he gave of his wisdom, his ripe experience of fourscore years, and spent his strength in the stress of a period of gravest concern to his country. At all times he gave himself to the duties and obligations of his position in the Department of State. As an authority on constitutional and international law, his counsel was invaluable in such matters as recognition and neutrality, particularly the multifarious questions connected with the latter subject. Often called upon by his position as counselor to meet with the representatives of foreign governments, he maintained the best traditions of the diplomatic relationship. I have spoken so far only on his political accomplishments, using that term in its most inclusive significance. He was likewise a scholar, as all who have heard him speak on historical and legal subjects recognized. His vital interest in educational fields was only another expression of his broad and varied interests.

"We mourn the death of Mr. Moore as bereaving those who have been associated with him through the past years of an inspiring friendship. We can give him now only that tribute of devotion which is the just meed of the distinguished and unfaltering patriot whose last strength and final breath were given in service to the public good."

May I add just one more testimonial, because I know that Judge Moore would have appreciated it. It comes from that grand old patriarch whom all Virginians not only admire but love, who first entered the Virginia House of Delegates 62 years ago and who has been elected to the Virginia Senate 10 times for 4-year terms since 1888 and who, although 92 years of age, is still a member of the Virginia Senate, Senator Henry Taylor Wickham, of Hanover:

"I am profoundly grieved by the death of Walton Moore. He was somewhat younger than I. The first time I saw him he was graduating at the Episcopal High School near Alexandria. He was the valedictory orator. I had been selected to deliver the address to the graduating class, and from that moment

he and I were close friends the balance of his life. He was a great man, a great Virginian, a patriotic Virginian. He served his beloved State throughout his life with absolute devotion to it, regardless of any other motives. His death is a great loss to our mutually beloved Commonwealth."

These testimonials, my friends, while in the superlative, are not overdrawn. They but correctly characterize the life of a superlative character. The encomium passed by Jefferson on Monroe applies with all its force, its implications, and its suggestiveness to Judge Moore: "If his soul could be turned inside out, not a speck would be found upon it."

Those of us who were so fortunate as to have been associated with him and permitted to listen to his words of wisdom can, like Paul, boast that we, too, sat at the feet of Gamaliel, and, having sat there, we are better, cleaner, wiser men, have a clearer, more hopeful outlook on life, and are not liable to grow stale with the years, because there was freshness in his age and age in his freshness.

Yes, my friends, truly a great man has passed on. And in his passing, this community, this State, this Nation, and humanity in general, have suffered a great loss. I close with two quotations from Secretary Hull, one found in his letter to Miss Helen, the other in his press release of February 8:

"The world has suffered grievously in the passing of one of its most distinguished citizens."

"We can give him now only that tribute of devotion which is the just meed of the distinguished and unfaltering patriot whose last strength and final breath were given in service to the public good."

St. Lawrence River Seaway

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 20, 1941

EDITORIAL FROM THE NEW YORK TIMES

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Times of today entitled "St. Lawrence: New Style."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times of March 20, 1941]

ST. LAWRENCE: NEW STYLE

Seven years ago President Roosevelt submitted the St. Lawrence River seaway and power project to the Senate in the form of a treaty that required a two-thirds vote of approval to make it effective. The Senate failed to approve it. Now, 7 years later, the President returns to the same subject, this time with an "agreement"—signed yesterday at Ottawa—which will not require a two-thirds vote of approval, but merely a majority vote to provide the necessary money.

For this method of whipping the devil around the stump some justification might perhaps be found if the St. Lawrence project could be described as an imperatively needed defense measure. But how can this be said of a project which, by Mr. Roosevelt's own definition, cannot be completed until 1945? The President offers the explanation that we are today appropriating money for the construction of warships, which also will not be completed until 1945. But this comparison is less an argument for supporting the St. Lawrence project than it is a reason for doubting the wisdom of clogging our shipways by laying down battleships that cannot be completed for 5 years when our shipbuilding facilities are so urgently needed for merchant ships and destroyers that can be turned out quickly to meet the threat of Hitler's all-out attack at sea.

The plain facts are (1) that the St. Lawrence project cannot possibly be of the slightest use either to Canada or the United States in any crisis this year or next year or the year after that or the year after that; (2) that if Canada and the United States need more power for defense work they can get it much more quickly either at Niagara Falls or by building steam-electric plants; (3) that instead of promoting defense, the St. Lawrence project promises to get squarely in the way of it by diverting an army of men, colossal amounts of material and whole trains of railway cars to the St. Lawrence at a time when there is crying need for planes, tanks, guns, and ships.

The President has chosen an unfortunate method of reviving a favorite project. On grounds of defense efficiency his request for appropriations to support it ought to be rejected.

National Youth Administration Activities in Fresno County, Calif.

EXTENSION OF REMARKS

OF

HON. SHERIDAN DOWNEY

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 20, 1941

ARTICLE FROM THE FRESNO (CALIF.) CLARION

Mr. DOWNEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the Fresno (Calif.) Clarion for February 1940, entitled "National Youth Administration Sums 1940 Activities in Fresno City and County."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Fresno (Calif.) Clarion of February 1941]

NATIONAL YOUTH ADMINISTRATION SUMS 1940 ACTIVITIES IN FRESNO CITY AND COUNTY

Nothing strikes closer home to the citizens of any community than the present and future of its young people. A visit to the Fresno County headquarters of the National Youth Administration reveals many worthwhile, practical achievements, directly affecting Fresno and Fresno County.

N. Y. A. offers youth, between the ages of 17 and 25, actual work experience on projects set up in conjunction with governmental agencies of all kinds, whether city, county, State, or National. The aim is to better fit the young people to obtain private employment in their chosen fields, thus becoming self-sustaining, productive citizens.

CONSTRUCTION PROJECTS, 1940

Reviewing the year 1940, N. Y. A. in Fresno points with pride to the ball playground recreation center building, constructed with N. Y. A. labor, under skilled supervision. Valued at approximately $52,000, the structure houses the largest basketball court in Fresno County, a large kitchen, and an auditorium seating 2,000 people. In addition to the physical value of the building, which was started in the month of August 1939 and completed in May 1940, the N. Y. A. youth employed in its construction received invaluable training in the trades, learning by doing. The practical value is demonstrated by the high record of placement of the youth workers in private industry.

ROSENBERG FOUNDATION ASSISTS

The Ball playground project was partially made possible by the financial assistance of the Rosenberg Foundation, to which much credit is due. This foundation likewise aided the establishment of another recreation construction job done by N. Y. A. during 1940, the Selma Recreational Building. Smaller in size, it is none the less complete in every detail, and serves highly important need in the city of Selma.

FAIRGROUND STRUCTURE

Begun in the month of May 1940 and completed in January 1941 the machinery display building at the Fresno fairgrounds is another community development built by N. Y. A. labor. Its value is $56,000 and like all other project accomplishments, could not have been undertaken without N. Y. A. cooperation. The abode structure is now being painted and receiving the final touches which will make it a very necessary adjunct to the fairs for years to come. So successfully did the fairgrounds improvement work out for all parties concerned, that activities on a greater scale are anticipated for the year 1941.

ROEDING PARK BENEFITS

Users of Fresno's beautiful Roeding Park are now able to approach to the borders of park lakes that were fast growing inaccessible. Water was undermining the banks to a distance of 5 and 6 feet in places. Several valuable trees had been lost, and lake bottoms were filled with the soil residue soaked away from the shoreline. N. Y. A. drained the lakes and put in a series of heavy granite retainers or walls on concrete foundations. Many of the scenic and graveled paths thus made possible are also of N. Y. A. construction.

AIRCRAFT LIGHTING

Nineteen hundred and forty also witnessed the installation of 5,600 feet of runway lighting at the Fresno municipal airport, under the supervision of Airport Manager George Johnson and City Electrician Bowman. The labor was provided by experience-seeking N. Y. A. youth.

RECREATIONAL LEADERSHIP

Specialized fields are also explored for work experience. During the year, N. Y. A. cooperation was extended Raymond Quigley, director of recreation for Fresno City. Some of the young people trained in this work are now well established in the field of playground supervision and allied professions.

MECHANICS IMPORTANT

With the increasing stress the national-defense program has placed on training and experience in the mechanical vocations, N. Y. A. has found many youths anxious to continue the training they received in school. Mr. James Welden, vocational coordinator of the Fresno Technical High School has conducted classes in various types of shop work, including machine shop, welding, auto shop, and sheet-metal work, as a part of the national-defense training program. N. Y. A. youth are being assigned in increasing numbers to this activity. Example of the prac-

tical nature of the work are the tool clerks, who become familiar with tools in use by machinists, and the functions of each, so that valuable precision instruments will not suffer loss or damage. Some of these young men show unusual mechanical aptitudes, and the skills developed are often high.

CITY SHOPS BENEFIT

Even before the call for defense training, J. W. McFarling, superintendent of the Fresno city garage, had seen the possibility of giving experience to N. Y. A. youth, and through his cooperation, work experience and training have been extended. This has also been the case in the Fresno Fire Department, through the supervision of N. Y. A. labor provided by Chief Burtner and Technician Catich.

AGRICULTURE PLAYS PART

No account of vocational help to valley youth would be complete without attention to the experiencing of agriculturally minded young people. The Fresno State College has helped in this, through the college experimental farm at Millbrook and Shields and the botanical gardens at the college, at which places projects were instituted at the suggestion of Professors Masten and Braum. Winston Strong, former George Dean instructor at Central Union High School, is the supervisor in charge. Work consists of the actual performance of all types of farm duties, using methods approved by modern research. Animal and poultry husbandry are also included. The botanical gardens provided experience in the propagation, transplanting, and care of ornamental shrubs, plants, and flowers.

GIRLS' ACTIVITIES

Young women, too, are given an opportunity to secure N. Y. A. work experience that will bring them nearer to private employment and self-sustaining careers. Since the predominant training among schoolgirls is for clerical and stenographic positions, the largest number of N. Y. A. projects are set up to give that experience, extending into governmental agencies throughout the county, whether of State, Federal, or city sponsorship. In many cases this actual performance of office duties under supervision has rendered employable girls that would otherwise have had difficulty in convincing prospective employers that an unprofitable training period would not be necessary during the early stages of their work.

HOUSEHOLD TRAINING

If a business career is not the aim of N. Y. A. girls, there is another activity included in the projects available to them. It is known as household training, and is a W. P. A. project which constitutes a thorough learning-by-doing course in home making and home economics. The bulk of the enrollment in this enterprise is from N. Y. A. applicants, and many find jobs as a result, according to Evelyn Fleming, superintendent of professional and technical projects for W. P. A. The minimum starting salary maintained for graduates placed in private jobs has been $25 per month, and room and board.

PLACEMENT THE AIM

According to N. Y. A. Area Director Johnson and Head of Personnel Carey, N. Y. A. takes the young people while they are in the formative stage and helps equip them for holding jobs in private employment, thus minimizing their future contacts with social agencies of any kind. The amount of tax money saved, and the hope and initiative engendered in the youth themselves is beyond estimate.

SCHOOLS BENEFIT

There is little if any duplication of effort between N. Y. A. work and the public-school system. According to E. W. Gillis, principal of the Snyder Continuation High School, graduates and those who have left school earlier often return to the classrooms via N. Y. A. Most important reason—project activities shorten the gap between school and the job. The best way to prove the value of an education is to use it, Gillis says. The natural urge to learn returns, replacing discouragement born of idleness. The result is renewed postgraduate work, or part-time studies, night or day. These cases of renewed school work, with a background of work experience and the incentive of possible employment, show a higher rate of interest, more intense application, and better accomplishment.

The Western Pennsylvania School for the Blind

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, March 20, 1941

ADDRESS BY HON. JAMES J. DAVIS, OF PENNSYLVANIA

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the introductory remarks of Hon. Eugene L. Connelly, chairman of the executive committee of the Western Pennsylvania School for the Blind, together with an address made by the senior Senator from Pennsylvania [Mr. DAVIS] at the annual meeting, June 10, 1940.

There being no objection, the introductory remarks and the address of Senator DAVIS were ordered to be printed in the RECORD, as follows:

I know of no function that comes to a presiding officer so pleasant as that of presenting to an audience a distinguished citizen who has been his lifelong friend. Except for one little fact, a constitutional inhibition, this lifelong friend of mine might have been President of the United States. He was born across the seas. Almost every other coveted honor within the gift of the people has come to him. I knew him before these honors began to fall upon him. He is as modest now as he was then. He had just left the heat of the puddling furnace when, as a young political writer, I was attracted by his eloquence and sturdy Americanism. I saw him become Secretary of Labor in the administration of President Harding, saw his reappointment successively by Presidents Coolidge and Hoover. Under his regime, out of his regime in the Department of Labor, labor and capital were at peace for a longer period than at any time since the establishment of the Department. While serving in President Hoover's Cabinet in 1930, he was called to represent the great State of Pennsylvania in the United States Senate, and was reelected in 1932 and 1938. I have sat with him in the Supreme Council of the Masonic Fraternity, of which he is an honorary member of the thirty-third and last degree. He is a real humanitarian, and has always felt a tender and kindly sympathy for the blind. His own father, for years before he passed on, was sightless. Is it any wonder, then, that he has come all the way from Washington in the midst of a scene of political madness and national danger to speak to us tonight.

Ladies and gentlemen, I am honored to present to you the senior United States Senator from Pennsylvania, the Honorable James John Davis.

Senator DAVIS. I always like to tell stories when I receive an introduction about being President of the United States. When I was selected as Secretary of Labor—most of you know that I came to this country when I was about 7½ years of age and began to work when I was 10. And when I was selected as Secretary of Labor, of course, they gave me a reception in a little town that I came to. My mother and father lived there, and my father, being blind, was unable to go to the meeting, and my mother, of course, went, and your mother always stands by you, right or wrong; she believes any good thing that they might say about her boy. When I got home, it was a community of Welsh people where we lived, and they asked me afterward and my father wanted to know what they said and what kind of a speech I made. And an old neighbor by the name of Jones said to him, "Dave, the people down there said that if Jim was born in this country he would be President of the United States," and they talked about it for some time, and my mother, through a great deal of excitement, said to my father in Welsh—it's funnier in Welsh than it is in English—she said, "David, if you would have come to the United States when I wanted you to, Jim would have been born here and we would have a President."

So we have a lot of experiences in life, and you can't tell what a boy is going to be or do. There was a very good friend of mine that we used to go to work with when we were boys, worked in the nail factory, and started out in the morning—well, Sunday we would work from daylight to dark, and he was bashful, and I noticed here he was standing over against the building. He thought because I might have had this job that I was a little bit sold on myself. So I beckoned him to come over, and I didn't know what I had done to him, so finally I said to him, "Dennis, you never thought when we were boys together, going to work in the mill, that I would ever be Secretary of Labor in the President's Cabinet, did you?" He said, "No," and he said, "By golly, you didn't, either."

So there isn't anybody that knows what anybody is going to do in America. The way is open, opportunity for work, and I hope we will always keep this old glorious country in a way that will always give every boy and girl, so far as that is concerned, an opportunity to go on to reach the heights.

So I am delighted to be here tonight, because when I speak about the sightless I speak of my own experiences with the blind. Through neglect my uncle as a boy lost his eyesight. He was a fine, handsome, upstanding man. He went to a school for the blind, and there he learned how to play almost every musical instrument. He also learned to make carpets and brooms and to tune pianos, and because of this training he was able to sustain himself throughout life. I said to him one day when I saw him—went around with him as a boy to take him to these places where he might tune a piano—and I said to him, "Uncle Sam, what a marvelous man you would be if you just had your eyesight"; and he had developed something of his own philosophy, to be happy with what he had, and he said to me, "Yes; if I had my eyesight I would be down there working with your father in the mill." So he made the best of life.

So another uncle had both eyes burned out while working in the mill, but he didn't complain or grieve. Instead, he secured a corner grocery store and, applying his splendid intellect to the problems of life, developed a splendid reputation as a sage in his community.

My own father's eyes were badly affected from the heat of the furnace in the mill, and yet he was so skilled in his work that he was able to carry on for many years, until he finally went blind. I remember reading the Bible to my father many, many times after he had lost the use of his eyes, and it was a source of great inspiration to me.

One of the great-hearted women of this city, Mrs. Rea, was responsible, was partly responsible, for the organization of the Gray Ladies in Washington, who have rendered such helpful ministry to the afflicted and sightless at the Walter Reed Hospital in Washington. Mrs. Rea was responsible for interesting Mrs. Davis in this work. Mrs. Davis frequently went to the Walter Reed Hospital to read to the sightless. These difficult experiences require rare insight in order that the necessary personal adjustments may be made. Tenderest care must be shown to those who suffer such affliction.

I am one of those who believe that the child is the hand of God, and he is in the universal pages of time the history of the human race, and that no man ever stood so tall or so straight that when he bent over to lift up a little child, and the child that has lost its eyesight should receive not only a vocational education, but an academic education as well. The minds of all of us are very active, and anyone of us can readily and easily know what a loss of eyesight would mean. And when the eyes fail, these active minds must be directed in a kindly and a useful way.

I am glad to say that the Western Pennsylvania School for the Blind has earned for itself a fine name in educational circles. The educational program there extends from kindergarten through high school. Many of these students then enter some school of higher education in Pittsburgh and elsewhere.

The Pennsylvania Association for the Blind at Harrisburg, the State organization, represents one of the finest organizations in the Nation, and it has been noted for years, because its activities have been so well coordinated and its leadership of a superior type. State organizations throughout the country, such as the Pennsylvania association, have more than justified their existence. Definite recognition of need for special care of the sightless in the development of social legislation makes State organizations imperative.

One of the national problems for the sightless concerns our Federal legislation. Until recently our wage-and-hour laws have carried a special provision which declares that handicapped workers may be employed at lower or substandard wages, and may work longer hours. Now, it has been put on the individual basis, and a person must have a certificate to be allowed to work under these substandard conditions. He must not be paid less than 75 percent of the minimum wage specified in the Wages and Hours Act. We now have legislation which protects products made by the blind. Their high quality of work is thus protected.

I knew two United States Senators, blind Senators, who were very able men—Tom Schall, from Minnesota, and Senator Gore, from Oklahoma. These two men—I have sat and listened to them by the hour, talk by the hour, thoroughly familiar with the economic life of all of our people, and it really was a treat to those of us when they would open up in debate. One was a Republican and the other was a Democrat. Both of them had great views, splendid views, fine views, on the social outlook of life. So we might say that our own Congressman, Matt Dunn, had taken a part in the lower House of Congress.

So one of the obligations which the State owes to the sightless is to help them to find a place for themselves as citizens. Some work has been done in this field, but not enough. It is true that many of the sightless have been helped into more sheltered types of work—magazine stands in buildings, work shops where hand work and books are made—and in other ways. These occupations help those who have a limited education, but it does not meet the problems of those who are qualified for other tasks because they have higher education. Some college men have found employment in law, insurance, salesmanship, and a few teach in schools for the sightless, but on the whole their problem is quite unsolved. Especially difficult is the problem of the educated blind woman.

One of the great institutions in Washington is the Library of Congress, which was one of the few institutions to pioneer in library work with the sightless. In 1897 a room was set apart and furnished with a selection of over 500 books in raised letters for the use of the blind. With the passing years this program has grown in scope, and leads the way for progressive methods for providing reading materials in the Braille and Moon systems. The Braille point system, which is expressed by the use of 63 symbols, is reinforced by the Moon system, developed by Doctor Moon of Brighton, England. The Moon system is primarily for the use of those who lose their sight late in life.

In 1935 the Talking Book came into being. It resulted from investigations made by the American Foundation for the Blind, under a grant from the Carnegie Corporation, and aided by the Bell Laboratories, and others. By congressional appropriations the work has been very successfully enlarged. The average book requires about 13 records. These are packed in heavy cases, making a package somewhat like a portable typewriter, and are sent through the mail to the blind readers.

Since 1904, Congress has amended the postal laws and regulations from time to time, so as to permit reading matter for the blind to be transmitted in the United States mail free of postage, and under such regulations as the Postmaster General may prescribe. Braille books and the Talking Books are sent under these conditions direct to the blind reader.

So it is that the duty of the home teachers for the blind has become a very interesting and valuable service. The duties of the home teachers are not confined to the mere mechanics of teaching, but extend over the whole field of service to the blind. The teachers themselves being blind, can readily understand and sympathize with all of the problems of the blind. Being skilled in practical social service, as well as the technique for teaching the blind, they can show their pupils how to meet problems, or direct them to the proper agency where they can be met.

So I want to point out to you that Seeing Eye, of Morristown, N. J., has rendered a great service to the sightless. This agency trains the dog with which the blind person makes his way not only about the home but through crowded thoroughfares. For 4 weeks the agency trains the dog with the blind person in order that the dog can be an efficient guide. The student pays $150 for the training and the dog. Probably many of you have been fortunate enough to see the Seeing Eye work in a constructive way. Chiefly German police dogs are used for this purpose.

So, my friends, I always feel a sense of beautiful companionship when with those who are sightless, for I know that under the laws of compensation they have been permitted to enter into fields of understanding that ordinarily remain closed to those of us who depend to such a large extent upon our eyes. The association I have had with many sightless persons over the years has convinced me that we do them and ourselves a grave wrong when we permit them to be regarded as objects of pity or charity. Most of the sightless men and women I have known did not wish to become dependent. They wanted to face life bravely and on their own. All that they asked was an opportunity to learn how to make this new adjustment so that they could carry on efficiently and well. This opportunity is now being made possible in an even larger way. Much still remains to be accomplished.

I congratulate all of you who are having some part in this good work, for truly it is a beautiful experience to learn how to see the true worth of the inner life and soul from those who are sightless. God bless you in this great work.

British Blockade of Foodstuffs for France

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, March 20, 1941

ARTICLE BY HUGH S. JOHNSON

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an article by the pen of Gen. Hugh S. Johnson in reference to the British blockade upon foodstuffs for France.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE MAN'S OPINION

(By Hugh S. Johnson)

It just "ain't good enough." The British reply to Herbert Hoover's tentative plan to supply some food to starving civilians in the conquered countries—and to supply it under complete British control smells—or, as my distinguished namesake, Samuel Johnson, once said in defense of rugged Anglo-Saxon English: "You smell; I stink."

The British argument boils down to this: "Germans are responsible for their conquests. Let them do the feeding." That's swell—from the British viewpoint—but the cold humanitarian fact remains that there isn't enough food in Europe. There is another consideration here and it isn't very pleasant. It is that one of the chief weapons of modern war is morale of the civilian population. The Germans reap our rightous indignation for impairing it by bombings of nonmilitary objects. But what do we think—what are we to say of the deliberate application of starvation to wholly innocent peoples—especially to the weak and to women and children—as a possible weapon of war? It is a ghastly thought.

Remember, this is no suggestion of aid to enemy populations but to people that Britain incited to war in her own interests when she was—as has been proved—unable to aid them.

Mr. Hoover's proposal was not final. It was, by its own terms, an experiment. If it turned out to result in military aid to Hitler, it was to be abandoned. It was to cost our people nothing. Couldn't it even be given a trial?

It is a gross mistake even to mention race or creed in any of this argument. We have grown so hysterical that I have been well advised not to include even a dialect story in these dispatches. But please may I say that Mr. Hoover is a Quaker, even as were all my

mother's family. They don't believe in ferocity or blood-shedding. In Spain and almost everywhere else that humanity has suffered they have moved in with food and bandages. At the World War armistice Britain was unwilling to feed the conquered enemies. The war was over. Mr. Hoover's was the only great voice raised to favor some alleviation of "man's inhumanity to man." At his urging we appropriated and spent $100,000,000 to supply dietary deficiencies to the aged, the weak, and the helpless in the conquered countries.

This column is not to urge any softness or any slackness in our conduct of this war. As a student, if not an adept, in the whole history of wars, it recognizes that the Four Horsemen of the Apocalypse are as much a part of it as gunpowder and bullets—conquest, starvation, death, and pestilence. But it is impossible here to see how our people can support a blockade of conquered peoples, friends of ours, the effect of which will probably be to starve them into submission to our potential enemies and could possibly be to warm and strengthen them into resistance in behalf of our apparent friends.

This British position goes just a little bit too far. It is all right for them to pay cash to Canada and their other associated nations for munitions they are to get free from us, to conscript Canadians for 4 months' training with no obligation to serve overseas, while we take our men by conscription for a year with no limitation as to service, and many other similar unequal burdens assumed so gratuitously by Uncle "Sap."

But when the ukase comes that we shall not even try to alleviate the sufferings of peoples who are as much part of our flesh and blood as the British—Belgians, French, Dutch, and Danes—to see whether it can be done without impairing the British military positions, my Quaker blood rebels, and while I have never before stood on common ground with Herbert Hoover, I do today. His opposition seems to me cruel and inhuman, if not positively obscene.

Bernard Baruch

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, March 20, 1941

ARTICLE FROM CHARLOTTE DAILY OBSERVER

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD a very interesting article by the pen of Mrs. J. A. Yarbrough, of Charlotte, N. C., who writes interestingly weekly for the Charlotte Daily Observer, of Charlotte, N. C. This article is entitled "Core of My Heart Remains in South Carolina—Baruch," and relates to the career of Hon. Bernard Baruch, of South Carolina, now residing in New York, one of our outstanding American citizens, and one who is thoroughly familiar with international and hemispheral defenses and trade matters.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Charlotte (N. C.) Observer]

CORE OF MY HEART REMAINS IN SOUTH CAROLINA: BARUCH—SOUTHERN-BORN FINANCIAL WIZARD AND PHILANTHROPIST WHO HEADED WAR INDUSTRIES BOARD UNDER WOODROW WILSON IS A SELF-MADE MAN, PROUD OF HIS RACE AND ANCESTRY—KNOWS AND LIKES CAROLINIANS—EULOGIZES J. B. DUKE

(By Mrs. J. A. Yarbrough)

"South Carolina is bone of my bone and flesh of my flesh, and, although I have lived in New York more than 50 years, the core of my heart remains in South Carolina," said Bernard M. Baruch, internationally known financier, philanthropist, friend of Presidents, but first of all, a South Carolinian.

In a luxurious private reception room Mr. Baruch sat and talked of many things—the genius of J. B. Duke and the humane way in which his wealth is being expended; of North Carolinians in Congress today; the first World War; his memories of South Carolina's suffering during reconstruction; of visiting his uncle, Hermann Baruch, in Charlotte during his boyhood; of his frequent trips to his plantation near Georgetown, where the people give him a warm welcome but leave him to come and go quietly in unobtrusive fashion.

His large New York office, occupying an entire floor, is maintained only for the purpose of conserving his fortune and attending to his many benevolences.

Over 6 feet, erect, slender, with classic features, ease, and poise, Mr. Baruch is a distinguished figure in any company. His blue eyes are sharp without being keen, his hair is silver without making him venerable, his gestures dramatic, his vigor and energy striking. Every few minutes he is out of his chair, pacing the floor, looking down on Madison Avenue's congestion, or going to an outer room to speak courteously to one who has perhaps called without an appointment.

Notwithstanding the fact of his investiture during the World War of the broadest authority over American industry and commerce any functionary of the United States Government had ever held, one gets from Mr. Baruch an impression of simplicity, freedom from pretentiousness, lack of affectation, and a high sense of compassion. His good deeds are frequent without being public, for he does not divulge his benefactions.

BACKGROUND OF BARUCH

He is a Jew and proud of it. His father, Dr. Simon Baruch, a Jew of Spanish lineage, emigrated to this country from Polish Prussia at an early age, settled in South Carolina and during the War between the States, was a noted surgeon of the Confederate Army. His mother was Isabel Wolfe, member of a well-known southern family whose forebearers had come to America prior to the Revolution.

Before there can be real understanding of Bernard Mannes Baruch one must first understand the background of this man who has held various national positions of trust and by authority of the President of the United States became one of the most powerful men in America during the World War.

Entering Spain as conquerors in 1500, the Moors gave favor and sympathy to the Jews, who, in time, turned barren wastes into fertile fields, hung the hillsides with purple grapes, gathered figs and olives where formerly thistles had flourished. Their clever fingers wrought marvels in precious metals, stones, fine linens, and silks. Jewish statesmen held high places in public affairs and so superior was their position in literature, art, and the sciences many came from distant countries to learn of these Hebrew masters.

From early childhood the finest traits of remote generations exhibited themselves in Bernard Baruch. Among his forebears were many rabbis, doctors, and students of philosophy and he seems to have inherited some of their idealism and impatience with error. While he is not an orthodox Jew, he observes the Jewish holidays in tribute to his parents and to his distinguished heritage.

In Sherman's march to the sea the beautiful home of Dr. and Mrs. Baruch was burned and 6 years later, their son Bernard was born at Camden, S. C., in a white frame house which is still standing. He recalls driving through the country to Charlotte, his childish impression of the splendor of his uncle's store located where Mellon's now stands, and he has vivid memories of an attack of malarial fever in Charlotte when he was given quinine in sweet milk.

When he was about 15 years of age, his father, impoverished as a result of the War Between the States, moved to New York City to practice medicine. The boy entered the College of the City of New York and was graduated from the institution, of which he is now a trustee. Although he has an academic education, he is also a self-made man with the broad sympathy such men acquire in the making.

His long residence in New York has never weaned him from the South and he takes deep pride in its traditions and accomplishments. He never allows a year to pass without spending several weeks at intervals at Hobcaw, his home near the South Carolina coast where he and his friends hunt and fish together. On the plantation he has built comfortable homes for several aged family servants and here, too, he buried his old black mammy, Aunt Minerva.

Largely through his influence a colony of northern capitalists has been established along South Carolina's coast which includes men of prominence such as Eugene du Pont, Robert Goelet, Ralph and Herbert Pulitzer, Richard Reeves and Howard S. Hadden.

"The greatest man of our time was J. B. Duke," said Mr. Baruch. "While he was hesitant and inarticulate in speech he was unerring in judgment. Throughout the world, anywhere you go, you see the discarded butt of a North Carolina cigarette or cigar. Mr. Duke, like John D. Rockefeller, wisely provided for the expenditure of his money. It was his ardent wish that it should be used for the well-being of mankind. He often talked to me about it. Today there is hardly a county in the Carolinas that does not feel the practical effect of his well-developed plans.

PROUD OF MISS ELLIOTT

"North Carolina people should be very proud of Miss Harriet Elliott. They have every reason to be. Her appointment by President Roosevelt is of transcendent importance.

"I never fail to miss Senator Overman and Senator Simmons when I am in Washington. They were my warm personal friends. J. W. Bailey, Robert Reynolds, and Josephus Daniels are among my good friends from North Carolina."

Dr. Baruch, who was one of New York's most eminent physicians, wanted his son to study medicine, but he had set his mind on a business career and after his graduation entered a broker's office in Wall Street at a weekly salary of $3. At a night school he studied law and bookkeeping.

Seven years later he had advanced no farther than a clerkship and was receiving only $100 per month. Dissatisfied, he asked his employer to double his salary in order that he might marry the girl he was engaged to. The request was promptly refused,

although his employer finally agreed to give him one-eighth interest in his business. Mr. Baruch accepted and at the end of the year he received $6,000. His marriage to Miss Annie Griffen, of New York soon followed.

Within a few years he became known as one of Wall Street's most clever brokers, and in 1902 his profits reached almost $1,000,000. He gave large amounts to his father, who used it for charitable purposes.

Before his fortieth birthday Mr. Baruch was established as Wall Street's largest and most highly esteemed speculator.

It is natural for one so successful to incur enmity, and he has been a target for the envious. His transactions have been frank and open, and never has a blemish been found.

In the heat of war's furnace many reputations wither. Success is the only test of merit, and from the general who loses a battle and the administrator who fails to make good, excuses are not accepted. Whether at fault or not they are retired, for it is achievement and not explanation that is wanted. In every war those who were supposedly able are found wanting and pass into oblivion, while others appointed to high places win public confidence for what they accomplish. Mr. Bernard M. Baruch is in the latter class.

APPOINTED BY WILSON

When President Wilson in 1916 made him a member of the Advisory Commission of the Council of National Defense it was generally regarded as a complimentary appointment, for the position carried no salary and involved more or less expense for Mr. Baruch. He had never been active in politics and had never met Mr. Wilson when he enlisted in his support to which he was drawn entirely by the idealism of the man as expressed in his public utterances.

The council was composed of the Secretaries of War, Navy, Interior, Agriculture, Commerce, Labor. The advisory commission was composed of Daniel Willard, Howard E. Coffin, Julius Rosenwald, Dr. Hollis Godfrey, Samuel Gompers, Dr. Franklin Martin, and Mr. Baruch.

Arranging all of his investments so that he could not earn a dollar of profit out of the war, Mr. Baruch also sold his seat on the stock exchange and severed his connection with the financial district in order to give his entire attention to the war work of the Nation.

He was made a member of the committee formed to purchase supplies in America for the Allies. Then the President appointed him on the War Council, which included the Secretaries of the Treasury, Navy, War, also Edward N. Hurley, Harry A. Garfield, Herbert Hoover, Vance McCormick.

On March 4, President Wilson appointed Mr. Baruch chairman of the War Industries Board. The President's letter, defining the powers and duties of the chairman stated, "The ultimate decision of all questions should rest always with the chairman," and the letter ended with the sentence that he was to be "the general eye of the supply departments in industry." And so Mr. Baruch, along with the glory of his title, was to shoulder the full responsibility.

SPEEDY AND COURAGEOUS

He had two qualities highly desirable in an administration—quickness and courage. He had them in the street and he had them in war. He was not afraid of action. A third quality which fitted him most fortunately for his duties was his ability to get people to agree on a proposition and put it through. His methods were tactful persuasion rather than coercion and he was fired with an honest ambition to serve his country. The courage with which he met many situations where he had to decide between the rights of the Nation and the rights of capital showed that he was no respecter of financial personages even though they may have been his personal friends and associates.

His dominating purpose was to "bring the people to realize their only business then was the business of war and to make the country so self-contained in an economic sense that it could, if necessary, continue to fight independently and indefinitely until victory was secured."

"Some of the war lords of the world have said I was and am a warmonger," said Mr. Baruch. "If insistence that this country be armed to protect the life and the system that we have here is warmongering, then I am a warmonger.

"Every thoughtful person knows that no one gains from war—conqueror, vanquished, and neutrals all lose. Those who think war will bring profit to any nation are in error. It is only peace that can bring gain, spiritual or material. The kind of peace we should have is that which will permit in the whole world the development of the individual, that he may be free to think, to work, and to live as we have been privileged in this country."

One-Third of Nation's Children on One-Seventeenth of Nation's Income

---

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1941

Mr. CANNON of Missouri. Mr. Speaker, under leave to extend my remarks, I include a radio address delivered over the National Farm and Home Hour, March 8, 1941:

President O'Neal and State presidents of Farm Bureau, it is a privilege to have the opportunity of participating with you in the program this morning, at the conclusion of the week in which we have had your cooperation in the passage of a bill which means more to the farmers of America than any bill which has been considered during this session of Congress.

The agricultural appropriation bill is the only bill so far considered in the House which affects farm prices or the farm income, and it is a matter of gratification that after consuming most of the week in its discussion we have passed the bill in the form in which it was reported by the committee—a committee composed of both Democrats and Republicans—enacting a nonpartisan measure in which politics had no part and in which all members of the committee joined in an effort to write a bill which would render the greatest possible service to American agriculture.

As a result of the enactment of this bill, every farm family in the country will live just a little better and every business dependent on farm patronage will be just a little more prosperous. With the increased farm income provided by this bill, farms in many communities will be saved which otherwise would fall under the sheriff's hammer and farm children will be just a little better prepared for the battle of life. And—a consideration not to be overlooked at this time—the country as a whole will be not only more prosperous and a better place in which to live, but as a result of the enactment of this bill the Nation will be stronger, safer, and more secure, for the stability and power of any people rests, in the last analysis, on its farm and farm homes and its agricultural assets.

In that respect, the bill may be said to be a defense measure in the truest acceptance of the term. The farmer produces the most essential and indispensable munition of war or peace. An army may fight without tanks or planes—and armies have fought and won without either—but no army has ever been able to maintain its position or protect its frontiers without food, without an adequate ration.

And in that respect, the American farmer is discharging his duties today with exceptional fidelity. There are no bottlenecks; there are no strikes; there is no sabotage; there is no "fifth column"; and there is no red flag on the American farm.

But, notwithstanding the supreme service rendered by the farmer, he is receiving the lowest pay, the smallest comparative income in the history of the Nation. In the last few days, and in an obvious attempt to influence the consideration of this bill, releases have been sent out showing that the farmers' income now amounts to approximately $9,000,000—a little more than last year—and that the price of some farm products has advanced slightly in the last few months. But all such reports carefully overlook the fact, a fact which cannot be emphasized too strongly, that while income is larger and prices in some instances are somewhat higher than last year the national income has increased so rapidly and the price of all industrial commodities has advanced so sharply that the farmer is getting a price and an income of less purchasing power by far than he got last year, and the relative wage he receives for his labor and the return he receives from his farm are shrinking every day.

As shown during the debate on this bill in the House this week, industrial prices and dividends are today, on a conservative estimate, 50 percent above parity. Union wage scales are fully 80 percent above parity. While the farmer is receiving less than two-thirds of parity.

On this depleted income the farmer is raising one-third of the children of the Nation—and incidentally farm-born and farm-reared children are holding the key positions in America today—the farmer is raising one-third of the children of the Nation and receiving only one-seventeenth of the national income—a problem of national import.

One of the reliable statistical authorities of the Nation estimates that if farm products had advanced at the same ratio with wages in the building trades, beef would today be selling for $3 a pound, eggs for $2 a dozen, and bread for 25 cents a loaf, and other products in proportion. Now these are unreasonable prices, of course, but they are no more unreasonable than the prices the farmer must pay for goods and services in these favored trades and industries.

While the bill we have just passed does not solve this problem, it does help. But for this bill, cotton would be selling for 5 cents a pound; wheat would be selling for 30 cents a bushel. Corn would be selling for 15 cents and hogs again would be selling for $2. Through appropriations carried in this bill, through loans, parity payments, soil conservation, and other funds which it provides, we are holding farm markets and farm prices at present levels.

But we cannot indefinitely finance agriculture out of the Public Treasury when every other class in America is receiving parity in the open market. Agriculture, too, must be allowed a fair income, an honest price and a decent wage in the market place. And that is the next problem for this Congress.

It is a problem which must be solved quickly, for a day is coming which will be remembered as long as history is written. It is a day that will mark an epoch in the annals of the human race. It is the date on which

medieval history will end and modern history will begin. It is the date of the end of the war.

The end of the war will test American resources as never before. We must prepare for it and prepare now, in this session of Congress.

For on the hour the armistice is signed every war industry will close. The fires in a thousand furnaces will die, men and machines now working in three shifts, turning out a vast deluge of war material, all of which is pure enomonic waste, will stop.

The farm market will drop as it dropped in 1920 unless Congress acts now to put a floor under farm income—as it already has put a floor under labor's income. A period of destitution will come, compared with which the depression following the last war will be as a summer's zephyr to a hurricane. Hell has no fury equal to that which awaits the farmer if Congress fails him in this hour of need.

In 1919 when everybody was receiving the highest pay and the highest prices ever received—and everybody was satisfied—the farmers of America were receiving 20 percent of the national income. Today the farmers receive only 6½ percent. And the alarming thing is—not merely that the farmer's share has dropped from one-fifth to one-seventeenth but that it steadily continues to drop. In 1919 it was 20 percent. In 1925 it was 10 percent. In 1937 it was 8 percent. In 1938 it was 7½ percent. In 1940 it was 7 percent—and now in the first months of 1941 it is 6½ percent. So, receiving today less than a third of what we received for the same service in 1919, what can we expect in the future—what can we expect next year? And remember—the farmer is handling the job more efficiently than ever before. The farmer is producing more abundantly today than in any previous period. The reports of the Department of Agriculture just issued show the greatest surplus of cotton, the largest surplus of wheat, the largest number of meat animals on feed, the largest supply of tobacco ever accumulated. Surpluses of all agricultural products are record breaking. The farmer is supporting the rest of the Nation in greater luxury while he is himself receiving comparatively less. We have today the highest standard of living in the city and comparably the lowest standard of living on the farm—the widest difference in pay received by the farmer and the rest of the country—than has ever been known since Columbus discovered America.

The farmer's share in the national income has fallen in a few years from 20 to 6½ percent—and is still falling. Why this unfilial treatment of the most faithful and most patriotic class of the Nation? The farmer works 100 hours a week, including Sunday—he and his wife and his children—for half of what he got in 1919—while the rest of the Nation works 40 hours a week, with Saturday and Sunday off, for twice what they got in 1919.

Why this discrimination and inequality of compensation? The answer is written here in Washington, so bold and so clear that he who runs may read. It is because labor and industry are organized, and their representatives have influenced and are influencing Congress to pass laws which protect their interests, put a floor under their wages, stabilize their prices, and guarantee their incomes.

Now, you cannot repeal these laws. You do not want to repeal them. The farmer, above all others, believes that the laborer is worthy of his hire, and has always supported labor legislation and legislation for the benefit of American industry. But the farmer cannot leave his own interests unprotected here. He cannot let the other fellows pass all the laws while they pass none for him—he cannot let them legislate money into the pockets of others and legislate it out of the farmer's pockets to do it. In this bill alone the representatives of organized agriculture have been instrumental in raising and maintaining the price, directly and indirectly, of every farm product. But the job is not yet done. They need you and a million more like you to back them up and to back up farm Congressmen. We need the support, the counsel, and cooperation of a strong, aggressive, militant organization.

Join now. Join and bring your neighbor with you. That is the only way to get effective and permanent results. That is the way labor has lifted its status from poor pay, intolerable working conditions, and arbitrary coercion. to honest wages and a voice in its own government. Join your farm organization. Join with us in providing a stabilized, sustained, continuous prosperity for the man who feeds the Nation. And in prospering agriculture we will prosper America.

Mr. Speaker, in response to this broadcast, I received letters from practically every State in the Union. In order that we may have some idea of what the farmers of the Nation are thinking, I am giving below a brief cross section of the replies received:

NEW HAMPSHIRE

I listened with amazement this noon to a speech from you over station WBZ, Boston. My husband and I just stopped eating and looked at each other. May God bless you in your effort. Our boy, just 19, could see no future here on the farm with us, and we could not encourage him to stay and face the hard work and worry and fruitless effort. He has joined the Navy and gone. Left his colt he raised and purebred bull calf and all his animals he loved. Said maybe he could earn enough money to help us carry on. We have a hired man we haven't paid for 3 years. All my sheets are made of bleached grain bags. The children are unable to have dental attention. This week for meat we have had one piece of beef, 2 pounds of sausage. The rest of the time we have eaten eggs, and those only one a day apiece to feed a family of 5. Of course, we have our potatoes and vegetables I canned. We raised a steer, but had to sell it to pay bills. We have been to one movie in the last year. It has been a crime the way the Government has loaned money to the farmer and then gives no opportunity to make enough to pay back. One of our neighbors has just lost everything he had. A man who fought in the World War. A good farmer and fine caretaker. He loses everything, and with 3 children and a wife has to go to work by the day. I am but a poor farmer's wife, but I want to at least acknowledge my appreciation.

ARIZONA

Happened to turn on the radio and heard your speech. The farmer has less buying power than I remember. For the past few years farm expense has been going up and farm prices coming down until less than the cost of production is being realized. We must do something to keep people on the farm and give them enough to raise their children.

MARYLAND

If the farmer had money enough from his crops to buy machinery and repair his buildings and pay for what his family has to have, the merchants would have business.

CALIFORNIA

We just can't make ends meet on the farm any more. Can't Congress do something for farm prices so we can have enough to buy what we used to have.

COLORADO

Our farmers are just existing. The county agent is helpful and the Government is introducing soil-conservation methods that are helpful but that is not enough. Everything is so high we do not get enough for what we sell to buy what we have to have to live.

ILLINOIS

As you know, farming has not been profitable for the last few years. I would leave the farm and go to work but I am a World War veteran and too old to get a job and too young to get an old-age pension.

INDIANA

Your speech reminds me of a farmer who was approached by a farm editor and asked if he would not be interested in becoming a better farmer. The farmer replied: "Brother, I am not farming now half as good as I know how." Improving production when we are getting such low prices is putting the cart before the horse.

NEW YORK

My farm is one of the best in Columbia County. I just figured my income tax and find I have lost over a thousand dollars this year. Last year I lost $875.54. These losses were with my son working on the farm without pay during the last two summers. Today he is on his way to Camp Benning for his selective service.

I have been in the general merchandise and machinery business since 1913, and I am quoting herewith some of the prices that farmers had to pay and what they received for what they produced during that time.

In 1913 we sold gang plows such as we use in our country, one 14-inch gang with 5-horse steel hitch complete with 2 set shares, for $73 laid down on the farm; a grain drill, 10-foot, such as we use here, for $145; a binder for $150; a mower for $50; a wagon for $75; etc. And we received 80 cents to $1 for a bushel of wheat, and taxes were about 10 percent of what they are now. And now a plow costs $150; a drill $275; and a binder $300; and 2-percent sales tax on top of it. Now, any sane man will have to admit that the present prices are about one-half of what it should be for what a farmer raises.

Everybody is head over heels in debt, machinery worn out, taxes eating him up, and the farm going to pieces. Many farmers are dying from the effect. It has made more bums out of good hard-working farmers than we have had since the beginning of the world.

PENNSYLVANIA

A year and a half ago my husband and I moved out to the farm and had in mind we would work toward some security for our old age—he being 51 and I under 50. We were both brought up on the farm and did not find it difficult to adjust ourselves again.

The place we bought was an old, run-down, neglected poultry farm. We both like chickens so we began to grow them. I did as much of the work as I could possibly do in the daytime, and during the summer we both worked every evening until 10 o'clock. My husband works in town to earn the living and pay the bills, else we would starve. At the close of last year, with slave labor, denying ourselves of all outside pleasure and recreation, we had less than 300 head of laying stock clear. All our labor was free service, poultry inspected almost weekly by a regular inspector, all improvements were paid for with my husband's earnings.

During the month of January we thought ourselves in position to make a profit, as all growing stock had grown to laying stock. But instead, the wholesale egg prices had taken a dip. We came out $1 to the good, not counting cost of delivery, lights, or labor. We culled the flock. February eggs took another drop. Instead of coming out even we ran behind $7. Now I ask the consuming public, who are constantly striking for higher wages, how much longer is the farmer to produce his food under such conditions. Were it not for the fact that we were able to make repairs on our 3-year-back clothes, we would

be going to a rummage sale to make our purchases. All other farmers around here are making the same sacrifices as far as I can see.

St. Patrick's Day Address

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

ADDRESS BY HON. ALFRED E. SMITH

Mr. LYNCH. Mr. Speaker, under leave to extend my remarks, I include therein an address delivered on the 17th of March by one of the most distinguished citizens of New York State, a sterling patriot and a great statesman, the Honorable Alfred E. Smith, at the one hundred and fifty-seventh anniversary dinner of the Friendly Sons of St. Patrick in New York:

For years I have heard distinguished and eloquent men tell the history of Ireland; its battles for freedom, of the great emigration to America, of the wonderful achievements of the people of Irish birth, and of their great love and devotion to the country of their adoption, and the part played by their children in the upbuilding and development of our great democracy; how they and millions of others have looked upon America as God's gift to the poor, the downtrodden, and the oppressed of every land.

Their record is an answer to the queer notions of the dictators who believe that there can be no unity in a country like ours, because there are so many people of diverse origins, so many people with ties binding them to the old country, so many differences of opinion which, if left to ourselves, can be ironed out, but which can be played up and magnified by skillful troublemakers.

What do the dictators know about this country? They have never mingled with our people. They never saw Abie's Irish Rose or Friendly Enemies. They know nothing of the strong ties that bind our people together, irrespective of their origin.

Let them take a look at the list of men who went from a public school in Oliver Street to the first World War where they will find a representative of every nation in the civilized world. They do not know that there are 10 Chinamen in the Sixty-ninth Regiment. Kwok Chung Lee is the latest addition and upon examination it was found that he was a cook, so don't be surprised any day if you read in the paper that a large number of Irish soldiers in Alabama are eating chop suey with the same relish that they would eat corned beef and cabbage.

The dictators are foolish enough to believe that they can stir up differences, magnify grievances, and create confusion to such an extent that we would be helpless to defend our democracy if and when the time comes for a final show-down. The propaganda coming out of dictator countries rests on a complete and total lack of understanding of the motives and impulses that supply the driving force and the energy that runs this country. Anything that rests on false premises can never get anywhere because its conclusions will always be wrong.

If you don't know the psychology of a people how do you expect to get any place with them? Of all the groups that make up America the Irish people will be the last to fall for the "bunk." First, because we are patriotic and our devotion to the United States, to the Declaration of Independence, and to the Constitution has been spoken of at our annual dinners down through the years since our institution. Second, thanks be to God, the Irish people have a well-developed sense of humor and they get a big laugh from the awkward stooges who represent Adolf, Benito, and Joey. Third, Irish people have instilled in them a religious faith that is angered and affronted by the godless dictators who would tear down all religions. Now, let us take account of stock and be sure that we will not be foolish enough to believe that liberty can be kept alive surrounded on all sides by tyranny; foolish enough to think that we can get along nicely in a world dominated by European and Asiatic dictators. I don't know where the conflict will end. The forces behind the dictators are not only formidable, they are ruthless and fanatical and they have a great advantage over the slow-moving, constitutional, scrupulous, and high-minded forces of democracy.

The big question is, Can we get wartime production without declaring war? Another important question is whether or not our people are serious enough in the situation in which they find themselves. Do they realize that ordinary, easy-going living, and peacetime pursuits must give way to a rapid preparation for the defense of our country?

Whatever may be in store for us I know that the followers of St. Patrick will be found in the front rank of Americans who have no other purpose than to defend the United States against her enemies, no matter who they are or where they are.

Allocation of War Industries

EXTENSION OF REMARKS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

Mr. HARE. Mr. Speaker, I ask the indulgence of the House at this time for the purpose of presenting some observations touching the national-defense program, and calling attention to a policy which may prove to be subject to criticism if continued. I know it is an easy matter to criticize or find fault, and I take the position that no man has the right to criticize the action or policies of another unless he is able to suggest or recommend a course or policy which would prove to be more satisfactory or successful and in this I sincerely trust that what I shall say will not subject me to the possibility of the charge that I am not practicing what I preach.

Enormous sums of money have already been appropriated by Congress upon the theory that the safety and future of our Government and its institutions are seriously threatened by foes both from within as well as without. These appropriations are made primarily for the purpose of preparing this country to properly and successfully defend itself in case of an attempted invasion from the outside. Staggering appropriations in the future are being planned and will be made upon the same theory. It is not my purpose to go into great detail outlining the grounds or reasons for our apprehensions as to what we may be forced to meet. We all may be mistaken as to what may happen, and I can express the hope that we are, but I am proceeding upon the assumption that what we have already done and what we are now doing may be justified in the light of present information.

In an effort to localize our fears of attack from without it seems to be the consensus of opinion that if attack is made it will come first by way of the countries south of us. Practically all of our military experts have said and are still saying that if Britain falls the next step in the line of march for world control by the totalitarian states or the Nazi forces will be to cross the Atlantic and take charge of South America, where preparations are already being made by propaganda and otherwise to make invasion with little or no resistance from the Latin republics. Should the Nazi forces be successful in such a program and this country undertakes to defend the Monroe Doctrine, to which it has subscribed for more than a century, we will certainly be called upon to defend our Government and its institutions.

Our defense program so far has been outlined with this thought in mind. Of course, we cannot be certain that the premises laid down or the conclusions reached are absolutely correct, but I am certain that the preponderance of the evidence before us is such as to preclude any other conclusion. At least the Congress so far has been acting upon this hypothesis, and it is assumed that those in charge of the national-defense program are acting upon the same premises. Therefore, in outlining a program our defense lines should be where they will be the most effective from the standpoint of offense, because if we are correct in our assumption, and the information furnished is correct, we will be forced to take the offensive. Certainly then both our defense and offense lines should be placed south of our seat of Government, but in reality we find that a very small percentage of the preparations are being made in this section of the country. It is true most of the military training camps have been located in the South Atlantic and the Gulf States which will be the assembling ground for our Army, Navy, and Air Corps in case of an attempted invasion. One reason for the locating of camps here is in order that the trainees may be near the scene of action in case an emergency should arise. This is perfectly logical in planning a defense program, but it has occurred to me that it is a weak link in the chain of defense to train young men to become experts in military tactics and have the implements of war manufactured and stored 1,000 or 1,500 miles from what will be the assembling ground.

My thought is that if the Government is going to construct or erect added or additional plants for the manufacture of war implements such plants should be located somewhere near these young men

where they are being trained so that in case of emergency the warrior will have his weapons within arm's reach and will not be required to take the hazard of having them transported a thousand or fifteen hundred miles before he can arm himself, although he may be face to face with the enemy. To be definite and clear in the point I am trying to make, I want to suggest to those in charge of the defense program that in the creation or establishment of new plants for use in making or storing implements of war such plants should be located as near as possible to where the men are being trained. This seems to be fundamental because I am certain that if I were in training and making preparations to defend my country against a threatened or pending attack I would want to have my weapons for defense where I could put my hands on them at a moment's warning and not be forced to wait a week or 10 days or longer to get them. We must remember that the destiny of nations has been determined upon what was considered a minor loss of time—Napoleon lost the battle of Waterloo and was exiled for life because one of his subordinates was delayed in securing necessary munitions and supplies. In our war for independence Washington defeated the Hessians at Trenton because they were not able to connect up with their defense weapons in time to meet his attack.

The Case of Claire Bruno

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

Mr. MARTIN J. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter I received from one of my constituents:

NEW YORK, N. Y., *March 4, 1941.*

Congressman MARTIN J. KENNEDY,
New York, N. Y.

HONORABLE SIR: As an active worker in your district, I am bringing a problem to you that has recently been brought to my notice by friends, who say that my name appears in the CONGRESSIONAL RECORD of September 19, 1940, and was placed there by Congressman DICKSTEIN (Democrat, New York), along with some 599 so-called anti-Semitic leaders.

I have absolutely no affiliation with any anti-Semitic organization, and I resent this accusation of Mr. DICKSTEIN'S. It is untrue, unwarranted, and hurtful.

My problem is, How may I have my name expunged from the RECORD.

Will you be so kind, Congressman KENNEDY, and tell me how this can be done?

Very truly yours,

CLAIRE BRUNO.

Mr. Speaker, upon investigation I find that the writer was entirely justified in protesting against her name being listed by Representative DICKSTEIN in the CONGRESSIONAL RECORD of September 19, 1940. It appears that Mr. DICKSTEIN included the name of Claire Bruno in a list of alleged anti-Semitic leaders.

Claire Bruno has been an active worker in the ranks of the Democratic Party and at no time has ever been known to take part in any un-American activity. To have her name published in the CONGRESSIONAL RECORD without an opportunity of a hearing is, in my opinion, both unfair and unjust.

In justice to this lady I am bringing this matter to the attention of the House and request that her name be expunged from the permanent RECORD.

End Unemployment and Balance the Budget

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

LECTURE BY DR. JOHN BARR, OF URBANA, ILL.

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following short lecture by Dr. John Barr, of Urbana, Ill.:

For several years before the war began in September 1939, Germany had been employing all of its people, many of them on a 10-hour day, and in addition had been importing labor from other countries. So far as we can tell, this great activity was about equally divided between the production of goods for normal civilian use, and armaments. That is, about half of the energy of the German people was devoted to preparations for war. Industry and individuals were very heavily taxed, the government having total control of production and investment, directing them into whatever channels it wished. The result was that while income was to some extent more evenly distributed, the standard of living in general was considerably lowered. The people were willing to sacrifice butter for guns.

This country likewise will not be making a full defense effort until every person able to work has a job at 48 hours per week and we are curtailing our demand for usual consumption goods so that such an amount of time and energy will be available for defense purposes as our Government may consider to be necessary. We will not be doing this out of any special love for England but for the very selfish purpose of our own protection. But if the English people are willing to stand for the bombing and loss of life and property, we should at least be ready to cheerfully forego a part of our normal peacetime wants in order to provide tools that will be used in our own behalf.

When we have reached this condition of full employment which should be brought about at the earliest possible time, our national income will be approaching the $90,000,000,000 mark and our total expenditures, including those of State and local governments will be about $30,000,000,000. This will leave about $15,000,000,000 for military purposes. This is stating the case for defense mildly. It will not be an effort comparable to what both England and Germany are now making and insofar as we fail to do this we will be belittling the power of Germany. Overconfidence has lost many a ball game.

A budget of $30,000,000,000 will be roughly a third of our national income. In 1938 this country collected $14,300,000,000 in taxes—the most that had ever been collected in any one year. The national income that year was $66,300,000,000, so that the percentage of taxes was 22 and the amount left after taxes was $52,000,000,000. This means that $52,000,000,000 worth of nongovernmental goods and services were produced to be used by all the people. If we collected $30,000,000,000 in taxes from a national income of $90,000,000,000 it would mean that $60,000,000,000 worth of nongovernmental goods and services would be available for normal civilian use—not much sacrifice so far as compared with 1938. When in a condition of full employment, we collect the exact cost of governmental activities (that is, balance the Budget) we leave the exact cost of civilian goods for the purchase of such goods.

Now, suppose that at this point of full employment, instead of balancing the Budget we continue to borrow, say, $10,000,000,000 a year from the banks. Then, instead of having $60,000,000,000 with which to buy the available amount of civilian goods, we will have $70,000,000,000 with which to buy the same amount of goods, and the price of these goods must go up, and that means inflation. That is, the price of goods must go up unless the Government fixes prices. If the Government does fix prices at the old level, then we will have $10,000,000,000 to save. This money will then go into the banks and remain idle, because there will be nothing to spend it for, and the Government will be paying interest on it. In a state of full employment, as we increase the amount of armaments produced we decrease the amount of civilian goods. We therefore sacrifice the satisfactions that the consumption of these goods would have afforded and to the same extent reduce our standard of living.

If this analysis is correct, it means that the burden of producing armaments must be borne by the people at the very time that the armaments are being produced; it cannot possibly be shifted to the next generation, even by borrowing. The burden will consist of working harder and consuming less. If we borrow and the next generation pays the bill, it will pay it to the next generation. This, of course, assumes internal borrowing, or borrowing within our own country, and there is no one else in the world that this country can borrow from at the present time.

Our annual national income is the value of the goods and services that we produce within the year. The only way that we can place a burden upon the next generation is in some way to reduce its ability to produce. We will not reduce such ability by leaving to the next generation or the people of tomorrow a vast amount of machine tools and factories produced by our own activities at the present time.

From this discussion it would appear that the sensible thing to do is to balance the Budget by taxation. We have seen that borrowing means inflation. If we borrow and the debt is paid, it must be paid by taxation. If the debt is not paid, it may mean repudiation. We therefore see that we are faced with either taxation, inflation, or repudiation. Taxation can be orderly and fair. Either inflation or repudiation can be very disorderly and very unfair. But what kind of taxation shall we have?

People of low incomes spend their money mostly for nondurable goods—food and clothing—the raw materials for which do not enter into the production of armaments. We should therefore tax the people of higher incomes, and this means higher income and inheritance taxes.

The national income in 1940 was $74,000,000,000, and total tax collections about $15,000,000,000. If we increase the national income to $90,000,000,000 and tax collections to $30,000,000,000, we can still live a little better than we did in 1940, which was not what could be called a bad year, and at the same time pay for all of our greatly increased Government expenditures. The yield from income and inheritance taxes in 1940 was probably about $2,000,000,000.

If we wish to raise the entire increase in taxes from these sources it means that they will have to yield at least seven times as much. This, of course, does not mean that rates will be multiplied by 7. A drastic increase would be necessary, but we are up against a drastic situation and drastic measures must be taken to meet it. The exact rates would have to be determined by tax experts, but there are some points which should be taken into consideration.

Rates on estates and gifts are still comparatively low except in the highest brackets. Exemptions could be lowered and the return from this source greatly increased.

I believe that ordinary corporation income taxes should be abolished, as high rates on this kind of income are very unfair to stockholders of small means. A flat corporation income tax is not progressive and violates the principle of ability to pay. But if these rates are abolished, there must be a tax on undistributed profits. The undistributed profits tax, which with a few changes would have been an excellent tax, met an untimely fate. This tax should be reenacted and there should also be an excess-profits tax with rates approaching 100 percent.

The personal income-tax rates would have to be greatly modified. In Canada the normal rate is 6 percent and the exemptions are $300 for a single person and $1,200 for a married couple without dependents. In England the exemptions are $400 for a single person and $580 for a married couple. In England about 50 percent of all taxes are income and profits taxes, as they would be here under the arrangement mentioned.

A recent study made by the Department of Commerce shows that people with incomes of less than $500 per year pay 22 percent of their income in all kinds of taxes, most of which are hidden. This percentage decreases steadily to the $5,000 to $10,000 bracket, where the percentage is only 15 percent. From that point the percentages increase, but the 22-percent figure is not again reached until we come to the $15,000 to $20,000 bracket. People with incomes of over $20,000 pay, on the average, 31.3 percent in all taxes. This shows that the greatest increases in income-tax rates should be made in the brackets from $1,500 to say $100,000. Increases should also be made in the very high brackets but not in the same proportion.

As we lower the exemptions and take in people whose income is made up mostly of wages and salaries, the collection should be made at the source. We already have the machinery for doing this in our social-security department. Employers could withhold the income taxes along with other payments.

We do not know when the present emergency will be over. If Germany wins, we will be forced to maintain a two-ocean navy and a huge standing army indefinitely. If we continue to borrow to meet this expenditure, our national debt will soon be larger than even the most carefree among us would deem comfortable. The only way to make so large a debt endurable would be to place the burden of carrying the debt upon the wealthier classes. This again would mean increased income taxes. Eventually, why not now?

If the emergency passes we will then be confronted with the danger of a great business slump. In this situation the high income taxes should be continued and other taxes reduced. The Federal Government should go in for a big program of public works and services. If more money was taken in, than could efficiently be spent in this way, part of it should be rebated to the States. These rebates should be made in proportion to the population of the States and in inverse proportion to the per capita income in the several States. The State governments would in turn rebate to their smaller subdivisions. In this way sales and property taxes would be reduced and larger purchasing power left in the hands of the mass of the people. This increased purchasing power would be an effective demand for goods and would sustain business in general.

If Germany, from 1933 to 1939, had devoted her entire energy to the production of civilian goods rather than to armaments, I can see no reason why she could not have been prosperous and peaceful. If Germany could have done it, we also could have done it. Within a short time it should be demonstrated that huge Government expenditures paid for by progressive taxation can keep all of our people busy. When the opportunity presents, all we will have to do is to keep the progressive taxes and reduce those taxes which bear more heavily on the masses.

Grand Coulee Dam

EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

STATEMENT BY THE BUREAU OF RECLAMATION, DEPARTMENT OF THE INTERIOR

Mr. HILL of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement issued by the Bureau of Reclamation of the Department of the Interior:

An idea of the size of mammoth Grand Coulee Dam in Washington whose power plant hums into action March 22 can be obtained only from comparisons, Commissioner John C. Page, Bureau of Reclamation, reported today.

To state that the dam is the most massive structure ever erected by man, or that it contains 10,500,000 cubic yards or 22,250,000 tons of concrete, fails to convey a mental picture of the vast dam.

The base of the dam covers 35 acres. The Great Pyramid of Cheops, first wonder of the world, covers 13 acres. The concrete in Grand Coulee equals about 4 Great Pyramids. About 5,000 men with modern construction machinery placed the concrete in 5 years. Herodotus related that it required 100,000 men 20 years to build the Pyramid.

The dam is 500 feet thick and 3,000 feet long at the base. It is 550 feet high, 30 feet thick and 4,300 feet long at the crest.

Translated, the figures mean that the dam is nearly 2 ordinary city blocks thick at the base and 15 city blocks long at the crest. It is as high as a 46-story building. It is only 5 feet less in height than the Washington Monument which is 555 feet from base to apex.

The cubic mass of Grand Coulee Dam could easily contain the equivalent of 250 Washington Monuments. A line of 78 of them would march across the ¾-mile length of the dam. In the center section of the dam the rows could be 9 deep. Only the pointed tops of the monuments would protrude.

The volume of Grand Coulee Dam equals the combined volume of the 20 largest concrete dams in the United States excluding Boulder. It would build a monument 100 feet square nearly 6 miles high, or if placed on an ordinary city block it would be nearly three times the height of the Empire State Building. It would pave a standard 2-lane highway from New York to Seattle and back again.

The concrete in the dam required about 12,500,000 barrels of cement. If this amount of cement were shipped in one trainload it would be 500 miles long and consist of 50,000 cars.

Concrete placement at Grand Coulee Dam went on all night long for nearly 2,000 nights under blazing electric lights. On May 25, 1939, a world record was established by pouring 20,684 cubic yards in a single 24-hour day. This was at the rate of 30 tons every minute. The 24-hour mixture and placement of concrete would have paved nearly 10 miles of standard concrete highway.

Words to the Wise

EXTENSION OF REMARKS

OF

HON. JARED Y. SANDERS, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

EDITORIAL FROM THE BATON ROUGE STATE-TIMES

Mr. SANDERS. Mr. Speaker, under leave to extend my remarks, I desire to print in the CONGRESSIONAL RECORD an editorial from the Baton Rouge State-Times of March 14, 1941, under the caption "Words to the Wise." This editorial contains a clear statement of the problem confronting industry in this country in the switch from production for peace to production for defense.

[From the Baton Rouge (La.) State-Times of March 14, 1941]

WORDS TO THE WISE

If there is one nation anywhere on the face of the earth that can comment with real knowledge on the various phases of our current defense program, it is surely England. For under the stress of a need to "get things done" that was even more immediate than is ours today, the little island across the seas made most of the mistakes and achieved most of the discoveries from which we should now be able to profit.

From this point of view, some words written recently in the distinguished London Economist should be of particular interest to Americans who want to know the facts about defense. The Economist in this particular passage is explaining that it takes time to build military equipment; and what it has to say should help to show why our national-defense program is now beginning to offer real returns, after a period when some benighted critics of industry were clamoring for clouds of tanks and airplanes immediately, and claiming that the manufacturing effort was at a standstill.

Says the Economist:

"Because tanks and locomotives are both heavy vehicles made of steel, it is far too easy to assume that a shop experienced in making the one can turn over to the other. Even for a diversified and resourceful engineering industry the transformation takes a long time. Munitions are infinitely more complex than peacetime machines; very few of them lend themselves to the method of the conveyor belt. In Great Britain it took something like 4 years of planning before the curve of aircraft production really began to rise, and a still longer period for army ordnance. Even a standardized merchant ship takes a year or 18 months to build when the yards have first to be laid down anew or brought back into service."

That is the experience of Britain. Among other thoughts, it leads to the reflection that the United States is forunate in having an industrial system so adaptable and so imaginative that it has already profited from the experience of other lands, and is drastically cutting down on the delays experienced in changing over suddenly from a peacetime economy to one that must turn out vast quantities of articles for defense.

Is It Table Stakes?

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. SPRINGER. Mr. Speaker, since the passage of the lend-lease bill, which was forced through the legislative channels with great speed and due precision, it appears that our Chief Executive is now heading us into this European war—not merely as an arsenal for the world, but as an actual participant in the war. No one can foretell what the future holds for the people of this great Nation. But we do know if and when the President leads us into this war, and with the unbridled power granted to him under the provisions of the lend-lease bill he can do just that, no one can predict how long such a war will last, or anticipate the great waste of our manpower and money in such participation. We do know that want any misery always follow in the wake of war. We do know that with resources practically depleted, and with manpower in part destroyed or rendered unfit to take its place in the arts and trades of civil life, our Nation will suffer an economic loss which the ages will not replace. War brings to all of the people of a participating nation great suffering.

Mr. Speaker, it is a sad future which we behold. If the President, in his apparent rush into this war, continues his course it will not be many days until we will feel the sting of war. He has carried us far into the field of battle, and with unslackened speed he proceeds toward the front. I shudder when I think of the boys in my congressional district—the thousands of them—who will have to respond; I think of them because they will have to bare their breasts to the enemy bullets—if the President continues his journey into this war. The people of our country want peace—they do not want war; they do not want to see hunger, suffering, and misery in this country; they do not want to have before them disabled veterans of this war, because we have them in vast numbers from the last World War; the people want the President to chart the course of peace, and they want him to follow that course. He has the power. Let him exercise it.

Mr. Speaker, in the extension of my remarks, I ask unanimous consent to include therein a very carefully written editorial which appeared in the Times-Herald of Washington, D. C., of this date, which editorial follows:

[From the Washington Times-Herald of March 20, 1941]

IS IT TABLE STAKES?

Some people hope that President Roosevelt, leading this country into the biggest rearmament program in its history, plans to play a game of international poker for table stakes.

WE FEAR IT ISN'T

The idea would be to put together the deadly Army and the huge Navy and air force we hear so much about and are beginning to see, and then say something like this to Hitler:

"Now, Mr. Hitler, you see what we've got for fighting purposes—and you know what we've been doing and intend to go on doing to keep the British war machine fired up and functioning. Maybe you can beat the British eventually; but if you do, your troubles will be only well started, because then you'll have to try and beat us.

"So how about turning off the blood and tears, and conferring with us and the British on reasonable terms of peace? We know you will be more likely to accede to reasonable terms now that you see us sitting with the British across the table from you."

We wish that were the plan in Mr. Roosevelt's mind. It makes sense to us. But we're afraid the Roosevelt-Churchill plan is otherwise.

It looks to us as if the plan is to carry this war to a finish, to a complete knockout of Hitler's Germany. Of course, it may end in a complete knockout of British and American world power, or worse. But whichever way it ends, the chances for a magnamimous peace will be small. No finish fight in history, which ended in victory for one side, to our knowledge, ever produced a broad-minded, generous peace. Too many war-bred hates had to be satisfied at the peace conference—which in turn assured the next war.

It looks like a long war, which, even if our side wins, will be tragic, bloody, and desperate, and will leave the British and the Germans flat broke and the United States at least badly bent. Probably the only victor will be Stalin.

All of which brings up the question: Is this a war of offense or defense—that we have now taken about 95 out of a possible 100 steps to join?

WHAT'S THE DIFFERENCE?

Our arms program is commonly called the defense program. But that is chiefly because slogans count so heavily in a war. It salves many a conscience to speak of a defense program or a defensive war, instead of arms for offense or a war of offense. Actually, the distinction is vague and shadowy, and subject to change without notice.

Hitler, for example, began an offensive war against Poland, September 1, 1939. Britain and France then declared an offensive war against Hitler, but left the Poles to handle their own defensive war. Hitler was fighting a defensive war against Britain and France until May 10, 1940, when he suddenly took the offensive.

This put France, Britain, Belgium, and Holland on the defensive. The Low Countries and France passed from defensive to down and out in rapid succession, and Britain was left on the defensive, where it still is. As to Hitler, that is.

As to Mussolini, Britain is decidedly on the offensive. To make this whole world play still more fascinating, Mr. Hitler never knocks over a country by diplomacy or arms without first stating that such country is menaced by some black-hearted foe, and that Germany is forced against its will to undertake offensive steps for its defense.

Mussolini, Stalin, and the Japanese use this same technique—which isn't so dumb, either, but which surely does play hob with the once clear and distinct meanings of those words "offensive" and "defensive."

THE GOOD OLD DAYS

So we think the smart thing for this country to do is to use up as little time and mental energy as possible worrying over the difference between "defensive" and "offensive," and concentrate on building up all its armed forces as fast as it possibly can.

They may be used for offense or defense, or both; but the one safe bet appears to be that they are going to be used somehow before the war is over.

As for the hope of arming ourselves economically or cheaply, we fear that is out the window. So the talk about shaving to five billions the President's request for seven billions initial British aid under the war-power law sounds futile to us.

If this war goes to a finish, and takes as long as now seems likely, the time will come when we'll all be looking back wistfully on the good old days when it took only seven billions at one crack to carry on.

Report of the Benjamin Harrison Memorial Commission

REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

Mr. LUDLOW. Mr. Speaker, under an act approved by the President on August 9, 1939, the Benjamin Harrison Memorial Commission was created to take steps looking toward the establishment of a suitable permanent memorial to the twenty-third President of the United States, Benjamin Harrison.

President Harrison is one of the few great characters in American history for whom no national recognition has ever been shown in the form of a monument or memorial. He was a citizen and Christian of the highest civic and religious ideals. He was a statesman of sterling character, highly respected and honored

by all who knew him, an ornament to the State of Indiana and to the Nation which he served so faithfully and well. It was my privilege as a young newspaper reporter in Indianapolis to come into contact with this great man on many occasions, and though I was brought up in the Jeffersonian school and he was of the opposite political faith, I have never known a man for whom I had higher esteem or who seemed to me to possess more sheer strength of character than Benjamin Harrison.

When this bill was before the House on July 31, 1939, there was a beautiful demonstration of our ability to lay aside politics in recognition of real worth and true Americanism. I was proud to be the author of the bill, and at my side arguing for it was the revered paladin of democracy, our honored colleague the gentleman from Illinois, Representative A. J. SABATH. The bill passed this House unanimously—just as later it passed the upper Chamber unanimously.

A very able commission was appointed to consider the whole subject of a proper memorial to President Harrison. At the head of that commission is Stephen C. Noland, editor of the Indianapolis News. The other members are J. Russell Townsend, Jr., of Indianapolis; Mrs. William H. Schlosser, of Columbus, Ind.; Ross F. Lockridge, of New Harmony, Ind.; and Thomas McCullough, of Anderson, Ind. The commission has considered the matter with great thoroughness and Mr. Noland, its chairman, together with Rudolph H. Grabow, forest supervisor, and J. A. Hall, director of the Central States Forest Experiment Station, Columbus, Ohio, arrived here today bringing the commission's unanimous report. I believe the thanks of the country are due to the commission for its untiring patience and for the devotion it has exercised in the discharge of its duties. Benjamin Harrison was in a large sense the father of American forestry, and in the memorial plan that is presented to us for our consideration he is definitely identified in our fixed and permanent history with forestry—a subject in which he had the greatest heart interest. It is reasonable to believe that out of the many and varied suggestions that were offered and considered no memorial plan could have been adopted that would have been nearer to his heart than the one submitted by Mr. Noland and his associates.

The report of the commission is being placed before the House today for appropriate reference, and in view of the widespread national interest in the subject I ask unanimous consent that the text of the report and covering letter may be printed at this point in the CONGRESSIONAL RECORD. I may add that in one respect this commission has established a unique record. Of a total appropriation of $2,500, a balance of $800, or nearly one-third, is being returned unexpended to the Federal Treasury. [Applause.]

The covering letter and report follow:

FEBRUARY 1, 1941.

To the Congress of the United States,
Washington, D. C.

GENTLEMEN: In compliance with the provisions of section 3 of Public Law No. 352, Seventy-sixth Congress, approved August 9, 1939, creating the Benjamin Harrison Memorial Commission, the Commission, which was appointed by the President of the United States, January 15, 1940, respectfully reports as follows:

The duty of the Commission, as prescribed in the law, is to "consider and formulate plans for establishment of a permanent memorial in the city of Indianapolis to the said Benjamin Harrison, twenty-third President of the United States."

The Commission has been advised that it is free to interpret the provision "in the city of Indianapolis" as meaning any memorial within the State of Indiana which would be consistent with the general spirit of the act.

The Commission has carefully studied the life and achievements of Benjamin Harrison. It has also studied the record of the Harrison family, from the time of the arrival of Benjamin Harrison, known as Benjamin the Emigrant, at the Jamestown settlement in Virginia about 1630. This study was broadened out of consideration for the fact that the Harrison family was intimately associated with the westward movement of population and the conquest and settlement of the territory in which Indiana now lies.

This report falls into two sections, as follows: First, a recommendation to change the name of the Hoosier National Forest to the Benjamin Harrison National Forest, speeding up the purchase schedule to the limits of ready assimilation as a demonstration of reforestation benefits, suitably marking entrances to the forest to commemorate Benjamin Harrison's great service to forestry, and providing therein a series of memorial plantations dedicated to the service which members of the Harrison family rendered to the Nation in the conquest and settlement of Indiana. This will include the designation of a road consisting of connecting stretches of two or more State roads running entirely through this memorial area and touching all the plantations, said road to be suitably marked all along the way and to be known as the Harrison Memorial Way.

The second part of this project includes a recommendation for the establishment in Marion County, Ind., of which Indianapolis is the seat, of the Benjamin Harrison Memorial Forest Institute, to be held and administered by the United States Forest Service for experimentation, advance study, and such other uses as the Forest Service may desire and Congress may authorize.

The other recommendation of the Commission is for the purchase and preservation in perpetuity by the Federal Government of the Harrison home in Indianapolis, together with contents and sufficient surrounding land to assure a proper environment for the purpose of the memorial.

Our recommendations include the suggestion that as a part of the upkeep and maintenance of the memorial, provision be made for the encouragement and direction of group pilgrimages of various kinds to high points in the memorial area as a part of the regular administration of the memorial.

Herewith the Commission submits its recommendations in detail, with reasons therefor and citations to its numerous exhibits, and also an accounting of receipts, expenditures, and remaining moneys.

The members of the Commission wish to express their satisfaction in the confidence which the President showed in them by assigning them to this duty. They realize that some sections of this report call for more study than could be encompassed in either the report or the evidence submitted with it. They stand ready to make any other investigations which congressional committees may desire or to supplement this report with such personal testimony as the committees may wish to hear.

We commend earnestly to the President and Congress the immediate timeliness of this memorial and respectfully urge that action be taken upon it during the present session of Congress.

Yours very respectfully,

BENJAMIN HARRISON
MEMORIAL COMMISSION,
STEPHEN C. NOLAND, *Chairman.*
J. RUSSELL TOWNSEND, JR.
Mrs. W. H. SCHLOSSER.
ROSS F. LOCKRIDGE.
THOMAS MCCULLOUGH.

REPORT OF THE BENJAMIN HARRISON MEMORIAL COMMISSION

SECTION 1. (a) Benjamin Harrison National Forest: While the Commission's study of the principal events of Benjamin Harrison's administration revealed several measures of noteworthy importance to the country's development, including the Sherman antitrust law, tariff acts, and the Pan American Conference, out of which grew the Pan American Union, it was decided that the most far-reaching of all his achievements was the creation of forest reserves and the impetus that he gave to the movement for conservation of the country's natural resources. His communication to Congress on the subject, dated January 20, 1890, sustaining the recommendation of a committee of the American Association for the Advancement of Science, is regarded by the Commission as the real beginning of American forest conservation. It resulted in the law of March 3, 1891, authorizing the President to set aside forest reserves by proclamation. For a discussion of these and subsequent events relating to his fathering of forest conservation, see exhibit 2, pages 202 to 204; and also exhibit 12, an extract from Gen. Lew Wallace's book, Life and Public Services of President Benjamin Harrison.

The United States Forest Service and the national forests grew out of Harrison's interest in public forestry. The work has been carried on in the spirit of his initiative and foresight. In looking over the situation in Indiana for suitable ways of memorializing President Harrison's interest in forestry, the Commission's attention was immediately attracted to the United States forest-purchase project in southern Indiana.

For a good many years the farming possibilities of an area of approximately 700,000 acres, extending from Brown County south to the Ohio River, have been steadily declining. The situation became so acute about 20 years ago that the farm communities in this area were unable to bear the tax load necessary to maintaining their essential functions of government, including schools. In this area are a number of woodworking centers populated by people who have a fine tradition of skill in converting hardwood timber into useful articles. These woodworking industries sprang up because of proximity to what seemed to be an unlimited supply of raw material, but as the land was cut over, then farmed out, or burned out, and then allowed to reforest itself at random, and cut over again, it was seen that this source of raw material had become almost depleted. At present these industries are importing into the State about 90 percent of their raw material. The burden of transportation put on their raw material is such that they are left in a severely handicapped competitive position. As a result of the decline of this soil, thousands of people in this area are dependent upon the Federal or State Government for relief or some aid in gaining a livelihood.

The Federal Government went into this area with the land-purchase and land-use program with a view to aiding these people to become self-reliant and conserving the skill and tradition of both their farming and woodworking inheritance. About 50,000 acres of this unit have been purchased. But latterly the purchase rate has declined sharply

because of lack of Federal appropriation. The result is that hundreds of families in this area are being sustained above a level of actual want but are receiving no aid that would enable them to regain their independence.

It is the belief of the Commission that if this purchase program were speeded up, so that the land could be acquired as fast as assimilation is possible, perhaps in 10 years, instead of the 40 years now contemplated, the cost would be less than the present cost to the Federal Government of maintaining these families.

The Commission made a complete survey of the 700,000-acre area, conducted public hearings for the purpose of ascertaining the economic resources of the communities and the attitude of the people in the small industrial centers toward their calling, and also studied the flood prevention, drought control, and recreational value of the whole forest project.

The Commission also consulted with members of the United States Forest Service, the Indiana State Conservation Department, Division of Forestry, and various commercial, agricultural, and civic interests in the communities within the forest-purchase unit. It made two inspection trips through the area, viewing the land, the condition of farmers, the woodworking industries, and their dependence on a supply of hardwood, and the general social and economic conditions. Testimony taken on the inspection and hearing trips is set out in the accompanying exhibits 4 and 8. Further testimony is shown in exhibit 7, pertaining especially to plantations memorializing the members of the Harrison family, and reference is also made to exhibit 6.

In order to obtain a clear account of the Harrison family's part in the settlement of America and the development of the Midwest territory and what is now Indiana the Commission felt justified in having the study. The Harrisons which accompanies this report as exhibit 2, made by Ross F. Lockridge, Jr., an authority on the subject.

The Commission especially invites attention to the testimony of citizens of Bedford and Tell City as being typical of the feeling in communities throughout the area that the memorial will have a general and immediate social and economic benefit to thousands of people who now look toward the future with doubt and misgivings. It would improve their opportunties for self-support and help to reestablish them on a basis of self-reliant citizenship.

Accompanying the report as exhibit 16 is a map of this purchase unit. It should be considered with exhibit 10, which shows desirable Harrison memorial-plantation sites, a discussion of this probable cost, and a typical development, with shelter-house and other recreational facilities. Exhibit 16 designates a road running entirely through the memorial area past all the plantation sites consisting of connecting stretches of State roads Nos. 135, 50, and 37. It is recommended that this road be officially designated as the Harrison Forest Way and that suitable markers be erected throughout its entire course, including the placing at certain selected points of elaborate kiosks bearing informative historic legends.

It was brought out in the testimony that the United States Forest Service and the forestry division of the Indiana conservation department are working in complete harmony in this area and that the Indiana forestry division would look upon the memorial as fitting appropriately into the State-reforestation plan. This plan is embodied in a report of the State planning commission.

Attention is also invited to exhibit 11, a letter from the Associate Regional Forester, United States Forest Service, Milwaukee, giving the Forest Service's approval of the project and some notes on the probable cost of memorial plantations and the annual appropriation for maintenance and fire protection.

The Commission is convinced by its study that this memorial would not only be thoroughly in keeping with what must have been in the mind of President Harrison when he inaugurated the forest-conservation program, but would also provide a substantial return on the investment of public money which it would involve.

The present purchase program calls, roughly, for the acquisition of the land in a period of about 40 years. If, as a memorial to President Harrison, Congress should appropriate sufficient money to reduce this to something like 10 years, the memorial would begin to pay dividends almost immediately and would, within a few years, pay for itself. The United States Navy has taken over 32,000 acres in Martin County within this forest-purchase area, and is acquiring 18,000 more acres, for the purpose of establishing there the munitions depot for the Atlantic Fleet. The Commission has gone into the question of the value to the safety of this depot, if it had a considerable surrounding forest area. Testimony of experts convinces the Commission that this would be helpful to the safety of the depot. The Commission is convinced that the national-defense program would be improved by speeding up the purchase of other forest land in this vicinity.

SECTION 1. (b) In conducting hearings to ascertain what could appropriately be done to memorialize President Harrison's interest in forestry and conservation, the Commission drew from members of the United States Forest Service a statement that for many years the Forest Service has hoped that the Federal Government might establish a forest institute embodying facilities for advanced research in forestry, a national repository for the archives pertaining to the development of American forestry, and an educational museum portraying the history of forestry and the utilization of wood in America. An arboretum of about 300 acres is proposed as an adjunct to the institute. Out of this study came the Commission's decision to recommend the establishment in Marion County of the Benjamin Harrison Memorial Forest Institute to fill this obvious need. It is the opinion of the Commission that this institute would augment and supplement the southern Indiana reforestation plan.

The Commission also believes that the Central States Forest Experiment Station, now on the campus of Ohio State University at Columbus, Ohio, should be combined with the forest institute. For a discussion of the feasibility of this plan see exhibit 5; likewise, see exhibit 8 for a discussion of the transfer of the experiment station to Indianapolis, and exhibit 9 for requirements of the site and the Forest Service's approval, by H. Earl Clapp, Acting Chief, of the general plan of the forest institute.

The Commission reached no definite decision as to the best location in Marion County. It employed Mr. William H. Bosson, Jr., a land expert of Indianapolis, to survey the county for sites which would conform to the general requirements of the institute as suggested by the Forest Service. The Commission viewed the sites which he suggested and voted to employ him to consult the owners of the Road 34 site as to their views about giving options in case of a Federal purchase. His reports are herewith presented as exhibit 13.

The Commission believes that if this institute is established it should be developed and maintained as a memorial to President Harrison without in any way reducing the normal appropriation of the United States Forest Service—that is, that this should be financed entirely, both for acquisition and maintenance, from money dedicated to memorializing President Harrison's service to conservation.

It is suggested that a Harrison memorial room be maintained within the institute, containing exhibits expressive of the essential purposes of the memorial. Among these exhibits, charts and maps should be displayed demonstrating the views and services of President Benjamin Harrison in connection with forest conservation, together with the achievements of his administration in the direction of national expansion and international amity.

SEC. 2. The Harrison home: The house which Benjamin Harrison built in 1871, and in which he maintained his home until his death in 1901, is at 1230 North Delaware Street, Indianapolis, Ind. It stands substantially as it did when he conducted his "front-porch campaign" from it in 1884, the difference being that it now has a front porch, whereas in 1884 it did not have a front porch. For a history of the home, see page 245, exhibit 2, of this report.

Upon the death of President Harrison, a life interest in this home descended to his heirs. The family became scattered, and the home was rented for various purposes. It fell into a state of disrepair, and efforts to persuade well-to-do people of the community to buy and maintain it were not successful.

The home came under the observation of executives of the Arthur Jordan Foundation, and they decided that its acquisition, restoration, and maintenance were within the philanthropic scope of the foundation's interests. This foundation now owns the home in fee simple. For a record of the foundation's reasons for acquiring, restoring, and refurnishing the home, see exhibit 1 of this report. This exhibit also outlines the policy of the foundation regarding the home.

Exhibit 3 is an appraisal of the land on which the home stands, made by the Indianapolis Real Estate Board, at the request of this Commission. This appraisal is on the basis of $200 a front-foot. Attached to the appraisal report is a letter giving a legal description of the land. The Jordan Foundation has not been apprised of the real-estate board appraisal.

By resolution of the Commission the purchase of the entire tract at this situation held by the Jordan Foundation was suggested as a means of obtaining enough land to protect the Harrison home from inharmonious building encroachments. The owners of the land lying between the Harrison home and the next street north—which is Thirteenth Street—are unwilling to sell at this time, but they assured the chairman of the Commission that if they should decide to sell, they would give preference to the Federal Government, and that they would be glad to consider a proposal for Federal acquisition of the land at their death. (See exhibit 7, p. 211 and following.) The resolution of the Commission to recommend the purchase of the entire Jordan Foundation holdings at this place is in exhibit 7, page 208.

Consultation with Mr. Hilton U. Brown, chairman of the board of the Arthur Jordan Foundation, failed to develop a definite statement that the foundation would sell. It is now using the two old mansions to the south to house its school of music. Part of the Harrison home is used as a dormitory for this school. Mr. Brown gave assurance, however, that his board was always governed by the essential philanthropic mission of the foundation fund for the good of all the people. He said that in line with this policy the foundation would not resist an attempt to buy for the purpose of establishing the Harrison home as a permanent memorial suitably protected.

It should be explained that the real-estate board appraisal does not include the three buildings—the Harrison home, the old Ayres home, and the old Wasson home. It was agreed by the appraisers and the members of the Harrison Memorial Commission that it

was impossible to make a trustworthy appraisal of these buildings. So much would depend upon the purpose for which they were intended, or upon zoning variances that might be obtained to permit new buildings on the site, that a dependable appraisal could not be reached.

The Arthur Jordan Foundation has rendered a notable service in rehabilitating the Harrison home substantially as it was at the time of Harrison's occupancy and in refurnishing it largely with Harrison furniture and redecorating it in the spirit of Harrison's era.

The contents of the Harrison home could not be appraised by normal means, for many items are unique and so intimately associated with the Harrison family that they could hardly be regarded as having a value except from their Harrison association. However, the Jordan Foundation and its executive director, Mr. Bernard Batty, have been at considerable expense in the restoration, and this cost could be easily ascertained by an audit of the foundation's books. Mr. Batty's statement on this subject, which accompanies this report, covers the whole situation.

Owing to the indefiniteness of the appraisals and the lack of an inventory of the contents of the Harrison home, the Commission does not feel justified in making an exact estimate of the cost of the Harrison home and the entire 538-foot frontage owned by the foundation. This property is 205 feet deep. However, it is the consensus of members of the Commission that the land, buildings, and contents of the Harrison home could be bought for about $225,000.

The heirs of Benjamin Harrison are desirous of seeing this home preserved and believe that its preservation would suitably memorialize his interest in his home, his love for Indianapolis, and the historical importance of the structure as a central point of interest in a national political campaign. In this connection, the chairman of the Commission interviewed Mr. E. F. Tibbott, who served President Harrison as Secretary during his term in the White House and until his death in 1901. Mr. Tibbott not only believed that the Arthur Jordan Foundation had done well in preserving and refurnishing the home, but was also impressed by the interest taken in it by the Daughters of the American Revolution of Indiana. Mrs. Benjamin Harrison was the first president general of the Daughters of the American Revolution. In commemorating her service the Indiana Daughters of the Revolution have caused to be copied and displayed in the Harrison home the portrait of Mrs. Harrison which now hangs in the White House. Mr. Tibbott also approved other sections of this report as being in line with President Harrison's major interests.

The Commission also recommends the establishment in part of the Harrison home—not the first-floor living rooms or Harrison's bedrooms—of a Harrison museum, within which could be suitably displayed the family possessions, mementoes of Harrison's public career, his correspondence, and other materials of value to visitors and students.

The Commission recommends that as a part of the upkeep and maintenance of the memorial, adequate provision be made for the encouragement and direction of group pilgrimages of various kinds—especially for school classes and organized clubs—to high points in the memorial area, such as the Benjamin Harrison home, the Forest Institute, and the plantation units dedicated to different individuals of the successive Harrison generations. This would make the memorial serve a definite educational and patriotic purpose for all time to come in harmony with the spirit of such a memorial.

The Commission contemplates expert direction of an educational nature for such programs and institutes for the purpose of helping to educate the public both as to the great conservation purposes involved and as to the patriotic principles to be inculcated by preserving the intimate history of the Harrison family, with particular emphasis upon the public careers of the two Presidents of the United States from that family. It would make the memorial keep alive before all the people all the time the human and historic significance of the life and career of Benjamin Harrison and of the wonderful continuity exhibited in the lives and careers of outstanding members of successive generations of this great American family.

In conclusion, the Commission respectfully commends to the immediate attention of the present Congress the timeliness of this memorial. The very urgency of our program of national defense makes most opportune the conservation of our vital natural resources, such as reforestation, both for the present and the future. At the same time, the promulgation of the patriotic and educational principles exhibited in the memorialization of Benjamin Harrison and the Harrison family will be an invaluable stimulus to American pride. Through the cultivation of historic and patriotic consciousness it will help to enhance our public morale at a time when such stimulation is of the most pressing importance.

Labor and Industry No. 1 Problem

REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

Mr. BENDER. Mr. Speaker, despite all the optimistic talk to the contrary, it was obvious in Washington this week that serious concern was being expressed over the continuance of strikes in critical defense industries. The naming of the 11-man Mediation Board, headed by Selective Service Director Clarence Dykstra, with 3 men representing the public and 8 others speaking for labor and management, was a foregone conclusion. The effectiveness of the new Board is due for quick demonstration.

At the Allis-Chalmers plant in Milwaukee, 55 days of bitterness had passed with no settlement in sight. The United Auto Workers Union was obviously in no hurry to end the strike. Neither was the managing ownership. United States conciliators had been on the scene and departed. Throughout the country other strikes no less important were slowing down production. A shut-down in one area had repercussions far away.

During February almost half a million man-days were lost on Government Army contracts. In the first 2 weeks of March, Army officials estimated that almost 300,000 days had been wasted away on idle men and idle plants.

The national mood is clear. We are determined that no time should be lost on unnecessary strikes, or through the obstinacy of management. This is the time to produce. It is up to the Federal Government to see that nothing interferes with this production.

DEFENSE CZAR HARRY HOPKINS

American defense preparations are in the hands of President Roosevelt and a four-man inner council, composed of Secretary of War Stimson, Secretary of the Navy Knox, and Production Managers Knudsen and Hillman. This last week Harry Hopkins was named as executive secretary to this Defense Council.

Mr. Hopkins gained indispensable knowledge of the specific problems of the war in Europe on his month-long tour of inspection through England. He probably knows more about what has happened in Britain than any man in America. Together with his direct experience with American working men and women as head of the W. P. A. and as former Secretary of Commerce, this information should qualify Harry Hopkins for almost any emergency task.

There are two difficulties in the way of this happy result. First and foremost is the physical factor. Mr. Hopkins has not enjoyed good health for several years. At most he can work no more than 6 or 7 hours a day. Then, too, Mr. Hopkins does not enjoy the complete confidence of either industry or labor.

To place him in a position of marked personal responsibility must be regarded as neither wise nor benevolent.

TAXES AHEAD

March 15 has come and gone, and tremendous income-tax payments have made the front pages of newspapers in every corner of the Nation. Taxes this year were higher than any before in the history of our country. They will undoubtedly become higher still.

Prospects for the future were already being considered. For the next year an estimated expenditure of some $20,000,000,000 is being considered. Including the $7,000,000,000 in aid to Britain already voted by Congress, this makes a grand total of at least $27,000,000,000 for 1941–42.

To raise this staggering sum seems impossible. But steps in that direction will be necessary. The 4 percent normal income-tax rate will be raised to at least 6 percent. Surtax levels will be lowered. Corporate taxes will probably be jumped, and taxes on theaters, liquor, tobacco, lumped together as "nuisance taxes" will be raised. Personal exemptions, lowered from $1,000 to $800 and from $2,500 to $2,000, will in all likelihood drop down to $600 and $1,800 before the next March 15 deadline.

The old saw that nothing is certain but death and taxes may be soon revised to read, "Nothing is certain but death and higher taxes."

WAR ON THREE FRONTS

Alarm over the European war has diverted American attention from the wars in Africa and the Far East. They are nevertheless real. In China, our fact-

finding emissary has just concluded a survey of conditions designed to influence our foreign policy in the Orient. In the Australian harbor of Sydney, an American goodwill visit by part of the Pacific Fleet, based on Pearl Harbor, was rousing the hearts of men "down under." In Ethiopia, Eritrea, and the Somalilands, British guns were barking out the destruction of Mussolini's African empire, with results destined to be felt even in the United States.

The "all-out" aid program means "all-out" aid to Britain, China, Greece, Turkey. It means more than a battle for the little isle of England. We have taken irrevocable steps. Every American must be alert and ready for the growing emergencies. The die is cast. Let us hope and trust that we shall never have cause to regret the action our Government has seen fit to take.

"One by One the Roses Fall"—Two More Useless Holding Companies Dissolved

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, "One by one the roses fall."

On yesterday I told you of Wendell Willkie's using the Republican Party as a fire escape just before the vast holding company known as the Commonwealth & Southern collapsed. On yesterday——

Mr. HOFFMAN. Mr. Speaker, will the gentleman yield?

Mr. RANKIN of Mississippi. I am sorry, I cannot yield. This is not an argument on communism. I am talking about electric power now.

On yesterday, after I made my statement, the Securities and Exchange Commission demanded further compliance with the Holding Company Act and ordered dissolution or disintegration of the United Light & Power Co., which is an alleged $600,000,000 concern, and also of the United American Co. Since this is one of those cases where holding companies are stacked five deep, all sucking money out of the pockets of the light and power consumers, this action of the Commission is referred to as enforcing compliance with the "great-grandfather clause."

You people who are paying the bills, not only to support these top holding companies but all the rest of them, ought to applaud this action of the Commission.

You are not only paying the operating company but you are paying all the expenses, incomes, and overcharges of all these other four holding companies piled on top of it.

I am inserting the order of the Securities and Exchange Commission dissolving two of these useless, expensive holding companies:

[United States of America before the Securities and Exchange Commission. At a regular session of the Securities and Exchange Commission, held at its office in the city of Washington, D. C., on the 20th day of March, A. D. 1941. In the matter of the United Light & Power Co., the United Light & Railways Co., American Light & Traction Co., Continental Gas & Electric Corporation, United American Co., and Iowa-Nebraska Light & Power Co., respondents (file No. 59–17). The United Light & Power Co., applicant (file No. 54–25).]

ORDER DIRECTING CERTAIN ACTION UNDER SECTION 11 (B) (2) OF THE PUBLIC UTILITY HOLDING COMPANY ACT

The Commission having previously instituted these proceedings pursuant to section 11 (b) (2) of the Public Utility Holding Company Act of 1935; notice having been duly given to all interested persons, and all such persons having been given an opportunity to be heard, with respect to what action should be required to be taken by said respondents to comply with certain of the requirements of said section 11 (b) (2), particularly the second sentence thereof; and

The Commission having filed its findings and opinion herein, in which the Commission finds, among other things, that the action hereinafter directed to be taken is necessary and appropriate for the purpose of bringing about compliance with the second sentence of section 11 (b) (2).

It is hereby ordered, pursuant to section 11 (b) (2) of the Public Utility Holding Company Act of 1935, particularly the second sentence thereof, that:

1. The United Light & Power Co. shall be liquidated and dissolved.

2. United American Co. shall be liquidated and dissolved.

It is further ordered that the respondents shall proceed with due diligence to comply with the foregoing order, and shall make application to the Commission for the entry of any further orders necessary or appropriate for this purpose; and the respondent, the United Light & Power Co., may submit to the Commission herein for its approval a plan proposing a method of complying with paragraph 1 of the foregoing order on a basis which is fair and equitable to its security holders, and providing for a determination of the relative rights and interests of its security holders in connection therewith; and jurisdiction is hereby expressly reserved to enter such further orders in this proceeding as may be necessary or appropriate for the purpose of carrying out the steps hereinbefore required in this order.

It is further ordered that jurisdiction be, and is hereby, reserved to enter such further orders as may be necessary or appropriate with respect to any of the remaining issues in these proceedings, and particularly for the purpose of considering what action should be ordered to be taken by the respondents to bring about compliance with the further requirements of section 11 (b) (2).

It is further ordered that the hearing heretofore held herein be, and is hereby, adjourned, subject to call hereafter upon such notice as the Commission shall deem appropriate.

By the Commission.

[SEAL] FRANCIS P. BRASSOR,
Secretary.

Mr. Speaker, if this revival of righteousness continues we may yet abolish all these useless holding companies, squeeze the water out of the stocks of the operating companies, and reduce light and power rates to the T. V. A. levels all over the country. That would save the consumers of the Nation more than $1,000,000,000 a year on their electric bills alone.

We are certainly moving in the right direction.

A Defense of the Late United States Senator the Honorable Ernest Lundeen

EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

LETTER TO THE EDITORS OF THE CLEVELAND PRESS, THE CLEVELAND PLAIN DEALER, AND THE CLEVELAND NEWS

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter recently forwarded by me to the editors of the Cleveland Press, the Cleveland Plain Dealer, and the Cleveland News:

In a recent issue you carried a letter purported to have been written by one Jean Turkovich, expressing her fears that I may hold some local meetings against our involvement in the war, and proclaiming me a satellite of Senator WHEELER and the late Senator Ernest Lundeen, of Minnesota. Of the latter she said, "now definitely determined to have been senatorial mouthpiece of a registered Hitler propagandist."

I do not dignify the comments directed against me, because I am certain the community as a whole believe with me that one does not have to be pro-British to be a good American. I do, however, resent her foul accusation against the late United States Senator Ernest Lundeen, whose lips are sealed in death. I know of no Christian worthy of the name who has joined in the smear campaign against the dead Senator. This scurrilous attack stems from the warmongers who once more want American blood shed for the imperialism of Europe.

It is the same sort of rabble who convicted and crucified Jesus Christ. History proved the Saviour innocent of the charges preferred against Him at the court of Pontius Pilate. History will prove Senator Lundeen innocent of these vicious charges.

Senator Lundeen as a young man was a member of the war Congress. On Good Friday, April 7, 1917, he voted against our entrance into the war, denouncing it as a bankers' war. He also voted against conscription. A few months later, when he returned to his home in Minnesota, in zero weather, he was seized by a group of so-called patriots and locked in a refrigerator car which was attached to a fast-moving freight train. He escaped death, after traveling in this ice box for over a hundred miles, when the train put in on a siding and a trackwalker hearing his cries released him.

After the war the people of Minnesota, including those who characterized him as a traitor, apologized and sent him to represent them in Congress. In 1936 they elected him United States Senator. A few weeks before his death I visited him in his office. Around the room were more than 20 color standards,

the flags of the American Legion posts, World War and Disabled Veterans' posts, and the Spanish-American War Veterans. All of them had been presented to the late Senator by soldiers, many who had fought overseas in that war to end all wars.

I am sure Jean Turkovich knows nothing of this. I am sure she never even wrote that letter smearing a good Christian, who, by the way, was married to an English woman. That letter was written by a political ghost writer, one of my cowardly political enemies who hides behind a woman's skirts and gets her to sign a letter besmirching the good name of a dead United States Senator, and one who had served his country in the Spanish-American War.

Jean Turkovich (Miss or Mrs.?), perhaps I should say to you, shame on you, but in the spirit of the holy Lenten season, I simply say, may God forgive you.

Sincerely yours,

MARTIN L. SWEENEY.

This letter is in reply to the publication of a letter from a reader attacking the character and reputation of our dead United States Senator Ernest Lundeen. Those of us who knew and served with the late Senator Lundeen will always remember him as a sincere, tolerant, and patriotic American. I believe it to be the unanimous opinion of those who knew him that he put the interest and welfare of his country above that of any nation on earth.

He was never the man to challenge the patriotism of any individual, even though at times he was in sharp disagreement on matters of viewpoint and policy. Recently in death he has become the victim of a vicious smear campaign by certain newspaper columnists and one radio announcer, who attempt to besmirch the patriotism of one who served in the Congress and in the military force of the United States. These cowards would not make their veiled charges against him in his lifetime, but, running true to form and giving an exhibition of their cowardice, they attack one whose lips are sealed in death. Parrotlike the author of the letter I replied to in these newspapers has joined the parade in the mud-slinging campaign against a true American. My reply in his defense is humble, indeed, in the light of the splendid contribution made by the late Senator from Minnesota.

Defense Housing

EXTENSION OF REMARKS

OF

HON. LE ROY D. DOWNS

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

RESOLUTION OF THE BRIDGEPORT, CONN., COMMON COUNCIL

Mr. DOWNS. Mr. Speaker, under permission granted me I am herewith inserting in the RECORD a resolution adopted by the Common Council, city of Bridgeport, Conn., on March 17, 1941, and approved by Mayor Jasper McLevy on March 18.

This resolution is a protest against the construction of row-type defense homes in that city, and requests that defense housing construction be in single units which, in the opinion of the members of the council, can be erected within the limitation of $3,000 set by the Lanham Act.

This resolution also carries objection to the placing of the $2,750 limitation on the construction cost of each unit. It is felt that the construction of a large number of row-type houses within the city of Bridgeport will not be in accordance with the city planning program and will be detrimental to the best interest of the city of Bridgeport.

The resolution follows:

Whereas there has this day been presented to this common council for its approval an agreement to be entered into between the city of Bridgeport and the Federal Works Administrator relative to the construction under the so-called Lanham Act of a housing project of 600 dwelling units for the accommodation of persons engaged in national-defense activities within the city; and

Whereas the project described in said agreement contemplates the construction of row-type houses as to which this common council did by resolution adopt at its meeting of March 3, 1941, express its opposition; and

Whereas it is still believed that the construction of row-type houses should continue to be vigorously opposed as detrimental to the welfare of the city of Bridgeport and its defense workers; and

Whereas under the Lanham Act it is provided that the average sum of $3,000 per dwelling unit may be expended in the construction of the dwelling accommodations contemplated in said act, and the expenditure of this sum of money in the city of Bridgeport would enable the Federal Works Administrator to construct the detached type of dwelling house which this common council feels should be constructed; and

Whereas the construction of row-type houses becomes necessary in the city of Bridgeport only because the Federal Works Administrator has arbitrarily and unreasonably determined that no greater sum of money than $2,750 per dwelling unit shall be expended in the city of Bridgeport, although he has provided a per unit dwelling construction cost of $3,000 on projects in other sections of the country where building costs are not as great as in the city of Bridgeport; and

Whereas, while arbitrarily insisting that no greater sum than $2,750 shall be expended in the construction cost of dwelling units in the city of Bridgeport and thus necessitating the construction of row-type houses over the opposition of all those who are familiar with Bridgeport's problems and needs, the same authority is appropriating an additional sum for each such contemplated dwelling unit in order that there may be provided in each of said units at the Government's expense a refrigerator and a gas stove for the use of each of the occupants thereof: Now, therefore, be it

Resolved by the Common Council of the City of Bridgeport:

1. That it does hereby affirm the opposition to the construction of row-type houses in the city of Bridgeport which it expressed in the resolution relative thereto adopted at its meeting of March 3, 1941, which said resolution is hereby incorporated in and made a part of this resolution.

2. That it refuse to authorize the execution, for and on behalf of the city, of the agreement with the Federal Works Administrator which has been submitted to this body and which contemplates the construction of row-type houses.

3. That it does hereby protest against the arbitrary action of the Federal Works Administrator in setting the construction cost of the individual dwelling units of the contemplated defense-housing project in the city of Bridgeport at the figure of $2,750 and in thus denying to the city the full housing cost limits provided in the Lanham Act, notwithstanding the fact that the full individual dwelling construction cost of $3,000 has been provided for other similar defense-housing projects which have been constructed in other cities.

4. That it does hereby denounce as unfair, unjust, and discriminatory this action of the Federal Works Administrator which arbitrarily and unreasonably denies to the city of Bridgeport, and to those who may be engaged within the city in its defense industries, the full benefits of the Lanham Act which have been extended to other sections of the country.

5. That this common council does hereby affirm its belief that the full limit of $3,000 for the construction cost of each dwelling unit should be provided for the contemplated defense-housing project to the end that there may be provided decent living quarters to those who are now, or who may hereafter be, engaged in the defense industries of the city of Bridgeport, and to the end that the city of Bridgeport shall not, at the conclusion of the present emergency, be presented with the problem of a substantial number of undesirable dwelling accommodations.

6. That it does hereby urge that there be eliminated from the plan for the construction of said project the unnecessary item of Government expense involved in providing refrigerators and gas stoves for the dwelling units thereof, that the contemplated appropriation for this purpose be added to the construction cost of said dwelling units, and that the Federal Works Administrator appropriate the comparatively small additional sum which will be necessary to secure the construction of a housing project of single-type dwellings.

7. That the mayor be, and he hereby is, directed and instructed to continue unalterably his opposition to the construction of row-type houses in the city of Bridgeport, to renew his efforts to secure the allotment for use in the city of Bridgeport of such Federal funds under the Lanham Act as will enable the construction of decent defense dwelling units within the city, and to adopt and use every means and legal expedients within his power to prevent the arbitrary and unjust discrimination in the administration of the Lanham Act which will deny to the city the benefits which have been freely extended to other communities of the country.

8. That copies of this resolution be forwarded by the city clerk to the Federal Works Administrator, to the Senators and Representatives of this State in the Congress of the United States, and to the chamber of commerce and the manufacturers' association of this city.

Profits and Wages

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

ARTICLE FROM LABOR

Mr. VOORHIS of California. Mr. Speaker, the following article from Labor newspaper is too eloquent to require comment by me. These figures ought to be

borne clearly in mind by every person who seeks to establish a fair division of the burdens and a fair sharing of such temporary advantages as there may be in connection with the defense program:

CORPORATE PROFITS PILING UP, WHILE WAGES LAG FAR BEHIND—TOP-HEAVY SITUATION THREATENS ENTIRE ECONOMIC SYSTEM, A. F. OF L. CLAIMS; DEMANDS LARGER SHARE OF DEFENSE INCOME

Vast profits are rolling into the coffers of American corporations, as a result of the defense boom, but wages are lagging far behind, the American Federation of Labor declared this week.

Figures compiled by the Federation showed profits leaped upward in 1940 by 10 to 190 percent above 1939, but that hourly wages in the same period rose only from 1 to 4.8 percent.

Seven major industries, analyzed by the A. F. of L., showed how profits outstripped earnings in 1940:

	Profit increases	Wage increases
	Percent	*Percent*
Automobiles	9.9	4.5
Petroleum products	10.6	.9
Textiles	32.9	2.9
Electrical equipment	36.1	4.8
Machinery	68.5	3.8
Iron and steel	98.5	2.8
Aircraft and parts	190.7	4.8

On the basis of net worth of these industries, profits ranged from 5.8 percent for petroleum products to 25.7 percent for aircraft.

Of course, profits for 1941 will be far above 1940, and, therefore, the contrast between profits and wages will be still more impressive.

This top-heavy situation threatens the entire economic system, the A. F. of L. warned. Industry is well able to pay higher wages, and labor will fight for such increases, the Federation made it clear.

The Federation maintained that a profit of 6 percent is enough for any industry, and that anything above that should be distributed to greater earnings to the employees.

"An adequate wage should be the first charge against any company," the A. F. of L. research service declared. "After that is met, if profits keep climbing, they should be devoted to wage increases. Such a course would keep up buying power and stabilize the economic system."

Veterans Resent Attacks on Ford Motor Co.

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

RESOLUTION PASSED BY ALLIED VETERANS' COUNCIL OF DEARBORN, MICH.

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks, I include a resolution passed by the Allied Veterans' Council of Dearborn, Mich., demanding a retraction of libelous statements concerning the Ford Motor Co., printed in recent issues of the magazine Friday.

The resolution follows:

Whereas we, the Allied Veterans Council of the city of Dearborn, composed of the veterans and Legionnaires of the Detroit metropolitan area, are in quorum assembled; and

Whereas it has come to the notice and attention of this body that a series of malicious and libelous, false and slanderous, fictitious and untrue statements have been published in a news magazine known as Friday, and circulated in the Detroit area, about and concerning and related to the Ford Motor Co., Mr. Henry Ford, Mr. Edsel Ford, Mr. Harry Bennett, Mr. William Cameron, and divers other persons associated with the said Ford Motor Co.; and

Whereas upon occasions too numerous to contain in this resolution the said Ford Motor Co. and hereinbefore-named persons have kindly and gratuitously assisted our group, both as an organization and as individuals, upon occasions when assistance from other sources was refused; and

Whereas the said Ford Motor Co. does, humanely and without consideration, now employ members of our group who are barred from employment in other places of industry by reason of either old age or physical disability incurred in many instances while serving in the United States Army in France and in other wars of our country; and

Whereas the said magazine Friday, on page 6 of an issue dated January 31, 1941, does specifically and maliciously and libelously state:

"Besides a network of spies, undercover men for all sorts of assignments and the common brand of factory stool pigeon, Bennett has carefully organized for Ford a private army of men who saw action in France during the World War—men capable and experienced in the use of machine guns, men needing no training.

"The technique of organizing this division was the same as the method of getting factory stool pigeons. I have testimony of veterans employed at Ford's right now. They are willing to take the witness stand before any governmental investigation body to tell of this private army estimated to number 5,000 men:" Now, therefore, be it

Resolved, That we, the members of the said Allied Veterans Council, of the metropolitan area of the city of Detroit, in quorum assembled, do hereby demand that the editors, publishers, and person or persons controlling the policy of the said magazine Friday, immediately, publicly, and in print as prominent as that which created these libels, fictions, misstatements, and falsehoods, retract and correct the said libels, fictions, and misstatements within a reasonable time after receiving notice of this resolution; and be it further

Resolved, That copies of this resolution be sent to each of the United States Senators from the State of Michigan; the various Representatives of the State of Michigan in Congress; the Attorney General of the United States; the national commander of the American Legion; the national commander of the Veterans of Foreign Wars; Mr. Henry Ford, Mr. Edsel Ford, Mr. Harry Bennett, Mr. W. J. Cameron, of the Ford Motor Co.; and the magazine Friday in which these statements appeared.

Made this 17th day of February, in the year of our Lord 1941.

WM. BUSHAW,
Commander.
EARL O. SMITH,
Junior Past Commander.
ROBT. H. HYNETT,
Adjutant.
EARL O. SMITH,

Commander, Post 1494 V. F. W.

The Federation of Architects, Engineers, Chemists, and Technicians—A Story of Communist Infiltration Into the Foundations of the National-Defense Program

REMARKS

OF

HON. MARTIN DIES

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

Mr. DIES. Mr. Speaker, today I wish to bring to the attention of the House another case of Communist leadership in a C. I. O. union which operates in some of our vital defense industries, including all of our navy yards. I present to you a purely factual statement concerning the Communist Party membership of Marcel Scherer, who is the national organizational director of the Federation of Architects, Engineers, Chemists, and Technicians. Scherer is by no means the only Communist who occupies a leading position in this important union of technical men. In fact, the union as a whole is under the complete domination of the Communist Party. The importance of this latter fact can hardly be overemphasized when we remember that the absolute loyalty of technical men who are employed in our defense industries is essential to our national security.

Architects, engineers, chemists, and technicians occupy strategic bottle-neck positions in American industry. Hence they are particularly important for the successful execution of the national-defense program. The attitude, affiliations, loyalties, and general trustworthiness of those engaged in these occupations is a matter of paramount significance. The following inquiry is concerned only with those who are organized in the Federation of Architects, Engineers, Chemists, and Technicians, affiliated with the Committee for Industrial Organization, and claiming a membership of 8,000. The F. A. E. C. T., according to information supplied by its official organ, Technical America, and various mimeographed publications, has established contact or contractual relations with the chief navy yards and with numerous industrial plants engaged in producing supplies for military purposes.

In a letter sent to Mr. Charles Edison, Secretary of the Navy, and in a telegram sent to President Roosevelt on April 10, 1940, the F. A. E. C. T. defended its claim to the right of collective bargaining in American navy yards. It is therefore pertinent to determine just who and what the F. A. E. C. T. represents and what are its real purposes in organizing these establishments.

MARCEL SCHERER, A BIOGRAPHY

The man who has been the actual and most active organizing head of the F. A. E. C. T. is Marcel Scherer, its national organizational director. Mr. Scherer was one of its charter members and general organizer of the New York chapter, the largest and most influential chapter in

the federation, for 2 years. (See third F. A. E. C. T. annual convention program, Detroit, Mich., October 7, 8, 9, and 10, 1937, p. 9.) Here in a brief biographical sketch, he is described as having been "dismissed from high school for pacifism during the war." Mr. Scherer was an active member of the Young People's Socialist League at Erasmus Hall High School in New York City, and in 1919 engaged in student agitations at the City College of New York. He joined the Communist Labor Party at that time and later the Communist Party. In 1931 he was Communist candidate for alderman from the thirty-seventh aldermanic district in Brooklyn.

To establish Mr. Scherer's past and present connection with the Communist Party of the United States, the testimony of Benjamin Gitlow, former candidate for Vice President on the Communist ticket; Joseph Zack, former member of the central executive committee of the Communist Party; Maurice Malkin, member of the Communist Party; and John P. Frey, president of the Metal-Trades Department of the American Federation of Labor, before the Committee on un-American Activities (vol. 1, p. 101; vol. 7, p. 4709; vol. 9, p. 5456; vol. 9, p. 5770) is further cited. In a letter to this committee, published on page 11 of September 1938 issue of Technical America, official organ of the F. A. E. C. T., Mr. Scherer makes no denial of the charge that he is a Communist.

According to the F. A. E. C. T. biography of Mr. Scherer, he "left private practice to organize relief committees for striking miners." The name of this committee was the Pennsylvania-Ohio Miners Relief Committee, room 314, 611 Penn Avenue, Pittsburgh, Pa. It received wide publicity and support in the official organ of the Communist Party, the Daily Worker. The Pennsylvania-Ohio Miners Relief Committee cooperated actively at the time with the Communist-inspired and controlled Save the Union Committee in its campaign within the United Mine Workers of America against John L. Lewis.

CAMP WOCOLONA

In 1928, Mr. Scherer, as president; Nathan Sparer, as secretary; and Paul Scherer, as treasurer, organized Camp Wocolona, in Monroe, N. Y. This camp was widely advertised in the Daily Worker. While ostensibly a purely recreational cooperative enterprise, the real purpose of the camp was to provide a gathering place for professionals, civil-service employees, technicians, and so forth, in preparation for the launching of a Communist-controlled union. To the regular weekly rates at this camp was added a tax of "50 cents for labor press," including the Daily Worker and Freiheit, both Communist organs. Wocolona is a contraction for Workers Colony.

STRIKE POLICY

In 1929, Marcel Scherer reappeared on the scene as the organizer of the union of technical men, among draftsmen and junior engineers of the New York Board of Transportation, a municipal government department. Nathan Sparer was vice president, Carl Weisberg was recording secretary and assistant organizer, all these officials being at that time members of the Communist Party. Since the Federation of Architects, Engineers, Chemists, and Technicians, which grew out of the union of technical men, in 1933, now has contacts and contractual relationships with the chief Government navy yards and with industrial plants manufacturing supplies essential to our defense program, it is highly important to note the attitude of Mr. Scherer, those associated with him, and his organization, toward strikes in Government departments. The relations between the union of technical men, headed by Mr. Scherer, and the board of transportation, furnishes a significant test. Negotiations with John H. Delany, chairman of this board, were broken off under the threat of a strike by Mr. Scherer.

Later in the same year Mr. Scherer organized a strike of 600 construction workers on the Grand Concourse line of the New York Municipal Subway, causing 600 men to lose their jobs permanently.

In April 1937, the Federation of Architects, Engineers, Chemists, and Technicians, again under the leadership of Mr. Marcel Scherer, called a strike of W. P. A. technical men working for the Federal Government, in New York City. The walkout included the United States Coast and Geodetic Survey, park department, Bronx water supply, public school No. 44, Bond Street Hospital, Bronx sewer and highway construction. Mass picketing, sit-downs, and seizure of Government property accompanied this strike.

Again in July 1936, the offices of the Federal Power Commission in Washington were picketed in accordance with the F. A. E. C. T. policy of using mass pressure instead of the duly constituted legal procedures established for disputes involving civil-service personnel.

Despite the repeated assurances given by Mr. Scherer and his present union, that the organization is opposed to strikes where the Government is involved, the foregoing examples prove beyond a shadow of a doubt that Mr. Scherer has consistently advocated and executed a strike policy whenever he considered such a policy necessary for the purposes which he desired to attain.

SPECIAL ACTIVITY

The activities of Mr. Scherer should by no means be imputed to any individual proclivities or designs, for Mr. Scherer, as already indicated, is a member of a highly disciplined organization, the Communist Party of the United States. The following testimony of Joseph Zack, former member of the central executive committee of the Communist Party, at a hearing of the Committee on Un-American Activities, held on September 30, 1939 (hearings, vol. 9, p. 5453), is significant in this connection:

> The Soviet Government will utilize its American organization for whatever purpose they find convenient or necessary at all times. * * * While I was in charge of the Trade Union Unity League I was once asked to supply an engineer, a chemist, who would personally have qualifications capable, and let us say, talk to other engineers higher in the profession than himself, in this instance, specifically, certain engineers of Du Pont. I was asked to do that by Max Bedacht, who was then in charge of this phase of their secret activity. Well, I recommended a certain individual, and I was asked to meet the Ogpu agent in charge of this branch of their activities, and I introduced him to him.

Our committee has been informed by an authoritative source that Marcel Scherer was one of those selected for this type of work.

Jimmy Collins, listed as a member of the Aircraftsmen's Federation, affiliated with the F. A. E. C. T., and listed also as a member of the national council committee of the Young Communist League—hearings, volume 1, page 590—met his death on March 22, 1935, while trying out a United States Navy biplane near Farmingdale, Long Island. The plane was known as a mystery plane, whose mechanism was considered of such a confidential nature that no photographers were permitted to take pictures of the wreckage of this plane. How confidential this information remained can be imagined in the light of the fact that Mr. Collins was a top-flight member of a highly disciplined organization, the Young Communist League, which was an affiliate of the Communist International.

Realizing that skill of a highly technical nature is required for access to specialized departments of service in the Government and private industry in which the F. A. E. C. T. is interested for its own purposes, it is conducting free shipbuilding courses in naval architecture and marine engineering, covering hull construction, elementary ship calculation, elementary marine machinery, and advanced marine machinery.

Among the sponsors and teachers of this school are well-known fellow travelers active in various Communist-controlled "front" organizations.

FRIENDS OF THE SOVIET UNION

In 1931 and 1932, Mr. Scherer was appointed national secretary of the Communist-controlled Friends of the Soviet Union, which published an official organ known as Soviet Russia Today. In its issue of April 1932, page 5, we find a call to the workers of the United States to "stop the transport of arms and munitions, rally to the defense of the Soviet Union." Mr. Scherer made an extended trip to the Soviet Union for this organization and subsequently made an American lecture tour for the Friends of the Soviet Union. The Communist, official theoretical organ of the Communist Party of the United States, in its issue of October 1931, page 832, in referring to the Friends of the Soviet Union, declared:

> An important means to develop the struggle for the defense of the Soviet Union is the building of the Friends of the Soviet Union into a mass organization. The Communist Party organizations must assist in the building the Friends of the Soviet Union.

This is completely in line with the sentiment expressed in a pamphlet entitled "Through Workers' Eyes," under Mr. Scherer's secretaryship.

COMMUNIST-CONTROLLED "FRONT" ORGANIZATIONS

Mr. Scherer's continued activity in behalf of the Communist Party is indicated by his consistent and continued sponsor-

ship of Communist-controlled "front" organizations and campaigns, such as—

American relief ship for Spain, Daily Worker, September 14, 1938.

American Congress for Peace and Democracy dinner, Daily Worker, December 12, 1938.

Trade-union sponsoring committee for a Labor Party conference, Labor Party News, May 1936, page 4.

See also his letter to the Daily Worker, January 13, 1938.

LEADERS OF THE F. A. E. C. T.

Other leaders and active members of the F. A. E. C. T. have been identified with the Communist Party or with Communist-controlled "front" organizations:

Walter N. Polakov, contributing editor, Technical America, 1938, official organ of F. A. E. C. T.; signer, open letter for closer cooperation with the Soviet Union (see Soviet Russia Today, September 1939, p. 25); signer, open letter to American liberals (see Soviet Russia Today, March 1937, pp. 14–15).

Ray Aversa, Detroit organizer, F. A. E. C. T., American League for Peace and Democracy, New York City division (see letterhead, March 21, 1939); delegate, Conference on Civil Rights, I. L. D., Hotel Picadilly, December 17, 1938 (see minutes).

Russell McNutt, F. A. E. C. T. representative to the American Youth Congress. (See Technical America, September 1938, p. 6.)

Ives D. Jacquier, New York City, F. A. E. C. T. organizer on W. P. A. projects; veteran of medical service in Spain; Medical Bureau and North American Committee to Aid Spanish Democracy. (See leaflet.)

Leonard Sparks, writer of the pamphlet, How to Win Jobs, published by section 1, Communist Party, New York City, on the basis of data furnished by the Federation of Architects, Engineers, Chemists, and Technicians.

Jules Korchien, secretary of F. A. E. C. T.; member, provisional committee for Washington Committee for Democratic Rights (see letterhead, February 2, 1940); consulting architect for the Soviet Government in Moscow and more recently housing expert for PM and Federal Housing Authority; member, board of directors Inter-Professional Association.

Sioux Indian Claims

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

RESOLUTION BY THE STATE LEGISLATURE OF SOUTH DAKOTA

Mr. CASE of South Dakota. Mr. Speaker, in the Seventy-sixth Congress I introduced a bill known as House Joint Resolution 352, to provide for a Claims Commission to investigate and propose a settlement of pending Sioux Indian claims based on a finding of facts.

The resolution was studied and discussed by the Sioux people at many councils. At their request I have reintroduced the resolution in this, the Seventy-seventh, Congress, and it now carries the number, House Joint Resolution 137.

This House Joint Resolution 137 is identical with House Joint Resolution 352 of the Seventy-sixth Congress, except in two particulars.

The first change is on page 1, where it is provided that at least one member of the commission shall be a Sioux Indian. There was nothing in the old resolution to have prevented the President from appointing one or more Indians as members of the settlement commission; but to insure that at least one would be, I have written that into the new joint resolution.

The second change comes at the very end of the joint resolution. The previous form required that the commission report at the opening of the session of Congress following passage of the resolution. Ordinarily there are a few months between sessions of Congress. In view of what happened last year, however, where one session of Congress ran into the next, I have thought there should be some provision to insure time for the commission to work. So the second change in the resolution provides that the commission may have 6 months in which to make its findings before being required to make its report.

Other than these two changes, House Joint Resolution 137 of the Seventy-seventh Congress is the same as House Joint Resolution 352 of the Seventy-sixth Congress.

Under permission granted by the House, I now place in the RECORD a resolution, duly adopted by the State Legislature of South Dakota, asking for the passage of my resolution which would create a special claims commission to secure a prompt settlement of Sioux claims:

House Concurrent Resolution No. 6

Concurrent resolution, proposing by this resolution, intended as a petition to the Congress of the United States, that the Congress provide by law for the creation of a Special Claims Commission to meet with the Sioux Indians of South Dakota, to effectuate prompt settlement of individual or tribal Indian claims presented and filed under the laws and treaties of the United States with said Indian tribes

Be it resolved by the House of Representatives of the Twenty-seventh Legislative Session of State of South Dakota (the Senate concurring):

Whereas the Congress of the United States did enact into law, during the fiscal year ending June 30, 1877, certain provisions intended to fulfill, and make compliance with various stipulations and agreements as were entered into in treaties with the several Indian tribes; and

Whereas many claims have been presented by the Indians, and Indian tribal organizations, said claims having been presented over a period of many years, all of which said claims have arisen from alleged violations of treaty rights, and which were intended to be fulfilled and made in compliance with, under the aforementioned act of Congress; and

Whereas such claims have not been acted upon or finally determined and are now pending in the courts of the United States and have been pending in some cases for many years; and

Whereas other and additional claims coming under said act and under treaties with Indians and Indian tribes will be filed from time to time for redress or for benefits due to such Indians or Indian tribes; and

Whereas under present law such Indian claims must be litigated in the courts, and with no prospect of final adjudication for many years after the instituting of said actions upon the same; and

Whereas the Sioux Tribe of Indians and other tribes of Indians are and have been entitled to a prompt settlement of their said claims, and the delay to final settlement and determination has been to the great loss and inconvenience of said Indians; and

Whereas the Sioux Tribe of Indians of South Dakota are now in dire need, and it is imperative for their health, proper living conditions, and their best interests that their claims be speedily adjusted, and that adequate provisions be made immediately for the furnishing to said Sioux Tribe of Indians necessary food, clothing, and other necessities of life pending the settlement of said claims; and

Whereas there was introduced at the first session of the Seventy-sixth Congress in the House of Representatives, under date of July 10, 1939, House Joint Resolution No. 352, providing for the settlement of claims of the Sioux Tribe of Indians against the United States brought under the act of June 3, 1920 (41 Stat. 738), in the Court of Claims, No. C-531 (1) to (24), inclusive, and any other claims which said Sioux Tribe of Indians or any one or more of the eight divisions of said tribe hereinabove named may have against the United States, and which said resolution further provided for a commission, to be known as the Sioux Settlement Commission, to be authorized to negotiate a settlement thereof, and further provided the manner and means of settlement thereof; and

Whereas the Congress of the United States has failed to act thereon: Therefore be it

Resolved, That for the best interests of the Sioux Tribe of Indians of South Dakota, and in order to provide for the betterment of the health and living conditions of said Indians of the Sioux Tribe of Indians of South Dakota, and at a time when they are in dire and serious need, and in order that a long-drawn-out controversy over said claims be avoided, and in the interests of justice, that Congress proceed to provide by law to carry out the provisions of said Joint Resolution No. 352; and be it further

Resolved, That this joint resolution is intended as a petition to the Congress.

Dated at Pierre, S. Dak., this 8th day of February 1941.

G. T. MICHELSON,
Speaker of the House.
W. J. MATSON,
Chief Clerk of the House.
A. C. MILLER,
President of the Senate.
DOUGLAS W. BARTZ,
Secretary of the Senate.

Don't Hate Roosevelt Week

EXTENSION OF REMARKS
OF
HON. RAYMOND S. McKEOUGH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

ARTICLE FROM THE CHICAGO DAILY TIMES

Mr. McKEOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Chicago Daily Times:

[From the Chicago Daily Times]

DON'T HATE ROOSEVELT WEEK

(By Herb Graffis)

Although there must be at least a thousand "weeks" to promote products or causes, there is room for week 1,001, so here goes.

The country is due for a Don't Hate Roosevelt Week.

During the past month I've been trying to find out just what there was against the lease-lend defense bill. Military, industrial, and financial authorities have told me much of the opposition to the bill was based primarily on a hatred of the President.

It is the conviction of many honest, patriotic businessmen who voted against F. D. R. last year that the most serious retardant to adequate and speedy national defense is nothing else but sabotage done by those who hate Roosevelt so frantically they have become the most effective bundsmen Hitler ever had in this country.

It is plain from the votes in the 1940 Presidential election and from the words and actions of the majority of the American people since that time, that it is only a very small minority of our fellow citizens who do hate "that man."

However, it was only a very small minority of the German people that brought on the Hitler dictatorship. The tip is that the minority of Roosevelt haters are far more dangerous to our liberties than they or we may realize.

The unfortunate part of it is that they make themselves look so bad. They'd be beneficiaries of the Don't Hate Roosevelt Week.

They would establish themselves, for a week at least, as having a high regard for truth. They would not go overboard for that wild yarn of Mrs. Roosevelt's Frauenfront, which was cooked up out of bile, gall, and venom, poured into an honest, sound plan for women's work in national defense. The plan was originated by a New York Republican women's organization.

During Don't Hate Roosevelt Week there would be laid aside those charges of vindictiveness which have been hurled at F. D. R. After all, charges of vindictiveness only amuse the thinking public when such charges come, for instance, from a newspaper which for years wouldn't print the name of the late and great La Follette because he wouldn't obey its attempted dictatorship.

Don't Hate Roosevelt Week would be much kinder to those who've been ruining their digestions and mental balance than it would be to Roosevelt. He's doing O. K. for all of us despite the handicaps to America's security and strength volunteered for Hitler by the Roosevelt haters.

Mr. Roosevelt's Speech

EXTENSION OF REMARKS
OF
HON. WALTER C. PLOESER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

EDITORIAL FROM ST. LOUIS POST-DISPATCH

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Louis Post-Dispatch, Monday, March 17, 1941:

[From the St. Louis Post-Dispatch of March 17, 1941]

MR. ROOSEVELT'S SPEECH

We feel sure that the President's speech of Saturday evening made a profound impression on all who heard it. Never has he spoken with more force and more fervor. Moreover, the speech is to be read in the light of the Lease Lend Act, by which Congress has embarked on a policy of all-out aid to Britain, and under which Congress has granted the President the most sweeping powers; in the light of the requested appropriation of $7,000,000,000 to finance the act; and in the light of a long series of events by which the country has gradually moved from neutrality to nonbelligerency and now to nonshooting belligerency.

If the speech is thus read, no one will fail to see that the President's call for sacrifice upon the part of every citizen in the land—steel worker or stevedore, machinist or housewife, farmer or banker, storekeeper or manu-

facturer—means exactly what it says. As the President puts it, the sacrifice will express itself in lower profits because of higher taxes and longer hours at bench, plow, and machine. But it will be felt also in many other ways because the country cannot make "a total effort," to use the President's words, without altering almost every phase of our lives.

Perhaps the sacrifices that will be demanded can be more easily imagined by saying that the country is being placed on a war footing. It is not a mere question of sending war supplies to Britain, China, and Greece. To be sure, the whole country is being mobilized to do that. But it is more than that. We are now engaged and the President makes it quite plain in a partnership with those nations that will last "until total victory has been won." It is not necessary at the present time to send men along with our ships, guns, tanks, and planes, but if it does become necessary under this program, men, too, undoubtedly will be sent.

The President has made it clear that we are embarked on an all-out campaign to end dictatorships all over the world, and we urge that his words be read again and again that the full import of them may sink in. The President's goal is to end dictatorship and to substitute for it all over the world the four freedoms—freedom of worship, freedom of speech, freedom from fear, and freedom from want. It is a noble program, but it is one beset with infinite complexity and one which presents the most colossal practical problems.

In fact, we believe the President's speech would have been more effective if it had been less sweeping in scope and more clearly defined in aim. The defeat of Hitler, which means not only the defense of Britain but the reconquest of the European Continent, is alone a terrific objective; but the President also includes the successful defense of China and the end of dictatorship in Japan in his program. This makes us party not only to a European war but a world-wide war. The war in China has been going on since 1937, but only now is it coupled, in importance to us, with the war in Europe. Would it not be wiser to attempt to destroy one dictatorship at a time, instead of taking them all on at once? Is it not prudent and in accord with first principles of military strategy not to fight a war on more than one front at a time?

As to the President's lack of clarity in aim, he speaks of the issue today as between democracy and dictatorship, freedom and slavery. Is it being too literal to say that Greece is not a democracy but a dictatorship, and that it was ruled with an iron hand by the late Metaxas? Turkey, which is in alliance with Britain, is a dictatorship of long standing. Kemal Ataturk was a dictator, and so is his successor. China, although it established a republic after the downfall of the Manchus, has never been a democracy in our sense and is now, of course, a military dictatorship under Chiang Kai-shek. There is absolutely nothing in common between the American way of life and those of Greece, Turkey, and China. Certainly, in victory, we would not attempt to impose our way of life on our allies if they preferred their own.

If the four freedoms are to be established all over the world, the job is not done with the conquest of Germany and Japan. Another huge dictatorship remains—that of Soviet Russia, a nation covering one-sixth of the world's surface. If this is a struggle between democracy and dictatorship, Soviet Russia, too, must be attacked.

So we think the President would contribute greatly to clearer thinking if he would narrow and sharpen his objectives, since the United States, powerful as it is, should not bite off more than it can chew.

The Farmer's Stake in Transportation—Association of American Railroads Driving for Monopoly of Transportation in the United States—Wheeler-Lea Bill Is the Instrumentality by Which They Hope To Accomplish Their Purpose

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

RADIO ADDRESS OF HON. FRANCIS D. CULKIN, OF NEW YORK

Mr. CULKIN. Mr. Speaker, under leave to extend my remarks, I include a radio address made by me over the stations of the National Broadcasting Co. on the Grange Hour, from Washington, D. C., March 15, 1941:

I greatly appreciate the opportunity to discuss on today's program the subject of the farmer's interest in transportation. It is noteworthy that the first national crusade in which the Grange participated after its birth was an effort to relieve the farmers of the West from excessive and ruinous freight charges. All through the years the Grange has continually fought the battle of the farmers in this field and kept before the minds of our citizens the public's vital interest in this matter.

It reasserted this identical principle in a resolution passed at the seventy-fourth annual session of the National Grange, held at Syracuse, N. Y., in November of last year. In that resolution it calls attention to the fact that the Congress and the Interstate Commerce Commission have failed to protect the public interest in transit costs. In this clear-visioned resolution the Grange urges that water and truck operations should not be hindered or restricted by unnecessary regulations or destructive interference on the part of the Government. In the concluding paragraph of the Syracuse resolution the Grange again rises superior to the propaganda of the railroad and other lobbies by coming out squarely for the highly meritorious St. Lawrence seaway project. Every thinking citizen must find himself in general accord with this sane, constructive program.

FREIGHT CHARGES HEAVY

I recently read an article by Mr. Brenckman, the Grange's able Washington representative, in which he stated that freight costs are the heaviest service charge that the farmer has to pay, and that during the past 2 years the farmer received only 39 cents out of every dollar spent by the consumer for food. The other 61 cents out of every dollar went for transportation and distribution. This condition is one of the most glaring and indefensible faults in our present economic system.

Let me illustrate how vitally transportation affects the farmer. In the Snake River country of Idaho, where wheat is the staple product, it cost the farmer during the depression years all he got for a bushel of wheat to carry it 100 miles, and he was still 900 miles away from his market.

Another illustration: A farmer from the State of Washington wrote me that he had $20,000 worth of apples on his trees; the transportation cost to market was $15,000; barrelling and handling charges cost $8,000; making a total disbursement of $23,000. This left him with a net loss of $3,000 on the transaction, and as a result his apples remained on the trees.

This same farmer wrote me that when he came into the Northwest under the urge of railroad propaganda he was advised that as soon as the country grew up the transportation charges would be substantially reduced. The rates are now some three times greater than when he first began to ship. In passing, may I say that if this particular farmer could get a decent rail rate to the Pacific seaboard and then ship to the East through a toll-free Panama Canal, his carriage charges in the present instance would not exceed $4,000. The farmer under these auspices would then get a living price and the people would get the apples at a reasonable cost.

WHEELER-LEA BILL

In an evil hour Congress passed the Wheeler-Lea bill, which placed coastal and internal waterways and trucks under the jurisdiction of the railroad-minded Interstate Commerce Commission. This bill provided, and its proponents succeeded in convincing Congress, that the regulation of water transportation and truck service would be administered so as "to recognize and conserve the inherent advantages of each type of transportation." It should be remembered in this connection that the carriage charges of bulk commodities by water are normally but 10 percent of the rail charges. It should likewise be remembered that prior to the Commission obtaining jurisdiction over trucks that the truck rates were about one-half of the rail rates. They are now 90 percent of the rail rates.

GRANGE FOUGHT LEGISLATION

In collaboration with the Grange and Congressmen from various parts of the country, I fought this bill when up and voted against it. It was and is my firm belief that the Association of American Railroads are driving toward a monopoly of transportation in America and that this bill is the instrumentality by which they propose to destroy waterways in its coastwise and internal phases and take the independent trucks and busses off the highways. It is my fixed belief that this same outfit plans to destroy the intercoastal water transport and to control all the outlets from the Great Lakes to the sea.

The ink was scarcely dry on the President's signature on the bill when I found my fears amply justified. Through the instrumentality of the Interstate Commerce Commission, which outfit the railroads hold in the hollow of their hands, the railroad group started a new drive for a monopoly of transportation in America.

COTTON FARMER HARD HIT

Judge MANSFIELD, of Texas, an outstanding authority in the transportation field, recently called the attention of Congress to the fact that hard-pressed Texas cotton farmers under the operation of this bill are now paying an increased transportation cost from Gulf ports to New England mills of $2.32 per bale of cotton. It should be eternally remembered that this added cost always comes out of the hide of the farmer himself. This procedure was accomplished by originally lowering the rail rates far below actual transportation costs for the purpose of killing coastwise water transportation and preventing any further investment in that field. The Interstate Commerce Commission has boldly ignored the express mandate of the law which required that the inherent advantages of water transportation shall be recognized and conserved.

Another phase of this far-flung battle line which vitally concerns the mode of living of the American people is the war that the railroad group is now making on the independent trucks and busses, which up to now have played a most important part in the transportation problems of America and, incidentally, pay annually $417,000,000 in taxes. These trucks serve 50,000 communities in the United States which are at present without rail transportation and employ some 3,545,000 men—over three times the number employed by the railroads. By authority of recent preliminary rulings of the Commission's agencies, the railroads are now going into the truck and bus business on a large scale, thus taking over these two types of transportation and in the long run making certain that the American people will pay through the nose for truck and bus service. It is likewise significant that there has been an effort in Congress to place farm trucks under regulation.

RAILROADS PLAYED AN IMPORTANT PART

May I say that I make no war on the railroads. They have played an important part in the development of America and are essential to our national life and progress. I will vote for any legislation that will enable the railroads to put their house in order, even to the extent of substantial loans from the R. F. C. However, I am unalterably opposed to the creation of a transportation monopoly which will destroy both producer and consumer alike.

MONOPOLY AT HAND

I desire to reemphasize that the railroads are driving toward a monopoly of transportation. That time is coming and, in my judgment, it is not far distant, if present auspices continue to control. The illustration I gave a moment ago as to the transportation cost of cotton from Gulf ports is an illustration of what they are doing to water transportation. This destructive procedure will soon follow on our internal waterways, which have been an effectual yardstick against high transportation costs for many years.

ARMY ENGINEERS

I wish I had time to discuss with you in detail the economics of water transportation. The United States Army engineers who have charge of our national waterways are, to my mind, the greatest body of servants in the Republic. No project goes through Congress except after their approval of the economics of the particular improvement. The engineers are under heavy fire from this railroad influence, but they are sticking to their guns and giving transportation relief to all localities where the economics of the situation justify it. They should be acclaimed and sustained by every patriotic American.

MONOPOLY MUST BE STOPPED

Monopoly in the transportation field must be stopped in its tracks if America is to remain a prosperous, growing country. It is difficult at this time, with the national thought and activity concentrated on national defense, to arouse the public on an issue of this sort. But the public should remember that it is at a time like this when the people's thoughts are centered on other things that the special interests get in their heaviest and most damaging blows. It is necessary therefore for public opinion to become active. I suggest that each of my hearers take time out to write letters to the President, to the Interstate Commerce Commission, to their Members of Congress, and the Senate protesting against the present administration of the law which is creating a monopoly of transportation in America. If a sufficient number of you do write, it will help cure this evil situation which is so fraught with economic danger to the American people, both in the consuming and producing field.

I thank you for listening.

Dedication to Humanity

EXTENSION OF REMARKS

OF

HON. HARRY P. BEAM

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

EDITORIAL BY LUDWIK LESNICKI

Mr. BEAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an editorial of Ludwik Lesnicki, from a recent issue of the Union Weekly, Chicago, on what America wants. The editorial very briefly expresses the views to which many political writers and commentators subscribe.

The editorial follows:

[From the Chicago Union Weekly]

WHAT AMERICA WANTS

(Ludwik Lesnicki)

Among the many true and inspiring things said by President Roosevelt in his message to the Seventy-sixth Congress, none is truer and more inspiring than this: "Destiny first made us heirs of European culture. Fate seems now to compel us to assume the task of helping to maintain in the western world a citadel wherein that civilization may be kept alive."

This fact sets America apart from the other great nations of the earth. We have no dreams of empire. We have no dynasties nor dictators to act as storehouses for centuries-old ambitions of power and conquest. We cast eager eyes on the possessions of no nation under the sun. We are content to live and let live—to have and let have. Time and time again we have put aside opportunities which few nations would have had the courage to resist. We might have taken Cuba; we did not.

We might have taken indemnities from China; we returned them. We might have seized favorable occasions to extend our territory in this hemisphere. We preferred to stand forth before the world as a protector and not as a despoiler.

Today, when the ambitions of so many nations are expressed in terms of more territory, more power, more influence—this country stands forth as one that wants nothing for itself and asks only for the respect for the elemental rights of liberty and freedom for other nations. We stand forth as great protagonists of humanity, and the language of our national demands falls fitly into the fine and all-embracing phrases which our beloved President Roosevelt knows how to employ so well.

We ask the warring nations for nothing. We ask them to respect those elemental rights which nations must make respected or cease to be worthy of the name.

They have nothing we desire.

But we have much that we desire to keep, and those things, the essentials of nationality and the common possession of humanity, they have taken away from European nations—and cannot and will not take away from us.

We ask nothing for the United States of America except what we have a right to ask for humanity itself.

For their own purposes some foreign nations have created and maintained among themselves the legend of America's preoccupation with dollars only.

President Roosevelt's above-quoted statement answers the familiar, foolish libel by reaffirming this Nation's ancient dedication to humanity.

What Would Sam Rayburn Do?

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

EDITORIALS FROM THE MADILL RECORD AND OKLAHOMA CITY TIMES

Mr. CARTWRIGHT. Mr. Speaker, I ask unanimous consent to extend my remarks in the CONGRESSIONAL RECORD and include an editorial from the Madill Record, of Madill, Okla., in my congressional district, and also a letter I wrote to Mr. Herbert J. Pate, editor of the Madill Record, commenting on the editorial.

There being no objection, the editorial and lettter referred to were ordered to be printed in the RECORD, as follows:

[From the Madill (Okla.) Record of March 13, 1941]

WHAT WOULD SAM RAYBURN DO?

The following editorial was published recently in the Oklahoma City Times:

"A MILITARY ROAD NEEDS FIXING

"The people of southern Oklahoma, we believe, are justified in keeping alive their complaint about the condition of highway U. S. No. 70, which parallels the Red River from Broken Bow to Waurika and beyond.

"Some stretches of the road are so rough that heavy traffic from the lumber-milling centers in McCurtain County to Lawton or Altus turns south into Texas and travels the Texas parallel road, not because it is nearer but because it is a better and safer road.

"Many truckloads of lumber, sometimes as many as 30 truckloads a day, are moving from the mills at Broken Bow and Wright City across the southern rim of the State to Fort Sill. This heavy hauling will continue through most of this year, and a little later the hauling will increase with the setting up of the big Altus-Lugert project. Highway U. S. No. 70 is the natural route for this traffic to follow. But most of these trucks turn south at Hugo, cross the river to highway U. S. No. 82 on the Texas side, and stay in Texas until they turn north into Oklahoma again. They detour into Texas because the Oklahoma road is too rough. The stretch of No. 70 from Madill to Durant is almost impassable at times, and the thin surfacing on much of the road from Durant east to Valliant has been pounded into chug holes.

"The good old Democratic counties of McCurtain, Choctaw, Bryan, Marshall, and Jefferson don't deserve this kind of treatment. They have always voted 'right.' Or have they? But this road is a military highway. At least, it has been a military highway for the last year and will gain importance as such as long as the national-defense emergency exists. The State and Federal road authorities should not wait until 1942 to begin fixing this road. It needs fixing now."

Thanks. It really is disheartening to sit here in Madill and watch traffic leave Okla-

homa as quickly as possible in order to get to a good east-and-west highway. We cannot find it in our heart to blame even our own citizens who do this very thing—day after day.

Highway No. 70 should carry a lot of traffic, but it doesn't. If SAM RAYBURN were chairman of the Roads Committee in Congress and represented this district in Washington, southern Oklahoma would have a passable highway.

COMMITTEE ON ROADS,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 18, 1941.

Mr. HERBERT J. PATE,
Editor, the Madill Record, Madill, Okla.

DEAR MR. PATE: I have read the editorial in the March 13 issue of the Madill Record under the heading "What Would SAM RAYBURN Do?" in which you quote an editorial from the Oklahoma City Times headed "A Military Road Needs Fixing."

Both editorials referred to the need for further improvement of Highway No. 70 in southern Oklahoma, in which I fully share your interest. I am glad that you and the Times have publicly called attention to the years of neglect of this important highway and pointed out some of the benefits its proper improvement will bring to our State.

I feel honored that you inferentially compared—or contrasted—me to my good friend and neighbor, the able and distinguished Speaker of the United States House of Representatives, Hon. SAM RAYBURN, of Texas.

Mr. RAYBURN, of course, occupies a much more important place than the chairmanship of any committee of the House, and in many respects his power and influence is second only to that of the President of the United States. He has been a Member of Congress continuously since March 4, 1913, or for more than 28 years. Only 3 Members out of the 435 in the House have had longer continuous service. He was beginning his fifteenth year of service here when I entered upon my first term in 1927.

The Fourth District of Texas is fortunate indeed to be represented in the Congress of the United States by a man with his experience and seniority and his great ability.

And if SAM wants to move to southeastern Oklahoma and represent our district in Congress, I'll resign or retire in his favor. I agree with you that he is an abler and more experienced Representative than I am, or than anyone else our district could elect.

But SAM, honest and forthright as he is, would be the first to tell you and others in our district that no Congressman—not even the Speaker of the House of Representatives—can control the expenditure of State and Federal-aid highway-improvement funds in his State or district.

Every mile of Highway No. 70 in Oklahoma is under the complete jurisdiction of the Oklahoma State Highway Commission, which, as you know, is appointed by the Governor of Oklahoma and confirmed by the Oklahoma State Senate—not the United States Congress. And the Federal Government has no right or authority to invest or expend 1 penny on that highway without the voluntary cooperation and participation of the State.

Since passage of the first Federal Aid Act in 1917, the Congress has appropriated from $5,000,000 to $500,000,000 a year to aid the States in building a connected system of highways and roads. A fair and just proportion of this money has been apportioned to Oklahoma, in accordance with a formula specified in the law, based on population, area, and road mileage. But initiative in the expenditure of these funds rests, by law, with the States, and no use of them for any purpose is possible without initiation by the respective State highway departments. The States match the Federal-aid funds with State funds, and also have the responsibility of obtaining rights-of-way and preparing plans and specifications for construction projects.

If you have any practical suggestion as to how any Congressman, under our form of government, can bring about improvement of a particular highway route in his district, when the highway is under the control and jurisdiction of the State government, I am sure that Mr. Speaker RAYBURN and other Members of Congress will be as interested as I will be to find out just how this may be done.

I was interested also in reading the feature story by Harold F. Johnson in the Daily Oklahoman of Sunday, March 9, 1941, on the Durant-Denison Dam, which contained the following reference to Highway No. 70:

"United States Highway No. 70 is an arterial thoroughfare across southern Oklahoma and is Durant's main outlet west to Madill and Ardmore. About 10 miles of this road must be relocated before the waters rise, and a new bridge must be built across the Washita. United States Army engineers have plans for this—and other roads, railroads, and bridges—all ready, the entire cost of which will be borne by the Federal Government. But as long as the Governor's opposition continues, of course, the State highway department isn't being helpful in the relocations.

"Plans of the United States engineer office at Denison call for early advertising, probably within the next 3 weeks, of a contract for relocation of the Frisco Railroad. This falls generally within the Madill-Durant area. It will involve about $3,000,000, much of which will go for labor. A 5,200-foot bridge will be built across the Washita near Durant."

That is presumably a nonpartisan report of some improvements to highway 70, and near Madill, which the Federal Government is ready to make now.

Due to the unusual circumstances this was a case where the Federal Government could and did provide specifically for some highway improvements in our district, "the entire cost to be borne by the Federal Government."

If there is any delay in making them, do you think it will be the fault of the chairman of the (House) Roads Committee in Congress?

If you can suggest how Speaker RAYBURN could get this work under way without delay, or secure any other improvements to Highway No. 70, he is our good friend and neighbor and I feel sure that he will be glad to try to help us.

I might remind you that, according to the latest report of the Public Roads Administration, Oklahoma had a balance of Federal-aid highway funds available for programmed projects, as of January 31, 1941, of $5,694,541, and a balance of Federal-aid funds available for secondary- or feeder-road projects of $1,209,791. Incidentally, every dollar of that was authorized and made available to the Oklahoma State Highway Commission by legislation which I introduced and sponsored here.

Matched with State funds, this would make possible some $14,000,000 worth of new road construction in Oklahoma, for which projects may be submitted at any time by the State.

I would like to see this money programmed and expended as quickly as possible, and, of course, I would like for a substantial part of it to be used for improvements on Highway No. 70, which runs all the way across our congressional district.

I believe you know that as chairman of the House Roads Committee I have had a leading part in making these funds available to our State. In simple fairness, don't you feel that my authority and responsibility, as a Federal official, largely ends at that point?

Also, some additional millions of Federal-aid road funds for Oklahoma have already been authorized by the Hayden-Cartwright Act of September 5, 1940, which will become available on January 1 next year.

And special appropriations for highways of national-defense importance will probably be made soon, of which I anticipate Oklahoma will receive some two or three million dollars. As tentatively planned, these funds also will be expended in cooperation with the State highway departments. Would you advise a different policy?

Very seriously, I should like to have your opinion and suggestions as to what you, if a Representative in Congress, would do to try to get Highway No. 70 properly improved. What do you think I can do, that I haven't done, as chairman of the House Roads Committee, in the interest of this, or any other particular highway in our district? Just what do you think Speaker RAYBURN could or would do now, if he represented our district in Congress, to secure specific highway improvements in southern Oklahoma?

In the interest of accuracy, before closing I should like to call special attention to the heading on the Times editorial which you quoted—"A Military Road Needs Fixing." And the statement in the last paragraph of that editorial: "But this is a military highway. At least it has been a military highway for the last year and will gain importance as such as long as the national-defense emergency exists."

I wonder just what the Times means by the term "military highway"? My understanding is that there are no military highways, as such, in the United States.

I enclose for your consideration a map showing a system of highway routes which have been designated by the War and Navy Departments as the routes of principal importance from the standpoint of national defense. This system, totaling approximately 74,600 miles, is generally referred to as the "strategic network."

The routes included in this strategic network were selected by the War Plans Division of the War Department General Staff, and I assume that there was no more politics or congressional influence in their selection than in the designing of a battleship.

Anyway, you will notice on the map, which has been revised to October 25, 1940, that neither Highway No. 70 in southern Oklahoma, nor Highway No. 82 in north Texas, are included in the strategic network as now designated. Army officials say that this network joins all important centers of defense industry and all military and naval concentration points. Its main lines include the interregional highway system recommended by the Public Roads Administration in the report Toll Roads and Free Roads (copy of which I am sending you under separate cover), and with few exceptions the routes shown are included in the Federal-aid highway system.

I know of no other official designations of highways in our State, or elsewhere, which would justify their being referred to as military highways? Do you? Or does the Times?

However, if Highway No. 70 in our State had been a part of the strategic network since approval of the Pershing map in 1922, apparently this would not have assured the programming of funds for its improvement. You will probably recall that last year the State of Oklahoma submitted to the Public Roads Administration a proposed $5,000,000 Federal-aid highway program which did not include any improvement on the 625 miles of highways in our State which are designated by the War Department as of primary military importance.

At the direction of the President, the Public Roads Administration, in collaboration with the Advisory Commission to the Council of National Defense and the War and Navy Departments, recently made an intensive survey of and a special report on our highway facilities from the viewpoint of national defense. I think printed copies of that report will soon be available and I shall be glad to send you a copy if you are interested.

Cordially yours,

WILBURN CARTWRIGHT.

National Defense

EXTENSION OF REMARKS
OF
HON. WILLIAM W. BLACKNEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

Mr. BLACKNEY. Mr. Speaker, I do not think that there has been any bill before Congress since I have been in Congress that I have studied so carefully and thought about so thoroughly as I have H. R. 4050, a bill making supplemental appropriations for the national defense, to provide aid to the government of any country whose defense the President deems vital to the defense of the United States, and for other purposes.

This bill involved an appropriation of $7,000,000,000 and was predicated upon the lend-lease bill, known as H. R. 1776, and now known as Public Law No. 11. I was bitterly opposed to the lend-lease bill, talked against it on the floor of the House and voted against it, because I did not believe in the dictatorial power contained in that bill.

Nevertheless, the great majority of both branches of Congress voted in favor of the bill. The President signed it, and it became the law of the land. After it became the law, it was my duty as Congressman to stand for its enforcement so long as it remained the law of the land. The bill H. R. 4050 was a bill to appropriate $7,000,000,000 to implement the lend-lease bill. It was a tremendous amount of money and will involve considerable hardships for the taxpayers of the United States. However, the bill was advocated by the administration, by the Secretary of the Navy, by the Secretary of War, by Mr. Knudsen, of the Advisory Commission to the Council of National Defense, as the best means of keeping the United States out of war.

Under the terms of this bill the administration could aid any government whose defense was deemed vital to the defense of the United States. The proponents of the bill repeatedly stated that by providing the munitions of war and other material to the nations abroad, it would be the most effective means of keeping us out of the actual European warfare.

The people of the United States love peace. We want to spare America the ravages of war. We want to spare American boys the necessity of baring their breasts to the bullets of the dictators. We want to spare American homes the sadness, the sorrow and distress, and suffering and death that always follow the wake of war, and it is because we hate war and because we love peace, that this bill was deemed not only a help to the democracies abroad, but an insurance to our own country that we would remain out of war.

Not only that, it was repeatedly stated by the proponents of the bill that 95 percent of the defense articles purchased under the terms of this bill are to be such material and implements as may be used by the United States, if the times should come when we should need to use those articles. I want to emphasize that point. The vast stores of implements of defense which we are making ready will be such that may easily and readily be turned to the use of America, if the day should come when we would need to use them for our own defense.

While I was bitterly opposed to the lend-lease bill, I am so thoroughly interested in my own country that my judgment would not allow me to oppose H. R. 4050. I have repeatedly stated that I will vote for every appropriation deemed necessary for national defense for the Army, Navy, and Air Corps, until America reaches such a state that no nation dare attack us here. I voted for this bill, as did 335 other Members of Congress, because I felt that the security of the United States was best protected by its adoption.

The President has repeatedly stated that no American boy should be sent to fight on European soil. It was stated by the proponents of the bill that those munitions of war manufactured in this country could be obtained by the European democracies here and transferred at their own risk to their home country. If the President is sincere, and I believe he is, then this bill by providing the necessities and implements of war to European democracies, should strengthen them and by strengthening those democracies, establish a greater protection to our own country.

I am bitterly opposed to sending American boys to engage in this European conflict, and I was willing to vote this vast sum of money in the hope that it might better insure peace at home. We should appropriate this vast sum of money, difficult as it will be for the taxpayers to pay, if by so doing, we are safeguarding our American boys at home and preventing the necessity of sending them again to become embroiled in a European conflict.

Abraham Lincoln—Man of the People

EXTENSION OF REMARKS
OF
HON. HARRY L. ENGLEBRIGHT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

ADDRESS BY JUDGE ANDREW R. SCHOTTKY

Mr. ENGLEBRIGHT. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD a very impressive address, entitled "Abraham Lincoln—Man of the People," delivered by the Honorable Andrew R. Schottky, a superior judge of Mariposa County, Calif., before the Merced Rotary Club, on February 12, 1941:

Today is the birthday of Abraham Lincoln. Today all over the civilized world, wherever democracy endures and liberty is exalted, the name of Abraham Lincoln is spoken with reverence. David Lloyd George, former Prime Minister of England, said not long ago: "I doubt whether any statesman who ever lived sank so deeply into the hearts of the people of so many lands, as did Abraham Lincoln." No man could overcome the obstacles that Lincoln had to overcome and attain the pinnacle attained by Lincoln without a reason. In this brief address I shall endeavor to point out some of the things that made the greatness of Abraham Lincoln and why his fame has endured and increased through the years.

Abraham Lincoln was born in Hardin County, Ky., on February 12, 1809. He was reared under conditions of great poverty. In 1816 his family moved from Kentucky to what is now Spencer County, Ind. From 1816 to 1830 he lived in Indiana, and during that time he attended school not more than 1 year in all. However, he was a studious lad, and improved every opportunity that he had to obtain and read good books. At the age of 19 he was 6 feet 4 inches tall and had remarkable physical strength. In 1830 his father moved to Macon County, Ill., and there between 1831 and 1833 Lincoln was a clerk in the New Salem store, and later conducted a country store, which was unsuccessful, and then became postmaster of New Salem. He borrowed law books from a neighboring practitioner and spent his evenings in the study of law. He was admitted to practice in 1836.

In 1834 he was elected a member of the Illinois Legislature, and remained in the legislature for 8 years. In 1837 he commenced the practice of law at Springfield, the capital of Illinois. In 1846 he was elected to Congress, serving one term. When his term in Congress ended, he returned to the practice of law and was not active in politics for several years.

In 1854 when the entire country was aroused over the Kansas-Nebraska bill regarding the admission of slave States to the Union, Lincoln again came to the front and took an active part in public affairs. He protested that "slavery is founded on both injustice and bad policy," and that under no circumstances should it be extended to the territories. A few years later, in 1858, when the controversy over the extension of slavery had become even more intense, Abraham Lincoln accepted the Republican nomination for United States Senator from Illinois, and in accepting the nomination, he delivered an address which at once stamped him as the leader of the forces opposed to the extension of slavery. In that speech he said:

"A house divided against itself cannot stand. I believe this Government cannot endure permanently half slave and half free. I do not expect the Union to be dissolved; I do not expect the house to fall; but I do expect that it will cease to be divided. It will become all one thing or all the other. * * *

"We shall not fail—if we stand firm, we shall not fail. Wise counsels may accelerate, or mistakes delay it; but sooner or later, the victory is sure to come."

His opponent in that election was Stephen A. Douglas, the little giant of western politics, then United States Senator from the State of Illinois, who, like most of the politicians of that day, considered the slavery question from the standpoint of political expediency. Douglas was afraid to face the real issue of slavery and attempted to hide behind the doctrine of squatter sovereignty, while Abraham Lincoln took the position that human slavery was wrong, and that under no circumstances should it be extended to the Territories. Then followed the memorable Lincoln-Douglas debates, which were carried on throughout the State of Illinois. In the election that followed Douglas was elected United States Senator, but Abraham Lincoln had impressed himself upon the Nation as a man who had the courage to face the fundamental question that was involved and to urge the

solution of that question not on the basis of temporary political success but on the basis of the highest welfare of the Nation.

In 1860 Lincoln was nominated for the Presidency by the Republican Party and was elected President in November of that year. Upon the news of his election the long-expected division of the Nation upon the slave question occurred. South Carolina soon seceded, and others followed until there were 11 States in the Confederacy. On the 11th day of February 1861 Lincoln spoke a few words of farewell to his own people in Springfield, and with a sad heart turned toward the Capital "to assume a task more difficult than that which devolved upon Washington." The outlook was indeed gloomy. He was inaugurated on March 4, 1861, and in his first inaugural address he endeavored to set forth his position clearly with reference to the seceding States and also to plead for conciliation. I quote a portion of that first inaugural address:

"I therefore consider that, in view of the Constitution and the laws, the Union is unbroken, and to the extent of my ability I shall take care, as the Constitution itself expressly enjoins upon me, that the laws of the Union be faithfully executed in all the States. Doing this I deem to be only a simple duty on my part, and I shall perform it, so far as practicable, unless my rightful masters, the American people, shall withhold the requisite means, or, in some authoritative manner, direct the contrary. I trust this will not be regarded as a menace but only as the declared purpose of the Union that it will constitutionally defend and maintain itself. I am loathe to close. We are not enemies but friends. We must not be enemies. Though passion may have strained, it must not break our bonds of affection. The mystic chords of memory, stretching from every battlefield and patriot grave to every living heart and hearthstone all over this broad land, will yet swell the chorus of the Union when again touched, as surely they will be, by the better angels of our nature."

On April 12, 1861, the war actually commenced with the attack on Fort Sumter, and from that time on Lincoln's administration was largely devoted to the suppression of the rebellion. On January 1, 1863, President Lincoln issued the Emancipation Proclamation freeing all of the slaves in the Confederate States of America. During the dark days of the Civil War the patience, perseverance, sagacity, and statesmanship of Abraham Lincoln sustained the forces of the Union, and slowly but surely the forces of the South were overcome. In 1864 he was reelected President, and when he was inaugurated for the second term on March 4, 1865, the end of the war was already in sight, as it was evident that the South could not hold out much longer. In his second inaugural address Abraham Lincoln uttered sentiments which he hoped would draw the North and South together after the bitter Civil War, closing his address with these words:

"With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us finish the work we are in, to bind up the Nation's wounds, to care for him who shall have borne the battle, and for his widow and his orphans, to do all which may achieve and cherish a just and a lasting peace among ourselves and with all nations."

On April 9, 1865, Lee surrendered to Grant at Appomattox, and the Civil War was virtually over. Abraham Lincoln's purpose was accomplished—the Union was saved. The entire Nation rejoiced, but in the midst of rejoicing there came a great shock. While attending the theater in Washington on the night of April 14, 1865, Lincoln was shot by John Wilkes Booth, a fanatical secessionist. The President died the following morning. The North was paralyzed; the South was stunned; the whole world was shocked. This good man, of humble origin who, step by step, had ascended the ladder of fame, who had tasted of the fruits of victory, and who had drunk of the dregs of defeat; who through sheer perseverance and strength of moral character had attained the highest pinnacle in his career, was to be no more. Who can deny that, had he lived, the history of the reconstruction period would have been materially changed? The conservative, conciliatory, steady hand was forever stilled; the radicals and extremists obtained unrelenting control. Had Lincoln lived, much of the bitterness that arose in the South during the reconstruction days would have been avoided.

Abraham Lincoln had an abiding faith in the judgment of the people. He was first and foremost a man of the people. On one occasion he said:

"Why should there not be a patient confidence in the ultimate justice of the people? Is there any better or equal hope in the world?"

I shall never forget my visit to the historic battlefield of Gettysburg a few years ago. It was there that the battle was fought which turned the tide of the Civil War definitely against the Confederate States. The thing that impressed me most was not any of the strategic points of the battlefield but was the national cemetery in which are buried the Union soldiers who fell in that battle. And in that cemetery is a monument marking the spot where Abraham Lincoln stood when he delivered the greatest of all memorial addresses, his Gettysburg Address, on the occasion of the dedication of that cemetery. As I stood on that hallowed, historic spot, gazing at the row upon row of soldiers' graves, in fancy I could hear the Great Emancipator deliver that inspired, matchless address, and in fancy I could hear him close with these words, which should challenge every American:

"It is for us, the living, rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this Nation under God shall have a new birth of freedom, and that government of the people, by the people, and for the people shall not perish from the earth."

Lincoln dared to think. While this was the principal constituent of his public character, it alone would not have made him great. He greatly dared to act upon convictions that to him were as profound as a religion, and as the result he bore his cross in enduring silence to that Gethsemane which inevitably awaits the man who, by the leaven of his spirit, endeavors to inspire the clay-bemired feet of mankind even an inch further toward that fair horizon toward which humanity has been striving since first we became conscious that we possessed souls. And so he suffered the martyrdom that at last has enshrined him in a special holy of holies in the heart of every American.

How easy it would have been for Lincoln to have followed the easier way. No especial obligation rested upon him to undertake the task that others had shirked. From the beginning the statesmen of America had been evading the inevitable, the inexorable issue of slavery, and had been compromising on that issue. A lesser man would have been content to leave it to others to attempt a problem whose solution was already overdue. Not so Lincoln. When he found himself face to face with an issue upon the resolving of which the future of his country depended, his statesmanship became sublime. The country plow boy, the Illinois storekeeper, the struggling lawyer, the developing statesman, almost overnight became an American demigod, whose fame has increased with the passing of the years and which will endure throughout the ages.

Today, as we think of Abraham Lincoln and revere his memory, a dark cloud hangs over our civilization. A new and sinister figure has risen to a place of tremendous power. This is the figure of Adolf Hitler, the Reichsfuehrer of Germany and the master of Europe, who with his lesser ally, Mussolini, has turned their peoples away from the truth and is trying to impose upon the world what he calls the new order. By their works we know them, and we know that this new order is a very old order; indeed, it is the foul order of slavery.

Listen to some extracts from Hitler's Mein Kampf, which is rightly called the Nazi bible, and see how the views of Hitler differ from the views of Abraham Lincoln who believed in government of the people, by the people, and for the people. I quote:

"The folkish State, therefore, has to free the entire leadership from the parliamentary principle of the decision by the majority" (669).

"The state in its organization, beginning with the smallest cell of the community up to the highest leadership of the entire Reich, must be built on the principle of personality. There must be no decisions by majority, but only by responsible persons, and the word 'council' is once more reduced to its original meaning—at every man's side stand councilors indeed, but one man decides" (660).

"As to the possibility of carrying through these ideas, I want you not to forget that the parliamentary principle of democratic majority rule has not always dominated mankind, but, on the contrary, it can be found only in very small periods of history, which, however, have always been periods of decline of nations and states" (671).

We are told by Hitler and Mussolini that our form of government is outworn, inefficient, a thing of the past; that government of the people, by the people, and for the people is sure to perish from the earth. We are asked to fall on our knees in a system where one man decides for all what they shall think, read, hear, eat, drink, wear, and do—a system, the essence of which is fear, the secret police, the firing squad, the concentration camp and torture. We are told that this is the new order and that we must conform to it.

It was the aim and purpose of the wise and patriotic men who met in Independence Hall in Philadelphia in 1787 to give to our new Nation a constitution that would endure through the ages. Their task was to establish liberty and justice as well as a government. They understood the civilizations of the past and had studied the failures of government in every age. They were familiar with the cruelties of unbridled power. They determined to erect a government dedicated to all the noble purposes of government and at the same time so restrained as not to be able to deprive the humblest man of rights which they had declared in the Declaration of Independence to be unalienable—the rights to life, liberty, and the pursuit of happiness. And so they drafted the greatest Constitution of all history, that Constitution which Abraham Lincoln revered and sought to preserve. That Constitution sought to establish a new order for our Nation and the world, a new order of freedom, democracy, peace. And neither the railings of dictators from without, nor the burrowing of enemies from within will ever prevail against that Constitution.

We know not what the future may hold for us, but we must be amply prepared for any eventuality. We can never subscribe to the doctrine that might makes right, we can never approve the ruthless trampling under foot of human rights and human liberties, or

the violation of the sovereignity of free, peaceful peoples. No bridge of understanding can be built between our Nation and the totalitarian nations because the dictators have proved to us that their pledges cannot be believed. They have discarded for themselves and for their peoples the whole code of international morality. Force, unrestrained by morality, is their creed. Our way of life is in danger. Our Christian civilization is in danger.

And as we today pay loving tribute to Abraham Lincoln, the supreme American of our history, let us highly resolve that our country will play her proper part in the present world crisis. Let us remember those words of Lincoln, uttered in his first inaugural address, when the Civil War was already in progress:

"Intelligence, patriotism, Christianity, and a firm reliance on Him, who never yet has forsaken this favored land, are still competent to adjust in the best way our present difficulty."

I close with these lines from Kipling's Recessional:

"The tumult and the shouting dies;
The captains and the kings depart:
Still stands thine ancient sacrifice,
An humble and a contrite heart.
Lord God of Hosts, be with us yet,
Lest we forget, lest we forget."

Food as a Political Instrument in Europe

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

ARTICLE BY KARL BRANDT

Mr. HINSHAW. Mr. Speaker, the following article, entitled "Food as a Political Instrument in Europe," has been written by Mr. Karl Brandt, and appears in Foreign Affairs, an American quarterly review, in the issue of April 1941. Mr. Karl Brandt was formerly professor of agricultural economics at the University of Berlin. He is now an economist with the Food Research Institute at Stanford University in California.

This article deals principally, as its title indicates, with food as a political instrument, and discusses its use as a political instrument by the Nazi government of Germany. It has been generally understood in this country that the use and distribution of foodstuffs by the Nazi government has been scientifically controlled, but I believe that very few Americans understand the full import of that control.

In addition to the discussion in this article, which is based largely upon quantitative factors, it is hoped that the author will write another article dealing with the qualitative factors as well as the quantitative factors.

It is well known in scientific and dietetic circles that in the course of rationing food it may be so distributed that one group or another may receive in their food rationing more or less of the various vitamins. By rationing food in such a way as to distribute less of certain vitamins, effects may be had upon the consumers of the food that may either increase or deprive them, for example, of the feeling of physical well-being through increasing or decreasing the amount of vitamin B complex in the ration. It is also possible to accomplish many other purposes through control of vitamin factors.

The article by Mr. Karl Brandt follows:

[From Foreign Affairs for April 1941]

FOOD AS A POLITICAL INSTRUMENT IN EUROPE

(By Karl Brandt)

To Americans the word "food" has fairly simple connotations. Food satisfies man's most basic and urgent need, and so seems eminently an affair of civilian economy. It is "our daily bread" of the Lord's Prayer—the stuff that keeps people from going hungry. Whether a person gets his share or not generally depends upon his income and food prices. For two decades, moreover, our Government has been worried by the presence of too much rather than too little food. It has tried to master the unwieldy food surplus in order to help the farmer, and has made a virtue of necessity by distributing surplus supplies free of charge among the needy and unemployed.

In the course of the public debate in this country regarding the European food problem, Americans have shown that they are thinking too largely in conventional physical terms. They speak about shortages created by the hostilities on land and sea, about food losses and destruction, about the consequent threat of famine to civilians, and about how to transfer enough from our land of plenty to relieve the stricken areas. Such thinking is natural enough in a democratic country where there is an abundance of the consumer goods typical of a competitive price economy. But the resulting picture is incomplete. The American public is not yet aware of the full implications of what is really going on in connection with Europe's production, distribution, and consumption of food.

II

In the totalitarian state food has ceased to be simply food as we all know it—a commodity of civilian origin and destination. It has acquired new and different aspects. It has become a complete chest of tools in the workshop of the modern tyrant. Even statistically food has been driven underground. Information on how much is harvested, imported, exported, lost, or fed to the people is now a military secret, guarded almost as carefully as the blueprints of a new bomber. Hence, a survey of Europe's food situation cannot at the present time be nearly so accurate as one compiled before the war. The economist must patch together incomplete statistics and bits of circumstantial evidence drawn from a multitude of unconventional sources.

In this total war, every nation considers food and feed essential factors in their struggle for eventual victory, along with coal, oil, electric energy, fibers, minerals, and metals. They know that thrift and foresight must be used in connection with them all. The German totalitarian state in particular, in preparing for war, made its food control a model system for all the phases of its rigid, thoroughgoing, centralized, planned economy.[1]

From the moment the Nazis seized the reins in Germany they copied the Soviets in transforming food from an economic end into a political means. Food became an instrument for executing domestic policies, for forcing the integration of the race, for persuading farmers to cooperate, for breaking the backbone of processing industries, for weaning a "degenerate" and miseducated people away from luxuries and unheroic attitudes. The granting of food became a premium for accomplishment and the withholding of it became a punishment for failure or dissent. Food could establish equality or set up distinctions, it could liquidate inferior individuals and groups, it could play Santa Claus or the big bad wolf. Since food is an inescapable necessity for the human animal, the Nazis saw what a beautiful instrument it could be for maneuvering and disciplining the masses. Their control of food put their thumb at the throat of every man and woman, of children as well as of the aged.

During the Third Reich's 6 years of peace and 18 months of war, numberless legislative and administrative decrees have given effect to this new concept of food as an all-round political instrument. The concept is entirely harmonious, of course, with the philosophy underlying the totalitarian state. If man's destiny lies in the survival of the fittest group in perennial warfare, and if his virtues flower under the enforced discipline of military command rather than in a harmonious relaxation of self-respecting citizens, then obviously it becomes a postulate of statesmanship that food is a political and military instrument. Once this idea has been conceived, it is only a matter of time before the Lord's gift of bread turns into Mephisto's rod, coaxing or cajoling, crushing or breaking, in the hands of der Fuehrer, Il Duce, El Caudillo, and the master of the Kremlin.

In the struggle of the democratic nations to survive they must understand all the techniques of their opponents, including their food policy. They must, so long as the war continues, resist aggression in every field by taking countermeasures in that same field. To fight the war strictly as gentlemen may mean the death of all gentlemen.

III

The result of efficiently engineering a nation's food policy is to give the entire food economy unprecedented elasticity. It is freer than in a "free economy," because it is relatively well protected against disturbance and can ignore both increasing costs of production and popular resentment arising from higher prices and consumer controls. Today, it is safe to say, the Germans are fairly well fed, despite a lack of some commodities; and they will probably continue to be well fed so long as they do not lose control of the conquered Continent.

The Nazi regime started its Erzeugungsschlacht, or battle of production, in 1934, in imitation of Mussolini's earlier battaglia del grano. Food imports were curtailed, farm prices for food were raised, dealers' margins were narrowed, and consumer prices were raised moderately. Agriculture, the food processing industries, and trade were studied and reassembled in accordance with the blueprint of the food cartel. Every living soul, whether farmer or laborer, grain dealer or milk retailer, thereby became a soldier in the Reich food estate, subject to the equivalent of martial law and bound to obey it on penalty of losing his freedom or his neck.

This revolutionary reconstruction of the food estate was undertaken to prepare it to withstand the test of war. The next step was to condition the consumer psychologically, to change his eating habits and the customs of kitchen management. The master minds who planned total war anticipated shortages and hardships. Hence, they put their best nutrition specialists, dietitians, economists, and psychologists to work to devise a streamlined rationing system that would feed the people sufficiently well, that would permit the regulation of the carryover through a tightening or loosening of the national belt, and that would be proof against

[1] Karl Brandt, The German Fat Plan and Its Economic Setting, Stanford University, California: Food Research Institute, 1938.

bootlegging. On the morning of the day the war against Poland began, September 1, 1939, ration cards were distributed to the German population. Rationing had been tried out long before with textiles and all sorts of other materials, and animal husbandmen had been subjected to feed rationing. In Germany, rationing is not an indication of existing real shortages of foodstuffs. It is an engineering and political science.

Addressing the German workers at the Rheinmetall-Borsig works in Berlin on December 10, 1940, Hitler[2] elaborated on the food-rationing system. "We want to avoid one person having more of the most vital commodities than another," he said. "Not everybody is in a position to buy a Titian, even if he had the money." And he added: "But in the case of food, everybody must be served." This is the socialistic refrain. But although such an égalitarian policy aims at preventing the rich from gorging or hoarding food, it establishes a class distinction between the various groups of recipients of rationing cards. First comes the "warrior caste," embracing the armed forces, the Gestapo, and to some extent the party militia. Next come the most skilled and essential laborers. Further down the scale come the unemployables, the aged, the incurably sick. At the bottom come those to whom it is an act of grace to give any rations at all: Prisoners, inmates of insane asylums and concentration camps, and Jews. Food cards express the quotation of the utility of citizens to Leviathan.

Allotments of higher rations are one means of promotion. They signify approval for laborers who pass from the unskilled to the skilled category, or from easier to harder work. One of the basic considerations is, of course, the actual caloric requirement for maintenance of any useful person's physical fitness. But a multitude of entirely different and partly contradictory calculations—including consideration of larger economic problems and astute political estimates—also come into play.

Rations may be lowered simply to accumulate greater reserves. Temporary limitations may be used to impress the people with the seriousness of the general situation, even when actual supplies on hand would allow more generous rations. Or extra rations may be granted to bolster morale in a difficult moment, even though stores thereby are drastically reduced. Cutting off luxuries prepares the people for being thankful later when a trickle of them reappears—some coffee, a little whipped cream, candies or chocolate. After the French collapse, when the German masses remained apathetic, special rations of modest luxuries were distributed to create an atmosphere of cheer and enthusiasm.

When the ministry of propaganda or the gestapo deems it advisable to play a more radical tune it turns the wrath of the masses against the capitalists by starting single-meal campaigns. Or a plan for compulsory public kitchens turns up, with the hint that a Spartan cuisine would have a good educational influence on epicureans. Hoarding or bootlegging food, or violation of the rationing laws, carries the death penalty, or in minor cases a term in a concentration camp.

IV

Food has also served the Nazis as an instrument for outmaneuvering their political opponents in neutral countries and for exacting complaisance. In fact, control of foodstuffs, including annual staple crops such as grain and sugar, or perishables such as milk, eggs, meat, fruits, and vegetables, is the main way in which the Nazis overcome patriotic resistance. It works particularly well in agricultural countries. Agriculture is relatively less elastic than industry. If the demand slumps, prices crash, and farmers default on taxes and interest. Countries with a large agricultural export are therefore most vulnerable in the game of squeeze, and the Nazi strategists have exploited the fact.

The technique used to force an agricultural country to yield, first to economic domination and later to military and political domination, is incredibly adaptable. One method is to concentrate in one hand all the foreign food purchases for the whole German nation, 80,000,000 strong. This single authority offers to buy a gigantic volume of goods in the country in question at fairy-tale prices; it sets the conditions, political or otherwse; it sees that its tempting offers become known through agents and by radio and the newspapers; and then it sits back to wait for the farmers to "turn the heat" on their governments, knowing that in all agrarian export countries the farm bloc is the most powerful of all political-pressure groups. Payment is arranged through a clearing arrangement with the national bank, which has to provide the interim payments to the farmers in national currency. Once the nation in question is in the grip of a big and powerful debtor it has to do as it is told or lose everything.

Knowing the inner structure of their victims, all their weak spots, the German experts in foreign trade, food, and feedstuffs have had an easy time preparing for "peaceful conquest." By outbidding competing countries with arbitrarily chosen higher prices; by granting subsidized credits and clearing agreements; by buying on a national scale in certain selected transactions; and by the simultaneous use of diplomatic and military pressure, Germany succeeded, between 1933 and 1939, in forcing the proportion of exports taken by her from Bulgaria, Greece, Yugoslavia, Rumania, Hungary, and Turkey from a former low of 15 percent to a high of 40 percent. Simultaneously she forced these countries to raise the percentage of their purchases in Germany, so that instead of representing 19 percent of their imports[3] these represented 46 percent.

Since actual warfare began, these forms of pressure have been supplemented by various schemes resulting in the inflation of the currencies of the neutral or conquered countries. The ratio between the mark and the currencies in question is arbitrarily fixed, and so are the prices offered by the German Government for foodstuffs. Indeed, nominally neutral countries like Hungary and Bulgaria, which have a food surplus have established rationing in order to force larger exports of food to Germany. Thus you may live in a neutral country that has food aplenty, but this does not guarantee that you will be allowed to eat it. If the food squeeze exercised from Germany becomes strong enough, not only the urban population but even the farmers themselves may have to suffer from malnutrition due to an unbalanced diet (though perhaps sufficient in calories), until for some reason of strategy the pressure is relaxed.

All the Balkan countries which, as I write, are still neutral—Yugoslavia, Bulgaria, Hungary, and the European part of Turkey—are in the same boat so far as food is concerned. If they resist Germany, their food surpluses will cause them grave trouble; if they play ball with her their bread basket still will be hung high. Sweden and Switzerland are in a better strategic position, even though from a military standpoint they are at Germany's mercy, because both are food deficit countries. Switzerland will be able to adjust her agricultural production. And Sweden is so important both as a source of industrial raw materials and as a purchaser of German industrial goods that certain needed food imports are permitted by the Germans to pass from occupied Denmark into Sweden. Moreover, as neutrals, both Switzerland and Sweden benefit from receiving British navicerts and from German willingness to let them import through the blockade.

Incidentally, if this German technique were ever tried against the Latin American countries, it would work magnificently in most cases. It also would work well against Canada, Australia, New Zealand. If Hitler should occupy the British Isles, thereby gaining control over Europe's normal purchases, amounting to an average of $2,500,000,000 a year in the Western Hemisphere alone, he could throw every one of those countries into political convulsions and stir up violent hatred against the United States. To do this he would not need to make a single military move.

V

It is in the conquered and occupied countries, of course, that the totalitarian food strategy is applied in its fullest extent. Central Poland, before the war part and parcel of an agricultural surplus producing country, is exposed to the worst suffering. The hatred and contempt which the Germans feel for the Poles has led them deliberately to aim at wiping Poland out as a national entity. This central area has been severed from the annexed parts of west Poland, and into it are being dumped increasing numbers of people considered undesirable. The food situation there, as a result, grows worse and worse. Only the large potato crop and American relief activities prevent complete disaster.

Czechoslovakia, with its strong industrial backbone, receives different treatment, because it belongs in the orbit of the "Greater Reich." In fact, the food situation in the Czech and Slovak areas does not differ much from that in the Reich and Austria.

Norway has had a hard time because its supplies of grain, leguminous vegetables, sugar, fats, and fruits are short under the blockade, even though in normal times she is able to export annually 200,000 tons of fats, 85 percent of her catch of fish, and 65 percent of her potato crop. Her fisheries still yield enough for her to send train loads daily to the Reich.

Denmark fares best among all the occupied nations. Although the Danes still stubbornly maintain their tariff border, the area is, for all practical purposes, incorporated into the Reich. Food and feed are rationed. In 1940 chickens and pigs were cut down to half. Cattle were also cut heavily, though the herd of dairy cows was kept almost normal. All the butter, bacon, eggs, and cattle that can possibly be spared are sold to Germany. Instead of exerting direct pressure in Denmark, which might diminish the supply at the source, Germany has resorted to the methods of an otherwise greatly despised liberal economy—she has raised prices to such a height that foodstuffs are produced and flow freely southward over the border. Indeed, for the last quarter of 1940 the German fat monopoly raised its prices per ton for Danish butter from 2,400 kroner in 1938 and 2,750 kroner in August 1939 to 4,500 kroner.[4] For the first quarter of 1941, the price has been boosted to 5,000 kroner for the first 8,000 tons, 4,250 kroner for the next 4,000 tons. Thus Denmark has a real export boom. By December 31, 1940, her former debit on clearing account had turned into a 1.5 billion kroner balance in her favor.[5]

The Dutch likewise find themselves in a favorable situation, even though, like the Danes, they have lost their British market. Their state, a model of intensive and up-to-date farming, has been closely integrated with Germany. Huge shipments of Dutch vegetables, butter, cheese, and meat roll eastward day and night. The incentives are

skyrocketing prices, paid in depreciating guilders, and the withdrawal of German duties. Dutch farmers desperately need an outlet. German purchases prevent wholesale bankruptcy. The only risk from the point of view of the Germans is that stubborn Dutch political resistance might force them to impose penalties, but they will avoid this if possible, because, as in the case of Denmark, Holland is too valuable an asset in the Reich's wartime food economy to be ruined.

Belgium, as the European country with the greatest density of population and next to Switzerland the highest degree of industrialization, is probably in the worst straits of any of the occupied territories. However, there is a great difference between Germany's treatment of the Belgians and the Poles. Immediately after the occupation of Belgium the German authorities began to cooperate with the Belgian administration in planning adjustments in the production, distribution, and consumption of food. Belgium is short of fats, fluid milk, grain, and potatoes; but she has an excellent sugar-beet crop and some milk and vegetables. While Norway, Denmark, and Holland have bread rations of roughly 80, 90, and 89 ounces per capita per week, the Belgian ration is only 56 ounces.[6] To promote efficiency, industrial workers are allowed up to 112 ounces. Some food is said to be passing into Belgium with navicerts through the British blockade. But the minimum supply of staple food needed can be arranged only by Germany, by transport either from Soviet Russia or the Balkans or out of her own reserves.

In occupied France food is strictly under German control, but the situation is much better than in Belgium, the wheat-bread ration being 87 ounces a week. The occupied region contains France's main wheat, sugar-beet, and dairy areas. But these are also the principal scene of the present Battle of England. R. A. F. bombings, Germany military movements, and civilian evacuations disrupt transport, trade, and administration so that local shortages are common.

Industrial unemployment is widespread in Belgium, Holland, and occupied France, while in Germany, with German war industries booming and German armies spread out all over the Continent, there is a desperate shortage of skilled labor. Consequently Germany is eager to import as many mechanical workers as she can, especially from the Low Lands, France, and the Scandinavian countries, where skilled labor is particularly well-trained and hard-working. Food is the lure used to secure them. German employment agencies offer jobs in Germany to unemployed Belgian, Dutch, and French workers. If these refuse, they lose their rationing cards. Sometimes rationing cards are withheld from workmen—who then are informed that plenty of food can be had in such-and-such a German industrial center.

Unoccupied France has been maneuvered into an exceedingly difficult situation. Vast numbers of refugees are crowded into a small area which is ill prepared to secure or distribute the supplies necessary. Communications and transport are strained, the civilian administration is overburdened, hoarding and bootlegging produce inequalities and, in many spots, shortages. Rationing, so far, has been badly organized and remains largely ineffective. In view of this the reduced (though still not alarmingly low) ration of 74 ounces of wheat bread does not mean very much one way or another.

The territory under the Vichy government produces winter vegetables, fruit, and wine, but is short of grain and fats. Wheat came normally from northeast France, now occupied, and the former imports of tropical vegetable fats—normally from 500,000 to 600,000 metric tons net annually—are no longer available. While the chess game between Pétain and Hitler continues, the Germans have no intention of relieving the food situation in unoccupied France. Indeed, food is one of the men in the game. Thus the French people read that Germany has promised to ship 100,000 tons of potatoes from Germany to Paris.[7]

All the occupied areas have to support vast German armed forces. On the other hand, Germany feeds, on German supplies, probably an equal number of prisoners of war and drafted foreign laborers. There still remains a large net profit for Germany in this account, however, since prisoners receive the smallest and German soldiers the highest per capita ration. Moreover, German soldiers buy and send home all the bootlegged and nonrationed food they can find.

VI

In general, we see, the European food situation no longer can be measured in ratios of physically available supply and more or less urgent demand. Although crops and stocks still act as delimiting factors, the civilian food ration is determined largely with an eye on other matters. The most orderly and satisfactory situation, of course, prevails within the boundaries of Greater Germany. In Italy, too, bread is free of cards. In the neutral, the nonbelligerent, and the conquered countries every sort of condition prevails, from one roughly approximating that in Germany down to real stringency.

It would be going too far, however, to say that conditions everywhere are strictly what the German conqueror wants them to be. He took 6 years to build his totalitarian power economy at home. It works there with the precision of a carefully built and solicitously tended machine. But in the conquered territories he had hurriedly to superimpose similar methods upon radically different economic systems. Neither the psychological coordination and control, nor the technical execution, approaches the perfection achieved in Germany proper. This is why there is general disorder in the European transportation system, universal disruption of wholesale and retail trade, speculation, and a lack of information regarding stocks. All these factors hamper the proper distribution of the food which is available and assigned for use.

The longer Nazi legions and administrators rule the Continent the more order they will restore. Since the threat of undernourishment, or even actual starvation, is the canker that destroys public morale, all governments, conqueror and conquered alike, concentrate their energies on banishing this fear. And they have made remarkable progress. The point to remember is that the commanders of the German Army of occupation, with the keys to the big granaries in their pockets, will tighten or relax their grip not in accordance with the size of available supplies of food but according to the dictates of broad political strategy.

VII

Late this spring, probably, will come the critical period in Europe's food problem in this war. Thereafter the food situation will tend to become less tense, even in such hard-pressed areas as Poland, Belgium, unoccupied France, and Spain. With the coming harvest, if the weather favors, the energetic German drive to work out necessary adjustments may well begin to show astonishing results.

The yield of the Danubian Basin and the Balkan countries in food and feed crops is not likely, in general, to increase substantially (except for a larger oilseed output, especially in Hungary). Yet the more advanced agricultural methods introduced by the Germans will give new proof of their efficiency and will exploit all the latent skill of the farmers. Practically all of the northern and the middle parts of central and western Europe will show increased agricultural production. The acreage devoted to potatoes, sugar beets, and mangels will be drastically increased, and more calories will be produced on the same acreage of cultivated land.[8]

All these root and hoe crops require an increase in draft power, in manual labor, and in fertilizer. These things can be provided. The armies of the occupied nations will be demobilized, horses will be turned back to the farmers, oxen will be used where horses are too few, nitrogen and potash fertilizers are plentiful, and industrial unemployment prevails. Nothing is more sensible, then, than to turn to more hoe crops.

Indications are that greater Germany and all the occupied areas except Norway are preparing to do so. Even Belgium expects to be self-supporting in grain in the new crop year by boosting the wheat area from 160,000 to 260,000 hectares, and the potato acreage from 147,000 to 177,000 hectares. At the same time, the extremely productive small family gardens in the suburbs of all the European cities will turn out more small fruit and vegetables in due season. True, in Holland, Belgium, Norway, and Denmark the poultry flocks have been cut by emergency slaughtering to less than one-half, and the hog population has been reduced considerably. More calves and young cattle have been slaughtered than under ordinary conditions. But these inroads have not, contrary to press reports, reached alarming proportions; and as feed supplies improve, the number of chickens and pigs may well increase again fairly quickly. In the Danubian countries the stock has definitely been increased.

If in 1941 the war does not turn into a sweeping movement of invading armies on the Continent itself, and if a general crop failure does not occur, we are probably safe in assuming that the threat of famine will gradually vanish, though a dearth of fats will still persist, and eggs, fluid milk, and cream will continue to be scarce. The need for activity by the Red Cross and by local relief associations in the various nations will persist, especially on behalf of children, the poor, and prisoners. Finland, Spain, and unoccupied France have already received some overseas supplies under British navicert; recently French convoys from North Africa reached Marseilles without being molested by the British. Finland has obtained 20,000 tons of edible oils, bacon, and pork from the United States. Moreover, the United States and Great Britain have agreed to a more flexible treatment of medical supplies and concentrated foods shipped under navicerts.

This appraisal of the European food situation may seem overoptimistic. But pessimists often forget that the Continent's total import deficit in foodstuffs before the war did not amount to more than 5 percent of its bread-grain requirements or 6 percent (10,500,000 tons) of bread- and feed-grain requirements combined. The real shortage is in fats—1,300,000 to 1,400,000 tons. Germany today has an untouched war reserve of 6,500,000 tons of grain, and this alone would permit her to adjust the situation in countries of greatest need without seriously depleting her stocks. The fat deficit will persist, but it will decrease as potatoes, sugar beets, and mangels become available for feeding hogs, cows, and sheep, and as more oilseeds, such as rape, are grown. A herd of 100,000,000 pigs now consumes tremendous amounts of feed which could be used as human food. Before starvation gripped

[6] Wheat Studies of the Food Research Institute, January 1941, p. 238. This issue gives detailed bread rations for 12 countries.

[7] By the end of November she had actually shipped 8,000 tons. Potatoes, be it noted, are free from rationing in unoccupied territory.

[8] Potatoes yield two or three times as many starch calories per acre as does wheat or rye; sugar beets from four to six times as many.

the population this herd, along with cattle and sheep, would be slaughtered and eaten. Furthermore, exceptionally high prices of food and feed in all areas outside of Germany will certainly stimulate increased production and will enforce the utmost thrift in consumption. At present the greatest pressure seems destined to fall on England because of her shipping losses.

The Nazis consider themselves complete masters of the European food situation. On September 30, 1940, Walter Darré, German Secretary of Agriculture, stated that there would be "no special difficulties to overcome" in occupied countries, and that the available food supply was greatly underestimated abroad.[9] He did not think it necessary to lay any blame for food shortages on the British, though he naturally would have been tempted to do so. On January 7, 1941, the German Ambassador in Madrid, Dr. Eberhard von Strohrer, insisted that Spain did not need a hundred-million-dollar credit from the United States, because Germany was in a position to carry out an offer to provide her with all the gasoline and other supplies she needed from Rumania and Russia.[10] On February 11, 1941, the radio brought the news that a joint German-Belgian commission had negotiated food shipment from Soviet Russia to Belgium. In February Russia offered Norway to barter a million tons of Russian grain for Norwegian aluminum. Immediately Germany interfered. The Nazis do not object to relief supplies coming into Europe if they have no political implications. But they consider the regulation of Europe, including feeding it, their affair—their self-assumed right as well as obligation. It is a key factor in their new order.

In conclusion, it may be worth while to reflect upon the role played by food in the World War. Food alone did not win that war. In October 1918, General Ludendorff forced the German Chancelor, Prince Max of Baden, to sue for peace within 24 hours. He did this because the German Army had lost the battle of Amiens and would have been thrown back to the Rhine by Christmas. Certainly the food stringency was one of the factors which had exhausted the fighting stamina of the nation as a whole. Yet even in November 1918 the front-line troops still were well fed. The Nazis have laid their plans well. They are determined that no shortage of food will arise to create even as much difficulty for their juggernaut as it did for the Kaiser's. Our sympathies must not be allowed to distort our judgment about the role of food in the tremendous struggle ahead. Appraisals of the food and raw-material situation made before the commencement of the Battle of Norway and the Battle of France still hold.[11]

The Nazis will think twice before spreading pestilence and starvation in western Europe so long as they can avoid it easily. But if their plans go awry, if starvation does impend, they would and could manage so that famine would proceed in concentric rings from the extremest rim toward the German center of the fortress. In this process they would dispose of the lives of the 150,000,000 hostages they now hold without batting an eye. This is their true advantage from the conquest of the continent.

The blockade impedes the wheels of Hitler's war machine, but that machine is not going to be halted for lack of food or raw materials. The present Nazi domain contains too large resources for that, so long as they are exploited by the skillful politico-economists who drew up the blueprints of the Nazi economic tyranny. The Nazi machine will be defeated only by superior diplomacy, superior steadfastness and superior military strength.

Oppose Federal Taxation on State and Municipal Bonds

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

RESOLUTION BY THE PENNSYLVANIA STATE ASSOCIATION OF BOROUGHS

Mr. VAN ZANDT. Mr. Speaker, with the present heavy expenditure of Government funds, which come primarily from the pockets of the taxpayers of America, we are confronted with an attempt to further hamper the property owners of America by the proposed Federal tax on State and municipal bonds. America has always pointed with pride to the many home owners in this country, and encouragement has always been given to home ownership.

The proposed Federal tax will increase the cost of the operation of local and State government, and taxpayers will be called upon to bear the burden of such an increase. The result of such a Federal tax imposed on State and municipal bonds has caused concern to the political subdivisions of the State affected by such legislation.

The following resolution opposing the imposition of a Federal tax on State and municipal bonds was adopted by the Pennsylvania State Association of Boroughs at their thirty-first annual convention in Harrisburg, Pa., February 27 and 28 and March 1. This resolution contains many compelling reasons why such a proposal should be defeated.

The resolution follows:

Whereas the Treasury Department of the Government of the United States has heretofore expressed to and urged upon the Congress of the United States its recommendation that the evidences of State and municipal indebtedness be subjected to Federal taxation; and

Whereas during the year 1940 the aforesaid recommendation was inquired into and it admittedly became apparent that the burden of any such taxation must necessarily resolve upon the municipalities and State issuing such evidences of indebtedness and thus add to the burden of real-estate taxation; and

Whereas admittedly real estate is presently overburdened and the taxation upon real estate should be relieved and not added to; and

Whereas such proposal would be contrary to all of our established concepts of constitutional division of powers and independence of functions between the several units of government; and

Whereas the inevitable consequence of any such proposal would be to subject municipalities to the financial domination and ultimate control of the Federal Government, thus tending to destroy the fundamental safeguard of democratic government, the independence of home rule; and

Whereas during the year 1940 committees of the House of Representatives of the Congress of the United States and of the Senate of the Congress of the United States conducted inquiries into the feasibility of such proposal, as a result whereof, in September 1940 the said recited proposal of the Treasury Department of the United States was decisevely rejected by the Senate of the United States; and

Whereas, notwithstanding such rejection, the Treasury Department of the United States has again urged upon the Congress of the United States its desires for the imposition of said recited tax, this time upon the theory that such tax would be in aid of the defense program of the Government of the United States; and

Whereas the said recited proposal of the Treasury Department bears no proper relation to the defense program of the United States and any increased revenue to the Government of the United States would be "diminimous" and any such proposal would inevitably tend to destroy the independence of the governmental units designated as local government and would thereby tend to destroy the cornerstone of the democratic principles which it is the avowed purpose of the Government of the United States to defend: Therefore be it

Resolved, and it is hereby firmly and highly resolved by the Pennsylvania State Association of Boroughs in convention assembled, That it is the unalterable consensus of opinion of this convention that the position of the Pennsylvania State Association of Boroughs as heretofore expressed in opposition to said recited proposal of the Treasury Department of the Government of the United States be reaffirmed; and be it further

Resolved, That the officers of the State Association of Boroughs be and they are hereby directed to use their best efforts in opposition to said recited proposal; and be it further

Resolved, That a copy of this resolution be transmitted to each and every one of the Members of the House of Representatives and the Senate of the United States representing therein the Commonwealth of Pennsylvania.

(This resolution, on motion of Mr. Julian Barnard, chairman of the resolution committee, was carried unanimously by the 970 delegates of the convention.)

St. Patrick's Day Address

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

ADDRESS OF HENRY F. BOYEN, POTENTATE, ISLAM TEMPLE, ANCIENT ARABIC ORDER NOBLES OF THE MYSTIC SHRINE

Mr. WELCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Mr. Henry F. Boyen, potentate, Islam Temple, Ancient Arabic Order Nobles of the Mystic Shrine, at Shrine's St. Patrick's Day luncheon in San Francisco on Saturday, March 15, 1941:

Ladies and gentlemen, the greatest monuments of the world are not wrought in iron and steel. They are not cut in stone or chiseled in marble. They are wrought of words and deeds, for by words and deeds alone can you build the spirit of a people.

We who are gathered here are a part of the great spirit of liberty that is America. More than 10,000 men and women, Catholic, Protestant, and Hebrew, under one roof, in free America, to break bread together and pay our tribute in our way to St. Patrick, who built his monument in the spirit of his people and so across the centuries has lived in the hearts of men.

We do not gather to glorify any particular religion, nor is the word "tolerance" sufficiently expressive of the ideal we cherish here. There is something richer and deeper that underlies it all—that comes with the force of heaven, for the right to worship God is not man created but heaven sent, and its exercise the finest expression of liberty the world knows.

Liberty is the common ground upon which good men of all creeds may unite, stand together, each affirming and assuring to the other his right to worship God according to his lights and the dictates of his conscience.

We gather to honor St. Patrick. We dedicate this luncheon to the unity and the liberty of this America of ours. We Americans love liberty—the liberty that was bought for us in all the battles by land and sea, that made America free and independent. If we ever lose this liberty, we would buy it back with our lives, our blood, and our fortunes. It has been preserved for us by all the generations that have gone before; it could be lost by just one. So we in our turn must find within ourselves the divine spark, fan it to a flame of glorious determination that liberty shall live.

Our Nation has been the hope and aspiration of subject races throughout the world for a century and a half. Yet there are those who want us to lose faith in ourselves, to lose confidence in our institutions.

They whisper doubts and suspicions with a thousand voices, appealing to man's baser nature, preaching hate, religious intolerance, destruction of the great moral principles that have carried man from the Stone Age unto this. They want liberty to fail here. We must fight back such philosophy. We must rise as a single unit to make the common fight for the common right as parts of and not parts from America. We must call back the spirit of the pioneers—the men and women who stood as the sentinels of humanity upon the outskirts of civilization. Those who laid the foundations of our Nation, suffering all of the hardships without enjoying any of the power that was to flow from it. It is our duty in our turn to lay our stone in the temple of liberty that its base may ever broaden to support the America of advancing years, for it is our hope that we are her builders not only for this day but for an unending succession of even more glorious tomorrows.

We have been thrilled by the lives of Washington and Lincoln. We have drawn our inspirations from the graves of our unnamed dead and undoubtedly each one of us at some time in his life cherished a secret hope that he, too, might serve our Nation so that he might earn his lodgings in the "Inns of Immortality where sleep our illustrious great." If you ever hoped for such an opportunity, it is here and now, for never in the history of the world has a generation been accorded the chance to serve itself, to serve God, that is accorded to our own, for the fabric of civilization is being destroyed before our very eyes and what we in America do is going to determine the course of human history for centuries to come.

The history of the world is but the story of man's struggle against tyranny, autocracy, darkness, and oppression. All about us dictators are attempting to turn back the hands of time and are denying to their own citizens the fundamental rights of free men, of free speech, of free thought; of the right to worship God according to the dictates of conscience. Liberty is disappearing with a speed and completeness that stuns the imagination of the world. The world needs the inspiration that only free and liberty-loving America can give, for here alone does the light of liberty continue to burn and the philosophy that every man is king.

The call goes straight to the heart of every true American: Climb the ramparts, man the watch towers, become the sentinels for God, for humanity, for liberty.

We have chosen the leadership for this hour; let us each say: "I am an American. I intend to stay an American. I will do my best to wipe from the heart hate, rancor, and prejudice. I will sustain my Government, and, through good days or bad, will serve my country to the best of my ability."

As I face the flag of our Nation I am reminded of the flag presented to Abraham Lincoln, which bore an inscription of two verses of Joshua:

"Have I not commanded thee? Be thou not afraid. Be thou of good courage, for the Lord thy God is with thee whithersoever thou goest. As I was with Moses, so shall I be with thee. I will not fail thee. I will not forsake thee."

Glorious promises for the President of our Nation. Men and women of America, let us face the flag of our Nation, emblem of the happiest free people in all the world today, and out of our hearts say to that flag in the promises of Joshua: "We will not fail you. We will not forsake you. We build for the unity of our land and may God ever hold you safe and at peace in the hollow of His almighty hand."

Are We to Reap the Whirlwind?

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

Mr. WOODRUFF of Michigan. Mr. Speaker, a 6-year program of public works which would constitute a "shelf" or "reservoir" of construction projects for use in time of need has been outlined by the National Resources Planning Board. The program was outlined in a report transmitted to the Congress on March 17 by President Roosevelt, who commended it as a means of maintaining "a strong and healthy national economy" and of preparing for "after-emergency adjustments."

Thus Mr. Roosevelt recognizes publicly that the situation in which we today find ourselves as a people and a Nation holds grave—very grave—possibilities of economic disaster after the war is over, and our defense mechanism has been built.

We will reach that "after emergency" problem with a Federal debt which no man today dare even try to estimate. We know, however, that it will be vastly greater than any debt any nation ever dreamed of in the history of mankind.

For the past 6 years many Members of the Congress have been warning that the spendthrift policies, and the superexpensive experiments and the costly panaceas might lead us to economic ruin and chaos if we got into a war.

It is now recognized by the soundest thinkers of this country that this grave danger does now menace us. Therefore it behooves us to exercise the greatest possible efficiency, to practice the most rigid economy possible in the governmental expenditures, even for defense, without impairing the quality of our national defense or the speed of its construction.

There is still too much loose thinking on economic questions among New Deal economists.

Mordecai Ezekiel, economic adviser to the Secretary of Agriculture, recently testified before the Senate Monopoly Committee that it would be necessary to prevent what he called oversaving if a post-defense depression is to be headed off.

These same views have been coming out of the Treasury Department from time to time. Ezekiel said:

> You can close the gap between savings and investments by the Government borrowing the hoarded savings and spending them.
>
> You can close the gap and at the same time keep the Budget balanced by having the Government tax away the hoarded savings and spending them. Or you can close the gap without action by the Government if business will so equalize the income as paid out by business that high-income groups are no longer able to save amounts in excess of the amounts needed for investment.

It would appear from a common-sense viewpoint that the surest way to produce a post-war depression in the United States would be by the Government taxing away and spending all of the savings of the people resulting from the increased expenditures of funds for national defense and war purposes, leaving no backlog of accumulated savings to provide consumer purchasing power when millions of soldiers are demobilized from military service, and at the same time millions of workers in defense and war industries are demobilized and turned out of their jobs. If at the time these demobilizations take place there is not a big reserve of consumer purchasing power with which the individual citizen can satisfy his desires and thereby provide work for industries no longer needed in defense work, we will go into economic chaos in spite of all that we can do.

It is equally true that the frantic spending of inconceivably great sums of credit money for defense work and war purposes will create a gigantic flood of new consumer purchasing power. It is also true that if some control of prices is not established prices will rapidly rise under the impact of this new flood of consumer purchasing power and we will be caught in a quick and highly dangerous inflationary boom.

It seems obvious therefore that there must some way be created by the Congress to preserve a wholesome and economically safe balance between earnings, spending, prices, and savings. If some way is not found to effectively encourage savings of wages and other incomes against the time of demobilization and cessation of war-defense work, these earnings will be recklessly spent as they are earned; prices will rise to unsound and ruinous levels, and we will face the

necessity for expenditures of more billions for vast public works to maintain the people in a new and vastly greater depression than we have experienced in the last 10 years. Such a depression would ruin this Nation and, in all probability, overthrow our present form of constitutional government.

If at the end of the defense effort, and the cessation of the war, farmers and wage earners have a healthy backlog of savings, those farmers and wage earners will be politically independent farmers and wage earners.

If, on the other hand, however, the Ezekiel-Treasury Department theories of the Government taxing and spending these accumulated savings is carried out, then farmers and wage earners will be left without a backlog of accumulated savings at the end of the defense effort and the war. In such case they will be dependent upon the Federal Government for work and income. This would keep them in the power of the political bureaucracy. Those who are leaning on the Government for support naturally tend to vote to keep in power those whom they believe are ladling out the public money to them.

Authoritarian Trend

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

EDITORIAL FROM THE GRAND RAPIDS PRESS

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Grand Rapids Press of March 18, 1941:

[From the Grand Rapids Press of March 18, 1941]

AUTHORITARIAN TREND

Those who wish to keep an eye on the trends toward authoritarian government in Washington should note the latest expression of the Treasury Department suggesting lower individual income-tax exemptions combined with a system of "forced savings" among those in the lower income brackets.

The proposed scheme is that a percentage of workers' wages be deducted by employers to be saved for application on income taxes when due. The Washington bureaucrats apparently believe that small wage earners would not voluntarily lay aside sufficient funds to meet their taxes under lower exemptions.

To the average liberty-loving citizen a measure such as this would appear an unwarranted encroachment upon the private life of the individual. It may be branded moreover as class legislation of the rankest sort, placing a stigma of incompetence on the lower wage earners.

The Government has no moral right to segregate the wages of its citizens nor to determine their disposition before taxes are due. At least it would have no right to such action under democratic principles. It is authoritarian government which reaches down to control the private affairs of its citizens.

The Treasury's suggestion is just one of many signs that the scramble for war money endangers private rights. A vigilant public will be necessary to prevent a steady encroachment.

German Strategy: 1914 and 1940

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

ARTICLE FROM FOREIGN AFFAIRS FOR APRIL 1941

Mr. HINSHAW. Mr. Speaker, Mr. "X," the anonymous author of the following article entitled "German Strategy: 1914 and 1940," is evidently a soldier of parts and a keen student and analyst of strategy in war.

This article appears in Foreign Affairs, an American quarterly review, in the April 1941 issue. The article follows:

[From Foreign Affairs for April 1941]

GERMAN STRATEGY: 1914 and 1940

(By X)

A commander in chief is not in a position to begin a war as a chess player may begin a game with a new gambit. He has to take over a play which has been opened by others—that is, the statesmen—and then carry it through according to the rules of the game. His strategical opportunities are thereby limited. In the long history of war more campaigns have been lost on account of a wrong political start than by subsequent strategical mistakes. More wars have been won by the élan, the passion, and the will to sacrifice of whole nations than by the genius of commanders.

It is in the political preparations and the use of political opportunities that we find the outstanding distinctions to be made between the strategical situation which faced Germany in 1914 and that which faced her in 1940. The German Army and German leaders of 1940 profited by mistakes of the past even more fully in the political field than they did in the field of purely military operations.

In 1914 the war began with the political odds against Germany. Close collaboration between the Chancellor and the chief of the general staff was needed urgently after the Bülow period, but it did not exist. The Chancellor, Dr. Bethmann-Hollweg, clung to the hope of reaching an understanding with England. The chief of the general staff, Gen. Helmuth von Moltke, had no such hope. He had no political imagination and he lacked the ability to foresee the psychological and political effects of his strategical maneuvers. He wavered between the fear that the Austro-Hungarian Empire might break up if the war were postponed and the fear that the German Army would not be ready for its superhuman task before 1916. He was perturbed by the shift of the French general staff in 1911 from a defensive to an offensive strategy. His only idea of parrying this threat was to speed up mobilization and to plan to attack Liege on the fifth day after mobilization. His whole plan was rigid and bound to a strict timetable. His army commanders likewise became academicians. No last-minute change to meet unforeseen alterations of the political scene was possible.

In the summer of 1914 the rulers of Germany were not able to show any flexibility of mind in meeting the changed conditions created by the murder of Archduke Franz Ferdinand and by the early Russian mobilization. Neither the chief of the general staff nor the Chancellor was able to take advantage of Britain's hesitation to define her obligation under the Belgian neutrality pact of 1839. If the British Cabinet had decided that the German passage through the valleys of the Meuse and Sambre did not violate that treaty, then General von Moltke would have been justified, at least politically, in carrying out the plan to attack Liege on the fifth day after the beginning of mobilization. Since a majority of the British Cabinet decided for the opposite interpretation, as any good judge of the prevailing temperament could have foreseen, the premature attack on Liege became a major political mistake even though only a minor military one. It took the Chancellor by surprise. Germany was brought into a disastrous impasse, diplomatically and politically, without gaining any decisive military advantage.[1]

The combination of constructive military and political imagination in one and the same man is extremely rare in history. Frederick the Great had it. Napoleon had it. In 1866 and 1871 no one man in Prussia had it. However, William I managed to prevent the frequent differences of Bismarck and Moltke from attaining serious proportions. Again, in 1914, as we have just seen, no one German had it. In France, too, in 1940 there was no such combination in one person, and no personality capable of enforcing close collaboration between the political and Army leaders.

There is a striking parallel between the way in which the strategical position of Germany slowly deteriorated before 1914 and that in which France's did before 1940. In each case the process was due to neglect of political opportunities. It seems to be an inevitable psychological sequence that the fiber of a victorious nation softens in time, while that of a defeated nation stiffens. No statesman or general can isolate himself from the mentality which surrounds him. In the words of Moltke, an army is never so weak as on the evening of the day when it has been victorious. The same holds true for a nation which assumes that a lasting political superiority can be guaranteed by a total peace. Such a nation underestimates the jealousy of former allies and neutrals. It will try to postpone new military risks at all costs. It will accept a series of diplomatic defeats. But eventually there will be a violent reaction within the nation itself which may force the political and military leaders to give battle at a moment when it would be wiser to accept one more diplomatic defeat.

Of course, there is no comparison in magnitude between the diplomatic defeats of France in the decade preceding this war and those of Germany in the two decades before 1914. The descent of French power and prestige in the years before 1939 was without parallel in its swiftness. In the summer of 1931 Germany still was totally disarmed, Great Britain had voluntarily disarmed, and all Europe, with the exception of France, was near economic collapse. At that moment France's military alliances with the Little Entente and Poland made her appear so overwhelmingly strong that the French thought it possible to dictate their own financial and political terms to the rest of Europe. Here

[1] Cf. Gen. Wilhelm Groener, Das Testament des Grafen Schlieffen, p. 216.

was the beginning of the estrangement of Anglo-Saxon public opinion from France. At the same time the countries of southeastern Europe began to realize that their economic future lay not in France but in Germany. The European financial debacle, for which French politics were partly responsible, was bound to have repercussions in France as well. Nations which face the consequences of such crises immediately and courageously, in spite of violent internal reactions, will be stronger in the end than those which try to escape by purely monetary expedients.

The fall of the Doumergue Cabinet in 1934 and the failure to pass urgent reforms were symptomatic of the illness from which France was suffering. Everywhere on his diplomatic tour of Europe Barthou encountered skepticism regarding France's ability to solve her internal problems and to meet her military obligations to her allies. This skepticism was increased by France's failure to oppose the military reoccupation of the Rhineland in March 1936. The sacrifice of Locarno was a turning point in European history. The French General Staff hesitated to act unless the Government authorized a full mobilization. The mere order for total mobilization would have been sufficient at that moment to bring about the collapse of the Hitler regime. From then on the deterioration of the European order was rapid. The sanctions against Italy left Mussolini dependent on Germany for economic support. The financial consequences of the Spanish war, and the German occupation of Austria, increased this dependence. Germany's rearmament proceeded at full speed. Britain and France still procrastinated.

The German occupation of Austria directly threatened the strategical position of Czechoslovakia, and hence the existence of the Little Entente. Instead of facing the facts the French indulged in utopian legislative controversies and changes of government. The consequence was social unrest among all classes of the population—a condition unfavorable for any military action in a modern war. On the basis of our present knowledge we cannot say definitely that France, Britain, and Czechslovakia were in a military position to make war successfully at the time of Munich. From the purely military point of view it would certainly not have been wise to start the war only to save a few Sudeten German counties for Czechoslovakia. But the Siegfried line had not yet been completed. For the Allies to sacrifice half Czechoslovakia's military strength to the Nazis, and then to await the completion of the Siegfried line, was tantamount to suicide.

The final occupation of Prague completely altered the military balance of power in Europe. Five Czechoslovak panzer divisions and 40 other Czechoslovak divisions disappeared from the list of potential Allied forces in the event of war with Germany. With the Czech arms thus acquired, Germany was able to arm 40 divisions which until then not only had not been well trained but had not even been fully equipped. The actual shift in favor of Germany in the military balance was therefore equivalent to 80 divisions; nor was that all. Poland's strategical position became precarious. France, which 4 years earlier could have mobilized half of continental Europe against Germany, was thus isolated. In case war came before 1941 she now could rely only on the Poles putting up a desperate struggle for a short while and on weak assistance from Great Britain. From this moment European politics were a race for time. The chief of the French general staff must, indeed, have been depressed as he counted over how many of his military trumps had been discarded in the vacillations of French and British politics.

The break-down of the Locarno guaranties had already created for the French chief of staff conditions similar to those which faced the German chief of staff in the decade before the war of 1914. It narrowed the scope and possibilities of strategical action by France and Great Britain. Thus General Gamelin must have seen that in the event of war he was like a chess player who has lost his queen. After the occupation of Prague and the competition of the Siegfried line he must have been fully aware that an offensive against Germany was no longer feasible. He knew, too, that he was unable to bring any decisive support to the last remaining pillar of the French system of continental alliances, Poland. It would be interesting to know positively whether General Gamelin favored giving guaranties to Rumania and Poland in the spring of 1939 or whether he was opposed. If, aware that he could not bring any effective help to save Poland from destruction, he did not foresee the disastrous consequences of the guaranty which Britain and France gave her, he is primarily responsible for his own subsequent defeat.

To guarantee the frontiers of Poland and Rumania, and then to start negotiations in Moscow, was a slap in the face for any Russian Government. No Russian Government could have omitted to utilize the opportunity of a war between Germany and Poland in order to recover Bessarabia, the Baltic countries, and the Curzon line in Polar 1. In case of war, whether or not Great Britain and France had given the guaranties in question, Russia would certainly have been forced, with or without Hitler's consent, to occupy Poland up to the Curzon line and at least some of the Baltic areas. Of course, lacking a previous agreement with Germany, she might have hesitated to march into Finland or Rumania. The point is that for Britain and France to guarantee Poland and Rumania, without simultaneously mobilizing British and French forces, could not save Poland and could not ward off the danger of a Russian agreement with Germany.

Why did the Polish general staff decide not to retreat at once from the corridor salient to the Rawka-Bzura-Pilica line? Was the chief of the French general staff told that Polish strategy had been shifted to the offensive? Was he aware that the Poles did not have enough military strength to carry offensive operations through without a simultaneous French offensive? He could at least have ordered the bombing of the armament plants in western Germany, for which the airdromes in eastern France offered excellent bases. He could also have harassed the Siegfried line more seriously than was actually done. He should have threatened to resign if the British and French Governments were not willing to bring all possible pressure to bear on the Belgian Government to permit the occupation of the Belgian fortifications by combined French and British troops. Polish neutrality having been violated, the violation of Belgian neutrality would no longer have meant very much in the moral judgment of the world. Instead, the French left the German Army more or less unmolested, and Germany gained time to build up her armaments and increase enormously the number of her divisions. In the Allied camp nobody had imagination enough to foresee the consequences of a simple technical differential. Germany's war production had been in high gear for 2 years. That of France and England had not. The Allies were not able to bring their production to full capacity even in the 8 months following the outbreak of war. Between the end of the Polish campaign and May 1940 each month added three times as much to the German armament output as to that of the Allies.

II

The topographical conditions of northwestern Europe do not admit many variations in war between Germany on the one side and Great Britain and France on the other. But the complete change in the meaning and importance of space and time in military strategy as a result of the development of mechanized warfare greatly reduced the chances of an Allied victory unless Allied troops had already occupied Belgium before Germany could shift her whole military strength to the west. When the German general staff struck in the spring of 1940, their numerical and geographical advantages had reached their highest point.

No German commander since the Napoleonic wars had enjoyed such favorable conditions for undertaking an offensive against France. No danger threatened from the east, as had been the case in 1914. Strategically, Germany can survive a European war only because she has the "inner line." In 1914 she began to make full use of it only after the first battles had been waged in France. In 1940, as a result of preceding diplomatic moves, the German general staff was able to reap all the advantages of the inner line even before the battle of France started. The maximum number of divisions was available, ready for attack on any given day. The road to Russia and the Balkans remained open, so that the Allied blockade could not be truly effective. Once the Allied Supreme War Council had decided against occupying Belgium while the Polish campaign was still in progress, even the best French military plans might have ended in failure. Because the French and British Governments had followed such an unimaginative policy in recent years, General Gamelin was compelled to make a back-to-the-wall fight, just as, for similar reasons, the German Army had been forced to do in 1914. If Britain and France, together with Poland and Czechoslovakia, had been prepared for modern warfare and had struck in 1938, Germany's position would have been utterly hopeless, as her armament industry was exposed to air attack from all directions. She would have been the besieged fortress from the very beginning of the war. The policy of the Allies, however, permitted the reverse to occur.

Only with this fact in mind can we make a fair comparison between 1914 and 1940 in their purely military aspect. The limited strategical possibilities in northwestern Europe have been studied many times. There is no leading general staff officer in France or Germany who does not know by rote all the major and minor variations of a campaign in that eternal battlefield. Thus the actual lines of the German Army's advance in Holland and Belgium and France could not have surprised anybody. The accounts of brilliant German strategy in Belgium might be justified if they were restricted to the efficiency of the German organization, the daring of the troops, and the fact that the German General Staff had profited by the mistakes of 1914. But beyond that they are a myth.

There can be no doubt that the French General Staff, in the general disposition of their forces, foresaw the possible lines of advance as clearly as the German General Staff did. Both were aware of the fact that fortifications of the type which existed along the Dutch and Belgian frontiers facing Germany could not resist for more than a few days. Only a Maginot Line from Utrecht to Montmédy, strongly manned, could have resisted for a longer period. It is always possible to filter even large forces through fortifications of the Liège type. Thus the main questions posed for the chief of the Allied forces were these: "How long can these fortifications resist? What will be the probable daily rate of advance of the German divisions after they have filtered or broken through? After that has happened, when and where will it be most opportune for us to meet them?" The questions were the same, with a few notable exceptions, in 1914 and 1940. In 1914 the German commander in chief had to take into consideration a French offensive southeast of Metz. In 1940 a French offensive in that area was impossible. Furthermore, the transfer-

ence of reconnoitering from the cavalry to the air forces and the mechanized speed of the spearhead forces had made the time factor much more decisive in 1940 than it had been in 1914.

After operations had begun in 1914 between Metz and the Scheldt, even a break-through by one army would not necessarily have meant a major defeat for the other. In 1940, however, the audacious use of mechanized divisions could prevent a retreating army from undertaking a successful reorganization within a distance of 100 miles. Joffre won the Battle of the Marne because he had an opportunity to retreat far enough, the pursuer being unable to follow at the same pace. Ludendorff, in August 1918, facing for the first time a modern combined air and tank attack, failed to see that a retreat undertaken for the purpose of regrouping his armies had to be a long one if it was to be successful. In Joffre's case a retreat of 100 miles was sufficient to gain decisive strategical advantages. To achieve the same results in 1940, a commander would have had to retreat until the inherent weakness of panzer and motorized divisions—namely, their length on the road (four times that of a normal division) and the enormous difficulties of fuel supply—slowed down the pursuit or halted it.

Mechanized warfare is not a German invention. The British developed it at the end of 1917, and the classic exposition of it was made by Field Marshal Lord Milne in 1927 in an address to the officers of the British Tank Corps. Italian and French generals as well have written understanding essays about it. No more astute analysis of the problems involved in this new type of warfare exists than was presented in a series of articles by a French General Staff officer which appeared in Le Temps between November 1939 and February 1940. These articles, dealing with the Polish campaign, sharply criticized the Polish General Staff for their failure to understand the full significance of the new type of attack. It is all the greater mystery that the mistakes made in Poland were repeated a few months later in France.

With the caution due in the absence of really detailed and authentic documentation, we can yet say one thing about the strategy of General Gamelin and, afterward, of General Weygand. They did not fully appreciate the importance of the change in the time factor introduced by mechanization. The German Army had an immense advantage in that none of its generals had ranked higher than staff captains or battalion commanders in 1917 and 1918. They had fought in the front line and seen with their own eyes the effect of the combined air, tank, and artillery attack of the British at that time. They knew from personal experience that one cause for the German disaster was the fact that even divisional commanders were too far behind the lines and that the transmission of information and orders by radio was still undeveloped. This time the divisional commanders rode in the first groups of attacking tanks, where they were able to utilize sudden opportunities as they were presented and at the same time could keep the commanders of the armies constantly informed. In contrast, General Gamelin, though he himself was in the right position, received information of the serious extent of the break-through at the Meuse only after a delay of 24 hours. Regardless of all this, the fact remains that, due to the nature of the available terrain, neither side produced any strategy which ought to have come as a surprise to anyone who had followed the evolution of military thought in the years since the last war.

With the exception of Bohemia, France has the best natural strategical frontiers in continental Europe. The only weak part is between the Meuse and the Channel. Invasion is extremely difficult in either direction in the Rhine Valley if that sector is defended. A French advance would pile up at the Black Forest; a German one at the Vosges. The creation of the Maginot line made even a German occupation of the plains of Alsace-Lorraine out of the question. The possibility of a German break-through between the Vosges and the Ardennes as far as Montmédy could be dismissed for the same reasons. But deep fortifications of the Maginot type are impossible between the Sambre and the Lys, a tributary of the Scheldt, because of the nature of the soil. Criticism of the failure to extend the French Maginot line to the coast, therefore, is not well founded. It is correct, however, if it is restricted to the line of the Meuse between Sedan and Givet. This line, with the exception of certain densely wooded areas, should have been thoroughly fortified. The experience of 1914 ought to have made this absolutely clear. But even such fortifications would not have been adequate without an extension into Belgian territory between Givet and Namur. If the Meuse had been fortified in this sector, the Germans would have been forced to concentrate their attack on the 50-mile gap between Namur and Antwerp. A line of fortifications along those 50 miles, though it would have been difficult to build at certain points because of the nature of the soil, would, of course, have provided an ideal basis for a purely defensive war, even if Holland were overrun. It would have been shorter by 50 miles than any line along the French-Belgian frontier. But political obstacles—among them Belgian timidity and naive optimism—prevented the construction of such a line in peacetime. The same political obstacles operated to prevent its construction and occupation by French and British troops after the war had started.

Specific figures of the strength of the Allied and German armies on May 10, when the attack in the Low Countries began, are not yet available. The maximum strength of the western German armies was hardly greater than it had been in 1914; that of the French troops probably about the same as it had been then. But since 1914 the French line had been extended by the acquisition of Alsace-Lorraine. In a way the Maginot line made up for the longer frontier. On the other hand, the immobilization of an important part of the French Army so far to the east left the Germans a good chance of being able to wheel the bulk of their army through Belgium and northern France into the rear of the Maginot line—a better chance than had attended their similar attempt in 1914.

III

The political prestige of having military control of Alsace-Lorraine has always been the bait which has lured the French out of their best strategical lines of defense. It was so in 1870 and again in 1914. This point must be clearly understood. General von Schlieffen[3] was willing in case of war to allow the French to occupy the whole of Alsace-Lorraine. General Groener, a member of the general staff in 1914, who had been in close contact with Schlieffen, and later minister of communications and minister of national defense in the German Republic, went even further and advised allowing the French the Saar and the whole Palatinate so that the bulk of the French troops should be immobilized there. In this way the chances for the successful execution of the ideal plan for a war in France—that is to say, the bottling up of the whole French Army from the rear in the fortified area of Lorraine—would have been greatly increased.[4]

To ward off such a danger, the French high command had to do everything possible to strengthen their center and left wing. Two alternatives were open. The French troops along the French-Belgian frontier could remain on the defensive or they could advance to meet the German attack on the Antwerp-Namur-Sedan line. The first course was preferable, but it would leave the Belgian Army to its fate. We may fairly assume that General Gamelin would have preferred this alternative, but that the supreme war council could hardly allow him to adopt it. A German occupation of the Dutch and Belgian Channel ports would have been of vital concern to Great Britain. Nevertheless, the second alternative, if it had been taken at the very beginning of the war, might have saved the Channel ports as well as the Belgian Army. But to carry it out after the German armies had begun the invasion of Holland and Belgium was tremendously risky. General Gamelin must have known it. The advance into Belgium could have succeeded only if the first line of French-Belgian and Dutch fortifications had held up the invader for at least 4 days, or if the French had had available another strong army to advance from the south through the Ardennes toward the Meuse.

The Dutch provinces of Limburg and North Brabant and the Belgian Ardennes are topographically the two areas which condition the speed of any German advance through Belgium. The Liége area is of only secondary importance. The speedy capture of Liége in 1914 was a great and daring feat, but strategically it was not decisive. Unless the German right-wing army infringed the neutrality of Holland, it was confined to the few roads in the 10-mile strip between the northern outskirts of Liége and the southern frontier of Dutch Limburg. This retarded the advance of the Army, which had to cover greater distances than any of the other German armies wheeling around the hinge of Metz. The roads through the Liége area itself had to be reserved for the second German Army on the southern flank of the first Army.

The careful wording of General Groener's studies[4] does not permit us to say definitely whether his own strategical ideas in 1914 were influenced also by political considerations. But his strong condemnation of the attack on Liége, for political as well as military reasons, suggests certain definite conclusions. He preferred to mass even stronger forces than Schlieffen planned all along the frontier of Dutch Limburg, in the belief that such a threat would force the French to invade Belgium before the Germans. Once Belgian neutrality had been violated by the Allies there need no longer have been any hesitation on the part of the Germans to march through Dutch Limburg. This would have given General von Kluck, the commander of the north-wing army, strongest of all the German armies, the possibility of advancing on a broad front. Instead, Kluck was unable to deploy until after his army had passed in deep formation through the narrow strip between Liége and Maastricht. Had he been able to use the Limburg route he would have gained 3 precious days and thus have been well in advance of the Allied schedule. In consequence he might have enveloped the northern wing of the Allied armies at Mons and prevented them from escaping to the south.

---

[3] Chief of Staff of the German Army, 1891–1907. His military writings between the time of his retirement and his death in 1913 were published in that year under the title "Gesammelte Schriften."

[4] In 1940 French territory extended much farther to the east than it had in 1914. This fact operated to produce exactly the same effect as the French offensive had in 1914—namely, to reduce the number of French troops available for the defense of the line Antwerp-Montmédy. Joffre's decision to carry out an offensive in Lorraine forced him to give up the idea of occupying the line Antwerp-Namur. Cf. Groener, Das Testament des Grafen Schlieffen.

[4] Op. cit., also Der Feldherr wider Willen, 1931.

The true students of Schlieffen, most notably General Groener, without losing sight of their object of luring the French Army back into the fortified area of Lorraine, advised cutting off segments of the Allied armies in the course of the grand maneuver. That aim was not achieved in 1914. But the lessons of the failure influenced the dispositions of the German general staff in 1940.

Dutch Limburg is like an appendix hanging down from the southeastern corner of Holland. Opposite Maeseyck, the vital point in crossing the Meuse, it is barely 3½ miles wide; yet its length is such that a whole army can pass across it on a broad front. A break-through into Belgium via Dutch Limburg reduces the importance of the fortified Liège area, including one of the strongest fortifications in Europe, Fort Eben Emael, as well as of the whole Albert Canal. A break-through, therefore, might endanger also the best line of defense for a Belgian-British-French Army, the so-called K-W line between Antwerp and Namur—unless, that is, it has been occupied soon enough by Allied troops. On account of the geographical configuration of Limburg, the Dutch have no chance whatsoever of holding a German Army there for more than a few hours. In September 1938 they fortified a marshy strip a mile wide along the northern bank of the Meuse with a bunker line. The bunkers, on account of the nature of the soil, had to be raised well above ground. They could be destroyed by direct fire from the sandy hills on the German side at the very moment when motorized German troops crossed the frontier. So, indeed, it happened. The Meuse bridge at Maeseyck was captured by motorcyclists 15 minutes after the beginning of the German advance. A few hours later, even before Eben Emael was captured, the bulk of the German troops were streaming into Belgium toward the Albert Canal, and the following day they crossed the canal at several points. On the first day, too, German motorized troops crossed the line of the Meuse farther north. This movement proved to be decisive in the conquest of Holland; it also endangered the fortified area of Antwerp. The complete occupation of Holland by the Nazis was a threat against Britain. Actually, it had little or no significance for the decisive campaign in France.

Thus the march through Dutch Limburg and Brabant reversed the situation of 1914, given the fact that the British and French decided to occupy the Antwerp-Namur line after the beginning of the German invasion. In 1914 the right wing of the German Army had to go as far as Mons in order to overtake the main forces of the Allied left wing. In 1940 the Germans contacted them as early as the third day. Thus the German lines of communication on this occasion were much shorter than they had been in 1914, a decided advantage. But if the German General Staff expected to envelop the Allied forces in eastern Belgium, making escape through Dunkerque impossible, they failed, as neither side moved fast enough. General Gamelin might even have profited from the only military advantage to be gained by moving into Belgium, namely, the use of the Belgian divisions intact on the shortest possible front if he had been able to attack the left flank of the German troops advancing through the Belgian Ardennes.

Whether or not the Allies moved into Belgium, their decisive maneuver to check the Germans would have been to attack from the south into the German flank in the Ardennes. Apparently the French General Staff did not even consider such a move. Why? In 1914 the advance of the French Fourth Army in that direction contributed more to slowing up the German advance than Joffre realized at the time. Post-war German studies demonstrate this very clearly. But General Gamelin could call upon only 9 British divisions (in addition, in case he advanced to occupy the Antwerp-Namur line, he could expect the support of a dozen Belgian divisions). Thus he might well have hesitated to start a flank attack in the Ardennes, which would have called for at least 10 first-class divisions. Perhaps he did not expect a thrust of panzer divisions through the Ardennes. The Ardennes present a densely wooded mountainous terrain, most unfavorable to the passage of panzer divisions, and there are few east and west roads. The country is such that if the Allies had had superiority in the air the advance of the panzer divisions there would have ended in a German catastrophe. The French, however, failed to reconnoiter properly, either in the air or by means of ground troops. The small detachments of light motorized cavalry which they sent forward were easily dispersed by the Germans. On account of this failure the advance of the strong panzer divisions remained unknown to the French General Staff until too late.

This neglect by the French command is the more remarkable in the light of General Groener's post-war writings. He considered the sharp southward turn of the German Army in the Ardennes in 1914 one of the fatal mistakes of the last war. In his view it should have held its westward course and thus insured a general southwestern direction of the main body of the German armies marching through Belgium. In fact, his chart of such an advance is a preview of the whole scheme of invasion in 1940. General Groener made this plan, even though he could not have foreseen that the French would leave the Meuse passages insufficiently covered at some of the very same points which had been unprotected in 1914.

In articles published in January and February 1940 the military correspondent of Le Temps, basing his prognostications on General Groener's principal ideas, though without fully understanding them clearly, predicted the main lines of the German advance. He assumed that three German Army groups would invade Belgium—a very strong one with panzer divisions would force the defenses of the Albert Canal; a second would advance slowly between Luxembourg and Liège; a third, again with very strong armored forces, would move through Luxembourg and the Ardennes to the Meuse. He perceived that both wings would be exposed to the counter-attacks of French-British forces. The provisions made by the French High Command to repulse the attack of the northern German Army group undoubtedly met this situation fairly. The advance by French elite troops and one or two large motorized units from between Lille and the Channel was well timed and well organized. But it remains a mystery how the long-anticipated thrust through southern Belgium could have been met by counterattacks (as the contributor to Le Temps predicted that it would) on the basis of the dispositions actually made by the French General Staff. The only possible explanation is that the French High Command did not take into account the possibility of the daring advance of German panzer divisions along the southern road from Luxembourg to Sedan, paralleling the Maginot Line at a distance often of no more than 10 miles.

This failure will remain one of the most amazing facts in modern military history. Articles published in the official organ of the German Army as late as the spring and summer of 1939 expressed apprehension about the risks which German motorized forces might run in advancing on that line. Even hastily constructed field fortifications 20 miles north of the Maginot line, strengthened by sufficient field batteries, could have stopped the German advance in that region, or at least have slowed it down. This would have permitted General Corap's army to arrive in time to close the gap between Namur and Montmédy. There has been much discussion of the disastrous psychological effect of the Maginot line on French strategy. It seems to be justified only when it refers to events in this area. Some French Army group and divisional commanders plainly forgot the necessity of keeping permanent contact with the enemy at all points, and of trying to harass him. Even if such activity had resulted only in securing a clear picture of the strength and direction of his advance, the benefits would still have been very great.

IV

Did the German high command foresee the ease with which their troops would cross the Meuse south of Namur and at Sedan? Did the actual crossing change their plans? We still do not know. We do know, however, that the organization of the entire German Army from Montmédy to Antwerp into two army groups prevented a repetition of the mistakes which occurred in 1914 as a result of a lack of cohesion between the Fifth, Fourth, and Third Armies and General von Bülow's army group on the extreme right wing. The German commanders were overworried, on that occasion, about a possible French counterattack from the south into the Belgian Ardennes. They tried to meet this danger by a tactical frontal attack. In wheeling to the south they neglected the central operative idea.

General Groener had contemplated the possibility of achieving a main break-through at the Meuse in a western direction; but since he could not count on large armored units he discounted its practicability.[5] Nevertheless, his plan to hold all the German armies west of Metz to a strictly southwesterly direction, despite the danger of a French counter-attack from the south into the Belgian Ardennes, left the way open for the execution of such a maneuver should the opportunity arise. This was the significant advance of the German General Staff over the original Schlieffen plan.

In 1914 the German cavalry failed utterly to fulfill its task. In 1940 the panzer and motorized divisions seem to have been under a unified command within each of the two army groups. This arrangement, and not simply the perfect composition and the new tactics of these modern cavalry units, was responsible for their decisive successes. The French do not seem to have understood all the possibilities of the new arm. Their tanks were not concentrated under a single command, but were placed in relatively small units at the disposal of divisional and army group commanders.

The initial successes of the German panzer and motorized divisions enabled them to advance in the two directions where they could make use of their striking power to the fullest extent. Topographically speaking, there are two lines of advance into France which present hardly any obstacles to motorized divisions once they have crossed the Meuse. The area between the Argonne and the Seine is open country, and so is the area between the Meuse and Abbeville. Both regions offer ideal conditions for operations (such as the military correspondent of Le Temps described in February 1940) by autonomous mechanized divisions fighting in isolation from the main armies.

Exactly what happened in the first 2 days following the rapid destruction of General Corap's army is not yet known. The Allies' only possible chance of recovery was to retreat at almost any price from Belgium to the lower Somme and simultaneously to attack from the Verdun area toward Rethel, into the flank of the German Army group advancing directly toward Laon. The first maneuver risked losing the entire British Expeditionary Force. The second was impossible because there was no reserve army available for the purpose. Even two modern tank divisions in reserve south of Montmédy could

[5] Cf. Groener, Der Feldherr wider Willen, p. 239.

have dealt a shattering blow to the German advance. They were lacking. The inability of the French High Command to execute either of these maneuvers should have convinced it, at the latest by May 24, 14 days after the beginning of the German attack, that desperate decisions were necessary.

The plan of General von Schlieffen was that the German armies should arrive in full force at the Abbeville-Verdun line on the seventeenth day after the beginning of the attack. In 1940, although the bulk of the German Army was unable to reach the Abbeville-Verdun line on the seventeenth day in accordance with the Schlieffen plan, motorized divisions had already advanced beyond that line and had cut off large detachments of Allied troops.

The French replaced General Gamelin by General Weygand on May 19. They were unfortunate even in their choice of the moment to change the high command. The shift entailed a 4-day lull in planning operations at a decisive time, and the time lost was never made up. When General Weygand finally found himself able to issue new orders it was already too late to withdraw the French left wing to the lower Seine. The Somme-Aisne-Montmedy line was actually the shortest line of defense. But when General Weygand had failed to halt the Germans by May 25 only one maneuver remained feasible—to retreat all the way back to the line Loire-Dijon-Belfort. That would have meant sacrificing Paris and the Maginot line, with an enormous amount of immovable artillery. Such a long retreat might have had a disastrous effect upon French morale. But the choice was between certain disaster and possible survival, and the risk would have been worth taking. General Weygand's decision to make his new stand on the Seine turned the Maginot line from an advantage to France into a disadvantage.

After the surrender of Belgium and the escape of the British and French forces from Dunkerque, though without their arms, the further advance of the German armies proceeded exactly in accordance with the ideal Schlieffen plan as developed by General Groener. He had taken into account the possibility of a resumption of French resistance along the line Seine-Oise-Verdun.[6] He presupposed that the French would protect the crossings of the lower Seine with relatively weak forces. In his view, the weakest link in the French line would be the Oise flank, despite its support by the fortress of Paris. He thought the Germans ought to attack across the Oise and across the Seine at the same time. If in meeting these attacks the French were to weaken their front farther to the east, along the Aisne, then the Germans could break through on that front between Soissons and Rheims. If the French neglected to strengthen the Oise-Aisne front, the break through could be made between Soissons and Creil.

Here we reach a very important point in General Groener's calculations. In order to carry out their maneuver successfully, the Germans had to be on the heels of the French at the Aisne, but they must be careful not to attack prematurely.[7] In the Groener plan the German cavalry would reach Rouen and Les Andelys (on the Seine) on the twenty-fourth day of the attack. They would be followed by the infantry, spreading west to Beauvais and beyond. On the twenty-seventh day they would cross the Seine at those points. At the same time an attack on the fortified Lorraine area from the east would be begun. In the actual event—in the Battle of France, 1940—Beauvais was reached on the twenty-fourth day of the attack. On the twenty-seventh day the lower Seine was crossed at Rouen and Les Andelys, the points indicated by General Groener.

The French decision to make a final stand on the line Seine-Oise-Verdun came, as already mentioned, too late. Looking ahead, General Groener believed that under conditions like those which prevailed in 1940 even the Marne line would not be tenable. He envisaged a wheeling movement of the German right wing, south and southeast through Dreux and Chartres, and then turning eastward to cut off Paris from Orleans. The plan was carried out to the letter in 1940.

General Groener foresaw that the French commander in chief would then face a desperate decision. Would he defend the upper Seine, a decision which offered certain advantages if coupled with an attack on the German right wing from the Loire? Or would he sacrifice the whole fortified area in Lorraine and retreat to the Loire and a line running across to the Jura Mountains on the Swiss-French frontier? The decision would depend upon his temperament. A French counterattack centering on Chartres could slow up the German advance, but Groener was doubtful whether one could be made because of the probable inability of the French to concentrate sufficient forces for the purpose. He thought the best strategy for France would be to take up the Loire-Jura line, as the German armies would be approaching exhaustion and would have to allow the French a breathing spell in which they might reorganize their forces. In any case, France would be in a stronger position to negotiate an Armistice.

V

In this article we have mentioned the difficulties of supplying the enormous quantities of fuel required by motorized divisions. But no attempt has been made to evaluate the effect of German air attack on the French morale or the French lines of communication. Nor is any opinion offered regarding the activities of the "fifth column." A comparative study of strategy, based on exact data, leads one to conclude that these factors have been overestimated in their actual bearing on the outcome of the war in France.

French strategy was under an evil star before the war began. If it is true that General Gamelin sent an ultimatum to the Belgians via the Quai d'Orsay the middle of January 1940, to the effect that the Allies should either be permitted to occupy Belgium at once or should plan not to enter Belgium at all, then he foresaw all. If he expected to await the German attack on the French-Belgian frontier, without preparing an attack from the south into the flank of the German columns proceeding across the Belgian Ardennes, then he faced carrying on a sterile defensive. But in that event, even though the Germans might have broken through at the Meuse or elsewhere, thus creating disorder in the Allied lines, the envelopment of the British and French forces in Belgium might have been prevented. Probably it would have been necessary to sacrifice the Channel ports; but though that would have been a serious blow to Britain it need not have greatly affected the campaign in France.

Afterward, an early retreat to the Seine-Oise-Aisne-Montmédy line, and the concentration meanwhile of strong reserve armies in Paris and between the Marne and Verdun, might have set the stage for holding up the German advance. To retreat to the Loire and to abandon Paris and the Maginot Line would have injured a French commander and French prestige. Yet that became precisely what had to be done. This was the innate danger in the French strategical position. The French Army clung to the Maginot Line and became too extended, with too few men per kilometer.

The Germans won not simply because they possessed superior numbers and had mastered a more modern tactical use of mechanized forces in the air and on land. The political mistakes of the Allies had lost them the war in France even before it began. Moreover, the German high command and the Army commanders, most of whom had received their previous promotions from General Groener while he was Minister of National Defense from 1928 to 1932, avoided all the major mistakes of 1914.[8] There was a clear strategical plan. There was a logical subdivision of the Army into groups suitable to the new type of warfare. In the mechanized divisions, further, there was daring as well as a capacity to check it when this became necessary in the orderly development of the general plan of operations. In all these particulars the situation of the German Army was the reverse of what it had been in 1914.

German strategy in France, as conceived by General von Schlieffen and developed by General Groener, was completely successful. If the Germans had captured the entire body of French and British troops at the Channel ports, instead of their arms only, the outcome of the war would very likely have been decided last summer. We should refrain from vilifying the leaders of the French Army, or from questioning the gallantry of the common French soldiers, whose exploits in isolated detachments are among the most heroic in history. France was not lost mainly through her Army. France was lost mainly through her politics in the period between the two wars. The events still to come will prove whether the Channel is to be a second Marne, and whether France is still to be saved through the resistance of Britain.

[6] Das Testament des Grafen Schlieffen, p. 228, et seq.

[7] Evidently when the maneuver was actually carried out the French General Staff did not understand what was going on. On May 25 the official report regarding the situation on the Aisne read, "Since yesterday we have dominated the enemy."

[8] General von Brauchitsch, commander in chief of the German Army in 1940, was a staff captain in 1914 and was selected for vital liaison work between Generals von Kluck and von Bülow. Cf. Reichsarchiv, Der Weltkrieg, p. 353.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

Mr. LAMBERTSON. Mr. Speaker, when the world makes bigger sacks to hold, we will hold them.

Belligerence cannot hide behind an arsenal for democracy.

We predict a second aid bill to free England before Independence Day.

Wallace's duck-dinner ducking of a tie vote was a blessing to our farmers.

The Chief goes fishing again. Last Saturday he called on all to make sacrifices.

Members swallowed elephants this last week who previously had strained at ants.

We must have another U-boat next week, Mr. Halifax, to insure a big vote in the Senate.

This has been the 7-come-11 week in the House—seven billion for King George

Wednesday and four billions more Friday for the other one.

There are four times as many men striking on defense projects as in January. This is our second greatest threat—Hitler our third.

Our present position is not the inevitable one. It would have been different under TAFT, VANDENBERG, WHEELER, or HIRAM JOHNSON.

When we recondition British ships in our docks we may bring the war to our shores under the bill which guaranteed to keep it away.

They may have taken Wendell in, but while in captivity he has taught Franklin and all the Cabinet to repeat frequently his "American way of life."

It was said in the recent famous debate that Congress would still have its hands on the purse strings. You will notice how dictatorial still they are.

Mr. Roosevelt made a Hitler speech to his defense workers, the pencil pushers. A lot was said about the common people to the 700 stuffed shirts just before the floor show.

Retail Prices of Sugar

EXTENSION OF REMARKS

OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1941

ARTICLE BY CHARLES J. WELCH

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting article which deals with the problem of retail prices of sugar. The article was written by Mr. Charles J. Welch, a member of the firm of Welch, Fairchild & Co., Inc., of New York City, and was released by him for publication under date of March 19, 1941.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Those in the sugar business know all about the price of raws and the wholesale price of refined. The minute a sale of raws is made a broker rings you up and advises you. Changes in the price of refined are immediately telegraphed all over the United States. But what do we know about the most important price of sugar, as far as the general public is concerned, namely, the retail price? The answer is—practically nothing. We doubt very much whether the best informed men in the sugar trade know what the sugar used in their own household costs.

The official retail price of sugar is ascertained by the Bureau of Labor Statistics of the Department of Labor, and this information is issued periodically. The annual average retail price of sugar, according to the Bureau of Labor Statistics, was as follows:

	Cents
1890	6.9
1895	5.3
1900	6.1
1905	6.0
1910	6.0
1915	6.6

After 1915 we get some interesting figures:

	Cents
1916	8.0
1917	9.3
1918	9.7
1919	11.3
1920	19.4
1921	8.0
1922	7.3
1923	10.1
1924	9.2

After the depression the retail price of sugar decreased considerably:

	Cents
1930	6.1
1931	5.6
1932	5.0
1933	5.3
1934	5.5
1935	5.7
1936	5.6
1937	5.6
1938	5.3
1939	5.4

Last year the average retail price of sugar was 5.1, not the lowest on record, but very little above the all-time low of 1932, which was 5 cents.

What do these Government figures mean, and how are they made up? Quoting from the pamphlet of the Bureau of Labor, "Retail Prices 1890 to 1927":

"HOW PRICES ARE OBTAINED

"Retail prices of food are collected from retail dealers through monthly reports of actual selling prices on the 15th of each month. The stores are selected by agents of the Bureau from those patronized largely by wage earners. Prices are secured from every type of store—the neighborhood store, the downtown store, the department store, and the chain store—provided a large part of the patronage comes from wage earners. Some of the stores are credit and delivery, some are cash and carry, and some are cash and delivery. No 'fancy' stores are included.

"The number of firms is apportioned according to the industrial importance of each city. For the larger cities reports are obtained from 25 to 30 stores and for the smaller cities from 10 to 15 stores. The total number of firms furnishing prices on one or more articles of food each month is now approximately 1,800. Quite naturally, firms are not constant, but when one firm drops out permanently another firm, similar in kind, is selected to replace it. Moreover, as the wage-earning population of a city shifts, stores are selected in the new localities to preserve the representative character of the prices."

The 51 cities cover the United States pretty thoroughly. New England, Middle Atlantic, North East Central, which includes Chicago, West North Central, which takes in Kansas City, Minneapolis, Omaha, and St. Louis; South Atlantic—Atlanta, Baltimore, Jacksonville, Richmond, Savannah; and so on. Cities in all parts of the United States are taken.

But as far as the price of sugar is concerned, just what does an average retail price taken in this way mean? The basic price for refined sugar in the United States is the price where the refineries are situated, namely, at the seaboard—Boston, New York, Philadelphia, Baltimore, Savannah, New New Orleans, San Francisco, and Galveston. Refined sugar in interior points is the seaboard price plus the freight. The freight to Chicago at present is 37.6 cents a hundred pounds. The freight to Kansas City is 49 cents. Now if the average retail price in all these cities is taken, is there any allowance made for freight? A price of 6 cents in New York might be high, but would a price of 6 cents be high in an inland city when the freight alone costs 50 cents?

But, anyway, we wanted to find out what the retail price of sugar in New York City was. We sent out someone with instructions to buy two pounds of sugar in ten different stores on the East Side of New York between Ninety-third Street and Sixty-fifth Street, and from Madison Avenue to First Avenue. In these 10 stores 1 sold a 2-pound carton at 11 cents; 7 charged 12 cents; 1, 13 cents; and 1 charged 15 cents. Our instructions were to ask each of the grocers whether or not they thought the price of sugar was going up. All 10 said they thought so. The other question was whether they were selling any more sugar now than was usual at this time of the year. Six said they were, four said they were not. Of the 10 2-pound cartons bought, 3 were National-Jack Frost brand, 7 were the American Sugar Refining Co.'s Domino brand.

A friend of ours on Staten Island the same day bought four 5-pound bags—not cartons—with the following results: 1, 25 cents; 1, 26 cents; 2, 27 cents.

In response to the question, "Do you think the price of sugar is going up?"—three said "Yes." The fourth said he could not make up his mind. In response to the second question, "Do you think your customers are buying more sugar now than is usual at this time of the year?"—one said "Yes." That was the A. & P. The other three places said, "Not yet, but as the price advances, feel people will be buying a lot more." In other words, the consumer does not buy an article because it is cheap. He, or rather she, buys because she thinks the price is going to advance

Now let us analyze these figures and get them down to a per-pound basis. In 5-pound bags the prices per pound were as follows: 1, 5 cents; 1, 5.2; 2, 5.4.

In 2-pound cartons: 1, 5½ cents; 7, 6 cents; 1, 6½ cents; 1, 7½ cents.

One strange thing was this: The grocer who sold at 11 cents and the one who sold at 15 cents both said that their customers were not buying more sugar than they usually did at this time of the year. We could well understand why the man who was charging 15 cents for a 2-pound carton was selling less, but the man who was selling at 11 cents was not selling more than usual. In the case of the 2-pound cartons, the variation in price was 2 cents a pound. That is almost incredible. Two cents a pound in one small district of New York City. And yet Washington gets very much excited if the price of sugar advances one-fourth cent a pound, and throws a fit it goes up one-half cent. Sugar is evidently not economics. It is politics.

This little experiment of ours has proved (at least to our satisfaction) that the consumer does not care a whoop how much he pays for sugar. If there can be a variation of 2 cents a pound between one store and another, there is something queer about retail selling. But why should the housewife raise a disturbance if her grocer charges her 2 cents a pound more than she can buy the same sugar for at another grocery store maybe one-half block or a block away? Why doesn't she just go to the cheaper man and get her supplies, and quit squawking?

Then there is the question of the amount of money that is paid for a piece of cardboard called a carton. Sugar that is sold in 5-pound bags is put up in packages of very strong paper. Housewives tell us that they like it better than the cloth, because there is no sifting. Why should anybody pay a big premium for a carton? That is quite beyond us. But the fact of the matter is that a great deal of sugar is sold in cartons, and the housewife pays this extra cost—for what reason only she and God know. If the housewife wants to economize because the price of sugar is going up, all she has to do is buy her sugar in bags instead of cartons—and she saves the entire advance unless it is a very sharp one. In September 1939 the housewife's kick was not nearly so much at the high price of sugar (it wasn't so awfully high) but because she could not get sugar. That made her mad.

The above facts were a revelation to us, and possibly they may be a revelation to about 99.5 percent of those actively engaged in sugar. We don't suppose it would be to the retail trade, because they must know all about it. We are speaking more about producers and merchants who think they know everything about sugar—but sometimes they don't. And it might also be a revelation to some of our statesmen in Washington who have delusions about knowing all about sugar very similar to the delusions that exist in the sugar trade.

We omitted to mention that these sugars were bought on March 14. On that day the raw sugar price had advanced to 3.30, and the refiners' list price was 4.85.

England Expects Every American To Do His Duty

EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1941

EXCERPTS FROM BOOK BY QUINCY HOWE

Mr. CLARK of Idaho. Mr. President, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD excerpts from England Expects Every American To Do His Duty, by Mr. Quincy Howe.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM "ENGLAND EXPECTS EVERY AMERICAN TO DO HIS DUTY"

(By Quincy Howe, published by Simon and Schuster, New York, 1937)

The amazing, historical, and prophetic book published 4 years ago and today partially suppressed. Copies cannot be purchased at leading Washington book stores despite repeated requests.

Reveals the high and mighty manipulations of the British network in the United States—how the world's greatest empire, through its highly placed powerful American intriguers, hypnotizes and master minds the world's richest Nation to pour out its blood and treasure not only to defend the world status quo, but actually to enrich that vast world empire.

Author Quincy Howe, born in Boston, Mass., August 17, 1900; prominent editor and writer, graduate of Harvard, 1921, and student at Christ College, Cambridge, England, 1921–22.

EXCERPTS FROM FOREWORD

Never since the days of ancient Rome has so much power remained concentrated in so few hands for so long a period as in the United Kingdom of Great Britain and its overseas empire. It is to those who govern this empire and its island headquarters that the words England and Britain refer throughout this book.

Not one but many books would be needed to describe how the British Empire functions. Suffice it to say here that its rulers have organized themselves on six different levels. First of all they have a state church which claims ecclesiastical parity with the Church of Rome. Second, they have a royal family and a whole supporting substructure of hereditary nobles. Third, the British Empire has an Army, Navy, and Air Force officered by members of the ruling caste and supplied with information by the most efficient secret service in the world. Fourth, the British Empire has the most efficient permanent civil service of any nation. This organization attends to all nonmilitary aspects of imperial administration, notably foreign policy. Fifth, in the Bank of England the rulers of Britain control a private banking house whose name still remains a synonym for financial stability. Sixth, in the House of Commons the rulers of Britain maintain the world's most exclusive and powerful club.

There is a saying in Hollywood that you don't have to be crazy to get into the movies, but that it helps. In like manner you do not have to have attended one of Britain's exclusive public schools to become a bishop, a member of the House of Lords, an admiral, a permanent undersecretary for foreign affairs, a governor of the Bank of England, or a Prime Minister. It simply helps. Now and then a Rufus Isaacs becomes Lord Reading, Viceroy of India, or a Ramsay MacDonald rises to the premiership. But by the time such self-made men have come to the top they are more royalist than the King.

Although 2,000 families are said to rule England, membership in the British ruling caste does not go entirely by birth—or by wealth either. And the 2,000 families are a purely arbitrary estimate. They simply indicate how intensely power is concentrated. The actual figure may be 20,000 or 200, depending upon one's definition of power.

This book, however, has no concern with the concentration of power as such. Neither does it try to draw distinctions between the British Government and the British people. To claim moral credit for having no quarrel with any people is like boasting that one has no quarrel with the tide or with the weather. To indict a people is like indicting the Atlantic Ocean or a thunderstorm.

HOW ENGLAND INFLUENCES AMERICA

What concerns me here is not the character of Britain's 45,000,000 inhabitants or of America's 130,000,000. Neither am I concerned with the moral qualities of Britain's rulers or America's. Such topics require far more space and far more knowledge than I have at my disposal. I am concerned solely with the influence of the rulers of Britain—hereafter referred to for the sake of brevity as England or Britain—upon certain influential Americans, and, through these individuals, upon the American public. Finally, I have written this book in the belief that this influence will play a larger part than any other single factor on the destinies of both the English and the American peoples in the course of the next 10 years.

EXCERPTS FROM CHAPTER SOS EMPIRE CALLING

In 1917 the United States entered the World War, which not only rescued but extended the British Empire. Today the problem of the British Foreign Office is to repeat the trick and save the Empire from an even graver crisis. Since 1920 the wheels that will involve the United States in another war to save the British Empire have moved ceaselessly and at accelerating speed. How urgent is Britain's need? America's peace depends on the answer.

The dozen or more different nations that competed against each other for colonies, trade, and investment opportunities throughout the nineteenth century finally divided into the two camps that opposed each other in the World War. And the defeat of the Central Powers left England more powerful than ever before and established the present world order of monopoly imperialism, which corresponds on the international scene to monopoly capitalism on the national scene.

BRITISH CREATE MONOPOLY IMPERIALISM

The aftermath of the war revealed monopoly-imperialism in all its glory. Three empires—the Russian, German, and Austro-Hungarian—had perished. Two of the victorious allied powers—Italy and Japan—received only a handful of the territorial spoils. A third—the United States—received nothing. This left Britain and France dividing Germany's former colonies, with Britain getting the lion's share. In central Europe millions of Slavic peoples, who had occupied a colonial status in the German, Austrian, and Russian Empires, won national independence, but depended on the Bank of France and the Bank of England for financial support. The Portuguese and Dutch colonial empires depended, as ever, on the protection of the British Fleet; even the French required British support to keep open their trade route to Indochina, while Britain's control of the Mediterranean placed French North Africa at Britain's mercy. The British had created a new thing under the sun—monopoly imperialism. * * *

Something more than mass discontent caused these concessions. From time immemorial the great bulk of the Indian people had lived in poverty and ignorance. Before British traders and administrators wrecked India's balanced, primitive economy, the Indians received better schooling and lived a more secure existence than they do today. The peasants wove their own cloth and supplied most of their own needs with their own labor. During the nineteenth century and up to the time of the World War, Britain destroyed India's home industries by selling cheap manufactured goods to the Indian market. In 1914 India was importing 75 percent of its cotton textiles from Great Britain.

* * * * *

A comparison between England's pre-war and post-war policies illustrates this point. Britain entered the Entente Cordiale with Russia and France not merely to protect the Empire against German aggression. The proof of the pudding is in the eating. Britain emerged from the World War in possession of Germany's colonies. In other words, it was a war of aggression on both sides. Furthermore, having decided to support the Entente Cordiale, the British followed that course consistently. German diplomats may have expected Britain to remain neutral—the more fools they; the diplomats, the military and naval staffs, the chief banking interests in France and Russia labored under no such delusion. They knew that the British would come to their aid. Only the British people and the German Government expected anything different.

* * * * *

On June 18, 1935, the pro-German faction in Great Britain scored a major political victory. After secret negotiations in London, England signed a naval treaty giving Germany the right to build a navy 35 percent as large as its own. This agreement not only violated the Versailles Treaty, it violated a much more recent Anglo-French agreement of mutual consultation on all European problems.

To what extent the Anglo-German naval treaty represented a victory for the pro-German faction and to what extent it represented official recognition of the inevitable must remain a matter for conjecture. There can be no doubt, however, that it reflected the growing power of Germany and the declining power of Britain. Winston Churchill summed up the position in the House of Commons on July 22, 1935: "Lord Beatty said the other day that we ought to be grateful to Germany for not having asked for 50 percent, and the first lord indicated that she might have asked for 100 percent. But would our answer have been the same? I hope not. But the reasons by which it would have been defended would have been the same. You would say, 'What could we do? We could not control them. Nobody is going to war to prevent them.'"

BRITISH CONCESSION TO HITLER

The one justification for the Anglo-German naval treaty lies in the field of politics, not strategy. If Britain has more to fear from

Soviet Russia than from Nazi Germany, then a strong German Navy is to be welcomed—and the stronger the better. But until Britain is committed to cooperate with Germany in Europe, a strong German Navy simply represents a concession to Hitler in exchange for nothing at all. Furthermore, Britain is drifting toward the opposite camp in the Far East where Japan, Germany's new ally, stands out as the chief threat to British imperialism. The ideal solution would, of course, be to have the United States and the Soviet Union fight Japan in the Far East while France and the Soviet Union fight Germany in Europe Still hoping for that happy issue, Britain therefore tries to avoid any commitment in Asia or Europe.

EXCERPTS FROM CHAPTER THE BRITISH NETWORK

It's fun, of course, to be fooled by the British for a century and more, but it's more fun to know how the trick works. The previous chapter simply reviewed the record; this one will try to show how the record took the form it did. And an extraordinary spectacle unfolds. We shall see almost the entire ruling caste in the United States obeying British orders with an eager servility that arises from the unique character of modern American society. We shall see that the relationship between America and England has no parallel in the modern world.

Italians and Frenchmen sometimes refer to each other as Latin brothers; before the war, the Russians tried to take the smaller states of southeastern Europe under their wing; since the war, Germany has exerted a growing attraction on the people of Austria. But a common culture is not the only tie that binds the Latin, Slavic, and Teutonic peoples. They are also held together by geographic proximity and trade. Indeed, the fact is that common economic interests frequently take precedence over a common culture. Thus, during the World War, the Bulgarian Slavs fought against their Slavic neighbors from Serbia while Turks and Germans fought side by side against the Moslems of Arabia and Britain's Christian soldiers.

AMERICA APES BRITISH FOREIGN OFFICE

In short, a nation's foreign policy is usually determined by its natural resources, its social order, its population density, its technical equipment, and its geographic position. But the United States, alone among the great powers, bases its foreign policy on an entirely different and quite intangible factor. Ancestral ties of language, tradition, and blood exercise such an attraction upon the American ruling class that it adapts its own selfish interests—not to mention the interests of the country as a whole—to the needs and desires of the British Foreign Office.

ENGLAND'S HOUR OF NEED

The history of Anglo-American relations might seem, on the surface, to suggest that British statesmen had bludgeoned or bamboozled American statesmen into taking orders from Downing Street. But the power that Britain wields in the United States does not arise from intellectual or economic superiority. If England, in its hour of need, expects every American to do his duty, that expectation does not arise from the usual economic consideration. On the contrary. If material factors alone determined American national policy, the United States would either have taken over the British Empire after the war or retired into its shell. Instead, it has puttered about the four corners of the earth only to emerge at every critical juncture defending British interests more heartily than the British themselves.

SPEAK SAME LANGUAGE

To account for this curious state of affairs it is necessary to recall certain facts that many Americans accept as instinctively as they do the color of the sky. First, and most important, Englishmen and Americans speak the same language. They read the same books, magazine articles, and news dispatches; they hear the same lectures and radio broadcasts; they attend the same plays and talking pictures. Furthermore, this common language originated in England, whence the first settlers of the Thirteen Colonies also came. In consequence many Americans look instinctively to England as the court of last appeal in all questions involving tradition, scholarship, morals, law, and manners.

This tendency to hold England in reverence appears most flagrantly in the American governing classes. They prefer to commune with their Maker in the exclusive atmosphere of the Episcopal Church, which grew from England's official national church. The private boarding schools which the sons of the American aristocracy attend are modeled on Eton, Harrow, and Winchester. The cult of the gentleman and the gospel of fair play originated in England and have been taken up more enthusiastically in the United States than in any other country. The great American unwashed may attend professional baseball games—just as the great unwashed of England attend professional football matches; the Anglo-American aristocracy prefers polo, yacht races, and fox hunts.

VISITING AMERICANS GET "WORKS"

The weakness of well-dressed Americans for the British way of life has given rise to an elaborate ritual, vulgarly known as the works, to which visiting Americans are subjected in London. Seedy yearning journalists from the Corn Belt find themselves seated in the distinguished visitors' section of the House of Commons. Business and professional men will be asked to teas and garden parties by the new rich of old England. Utility magnates, Senators, railroad, bank, and college presidents rate dinner and week-end invitations from members of the nobility.

Shortly after the World War, William Randolph Hearst had the distinction of receiving the complete works. After all, he had built enormous circulation for his many newspaper properties by his unremitting attacks on perfidious Albion and only at the eleventh hour had he endorsed the crusade for democracy. Something had to be done to bring him into line. The treatment included dinners, week ends, and lunches with various distinguished Englishmen, climaxed by a meeting with the King. It worked like a charm. When Mr. Hearst returned to the United States he announced that the salvation of the world depended on the cooperation of the two great English-speaking democracies.

CECIL RHODES SHOWED WAY

The circumstances that few of the Englishmen who honored Mr. Hearst had ever in the past expressed anything but contempt for his opinions and journalistic methods did not prevent them from giving him the complete works with as much gusto as if he were the twin brother of Walter Hines Page. As a rule, however, the complete works, including presentation of wife and daughter at the Court of St. James's, are reserved for those Americans who have already proved their loyalty to the British throne.

The British Empire could never have attained its present stature if its rulers had not turned this state of affairs to their advantage. More than a generation ago, Cecil Rhodes showed the way when he endowed the scholarships that bear his name and that enable hundreds of promising young Americans and colonials to expose themselves for 3 years to the influence of Oxford. For Britain's imperialists proceed on the theory that their cultural heritage is their strongest card, both in the United States and their own dominions, and insofar as they fear the United States, they fear the growth of a native and distinctive American culture. A South African delegate to the British Imperial Conference at Toronto in 1933 put it this way:

"What lies before us now is a cultural struggle. Are the dominions going to build up local self-sufficient, self-inspired cultures which owe comparatively little to cultures elsewhere? Or are they going to acclimatize and adapt to meet local conditions the culture of Europe and particularly that of England, so that this remains unchanged in all its essentials, however much the particular form of its expression may alter? Or (a much more formidable possibility) whilst retaining the outward form and political machinery of a British Commonwealth, are they going to establish in their own areas a culture which owes all its inspiration to the United States of America? Personal contacts and the fostering of common beliefs, traditions, and practices are the only forces that in the long run can counteract the effect of the thousands of miles of salt water which Burke pointed to as the causa causans of the regrettable incident of 1783."

ENGLAND EXPORTS CULTURE

To judge from the cultural interests of most well-to-do Americans, they share this Old World regret for the incident of 1783. They flock in droves to hear Lord Lytton, Sir Arthur Salter, and Sir Arthur Willert interpret world affairs from the point of view of the British Foreign Office. They lap up the novels of Sir Hugh Walpole, Charles Morgan, and Warwick Deeping from whom they gain an insight into the finer shades of civilized life as only English ladies and gentlemen can live it. And even if they never plan a pilgrimage to such Anglo-Saxon shrines as Westminster Abbey, Shakespeare's birthplace, or the Albert Memorial, they become unofficial members of the great British family of nations by joining the English Speaking Union.

SPEARHEAD OF HER DRIVE

For all its innocent appearance, this organization is nothing more nor less than the spearhead of England's cultural drive on the United States. The purpose of the English Speaking Union, according to its own prospectus, is: "First. To draw together in the bond of comradeship the English-speaking people of the world. Second. To strengthen the friendly relationship between the people of the United States and of the British Empire by (a) disseminating knowledge of each to the other and (b) inspiring reverence for their common institutions." The activities of the English Speaking Union include hospitality to overseas travelers, forums for discussion, interchange of secondary school teachers, scholarships, special luncheons and dinners, cooperation with other organizations in entertaining visitors, intelligent travel service, friendly personal contacts, and interchange of gifts and messages between cities and towns in Great Britain and their namesakes in the New World.

The facilities of the English Speaking Union include its headquarters in London and smaller branches in many other cities in the British Isles, the Dominions, and the United States. British subjects and citizens of the British Dominions may join the English Speaking Union of the British Empire for a guinea a year. Citizens of the United States may join the English Speaking Union of the United States, a parallel and self-governing organization, for $5 a year. All member receive the same monthly bulletin, The Landmark, published, as luck will have it, in London, and all have access to any of the Union's quarters.

DIRECTORS FROM UPPER CRUST

The English Speaking Union was born in the historic year of 1917, and since then has not only helped thousands of travelers but has encouraged social contacts between all English-speaking peoples. Yet its directors are better known as financiers, statesmen,

churchmen, journalists, educators, lawyers, and industrialists than as lecture managers, tourist agents, or professional entertainers.

Thus anyone who accepts their aims at face value will be surprised to learn that the first chairman of the English Speaking Union of the British Empire was none other than the late Lord Balfour, who originated the doctrine that the United States should pay the entire cost of the World War from April 1917 through November 1918. And when we survey the guiding spirits of the English-Speaking Union of the United States, we see the same pattern. Its president, John W. Davis, succeeded the late Walter Hines Page as America's wartime Ambassador to London, and after seeking the Presidency of the United States on the Democratic ticket in 1924 devoted himself entirely to his legal practice. By 1933 he had become J. P. Morgan's most trusted adviser and coached him during the famous senatorial investigation of that year. In 1935 Mr. Davis again attracted public attention as one of the founders of the American Liberty League.

MORGAN PARTNER TREASURER

A Morgan partner also holds the post of treasurer of the English Speaking Union of the United States—Harry P. Davison, son of the man who went to London in 1914 to make the Morgan bank sole American purchasing agent for the British Government during the World War. Henry J. Fisher, chairman of the union, has more connections in the publishing than in the financial world. He is chairman of the board of the McCall Publishing Co. and of the Popular Science Publishing Co. He is a member of the executive committee of Harper & Bros., of which he is also a director, and a member of the board of governors of the Yale Publishing Association. Thus the three chief figures in the English-Speaking Union include J. P. Morgan's personal attorney, a full-fledged Morgan partner, and the director of several publishing concerns, some of which cater to the masses, others to the smaller but more influential quality audience.

The board of directors of the English Speaking Union of the United States runs to 18 names. The most important on the list is Gen. James G. Harbord, chairman of the board of the Radio Corporation of America and of the National Broadcasting Corporation. Of equal significance is the name of John H. Finley, editor in chief of the New York Times. Through these two men the English Speaking Union makes its voice heard on the most powerful newspaper and the most powerful radio chain in the United States. Other names worth noting are those of Mrs. Robert Bacon, widow of a Morgan partner; Harry A. Garfield, former president of Williams College and chairman of the Williamstown Institute of Politics; Mrs. Henry Goddard Leach, wealthy wife of the editor of the Forum; Langdon P. Marvin, Wall Street lawyer; and George E. Vincent, honorary president of the Chautauqua Association and former president of the Rockefeller Foundation.

ELITE VICE PRESIDENTS

In addition to its 18 directors, the English Speaking Union has 10 vice presidents. Two of these are bishops of the Protestant Episcopal Church, no other denomination being officially represented. Two others are men of considerable distinction: Frank B. Kellogg, former Secretary of State, and Paul D. Cravath, a director of R. C. A. and N. B. C. David P. Barrows, another vice president, is a trustee of the Carnegie Endowment for International Peace; Victor Elting is former president of the Chicago Council on Foreign Relations; Mrs. F. Louis Slade is a member of the executive committee of the American Council of the Institute of Pacific Relations; Alexander W. Weddell has been in the consular and diplomatic service since 1908 and became American Ambassador to Argentina in 1933.

Far from regarding membership in the English Speaking Union as a form of hyphenated Americanism, these influential citizens believe that to give aid and comfort to the British Empire is to serve the highest aims of the United States and even of humanity as a whole. Most of them, in fact, would be profoundly shocked to find themselves listed as anything short of 100-percent Americans, and they will frequently take issue with certain aspects of British policy and British civilization. They simply lend themselves to the cause of their favorite charity, their favorite political party, or their chosen religion.

IDEAL FOR BRITISH FOREIGN OFFICE

Furthermore, if the British foreign office were to prepare its own ideal roster of those Americans who could do most to promote British interests in the United States, it could scarcely improve on the actual list of men and women who control the English Speaking Union. This does not mean that the English Speaking Union is the creature and creation of the British foreign office or that its directors consciously and deliberately serve British interests at the expense of American interests. On the contrary, they regard themselves as the noblest Americans of them all. But whether it actually serves the best interests of the American people to give aid and comfort to the British Empire is another story.

That story unfolds as we pursue the interests and activities of English Speaking Union leaders in various directions. To begin with, they all tend to favor internationalism in general and the League of Nations in particular. They oppose isolation, economic self-sufficiency, and high tariffs. They support Secretary Hull's reciprocal trade treaties though most of them voted for Landon. Thus we find the board of directors of the English Speaking Union interlocking with the boards of other organizations devoted to League of Nations affairs and to a more cooperative American foreign policy. Not every director of these other organizations is necessarily as pro-British as the directors of the English Speaking Union, but insofar as any American supports the League of Nations, for example, he is lending aid and comfort to Britain. That he may not be aware of what he is doing does more credit to his heart than to his head; officially or unofficially, consciously or unconsciously, he is a faithful soldier in His Majesty's service. Though he may not recall that the League of Nations originated in the British Council of Imperial Defense, he can hardly have failed to hear Stanley Baldwin's repeated pleas to the United States to join.

MORGAN ATTORNEY, VICE PRESIDENT

And whom do we find on the board of directors of the League of Nations Association—"an organization of men and women convinced that the United States should become a member of the League of Nations"? Mr. Morgan's John W. Davis appears as 1 of its 3 honorary vice presidents; its 27 directors include Newton D. Baker, who set forth the Morgan thesis on America's entry into the World War in the October 1936 issue of Foreign Affairs. These two men make no secret of their sympathy for the British point of view; others, by reason of their support of the League of Nations, automatically (if unconsciously) support the British position. And many of them are men of substance: Raymond B. Fosdick, president of the Rockefeller Foundation; Manley O. Hudson, recently appointed member of the World Court; Prof. James T. Shotwell, director of the division of economics and history of the Carnegie Endowment for International Peace; and S. Van B. Nichols, chairman of the association's board, who lists himself in Who's Who as "public speaker on League of Nations, World Court, and international subjects." It is not difficult to imagine the gratification that the activities of these men must arouse in the British foreign office.

INTERLOCKING AID ENGLAND DIRECTORATES

If the League of Nations Association interlocks with the English Speaking Union in respect to personnel, objectives, and general character, the Foreign Policy Association bears a similar relationship to the League of Nations Association. Just as the League of Nations Association does not announce Anglo-American cooperation as its primary aim, so the Foreign Policy Association does not assert that its objective is to get the United States into the League of Nations. Yet that is the open ambition of many of its leading spirits.

James G. McDonald established the Foreign Policy Association after the war in order to educate American public opinion in world affairs. In 1934 he quit his position as chairman to head a League of Nations Commission for the care of German exiles. This humanitarian work naturally added to his enthusiasm for the League, and he returned to the United States urging his countrymen to cooperate with the Geneva organization to prevent armed conflict. Mr. McDonald is also a member of the editorial staff of the New York Times under our English-speaking unionist, Dr. John H. Finley. The English Speaking Union has further representation on the Foreign Policy Association in Mrs. Henry Goddard Leach, a director of the Union and vice chairman of the Foreign Policy Association.

MORGAN PARTNER'S WIFE AIDS

On the national board of directors of the Foreign Policy Association we find the name of Mrs. Thomas W. Lamont, wife of the Morgan partner, who himself appears on the national council along with Robert W. Bingham, American Ambassador to Great Britain. At a dinner held in London on July 4, 1936, Mr. Bingham declared: "The British and ourselves have sought to lead the world in the path of peace and disarmament. Unfortunately so far we have failed. But in a world armed and arming I shall expect this Nation and my own to match gun with gun, ship with ship, plane with plane, man with man in the protection of our countries and our homes." The National Council of the Foreign Policy Association also includes Mrs. Carrie Chapman Catt (a vice president of the League of Nations Association), Manley O. Hudson, and Stephen Duggan (both directors of the League of Nations Association), and such outstanding figures as Roscoe Pound, former dean of the Harvard Law School, Silas H. Strawn, of the Liberty League, Felix Warburg, William Allen White, and Owen D. Young.

BELONG TO BRITISH NETWORK

Not all these people have publicly advocated Anglo-American collaboration. Some of them have not even declared themselves in favor of the League of Nations. They do, however, stand for two things. They all belong to or speak for the conservative propertied classes and they all favor a more positive cooperative foreign policy. Which is exactly the same thing as saying that they belong to the British network. For, in respect to foreign policy, the propertied classes in the United States have no alternative to offer.

Still another organization devoted to American foreign policy illustrates still more clearly the pro-British bias of most well-to-do Americans. The Council on Foreign Relations, organized shortly after the war, calls itself "a nonpartisan and noncommercial organization studying the international aspects of America's political, economic, and financial problems. It is not a trade organization and has no connection with any political party. Its membership is composed of men of many professions, with a variety of interests and views." Membership in the council is elective and the 500 rank-and-file

members include a real cross section of political and economic opinion. Even the quarterly organ of the council, Foreign Affairs, prints as varied an assortment of articles as any magazine in the field.

But on the board of 18 directors we encounter many of our friends of the English Speaking Union. The ubiquitous John W. Davis appears both as a director and as a member of the nine-man editorial advisory board of Foreign Affairs. Here, too, we again meet Harry A. Garfield, of the English Speaking Union; Stephen Duggan, of the League of Nations Association and the Foreign Policy Association; and Newton D. Baker, of the League of Nations Association. Walter Lippmann, friend and defender of the Morgan partners, also serves both as a director and as a member of the editorial advisory board. Paul D. Cravath, one of the 10 vice presidents of the English-Speaking Union, is a director of the Council on Foreign Relations, together with Russell C. Leffingwell, a Morgan partner.

PRO-BRITISH ORIENTATION

The late George W. Wickersham, president of the League of Nations Association, saw no inconsistency in serving also as president of the Council on Foreign Relations, but since his death he has been replaced by Norman H. Davis, whose labors at several naval conferences gave so much satisfaction to the British Foreign Office. Owen D. Young is also a board member of the council. Mr. Young, it will be recalled, endeared himself to England when he suggested that his European collaborators on the plan that bears his name prepare a special memorandum urging the United States to take Lord Balfour's advice and cancel the war debts in exchange for exactly nothing at all. In short, by reason of their very importance and influence and by reason of their honest endeavor to include many points of view, the directors of the Council on Foreign Relations stand as living proof of the predominantly pro-British orientation of the American ruling class.

So far, our survey of the British network has been confined to international sport, to the synthetic hospitality of an English-Speaking Union dinner, and to the grinding boredom produced by the meeting of the minds of Walter Lippmann, Newton D. Baker, and Norman Davis in the innermost sanctum of the Council on Foreign Relations. Let us now watch these gentlemen at their daily duties. For to discover the members of the British network doing their masters' business we must see them doing their own.

ROLE OF MORGAN BANK

At the risk of hammering one point beyond recognition, mention must again be made of the importance of the Morgan Bank as Britain's financial base of operations in the United States. Its role in the World War as sole purchasing agent for the British Government leaves no doubt as to its importance during that period, and the statements of Messrs. Morgan and Lamont at the time of the Nye investigation do credit to their forthright support of the British position.

To Mr. Morgan there was never any question of following the lead of his President and remaining neutral in mind and thought. The moment the Germans threatened the security of England by invading Belgium, "We found it impossible to be neutral." And if we are to believe Thomas W. Lamont, Mr. Morgan's partner and spokesman, most of the best people who lived along the eastern seaboard felt the same way. "Does anyone," asked Mr. Lamont in a letter to the New York Times, dated October 18, 1935, "even of the post-war generation, believe that business interest determined the pro-Ally sentiments of Morrow or Morgan or Davison, or any of us? Surely not. Like most of our contemporaries and friends and neighbors, we wanted the Allies to win from the start. We were pro-Ally by inheritance, by instinct, by opinion, and so were almost all the people we knew on the eastern seaboard of the United States from the moment Germany violated Belgium's neutrality."

NEW YORK TIMES PRO-BRITISH

Mr. LaMont's priceless definition of the American aristocracy—"almost all the people we knew on the eastern seaboard"—holds just as good today as it did in 1917. It also covers like a tent the chief figures in the British network, notably the owners and editors of the New York Times, which is Britain's chief propaganda organ in the United States, just as Morgan's is Britain's chief financial base.

We have already seen the late Adolph S. Ochs, who built up the Times to its present commanding position, acting as intermediary between the British Admiralty and the American Department of State and preparing the way for the British-inspired naval conference at Washington in 1921. Furthermore, it was during his conversations with Lord Lee, of the British Admiralty, that Mr. Ochs defined the policy of his paper in terms that might have surprised those readers who took at face value the Times' slogan: "All the news that's fit to print."

ADOLPH OCHS PREACHED UNITY

"I told him," he wrote afterward, "that I had always felt the peace and welfare of the world rested with the English-speaking nations, and particularly with the United States and the British Empire, and that I regarded it as my patriotic duty to promote that as far as lay within my power; that the New York Times was dedicated to that policy; that I never thought it necessary to have treaties or written agreements to that effect; that I thought to express it in writing would simply be qualifying the broader principles of our friendly relations; that I thought we were in full accord in our ideas of justice and righteousness; and that while our interpretations of these principles might not at all times be in accord with the understanding of other nations, we should unitedly be strong enough to maintain our ideals, protect them, and win respect for them, if by no other means than by our power and strength."

EXCERPTS FROM CHAPTER, THE ANCIENT GRUDGE

To watch first the British Foreign Office and then the British network in action is to detect a contrast between British and American foreign policy. Whereas the British Empire needs the aid of the United States to maintain its rule over one-quarter of the earth's surface, the United States derives no corresponding benefit from the partnership. Its stake in the Empire would appear to be more sentimental than material.

Which gives rise to a horrid thought. Granted that all Mr. Lamont's friends along the eastern seaboard pledge the last full measure of their devotion to King and country, can this enlightened group prevail forever against those dark hordes whose motto reads, "What is there in it for me?" For it must be confessed—more in sorrow than anger—that we cannot all sustain ourselves in the rarefied spiritual atmosphere that Mr. J. P. Morgan breathes when he declares that Americans fought in the World War to save their immortal souls. Human nature being what it is, we cannot all subordinate crass self-interest to the higher purposes of the British Foreign Office—at any rate, not all the time.

ANOTHER WAR WITH BRITAIN?

By increasing its export trade, by investing more money abroad, and by importing more raw materials, the United States found itself conflicting with Britain in three separate spheres. The wartime era of Anglo-American good feelings gave way to a period of mounting suspicion. By 1930 the tension had reached such a point that Ludwell Denny, one of the most knowledgable correspondents on the Scripps-Howard staff, wrote a book entitled "America Conquers Britain: A Record of Economic War." "War between America and England," he declared, "is more probable than war between America and any other power." Nor was he alone in this view. David Lloyd George and the late Frank H. Simonds agreed with him. So did Lieutenant Commander Kenworthy, a Labor Member of Parliament, now Lord Strabolgi, who prophesied in 1928, "The danger of Anglo-American conflict is as real as was the danger of war between Britain and Germany in 1905. We are heading straight for the same tragedy as 1914."

* * * * *

AFTER ALLIANCE—WHAT?

Let us assume, however, that the Anglo-American honeymoon runs its chartered course and culminates in something like the Anglo-American alliance toward which the British Foreign Office has been working. What then? May not a struggle ensue in which a new breed of American imperialists, less Anglophile than the Morgans, may refuse to accept dominion status? Aye, there's the rub. War between England and America may be as unthinkable as the prophets of the English Speaking Union say, but isn't peace between them equally unthinkable in the long run? In fact, isn't it possible that even the early, immediate stages of Anglo-American collaboration do not mean peace but the sword?

* * * * *

It would be difficult to name any two countries that have fewer common interests or more points of difference than Great Britain and the United States.

* * * * *

It is especially interesting to note that the Morgan-Grenfell bank is the parent house of all the Morgan institutions. It was founded in 1838 by an American citizen, George Peabody, and in 1854 Junius S. Morgan, grandfather of the present J. P. Morgan, entered the firm. Though an American citizen, Junius Morgan lived in London, and his son, the original J. P., emigrated to the United States. E. C. Grenfell, one of the managing directors of Morgan's London house, is on the court of the Bank of England.

BRITISH INTERNATIONAL BANKING

Here is evidence not only of still another link between British and Morgan interests, but of the international character of British banking generally. Hambros Bank, for instance, was founded by a Dane and specializes in Scandinavian and Greek issues because it was a Danish Prince who ascended the throne of Greece as George I in 1881. Lazard Brothers specializes in Anglo-French issues. Schroder's has a large stake in Germany.

* * * * *

If all this belongs in the field of conjecture, let me recall that the bulk of this chapter rests on the supposition that England and America can—if they wish to do so—defend the existing world order. The record of the first Roosevelt administration not only shows the United States declining to compete with England for foreign trade and foreign investments; it shows American Treasury officials and American naval officers working closely with their British counterparts.

* * * * *

ALLIANCE NO WORLD PANACEA

Thus the prospects of an Anglo-American alliance cannot be judged in terms of American interests alone, or even primarily in those terms. Just because Britain has always dominated American foreign policy, just because a British network of highly placed Americans rallies to the support of the Empire, just because the latent conflicts between England and America have relaxed temporarily—all this does not mean that an Anglo-American alliance can instantly and permanently stabilize the world the moment it is concluded. To accept that view is to

adopt the perspective of Dr. John H. Finley as he quotes Kipling at an English Speaking Union dinner.

In short, the full implications of English-speaking unity do not emerge until the positions of both England and the United States have been analyzed. We have seen what the policy of supporting Great Britain has meant to the United States. We have seen how the British network operates and why the United States defends Britain's stake in the world. And we have reached an uncomfortable dilemma. Has Britain become so weak that only the aid of the United States can preserve the Empire? Or has Britain's position become so strong that only the United States stands in the way of its universal rule?

EXCERPTS FROM CHAPTER, ENGLAND, WHAT OF THE NIGHT?

Britain's domestic dilemma is largely the product of the imperial and foreign dilemmas and the two names—Britain and England—reduce it to two words. For Britain sounds imperial, England insular. Britannia rules the waves, but it is of England that the poets from Shakespeare to Rupert Brocke have sung. Perhaps, indeed, the part is greater than the whole, for the island of Great Britain includes three nations, England, Scotland, and Wales, and it is the English Nation that has dominated the other two since Queen Elizabeth's time.

ENGLAND'S INTERNAL DECAY

Yet this nation which has impressed its language, its institutions, and its rule not only on the island of Great Britain but upon a quarter of the earth's surface shows signs of internal decay. The same dangers of revolution and war that threatened the British Empire also threaten the mother country. Furthermore it is primarily because of its foreign conquests, because of its dependence on foreign lands that these dangers threaten the British people so acutely.

* * * * *

What does have bearing on the fate of England is the physical well-being of its people. Sir John Boyd Orr, director of the Rowett Institute for Research in Animal Nutrition in Aberdeen, threw some disturbing light on this subject in March 1936, when his book entitled "Food, Health, and Income" appeared with the astounding statement that half the British population is undernourished. Some four and a half million people have only 4s. ($1) a week to spend on food, and 9,000,000 more spend only 6s. A minimum of 10s. a week is required for an adequate diet; 6s. do not buy enough milk, fruit, or vegetables; 4s. do not buy enough food of any kind.

CHILD ARISTOCRATS HEALTHY

Of the different income groups Sir John writes, "As income increases, disease and death rate decrease, children grow more quickly, adult stature is greater, general health and physique improve." In consequence boys who attend the fashionable schools of the aristocracy average 5 inches taller than the corresponding sons of working men. This condition continues in adult life; less than half the applicants for army enlistments can pass the physical examination.

The trend of the birth rate, both in Great Britain and the Dominions, also causes alarm. If the present annual rate of less than 15 births per thousand remains constant—and it has fallen steadily from 35.4 per thousand in 1880—England's population will decline 10,000,000 during the next 20 years. Australia and New Zealand are not reproducing themselves and since 1931 more people have been migrating from the Dominions to Britain than have been leaving Britain to populate British possessions overseas.

DRY ROT CORRUPTS

While men decay, wealth accumulates. The same process of dry rot that has been corrupting the leadership of the labor party also afflicts the aristocracy. The incident of the Zinoviev letter shows the conservative party stooping to hire a gang of forgers in order to win a general election. Nor was this an isolated incident of corruption.

* * * * *

It requires no microscope to detect England's symptoms of decay: The discrepancies of wealth and poverty, the corruption in high places, the generally slack morale leap to the eye.

EDWARD'S ABDICATION UNFORTUNATE

Nowhere did the whole episode (Edward's abdication) make a more unfortunate impression than on the United States where British spokesmen had bragged for years about the unassailable moral and material position of their empire. Furthermore, the venomous comments of the archbishops and other worthies made it quite plain that the same British aristocrats who had shouted themselves hoarse between 1914 and 1917 for America to rescue their imperial holdings actually in their heart of hearts despised the United States as the "alien" source of Edward's corruption. Indeed, as long as the memory of the abdication lingers, it will be just a little harder for these same Englishmen and their faithful henchmen at 23 Wall Street, Times Square, and points west to draw America into the second world war on the British side.

EXCERPTS FROM CHAPTER ALLIANCE: ENGLAND'S SALVATION

At the same time, however, a recent survey conducted by Dr. George Gallup's American Institute of Public Opinion shows that 70 percent of the American people now believe that the United States should not have gone into the World War. Even the New York Times sorrowfully confesses that the sentiment of the country is overwhelmingly isolationist

* * * * *

ROOSEVELT ALLIANCE MINUS ADVANTAGES

This is no academic matter. Already, in the name of the "good-neighbor" policy and international appeasement, the Roosevelt administration has begun assuming the responsibilities of an alliance with England without receiving any advantages in exchange. Speaking in Atlantic City on May 13, 1937, Raymond Leslie Buell, director of the Foreign Policy Association, pointed out, "America is drifting into a tacit alliance with Britain and France and so far has received little in return. Today we are in effect morally supporting the status quo in Europe without participating in the decisions made by Britain and France which may determine the peace of the world." He then cited the tripartite monetary agreement, the American naval program, and the cash-and-carry neutrality measure as advantageous to British interests.

Mr. Buell is perhaps a bit of a dreamer to expect a consistent and clear-cut foreign policy from a President who, in domestic affairs, turns over his New Deal to reactionary southern Senators, stock-market gamblers, municipal machine politicians, former commanders of the American Legion, and Texas bank presidents. But if the domestic situation can wait while Roosevelt makes up his mind whether he is saving capitalism or peacefully installing a new social order, the foreign situation calls for a definite line of policy, thoroughly worked out in advance and ready for immediate application.

A STATUS QUO ALLIANCE

If the United States decides to support England, it may appear to be acting in behalf of peace and democracy, of collective security and resistance to aggression. In effect, however, the decision will mean that the greatest Empire on earth and the world's strongest Nation will be putting their combined support behind the status quo everywhere.

* * * * *

Communism, fascism, national socialism—Japan, Russia, Germany, Italy—the names of the possible opponents of democracy change from sentence to sentence and from paragraph to paragraph. And if President Nicholas Murray Butler, who has received more honorary degrees than almost any man alive, cannot name the line-up in the next world war or define its objective, the problem defies the power of the human intellect. But it does not require superhuman gifts to detect the political purpose of an Anglo-American alliance.

CRUSADE'S OBJECTIVE THE SAME

Perhaps the British Foreign Office will invite the American people to crusade against fascism; perhaps it will be an anti-Communist crusade—God only knows and this time he has not vouchsafed His secret to the president of Columbia University. All that mere mortals can know is that the next crusade Britain undertakes will have the same objective as the last one, the protection of British interests. And it is a prime British interest to defeat any political movement—Fascist or Communist—that threatens the Empire.

The possibility of course exists that the next world struggle will finally simmer down to a conflict between fascism and communism in the course of which some of the democracies will turn one way, some another. It does not, however, require the services of a crystal gazer to guess which way the British Empire would move or which camp the British network would urge the United States to support.

NORMAN + MORGAN = DEMOCRACY?

What, then, becomes of the democratic professions of Sir Arthur Salter and Lord Lothian? That an Anglo-American alliance is well calculated to support the existing order throughout the world, even at the expense of democracy against fascism, should not cause John W. Davis to resign from the English-Speaking Union. It should, however, give pause to anyone who calculates that Montagu Norman plus J. P. Morgan equal democracy.

The least, then, that the Anglo-American alliance offers is a crusade against revolution; at most it may include an additional preliminary crusade against fascism before the "red" hunt begins. All of which has exactly nothing at all to do with the present outcry against dictatorship and the present enthusiasm for democracy. In short the political appeal of the Anglo-American alliance is just as spurious as the cultural appeal. In the one instance the British have made their interests synonymous with democracy; in the other with civilization.

EXCERPTS FROM CHAPTER, ISOLATION: AMERICA'S OPPORTUNITY

To continue in the present direction is to drift into an unwritten alliance with England and to receive nothing in exchange. A policy that is at once progressive and isolationist offers the only solution.

Such a policy must meet the three chief problems that confront the United States today. First, it must keep the United States out of war abroad and defend the American people against foreign attack. Second, it must make the United States economically independent during a period of foreign war. Third, it must take measures to prevent what happened in Germany from happening here.

BRITISH NETWORK BACKS STATUS QUO

There is no use pretending that the United States can stay out of war and maintain the existing system at home and abroad. The members of the British network hope, of course, to keep the peace, but in 1937, as in 1917, they would go to war rather than let Britain down. And with even better reason. For in 1937 the British Empire stands out as the mightiest vested interest in a changing world. Any threat to its existence also threatens America's vested interests at home and abroad. In short, it is no accident that the

British network tends to become more and more difficult to distinguish from the wealth and fashion of the land.

* * * * *

As long as the United States has overseas possessions, overseas investments, or overseas trade to protect, its Army and Navy must plan to deploy thousands of miles from home. And to achieve its purpose such an expedition calls for a greater national effort than that of 1917–18. In fact, the next crusade will begin where the last one left off, and embody at the start the lessons of the World War.

WASHINGTON WAR DICTATORSHIP

While the public at large looked the other way the generals, the admirals, and the businessmen have laid their plans. In consequence, a body of legislation now exists which, according to Mr. Hallgren, will establish a dictatorship in Washington the moment war is declared: "These powers are absolute. They cover everything. They can be used to suppress any newspaper, printing press, publishing firm, or any other business, or any individual in a position to influence or appeal to public opinion. They can be used to compel any corporation, other organization, or individual to do whatever the dictatorship orders done. Nor will the Government hesitate to use any of its powers, explicit, implicit, or assumed, to smash anyone and everyone who might dare to stand in the way of its war effort or of the dictatorship. Whatever its own interests and desires may be, the whole Nation will be forced to submit to the wisdom or madness, as the case may be, of those who will be sitting in power in Washington when the war comes."

To judge from the experience of the last war and from the record of the N. R. A., those "sitting in power in Washington" will include the same dollar-a-year men whose firms made profits of 200 percent and 300 percent in 1917–18. The failure of Congress to pass any legislation limiting profits in time of war, and Walter S. Gifford's opposition to any plan that would not "leave enough profits to keep the wheels of industry moving" suggest that the dictatorship will not bear too heavily upon the possessing class.

BRITISH NETWORK BACKS FOREIGN WAR

Nor do the advocates of aggressive war misrepresent their aims. General after general and admiral after admiral have testified in Washington that the United States must prepare to fight abroad. And the civilian members of the British network back them up 100 percent.

* * * * *

Secretary WALLACE says, in effect, that the United States can stay out of war if it becomes self-sufficient. General Butler says, in effect, that the United States can stay out of war if it keeps all its armed forces at home at all times. But in order to become self-sufficient in time of war the United States must acquire stores of raw materials from abroad. And in order to keep its armed forces at home, it must withdraw from its various colonial possessions.

DANGEROUS MILITARY DICTATORSHIP

Secretary WALLACE sees that his plan would mean an unprecedented exercise of power by the Federal Government. General Butler merely asks for a constitutional amendment. Both men foresee the danger of a military dictatorship in the United States; both doubt that any foreign war could benefit the American people or, indeed, anybody else. That Mr. Davis desires peace and abominates war as much as Mr. WALLACE or General Butler no reasonable man can doubt. But it is difficult to see how his policy of rearmament and collaboration with Britain can lead to anything but war abroad and dictatorship at home.

What, on the other hand, will a policy of self-sufficiency and noninterference in foreign war involve? First, more centralized power in Washington; second, liquidation of all foreign investments and colonial possessions; third, recognition by the Federal Government that the United States is already facing the same revolutionary issues that have risen more sharply elsewhere. I have suggested how the United States might become self-sufficient if it abandoned its foreign holdings and its foreign military outposts. The time has come, however, to suggest a practical alternative to the military dictatorship which the British network proposes as the final solution of America's domestic problem.

* * * * *

At this point extremes meet. The British network anticipates that only an Anglo-American alliance can preserve the status quo throughout the world. But it also believes that the end in view justifies war and a military dictatorship in the United States. The Communist International anticipates that only a united front of all the democratic powers can overthrow fascism and promote social revolution throughout the world. And it, too, believes that the end in view justifies war. In fact, the Communist International will go further any say that capitalism cannot avoid war anyway.

Although the British network and the Communist International see the same policy leading to diametrically opposite conclusions, they agree that the same means justify the opposite ends for which they are working. They also agree that the "middle way" leads nowhere at all.

* * * * *

The British Foreign Office understands clearly enough that an alliance with the United States is not practical politics today. In fact, the British Foreign Office decidedly prefers the present state of affairs whereby the United States unofficially underwrites the British Empire and gets nothing in exchange. It is only the American members of the British network who advocate some more formal arrangement involving a quid pro quo. Even J. P. Morgan does not like to give something for nothing.

To adopt a continental foreign policy, the United States does not need to take every last measure recommended here. It does, however, need to reverse the present trend toward an unofficial alliance with England. Where this trend leads we already know. What, then, would a reversal toward isolation involve?

ISOLATION SERVES CIVILIZATION

An isolationist foreign policy serves not only the interests of the American people but the interests of civilization, democracy, and progress throughout the world. It will deliver the very goods that the British network only promises.

A self-sufficient America promotes western civilization by preserving it in the one country where it has not gone into a decline. Furthermore, an isolated America will not uphold England's dead hand over one-quarter of the earth's surface. Other nations will have a chance to find their places in the sun. Nor will the British people stand to gain the least from a collapse of the British Empire.

WAR MEANS UNITED STATES DICTATORSHIP

A self-sufficient America promotes democracy by preserving it in its country of origin. The moment the United States fights the war of aggression into which the British network is now forcing it—in the name of peace and democracy—it will establish a dictatorship on its own soil.

A self-sufficient America promotes progress and aids world organization. It promotes progress by showing what one continental area can do under its own steam. It aids world organization by transferring its present support from a lost but mighty cause, the British Empire, to the mightier winning cause of a cooperative world community. And a cooperative American community offers the best immediate contribution toward that cause today.

"IT CAN HAPPEN AGAIN"

Not one of these prophecies may ever come true. It all depends upon the course of events and upon what policies the United States follows. But the British Empire anticipates trouble during the next 5 or 10 years and seeks American support. The best-informed foreign service in the world looks for wars and revolutions in the near future. The most skillful diplomats and propagandists have set the wheels in motion to mobilize America when the lightning strikes.

It can happen again.

Foreign Affairs

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1941

ARTICLE BY T. D. KEMP, JR.

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the CONGRESSIONAL RECORD a most interesting article by Mr. T. D. Kemp, columnist, who writes daily for the Charlotte Observer of Charlotte.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Now

(By T. D. Kemp, Jr.)

The lend-lease bill becomes law and so the British rain bombs on German cities in their most ambitious raids of the war. The Germans likewise intensify their raids on British cities. We still sleep peacefully, but our political leaders have succeeded in pouring oil on the fire so that it may spread now into a world-consuming conflagration.

Mr. Herbert Agar, editor of the Louisville Courier-Journal, tells a Boston audience the lend-lease bill is not a bill to keep us out of war but a bill to "fight an undeclared war against Germany, and those who say it is anything else are lying."

Intelligent people know Mr. Agar is right, although few admit it. Others in this Nation, for selfish or revengeful reasons, are delighted to see this "oil poured on the fire," feeling that it will enrich them while they sit at home and watch "democracy" triumph.

You recall in that last World War we determined to make "democracy triumph" in the same way. The net result was millions dead and wounded. Communism in Russia, fascism in Italy, nazi-ism in Germany, class rule in England, social degeneracy in France, widespread misery and poverty in Austria and the Balkans, and $22,000,000,000 worth of unpaid debts owed us by England and her Allies which finally led to the depression. Our thanks for participation was the title of "Uncle Shylock," which one heard everywhere in Europe in the 1920's. We have learned nothing.

Now by a slow and calculated process we are back in the mess again. The pity is that

we don't admit it, get down to brass tacks, try to win the war before communism spreads, and then have a guiding hand at the peace conference instead of getting kicked out as we were before.

Our political leaders will, of course, wait for some incident to admit to the American people that we are at war. That incident will probably come by summer. In the meantime our Army camps are here to stay, our taxes will increase to the breaking point, freedom of speech will be more and more curtailed, and our present way of life may become as obsolete as a stable in Detroit. But we may yet save the British Empire, even though it may not be worth saving, provided we face the facts and stop "kidding."

Mr. Roosevelt wants $7,000,000,000 at once for the purchase of materials to aid England. He will get it, and the American people will pay, despite the fact that English capitalists have billions of dollars invested in this country and in South America, most of which could be put up as collateral or converted. Unless you have actually lived in England, you have no idea how wealthy the wealthy Britisher really is.

Congressional fiscal experts have already suggested a 5-percent tax on the weekly pay check of most of this Nation's workers to pay for the aid to England. Thus a worker getting $40 a week would actually get only $38 and a tax receipt for $2. When this war is over, those tax receipts will not buy food and clothes for that worker's family.

Russia's state planning commission is assigned the task of drawing up a new 15-year plan, by Mr. Stalin, "to make the Soviet Union the greatest industrial nation in the world."

Those communist leaders have long had the ambition to become the world's industrial leader. Now they are swapping grain, cotton, timber, and oil for lathes, turbines, tools, electrical equipment, hydraulic presses, precision instruments, etc.

The intelligent nations are busy manufacturing guns, ammunition, and other instruments of destruction.

No wonder that sinister Stalin chuckles to himself as he watches this war spread, making every agreement necessary to keep it going in full fury as long as it doesn't involve Russia.

Carol Hohenzollern, ex-king of Rumania, and his mistress, Magda Lupescu, are reportedly making plans to go to Cuba. The couple, after their recent escape from Spain, where they were under technical arrest, are now in Lisbon at the home of Carol's Portuguese business agent.

Worth millions, and with much of his fortune banked in New York City, Carol and his fat Pompadour, who is said to be the clever one of the two, will probably turn up in this country eventually. New York cafe society, already filled with scum, will welcome this couple with open arms.

Harsh Realism for America

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1941

ARTICLE BY STUART CHASE

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the current issue of the Progressive, by Stuart Chase, entitled "Harsh Realism For America."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Progressive]

HARSH REALISM FOR AMERICA

(By Stuart Chase)

William C. Bullitt made a speech recently. He said: "The moral code which was accepted by all the rulers of the earth has been denied, derided, and defiled by the dictators of Germany, Italy, the Soviet Union, and Japan. For them the Ten Commandments have lost all meaning. They have discarded all the teachings of the words and life of Christ, 'Love thy neighbor as thyself.' Quote that to Hitler, Stalin, Mussolini, or the Japanese militarists and hear them laugh. We can expect neither honor nor mercy in their dealings with us or with any nation."

Mr. Bullitt then goes on to say that isolationists are like sufferers from dementia praecox "who cannot bear to face the harsh reality of the real world."

This kind of talk leaves me groggy. Mr. Bullitt leaps blithely from the Golden Rule to the harsh realities of power politics. He has hopelessly mixed his frames of reference. When, in the bloody course of history, have dealers in power politics ever been concerned with the words and life of Christ? Does Mr. Bullitt want us to go to war against sin, or does he want us to be realistic about defending our country? These are two very different things.

Tangling up hymns and howitzers leaves us in a mental fog, paralyzing intelligent action. Interventionists are continually doing it. Let us see if we can untangle Mr. Bullitt, and keep out frames of reference clear. The moral case against the Axis Powers runs something like this:

The world was struggling toward the light. Christian decency and good cricket was the order of the day. Suddenly, apparently out of nowhere, arose four powers of darkness—Germany, Italy, Japan, and Russia. Without warning and in defiance of their most sacred obligations, they assaulted the children of light—Ethiopia, China, Austria, Czechoslovakia, Poland, and the rest.

Britain alone hold out. If she falls, the powers of darkness will blacken the maps of Africa, Asia, the Indies, and perhaps those of Latin America and Canada. The United States will be the last stronghold of Christian decency, democracy, liberty, and enlightened capitalism. How long before it too will be blacked out?

To avoid this fate, worse than death, we must now join all available children of light anywhere, and smite the powers of darkness hip and thigh. Otherwise it will be too late. The night will come down for a thousand years. All that we hold dear, all that we have stood for and fought for, the freedom and the future of our children's children, are at stake. Britain, China, Greece, Australia, Sumatra, we are coming. The black night shall not fall.

AND NOW REALITIES

I think this does the moral case adequate justice. In fact, I should not be surprised to hear it coming back at me over the radio some day. But it takes a high-powered microscope to find any traces of harsh realism in these cadences.

The case for political and military realities is in another frame of reference altogether. I am not necessarily advocating it. I am just stating it. It runs something like this: The object of a realistic foreign policy for the United States in 1941 is to maintain the undisputed sovereignty and territorial integrity of the Nation with a minimum loss of manpower, resources, and democratic institutions. No policy is worth considering which runs beyond our military power to enforce.

As has happened consistently in the past, various sovereign states have now burst the varnish of world order and the status quo, and marched forth to acquire additional real estate at the expense of whomever it may concern. The essential anarchy of international relations is again exposed. They have "ganged up" to remake the boundary lines of Europe, and to conquer and divide large sections of the British, French, and Dutch colonial possessions. They are well armed, well led, and extraordinarily determined.

Germany, Italy, and Japan have agreed to fight jointly any nation which makes war on any one of them. This compact seems to be aimed specifically at the United States. If we go to war with Germany, we shall automatically have Japan to fight in the Pacific. There are no moral principles in the Axis protocol at all—only the toughest kind of power politics. Russia is probably a silent partner of the Axis because she fears both Germany and Japan more than she fears us.

FOUR AMERICAN STEPS

Now in these tumultuous circumstances what should the United States do to carry on the object of national survival stated above? Four steps are indicated on the basis of harsh realism.

1. Arm to the point of repelling all possibility of invasion. Do not, however, arm against invasion in general, only against tangible, computable military forces. There is no point in building battleships and vast standing armies just for the exercise. Hard-boiled military men should set the limits.

2. Tie up the Western Hemisphere economically to insure all essential raw materials in case needed imports from abroad are cut off. Ring the hemisphere with bases in cooperation with Canada and Latin America. This gives us a cyclone cellar.

3. Tie up with potential allies who are in a position to give us military and economic help, and where geography is not too vulnerable to defend. How much of the British Empire is a good military risk is for experts to decide. Off-hand it looks as if the defense of Canada were the best kind of military risk, the defense of the British Isles one of the poorest.

4. Endeavor by diplomatic and economic pressure to sow dissention in the ranks of possible enemies—divide them, split them, turn them against each other. Avoid like the plague any commitment to take on Germany, Italy, Russia, and Japan at once.

DEFEND WHAT WE CAN

Do we live in a world of Christian decency? Alas, we do not; and never have. Most of the world's peoples are not Christians to begin with. Can we shoot the words and life of Jesus into benighted aggressors? Alas, we cannot—and it would be a wicked hypocrisy to attempt it. Can we make the world safe for the gold standard, free trade, Sir Montagu Norman, political democracy, and international rotary? Not unless we lick the tar out of 400,000,000 exceedingly well-armed patriots, who are very difficult to get at in the military sense.

Eighty-five percent of us do not want to lick the tar out of anyone unless he should attack the New World. Here is a grave problem of morale which needs more realistic consideration than the interventionists have ever given it. Can we defend the Western Hemisphere and save our own democratic way of life? We have a good fighting chance to do so if we concentrate on it. We have no chance at all if we scatter our forces on wild-goose chases all over Europe, Africa, and Asia.

It thus appears that Mr. Bullitt's war against sin is just about an all-time low in harsh realities. I never met a military man who would undertake to purify the planet with TNT. It would be easy to purify the solar system if elevating rhetoric could do it;

but if Berlin is to be taken by armed assault, another and more rigorous strategy must be employed.

No interventionist has indicated the vaguest outline of what such strategy shall be. Pending a practical plan cast in terms of men, materials, and fire power, harsh realities dictate defending what we can defend and letting crusades for utopia go over until the next meeting.

If the American people want a moral crusade, it is their right to have one; but it is criminal folly to tell them that such an adventure has any connection with the practical realities of their survival as a free people in a very dangerous world.

Why the Bill Regulating the Warehousing of Cotton Should Become a Law

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

Mr. PATMAN. Mr. Speaker, Wednesday, March 26, 1941, the House, in all probability, will resume consideration of S. 262, an act regulating the warehousing, storing, and reconcentration of cotton held by the Commodity Credit Corporation. Thursday, last, this bill was debated in the House, and all time for general debate expired except 31 minutes' unused time, 14 for the proponents and 17 for the opponents. After the 31 minutes are consumed by the proponents and the opponents of the bill, the bill will then, doubtless, be read under the 5-minute rule.

WHY BILL SHOULD PASS

This bill should become a law for the following reasons:

1. It will help the farmer, the small local warehouseman, the local community, and the Government.

2. It will not prevent reconcentration of cotton if the local warehouse fails to agree to a fair storage charge.

3. It is unreasonable to ask the Government to spend $2.18 per bale to reconcentrate cotton in order to secure a saving of only 48 cents. This is especially true since the Government must borrow the $2.18 and pay interest on it.

4. If the cotton is sent to the ports where the warehouses are owned by a very few people, the Government will be at the mercy of these port warehouses. Then in order to get a fair rate, the Government will have to ship the cotton back to the interior. Then if the Commodity Credit Corporation officials are right in believing that all of this cotton will be exported, the cotton will then have to be shipped from the interior to the ports again. It will be three trips over the railroads this cotton will have to take, if the Commodity Credit Corporation's contention is carried to its logical end.

5. The Commodity Credit Corporation will not save $5,000 a day as alleged, because the cost of removal, including freight, is not considered.

6. If the Government can save $5,000 a day, it will be against the interest of the farmer and the country for the cotton to be removed, because it will cause the farmers to pay $17,500 a day additional in higher storage rates, which cannot be prevented.

7. If the time should come when the price of cotton would justify the farmers in redeeming this cotton that has been taken over by the Government, it would be in the public interest to let the farmers redeem it. In that event, if the cotton has been reconcentrated at the ports, the farmer would receive much less for his cotton than he would in his local community.

8. The transportation system is going to be taxed to the limit during this emergency and it should not be further burdened with the needless and useless removal of the cotton from the interior warehouses to the ports.

9. The only sure gainers, if this bill is not passed and the cotton is reconcentrated, will be the railroad owners and the owners of the large port warehouses. The large warehouses at the ports could afford to offer to store the cotton free the first year.

10. No individual with business judgment would consider for a moment reconcentrating his own cotton under the circumstances and conditions that the Commodity Credit Corporation is proposing to reconcentrate the cotton involved in the bill.

11. Congress has compelled the local interior warehouses to pay higher wages and has caused them to gather the cotton in from the farmers one and two bales at a time without any charge whatsoever, and it would certainly be unfair to give a few owners of port warehouses the benefit of the free service rendered by the interior warehousemen.

TOO MANY UNCERTAINTIES

It is said of Christopher Columbus that when he left home that—

he didn't know where he was going; when he got there, he didn't know where he was; when he returned home, he did not know where he had been.

It happened that Columbus' voyage was a successful one, but since the law of averages has not been repealed, one can hardly conceive of the Commodity Credit Corporation successfully and in the public interest handling the cotton in the way and manner it is proposed. It is proposed that the cotton be shipped to the ports. It is known how much the freight will be. Incidentally, more than four times as much as the known savings on storage. It is not known how much the storage will be after the first year. Neither is it known whether the cotton can possibly remain in the warehouses where reconcentrated after the first year, and it is not known how much the freight will be back to the interior, in the event it must be shipped back.

THIS BILL IN THE PUBLIC INTEREST

If the Members of Congress understand this bill, I venture to say that a comparatively few votes will be cast against it.

I cannot understand why any Government official or Member of Congress would attempt to cause the Government to do something that he, as an individual, would not do himself.

In this case, I venture to say that no one connected with the Government would consider it good business judgment to reconcentrate the cotton in the manner proposed by the Commodity Credit Corporation if such person owned the cotton himself instead of the Government owning it.

The hearings on this bill disclose that no witness would say that he would ship this cotton to the ports from the interior warehouses, if it belonged to him and not to the Government.

I asked Dr. Robbins, the president of the Commodity Credit Corporation this question:

Dr. Robbins, let us suppose that you own a thousand bales of cotton in an interior warehouse; that you are now paying 12½ cents per bale per month storage, including insurance, and all other charges; that the owner of a port warehouse is insisting that you move your 1,000 bales of cotton from the interior warehouse to a port warehouse; that the charges per bale per month would be reduced 4 cents, or 48 cents per bale per year; that the freight rate on the cotton and other handling charges, which you would have to incur to move the cotton from the interior warehouse to the port warehouse would average $2.18 per bale; that the port warehousemen would not agree to keep your cotton for 4 cents per bale per month less, except for 1 year; and that the contract would not be good longer than 1 year. Would you, as a business man looking after your own private, selfish interest, move your 1,000 bales to the port warehouses under those circumstances?

Dr. Robbins has never until this good day stated that he would ship his cotton to the port under these circumstances, neither has any other witness to whom the same interrogatory was propounded. The main witness for the ports admitted he would not ship his cotton to the ports under such circumstances.

It would not be good sense and good business judgment for him to move his cotton—whether one bale or a thousand bales—to the port warehouse for the following reasons:

1. He would have to immediately spend $2.18 removal charges on each bale, when he would only have definite assurance of a 48-cent saving. It would require 4½ years for him to save as much as the removal charges, if the savings continued.

2. After he had received the benefit of a saving of 48 cents per bale for the first year, the warehouseman could raise his rate to 25 or 50 cents per bale per month, or even more.

3. If he were unable to receive a satisfactory rate from the port warehouse at the end of the year, the only alternative he would have would be to move the cotton again; and if he had to move it back to the interior, the rate would be at least $2.18 and possibly much more, since the railroad companies do not have a published rate at this time from the ports to the interior.

4. He would not know where his cotton was going to be used, since the export market is practically gone and it is pos-

sible that his principal market in the near future will be in the interior.

5. Storage space is becoming more scarce at the ports and an increase in charges is probable. Steamship rates from the ports have increased from 85 cents per ton to $9 per ton during the past few months. There are four bales of cotton to the ton, so this increase in bales of cotton would have amounted to from 21 cents to $2.25 per bale. In other words, if the ports increase their storage charges in proportion, instead of the Government being required to pay only 8½ cents per bale per month, it will be compelled to pay more than 80 cents per bale per month, or $9.60 per year. If this increase in storage goes into effect, the owner of the cotton would find himself in the following position at the end of 2 years:

Removal charges, including freight from interior to port	$2.18
Storage, first year	.96
Storage, second year	9.60
Total	12.74
Interior storage, first and second year would have been	3.00
Loss to owner of cotton in 2 years	9.74

This will be the loss at the end of 2 years, if storage charges at the ports increase like shipping charges at the ports and the charges will be prohibitive after 2 years. In 3 or 4 years the port storage companies would receive from the Government more money for storage charges than the cotton is worth. I know it will be said that this is an extreme illustration. A few months ago the same thing would have been said about storage space in ships, but it happened just the same.

BAD FOR GOVERNMENT

The removal of the cotton would be especially bad for the Government. The savings promised are practically nil compared to the risk the Government will be compelled to run in making the change.

In one lot of cotton reconcentrated by the Commodity Credit Corporation, amounting to 300,000 bales, it will take the Government 9 years to save enough on storage charges to pay the cost of reconcentrating the cotton.

Further, there are big programs, which demand the use of cotton in the interior. I refer to the mattress program and the programs to use cotton to construct bomb-proof shelters and to make paper by mixing cotton with wood pulp and to make finished products, which are to be sent to Great Britain. These programs if carried out will absorb the entire cotton surplus in the interior.

The testimony before the committee disclosed that cotton was shipped from an interior point to a port and then this same class cotton was needed in the mattress program and the Commodity Credit Corporation was compelled to ship cotton back from a port to this interior point for that purpose, causing a loss of several dollars a bale.

BAD FOR THE FARMERS

The farmer is dependent upon a bonded warehouse, in order to obtain a loan on his cotton. When our exports were normal, the interior warehouses would only keep the cotton 2 or 3 months each until it was shipped to the port and then shipped overseas. Along with the loss of our export market and the piling up of a huge surplus of cotton, the interior warehouses were compelled to greatly enlarge their facilities.

In addition to their local and State taxes and income taxes to the Federal Government, the interior warehouses have recently had an increased burden added in the form of higher wages to their employees, caused by the passage in Congress of the wage and hour law.

Notwithstanding the enlargement of their facilities and the increased cost, the interior warehouses have been able to reduce storage charges from 50 cents per month to 12½ cents per month per bale. This was brought about because the local warehousemen had this Government cotton, which enabled him to collect storage 12 months in a year instead of only 2 or 3 months as heretofore. If the Government cotton is removed, the interior warehouses will have to put their charges back where they were or go out of business. If they go out of business, the farmers will not have a place nearby, where the cotton is grown, to obtain a loan. Therefore, an injury to the local warehouseman is an injury to the farmer in two ways:

1. In increased storage charges, and

2. Reduced facilities and possibly the elimination of the warehouse that he is looking to in his local community to store his cotton and obtain a loan. It must be remembered that no loan can be granted by the Commodity Credit Corporation unless the cotton is stored in a bonded warehouse, approved by the Commodity Credit Corporation. If the warehouse cannot operate, the former will not be able to obtain a loan in accordance with the farm act intended to help the farmer.

When the farmer seeks a loan on his bale of cotton, some one must fill out a very complicated form in duplicate. The forms are so large that a carbon cannot be used, so each of the two copies must be an original. The warehouseman is glad to fill out these forms for the farmer free of charge, because the cotton will be stored with him and he will collect money each month for the storage. It costs on an average from 15 to 25 cents to pay the expert help to fill out one of these forms. If the local warehouseman fills out the form and renders the other free service of taking a sample of the cotton and shipping it to the nearest Government classing office to get the grade and staple certified, which requires an expenditure for postage, bookkeeping, and other expenses, it will take him 2 or 3 months to get his money back before he collects a penny in gross profit from the farmer on storage.

The local warehouseman collects this cotton on one- and two-bale lots, and when it is accumulated in a local warehouse, the large Mammoth Cave port warehouse can afford to bid a much lower price, because it will be getting the cotton in large quantities without the expense of having served the farmer in the manner indicated and outlined. I venture to say if the ports were required to establish offices and gather this cotton in the same way that the local warehousemen gather it that the ports would not be able to offer a rate as low as the local warehousemen offer.

It is claimed that this bill will cause the Government to lose $5,000 a day. The charge is a ridiculous one and cannot be substantiated at all. However, if true, it is certainly not a good policy for the Government to save $5,000 a day if it will cost the farmer—as it will—$17,500 a day in extra storage charges that they will have to pay. The Commodity Credit Corporation is a part of the whole farm program.

GAINERS IF BILL NOT PASSED

If this bill does not become a law, the railroads will be sure of an enormous profit in transporting the cotton from the interior to the ports and possibly also earn a large profit in shipping much of it back from the ports to the interior. The large port warehouses will profit because the Government will be at their mercy when the cotton is once stored with them, and they will certainly have a good excuse to raise storage rates.

MONOPOLY

There are about 1,600 interior warehouses, most of them independently owned. There are 45 warehouses at the ports, owned by 33 companies. One company owns 14 of these port warehouses. It will be much easier for 33 concerns, which are already closely interlocked, to get together and frame up on the Government than it would be for 1,600 independent warehouses scattered over the entire country.

ADMITTED BY PORT REPRESENTATIVE THAT SMALL INTERIOR WAREHOUSEMEN WOULD BE RUINED

Mr. Greenville Mellen, of Gulfport, Miss., was the official spokesman for the big port warehouse interests before the committee. He presented the charts and maps that were prepared by Anderson-Clayton & Co. representatives and in the offices of Anderson-Clayton & Co. This is admitted in the testimony. The maps and charts attempted to present information that would lead members of the committee to believe that it was in the public interest for the cotton to be reconcentrated.

As official representative of the big port warehouse interests and when he was testifying, Mr. BROWN of Georgia, a member of the committee, asked him the following question:

> And with this other cotton it would contribute about four or five million bales. And suppose the Government had 11,000,000 bales of cotton. And suppose you go ahead and undertake to get the lowest bid and exercise any other discretion under the law and submit bids and get the lowest bidder. Now, don't you know the little warehouse would be cleaned out and won't have any cotton at all, and the big warehouses would get all of it?

Mr. Mellen's reply was:

> Yes, sir.

Then Mr. BROWN asked him this question:

> That is the reason this bill was introduced, as I understand?

And Mr. Mellen's reply was:

Yes, sir.

In this testimony we have the positive proof from the monopolistic port warehouse interests that they are attempting to force a situation that will cause the Government to give them a great advantage over the interior warehouses.

MR. CRAWFORD ADMITS STORAGE SPACE BECOMING SCARCE AT THE PORTS

In the printed hearings before the House committee, page 236, Mr. CRAWFORD of Michigan, a member of the committee, made the following statement and asked the following question:

Well, you have got your Government scouting the whole country today for warehouse space in connection with the defense program. How does he know but what within a few days he will be offered more earnings than he now has in the warehouse?

Mr. CRAWFORD, the leading opponent of this bill is apparently apprehensive of what the port warehouses will do. He has suggested that space is becoming scarce—and it certainly becomes scarce at the ports first—and will, doubtless, expect the port warehouses to increase their charges at the end of the first year. The warehousemen at the port, if this bill does not pass, can kindly inform our representative of the Commodity Credit Corporation that he will be compelled to pay a much higher price for storage at the end of the year, but if he doesn't like the rate, there is nothing to keep him from paying the freight on the cotton back to the point that it was originally shipped from.

I repeat that no individual would reconcentrate this cotton as proposed by the Commodity Credit Corporation if he owned it individually. We should certainly not do anything for the Government that would be against our own selfish interest if we were occupying the Government's place in the transaction.

In order that the Members of the House may know the kind of form that the local warehouseman must fill out, making two original copies, I am inserting it herewith:

[Front]

Fill all blanks with ink, indelible pencil, or typewriter. Only white copy marked *original* is to be signed; the colored copy marked *duplicate* is to be retained by the producer. No papers containing additions, erasures, or alterations will be accepted by Commodity Credit Corporation

C. C. C. Cotton Form A (1940-41)

This note must be tendered prior to July 1, 1941

(Original)

DO NOT WRITE ON THIS FORM UNTIL YOU HAVE CAREFULLY READ 1940-41 INSTRUCTIONS

COTTON PRODUCER'S NOTE

$_____ Date _____

On demand but not later than July 31, 1941, for value received, the undersigned promises to pay to the order of _____, payee, at the office of the Commodity Credit Corporation, Washington, D. C., _____/100 dollars, with interest from the date hereof at the rate of 3 per centum per annum payable at maturity. The makers and endorsers severally waive presentment for payment, demand, protest, notice of protest, and notice of nonpayment of this note.

This note is secured by a pledge of warehouse receipts representing _____ bales of cotton aggregating _____ pounds gross weight.

Witness:

_____ (Name) _____ (Address) _____ (Signature of producer)

Warehouseman should complete schedule of warehouse receipts. If space insufficient, attach schedule firmly. Have producer and warehouseman identify same by signature Note in space below that schedule is attached and fill in line marked "Total" only.

SCHEDULE OF WAREHOUSE RECEIPTS

[Enter warehouse receipt numbers representing cotton of only one grade and staple length]

WAREHOUSEMAN'S CERTIFICATE AND STORAGE AGREEMENT

All charges on the cotton listed in the above or attached schedule are paid to August 1, 1940, or dates of warehouse receipt(s), whichever is later. This cotton is in existence, is undamaged, and is and will be kept under cover within a structure enclosed in such a manner that the cotton is adequately protected from weather damage. The cotton represented by the warehouse receipt(s) listed above or in the attached schedule is insured against loss or damage by fire for the full market value at the time and place of loss under policy or policies providing coverage similar to that afforded under the standard fire policy of the State in which the cotton is stored, and will be kept so insured so long as the receipt is outstanding. All charges, except as stated below, including storage and insurance, receiving, tagging, weighing on arrival, sampling on arrival, storage of samples, picking out by tag numbers and loading into cars or trucks, will be at the rate of 15 cents per bale per month or fraction thereof, or the warehouseman's established tariff, whichever is less, for the period from August 1, 1940, or the dates of the warehouse receipt, whichever is later, through July 31, 1941, and at the rate of 12½ cents per bale per month or fraction thereof, or the warehouseman's established tariff, whichever is less, after July 31, 1941. Charges for reweighing and resampling will be at the rate of 10 cents per bale for each service (including ranging or out-and-in charges) or the warehouseman's established tariff, whichever is less. Compression charges, and flat delivery charges on cotton moved from a warehouse operating compress facilities without payment of compression charges, will be at the rate provided in the warehouseman's established tariff in effect July 1, 1940. The warehouseman agrees that the charges specified herein shall apply for the benefit of Commodity Credit Corporation, the producer signatory to the note and any subsequent holder of the warehouse receipt, provided that after 15 days from the date the cotton is released from the loan this agreement of the warehouseman shall not be applicable. Commodity Credit Corporation may, by agents or otherwise, inspect the cotton, the warehouse, and the records of the warehouse at any time. The warehouseman agrees that if the cotton is ordered shipped by Commodity Credit Corporation, for the purpose of reconcentration or otherwise, shipments will be made promptly and storage charges will stop on receipt of shipping instructions and surrender of the warehouse receipt(s) unless the cotton is shipped within a reasonable time, as determined by the Corporation. Representative samples from both sides of the bale(s) of cotton listed in the above or attached schedule were drawn by the undersigned warehouseman and

delivered or forwarded for classing to a Board of Cotton Examiners of the United States Department of Agriculture, except for cotton classed under either a Form 1, Form A-2, or Form MD-4 Classification Memorandum of the United States Department of Agriculture, and the grade and staple shown in the above or attached schedule is the grade and staple reported by said Board of Cotton Examiners. The undersigned has read sec. 7 of the Loan Agreement on reverse side hereof.

LOAN AGREEMENT

Print or Type { Producer ..... County ..... } Print or Type
{ Address ..... (Post office) R. F. D. ..... State ..... }

To secure note of ..... (Date) of ..... (Insert face amount) payable to ..... (Name of payee)

1. The undersigned hereby sells, assigns, pledges, and/or hypothecates to said payee and any subsequent holder the warehouse receipts for cotton listed on the reverse side hereof as collateral security for the payment of the indebtedness as evidenced by the note referred to above in this loan agreement.

2. In consideration of the loan evidenced by the aforementioned note, the undersigned represents and warrants to and agrees with all holders of the note as follows:

(a) That the cotton represented by the warehouse receipts listed herein or in the attached schedule is in existence and in good condition and that such cotton was produced in 1940 by or for the undersigned on only one farm and that such farm is located in ..... County, State of ..... as ..... (state whether landowner, landlord, tenant, or sharecropper. If as tenant or sharecropper, landlord must execute lien waiver on reverse side hereof unless the note and loan agreement are signed jointly by landlord and tenant or landlord and sharecropper as the case may be).

(b) That said cotton is "eligible cotton," as defined in section 1 (c) of the Instructions (1940-41 C. C. C. Cotton Form 1) or any amendment thereto.

(c) That if the acreage planted to cotton in 1940, on any farm in which the undersigned had an interest in 1940, exceeded the cotton acreage allotment established for such farm, he has obtained the approval in section *A*, or *B* on the reverse side hereof of the County Agricultural Conservation Committee of the county in which such farm is located.

(d) That if any tenant or sharecropper has an interest in the proceeds of the cotton pledged in security for this loan that such tenant or sharecropper will be paid his pro rata share of the proceeds of this loan and his pro rata share of any additional proceeds received from such cotton.

(e) That he is the owner of such cotton, has the legal right to pledge same, and that the beneficial title thereto is and always has been in the undersigned producer and that the benefits of the loan will accrue solely to the undersigned and any tenant or sharecropper having an interest in the proceeds of such cotton and have not been assigned or transferred to any other party by way of assignment, sale, or option. (A misstatement or misrepresentation in regard to any of the foregoing renders the producer personally liable under this loan agreement and subject to criminal prosecution under the provisions of the Criminal Code of the United States.)*

3. Upon maturity any holder is authorized to place all or any part of said cotton in any pool or pools with any other cotton held by the holder under generally similar loan agreements, and, either by pool or separate contract, to sell, assign, transfer, and deliver the cotton or cotton documents, evidencing title thereto, at such time, in such manner, for cash or upon such terms and conditions, as such holder may determine, at any cotton exchange, or elsewhere, or through any agency, at public or private sale, for immediate or future delivery, and without demand, advertisement, or notice of the time and place of sale or adjournment thereof or otherwise; and upon such sale, the holder may become the purchaser of the whole or any part of such collateral security.

4. After deducting all fees, costs, and expenses incident to insuring, carrying, handling, and marketing the collateral and accounting to the undersigned producer, including reasonable attorney fees, the holder shall apply the residue of any sales proceeds or insurance proceeds toward the payment of the above-mentioned note, returning the overplus, if any, only to the undersigned, or his personal representatives, without right of assignment or substitution of any other party. The undersigned producer shall be and remain liable to the holder for any deficiency only in the event that the loan was obtained through fraudulent representations by the producer.

5. The undersigned agrees that if any Federal agency or instrumentality shall become the holder of the above-mentioned note, it may, before or after maturity, move the collateral cotton from one storage point to another, subject to the provisions of the act of June 16, 1938 (Public, No. 660, 75th Cong.), and pay freight; may compress the commodity; may store separately, in block, or otherwise; may insure or reinsure against any risks, or otherwise handle or deal with the commodity, as may be deemed appropriate and proper subject to the terms of this loan agreement, releasing, substituting, and obtaining any and all instruments and documents, and paying or discharging any accrued or accruing charges or expenses as may in any way be appropriate or necessary therefor. Any costs and expenses connected with such handling without regard to insurance savings by reclassification or duration shall be a charge against the commodity, payable out of any proceeds thereof.

6. The undersigned further warrants for the benefit of any holder of the above-mentioned note, other than the payee, that he has no defenses to said note or set-offs or counter claims against the payee; that none will be claimed which may hereafter arise against any prior party and that in case of any judicial proceedings on said note by any such holder he hereby waives the right to any and all defenses, counterclaims, or set-offs against any or all prior parties.

7. The undersigned, and all warehousemen by executing certificate and storage agreement on the reverse side hereof agree that they and each of them have full knowledge of the provisions of section 35 of the Criminal Code of the United States,* and have made the representations and statements contained herein, for the purpose of influencing the Commodity Credit Corporation to acquire the above-mentioned note by purchase, discount, or rediscount, or otherwise, or to extend or renew credit in reliance thereon.

8. Unless the above-mentioned note is made payable to the Commodity Credit Corporation the undersigned represents he received on the day the above-mentioned note is dated the full amount thereof, without deductions for interest, commissions, storage, insurance, or other charges. The undersigned hereby acknowledges that he has received a copy of this agreement and the above-mentioned note.

Read, considered, and signed.

I am inserting herewith The Story of S. 262, which was prepared by the central committee representing the cotton compress and cotton warehouse industry throughout the interior of the cotton-producing States:

THE STORY OF S. 262—REGULATING COTTON WAREHOUSING

THE NECESSITY FOR THE BILL

The bill is made necessary because the Government-owned cotton is not technically covered by existing acts of Congress specifically expressing the policy of the Congress with reference to the movement of cotton from interior locations to port locations.

The warehouse industry is an essential part of the Government's loan program. Without a warehouse near the source of production the producers would be unable to obtain Government loans, because the warehouseman's certificate and waiver is an essential part of the loan agreement (see record, pp. 496 to 500.)

Early in the beginning of the loan program the Commodity Credit Corporation undertook a comprehensive movement of the cotton from interior locations to port locations. The Congress, in response to protests from interested producers, added an amendment to the Agricultural Adjustment Act of 1938 prohibiting such movement without the written consent of the producer (sec. 383 (b) of A. A. A. of 1938.)

With this law in effect the Commodity Credit Corporation made it a condition precedent to the obtaining of a loan by the producer that he waive such rights and give written consent to the movement of his cotton from interior locations for reconcentration purposes.

Based upon this written consent thus obtained, the Commodity Credit Corporation entered upon another program of moving the cotton from its interior locations to the ports. Again Congress received protests from the interested producers, and in response to that protest passed what is known as the Bankhead Act (Public, No. 660, 75th Cong., effective June 1938). This act related only to Government-loan cotton. At that time there was no Government-owned cotton.

Subsequent to its passage and some time during July 1939, the Government negotiated a barter deal with England providing for the exchange of cotton for rubber, involving about 600,000 bales of cotton.

Before this treaty was completed and the details worked out, the Commodity Credit Corporation announced for the third time that it was going to move from interior locations to the ports substantial volumes of cotton so as to have it available for exchange with England under the barter agreement. It was variously estimated that it would require the movement of some 3,000,000 bales from the interior to the ports for that purpose. This record shows through the testimony of the Government that it would have required the movement of more than 6,000,000 bales from interior locations to port locations in order to find the grades and staples involved in the 600,000 bales delivered to Great Britain (R. 344).

Because of the announcement of the Commodity Credit Corporation of its intention to move this large volume of cotton from interior locations to port locations, for the purpose of meeting the terms of the barter deal, Congress, in passing the Barter Act, inserted an amendment that required the Corporation to sample, grade, and class the cotton at its then location rather than to incur the cost of handling, rehandling, and transportation to the ports. Experience has now shown the wisdom of the congressional amendment. If the Commodity Credit Corporation had obtained its way, 6,000,000 bales would have incurred transportation cost averaging approximately $2 per bale for the movement to the ports in order to deliver 600,000 bales to the British Government.

The prior regulations prohibiting the movement from interior locations to port locations related to Government-loan cotton and to the barter cotton. After the completion of the barter deal the regulations contained in that act were no longer effective, having automatically expired upon delivery of the cotton to Great Britain, and there were no regulations covering the cotton to which the Commodity Credit Corporation had taken title.

Therefore, as soon as the barter deal was completed and the 6,200,000 bales of Government-owned cotton relieved of the regulations of Congress, the Commodity Credit Corporation again inaugurated a program to move the cotton from interior locations to port locations. This time it was inaugurated under a so-called scheme of competitive bidding. The important fact, however, to bear in mind is that just as often as the Congress expressed its will to prevent the movement from interior locations to port locations the Commodity Credit Corporation has undertaken such movement regardless of the declared policy of the Congress. Technically, the Government-owned cotton does not come under the terms of the existing acts of Congress, but the cotton was originally under such acts, and since they had been passed at least on three occasions by the Congress it should be expected that the policy of the Congress would be well known to the agencies of this Government and respected.

THE REASONS WHY THE COTTON SHOULD REMAIN AT ITS PRESENT LOCATIONS

(a) No export demand

Port stocks now exceed any possible present or future export demand.

	Bales of cotton
Exports (period Aug. 1, 1940, to Jan. 19, 1940)	636,602
Exports (period Aug. 1, 1939, to Jan. 19, 1940)	3,451,045
Stocks of cotton in port warestocks	3,404,791

These port stocks have actually increased since 1938 from 2,981,873 bales with a declining export demand.

The distribution of the Government-owned and Government-loan cotton as of November 30, 1940, but not including any of the 1940–41 loan cotton (because of the lack of a record showing its distribution) as between ports and the interior communities, is as follows:

[In bales of cotton]

	Government owned	Government loan	Total
Ports	1,552,994	404,924	1,957,918
Interior	4,646,921	1,626,498	6,273,419
Total	6,199,915	2,031,422	8,231,337

The Government-owned and Government-loan cotton located in interior warehouses is situated in 907 interior communities, having an average stock of 6,917 bales per community. The port stocks are located in 17 port cities, and they have an average stock of 115,172 bales per port community.

Since there is no possible immediate demand for the cotton in export commerce, it is contrary to sound economics to incur handling and transportation costs on the cotton for such movement. The Government stated that the cost of freight would be $1.43 per bale (R. 370) and 10 cents per bale for receiving, 5 cents per bale for supervision (R. 371), and 60 cents per bale for compression (R. 372), totaling $2.18 per bale and equaling, on the 2,000,000 bales to be moved to port locations, $4,360,000.

The greatest amount that the Government has alleged would be saved as a result of competitive bids is stated by the Government to be $1,800,000. It would take nearly 3 years for this savings to equal the transportation and incidental costs.

(b) Interior stocks have an important bearing on warehouse handling and storage charges

The location of the Government-owned cotton in interior warehouses is now serving as a basis to bring down the producer's handling and storage charges on Government-loan, Government-owned, and the producer's cotton sold independently of the Government loan.

The record shows by undisputed testimony that as interior stocks have gone up the cost of handling the producer's cotton has gone down, and as to interior points this included both Government-loan cotton and the producer's cotton sold independently of the loan (R. 69). Briefly, the showing is that prior to the Government loans the handling and storage charges were 50 cents per bale for the first month and 25 cents per bale for the next 3 succeeding months. The average holding time was shown to be 3 months. It was also shown that as the Government-loan stocks went up at interior points these charges went down, and on the date of the hearing the charge was 15 cents per bale per month for the first month and each succeeding month including insurance, whereas the prior rates did not include insurance. This cost amounts to 3.257 cents per bale per month.

It was shown that the charges, at the ports for handling the Government-loan cotton for the account of the producer, were the same as at interior points, but for the han-

dling of the producer's cotton marketed independently of the loan, the charges were on substantially the same basis as they had been for many years and that the lowest charge was shown to be 35 cents for receiving and the first month's storage, and 21 cents per bale for each succeeding month thereafter. For the average period of 90 days this represents a cost to the producer at the ports of 77 cents per bale as compared with the cost at interior points of 45 cents per bale (R. 72–74).

The importance to the producers and the Government of holding the charges down on the producer's cotton, both that marketed through the loan and that marketed independently of the loan, is reflected by Exhibit 5 (R. 68). It is there shown that for the eight seasons for which we have a complete record there were seven loan programs in which the producers inducted 19,614,553 bales into the Government loans. Of that figure the producers had repossessed on July 31, 1940, 7,753,607 bales and sold it into trade channels. During the eight seasons in which there were seven loans the cotton farmers of America produced 100,357,233 bales; nearly 90,000,000 of those bales were marketed through the interior facilities and the handling charges of such facilities are, therefore, an important factor in the producers' income. Based on the yearly average production of 12,397,000 bales for the 8-year period the savings to the producers amounted to $5,579,000 per annum in connection with the cotton marketed into trade channels.

In other words, by holding this cotton back in the interior and thus creating a backlog of dead stock, so to speak, supporting the interior warehouse industry, the charges to the producers, as a whole, have come down to where the producer is saving almost $6,000,000 per annum, and adding that to his income from the production of cotton.

Conversely, it is shown that the advocates of the competitive-bidding system have not brought their charges down, but rather advocate a two-price system, namely, a level of rates based on the dead stock at the very lowest level with the highest rates applicable on the producers' moving stocks. The adoption of the competitive-bidding system can only mean the spreading of this two-price system throughout the entire industry.

Measuring the possible future charges to the producers, if the Government's program is made effective, by the charges made at port locations and by the advocates of competitive bidding the producers would have added to their handling and storage bill nearly $6,000,000 per annum so that the Government could save an alleged amount of $1,800,000 per annum and lose in transportation charges approximately $5,000,000.

The president of the Commodity Credit Corporation admitted that the presence of the Government stocks at interior locations had enabled the warehouses serving the farmers to reduce their charges on current cotton, thus confirming the major contention of the warehousemen supporting S. 262 (R. 415).

The record shows by reference to income-tax returns of the largest and most profitable operators; of average operators; of medium-size companies and the smallest operators, that none is making more than a reasonable profit and that the smaller companies are, indeed, on the ragged edges of bankruptcy under the present rates (see pp. 82, 83, 84, 85, and 488, 489, 490, 491, 492).

The record also shows that charges of the interior warehouses to the Government have come down from 25 to 18, to 15, to 12½ cents per bale per month (R. 69–70). Under such circumstances it is reasonably certain that if we place the Government-owned dead stock on the competitive-bidding basis and bring the rates on that stock down to the lowest level, then obviously the rates on the other stocks must rise correspondingly. The program of competitive bidding presents the narrow view of obtaining the lowest cost to the Government and ignoring the effect of such system upon the charges paid by the producer.

THE CALL FOR BIDS FAVORED PORT WAREHOUSES AND DID NOT PERMIT INTERIOR WAREHOUSES TO COMPETE ON A FAIR AND EQUITABLE BASIS

The call for bids, dated November 8, 1940, was presented to the warehouse industry on three forms (R. 100–105). The important thing in connection with all three forms is that the Corporation included the Government-owned and the producer loan cotton of 1938–39 and 1939–40. Form 2 covered the cotton on hand and permitted a bid to be made to obtain additional cotton moving from its present location to the warehouse of the bidder. It, too, covered both Government-owned and producer loan cotton.

However, the producer loan cotton was subject to the Bankhead Act and could not be moved. The Government-owned cotton was not technically covered by that act. Therefore the bidder for reconcentrated cotton knew that he could bid for Government-owned dead stocks and receive only that. This is an important fact dealing with the unfairness of the method of calling for the bids.

Bearing the above facts in mind, attention is directed to the fact that Form 55–A–2 contained eight arbitrary, fixed amounts for the performance of such services as compression, receiving, and delivery to shipside, whereas Form 1 did not contain any such arbitrary, fixed amounts.

Therefore, in order for the interior warehouses to compete for the reconcentration of cotton, they would have to bid to compress cotton for 30 cents per bale. Their taxes and labor costs exceed 35 cents per bale. They would have to bid and assume an obligation of effecting delivery to shipside (meaning delivery of the cotton within 200 feet of the ship's tackle) for 15 cents per bale. This was obviously an impossibility and presented an impossible commitment to be made by an interior warehouse.

In answer to this proposition, the president of the Commodity Credit Corporation stated that the term "shipside delivery" was a service that is rendered only by port warehousemen (R. 341), thus admitting that the forms were deliberately designed for bids from port warehouse only, and permitting those facilities to bid on Government-owned dead stocks, while requiring the interior facilities to bid on all characters of cotton in such a manner as to require the averaging of the bids. Obviously the interior facilities were placed at a decided disadvantage and were unable to bid in order to hold or reconcentrate the Government-owned cotton.

The most conclusive fact establishing the noncompetitive character of the call for bids is shown by the limited nature of the response received by the Corporation. As to interior points, dealing with the reconcentration bid (Form 2), the Corporation received bids for only 270,450 bales out of an existing stock in excess of 8,000,000 bales from bidders other than Anderson, Clayton Co. From that company the Corporation received bids for 365,000 bales to be moved from one interior warehouse to another and 1,125,000 bales to be reconcentrated at port locations. Thus, disclosing that only the powerful financial companies were able to bid to reconcentrate the cotton at interior points under the form containing the arbitrary fixation of amounts for compressing and delivery to shipside.

The president of the Commodity Credit Corporation admitted that it probably would not move in excess of 2,000,000 bales and more than likely only 1,500,000 bales. (R. 337.) Of this figure Anderson, Clayton Co. is the bidder for 1,490,500 bales, and under the conditions set out in the form it is almost a foregone conclusion that it will be the successful bidder.

The total bids received on all cotton for movement from one warehouse to another (reconcentration) covered 3,396,450 bales, nearly half of the bids on this amount were bids from facilities owned and controlled by Anderson Clayton Co. Only 270,450 bales were included in the bids of interior warehouses other than those owned by Anderson Clayton Co. Obviously, this meager amount of cotton discloses the inability of the interior to bid on the forms as presented. As a matter of fact, the Corporation received bids from only 25 bidders at port locations and 62 bidders at interior points for the reconcentration of any of the cotton (R. 411, 420–421).

S. 262 PRESERVES THE PRESENT SYSTEM OF HANDLING GOVERNMENT-OWNED, GOVERNMENT-LOAN, AND PRODUCERS' COTTON

Heretofore, and prior to November 8, 1940, the Government has called the industry in and negotiated rates for the handling of the cotton. That system has produced the results heretofore described. The purpose of S. 262 is to preserve that system. It provides that such contracts shall be negotiated if, as a result thereof, the Corporation is able to obtain reasonable and satisfactory rates, otherwise it permits the Corporation to freely advertise for competitive bids in order to protect the Government and the producers.

The Lend-Lease Bill

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1941

RADIO ADDRESSES BY HON. GERALD P. NYE, OF NORTH DAKOTA

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several addresses I have delivered over the radio.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

LEST WE FORGET AND REGRET

(Delivered over radio forum, Mutual Broadcasting System, Willard Hotel, Sunday evening, January 19, 1941)

The advocates of H. R. 1776 have maintained that dictatorship was a thing that had to be destroyed, by steps short of war, of course. It is anything but humorous now to find these advocates concluding that the only way to destroy European dictatorship is to create an American dictatorship. That is precisely what H. R. 1776 does.

This measure is another step, but not to be called a step short of war. It is a step all but straight into war.

Under its terms and "notwithstanding the provisions of any other law" the President is empowered to give, lend, lease, or sell any American defense article to any nation he chooses (however secret and advantageous to our own defense our military mentors might consider it); to communicate any defense secret he might wish to any nation; to permit warring nations he names to repair their ships in American ports and thus bring the war to our very shores; to give our

Navy to another nation if he chooses; to open the doors of the Treasury to such nations as he might choose and at such time as pleases him. It is the most brazen request ever made, a request upon Congress to surrender every bit of control it possesses to check or halt a march to war, a request for Presidential power greater than was ever accorded even a wartime President.

The fundamental objections to this bill are in no way related to the issue of helping Britain to win her war, the war which she herself declared.

Honesty in our thinking now may save a lot of dishonest explaining in the years to come. What help that is short of war might we now give Britain that isn't already being given, or that cannot be given by a Congress that has overwhelmingly granted help it could consider short of war?

And what is it that Britain wants and needs? Churchill, who once told us that the war could have been ended in 1917 if only we had stayed out of it, tells us now that Britain must have credit, a thing we were told by our own leaders she had so much of back in the arms-embargo-repeal days. In the same breath Mr. Churchill says Britain does not need American sons, not in 1941, just credit and lots of it. (Churchill didn't say what would be the need for American boys in 1942.) It's credit they ask now, whereupon the President asks for the power to give England our Navy if he thinks such is in defense of America. Incidentally, the call for American credit comes long before those who have profited from the British style of democracy have even begun to scratch their own resources to save their own country. Morgenthau, Knox, and Stimson to the contrary notwithstanding, Britain has great sources of credit here in the Americas upon which to draw, as revealed by the Federal Reserve Bank and other good sources.

What of Britain's need for ships if she is to save herself; her ability to carry on her necessary commerce? The London Economist of November 21 boasts of Britain's unprecedented naval and shipping tonnage. Statistics by the British Government in September reveal that during the war months Britain has managed to increase her own imports to the tune of 33 percent and has lost only 2 percent of her export trade in spite of the war.

If Britain must be helped with her commerce, what's the matter with our offering to take her shipping and commerce in neutral waters off her hands, turn her ships free for her immediate war needs, and get our idle merchantmen at work? Why not? A London publication of last month tells why, by boasting of British ability to hold her foreign auto market against all comers.

Let's quit mincing words. This present howl is not occasioned by fear of the outcome of the war for England nearly so much as by fear that England may have to pay for her own war, and by some Americans who probably encouraged England to take the war route. This is a good time for Americans to do a visit to the nearest veterans' hospital, and to weigh again the other costs still upon us as a result of our last "democracy" rally. Such visiting and such weighing may save us from the plunge that 1776 invites. We should do these things lest we forget, lest we regret once again.

OUR REAL DANGER IS IN INVOLVEMENT IN WAR

(Delivered over the Columbia Broadcasting System on Saturday, February 1, 1941)

Once we were of pretty much one mind in determination that our American life depended largely upon our continuing divorcement from the politics, the hates and the wars of Europe, the divorcement for which the fathers of '76 paid so dearly. In 1917 we took a little feeler on the theory that maybe Europe had changed since '76. That feeler and the consequent experience gave meaning and new life to the warnings of Washington, Jefferson, Monroe, and their kind.

But during late months we have given ear to propaganda. We've permitted sympathies to become powerful emotions which have carried us to dangerous extremes, and now, finally, to the challenge of participation in war abroad.

That challenge is the lend-lease bill, ironically numbered 1776. It is a brazen, open proposal to let the President set aside, at his choosing, provisions of existing law which safeguard our continued noninvolvement in Europe's war. It would authorize the President to exercise complete control over the American purse and to take certain steps which are actual steps to war. None who read the lend-lease bill is going to call these provisions of the law "hidden." They are as open as the face of the clock, as direct as provisions of law can be direct.

Only yesterday Secretary Knox testified that the President already has the power to order the American Navy to convoy munitions shipments into dangerous war zones. What this action would invite is obvious. Denial of this power ought to be clearly written into law by this Congress. The lend-lease bill would put us straight into the war by permitting the war vessels of belligerent nations to enter our own ports for repairs, bringing submarine warfare to our very shores. The bill would empower the President to give to any nation he chooses any part or all of our Naval Establishment.

This is a sad hour. Many are believing that the lend-lease bill is nothing more than a give-help-short-of-war-to-England bill. Overwhelmingly, the American people seem to favor help to England. Once the ice was broken, as it was by repeal of the arms embargo, it has not mattered how much or how little help we gave, or give, so long as it was short of war. These people must be given time to realize that this pending lend-lease bill is not confined to steps short of war. Indeed, this present legislative effort combined with what is being done by our Government through the purchase, for instance, of the tags which are to identify our dead and our wounded, should stir in every American heart the knowledge that we are moving fast, oh so fast, into another European war with the only purpose to be that of reforming and bringing order to Europe. What a sight it makes! Thomas Jefferson described it when he said: "For us to attempt to reform all Europe and bring them back to principles of morality, and a respect for the equal rights of nations, would show us to be only maniacs of another character."

What can we do for Britain short of war that is not now being done? The answer to the question is only revealing of the fact that the lend-lease bill contemplates steps now that are not short of war. It is amazing how lightly this challenge seems to rest upon some heads.

Without the fear of danger of our being successfully attacked by European powers if they were successful in Europe, this kind of legislation could not get to first base.

This fear is not warranted. Give Hitler whatever power might come to him by reason of the outcome of the war in Europe and give us the same time that he has to add to that power, then if he should choose, foolishly, to make war upon this hemisphere we can give him, if I may use the expression, "the works" as no power was ever given "the works" before.

Just now we are being filled up with the awful fear that England is unprepared to carry on further without our financial aid, when in truth England has possessions and holdings here in this hemisphere convertible into a purchasing power that is great enough to continue her purchases, on such a scale as she has been purchasing, for many, many years. Surely, if the cause of saving England is a good cause, Englishmen themselves should be willing to spend their own wealth in that savings before we are asked to pour our resources into such a cause. Sometimes I think that the real purpose involved in all of this agitation for our benefit is that mainly of winning access to our resources and wealth, to be poured into that wasteful European game as we poured it once before, never to see it again. The Indians have a word for it. It is an old saying among the Indians that "White man fool Indian once, shame on white man; white man fool Indian twice, shame on Indian."

Our American defense has never been dependent upon the British Navy, and it is not thus dependent now. And it never will be thus dependent. Instead of dribbling away our resources and gambling on any order in Europe, we ought to be making ourselves strong in an economic way, building up our resources, making strong and healthy our own land, and devoting our full energy to the building of whatever defense might be called for against the worst that could possibly grow out of this pending world strife. We ought to take hold of ourselves before it is too late. It is going to be too late if we permit enactment of this so-called lend-lease bill. That can be prevented only if the American people will make strong, very strong, their protest against this drift to war; so strong that the protest can be heard above the din and the rabble occasioned by this pressing propaganda and the voices of fear and of hate, voices that have quite completely forgotten that America's real danger lies in involvement in another war, which will add to burdens already so great that ours is a struggle to win our way out. Let that voice be heard. Democracy, our kind of democracy, can be expected to respond to it. Let us make it heard as it will be heard if only there will be acknowledgment of the fact that the "isms" of today are as nothing compared with what will be our lot if we invite the shambles that will be ours in a political, economic, and social way if we but let ourselves be dragged into this war that promises a duration of years.

POLITICAL BETRAYAL?

(Excerpts from address before Legion of Honor, Lincoln Day banquet at Philadelphia, Pa., Wednesday evening, February 12, 1941)

Lincoln, with all his other accomplishments to which we pay constant tribute, contributed more than did any other to the creation of a great political party, the Republican Party. He gave that party great character by his leadership. His was a leadership recognizing the need for a strong second-party system; a leadership of integrity; a leadership which offered phrases and speeches which were meant by that leader and stood by that leader. Lincoln's was a leadership that inspired confidence in what he did and what he had to say.

Not as much can be said of some more modern leaders who talk in a campaign for oratorical effect and who say things in a campaign which they do not mean.

Last fall a paramount issue confronting the people of the United States in the Presidential campaign was the question of staying out or getting more deeply into Europe's war. Millions of the American electorate listened again and again and again to Wendell Willkie, counting him more apt than his opponent to keep us out of that war. During his campaign he told Americans it was his purpose to "keep out of war at all hazards"; that "the battle of America is a battle for liberty." "It belongs right here at home." The American people listened again and again to assurances by Willkie of will and determination to keep this country out of war. He charged

again and again and again that the Roosevelt administration was edging us toward war by careless speech and careless action. He declared that President Roosevelt was deliberately inciting us to war, encouraging other countries to hope for more from us than we were able to give. That the President was being pushed and moving to dictatorship; that Roosevelt contributed to the downfall of European democracy and alleged that Roosevelt shared direct responsibility for the European war. Willkie alleged a determination to do everything possible to prevent a moving in of dictatorship upon our own Government. Just before election Mr. Willkie said at Baltimore: "On the basis of Roosevelt's past performance with pledges to the people you may expect we will be at war by April 1941 if he is elected."

And now comes a legislative proposal called the lend-lease bill proposing the conferring upon the President of powers hereto unheard of even in wartime in this country of ours. There follows a hurrying and scurrying on the part of Mr. Willkie to move again into the limelight; he flies to England, spends 6 or 7 days with officials and photographers, and returns as an expert on the issues involved in the pending fight on the lend-lease bill.

Yesterday, before the Senate Foreign Relations Committee, Mr. Willkie was confronted one after another with these election declarations of his. Men upon the committee wanted to know what had come over the man that would cause him to so completely alter the position he had enunciated in the last Presidential campaign. His explanations were arrogant and an insult to the American electorate and particularly those millions who listened to him in all seriousness last fall. What was his explanation? Merely this: "It was a bit of campaign oratory."

I am not one to enjoy and laugh at light explanations of that kind. Instead I find myself enraged, enraged because of the degree of betrayal which was afforded by party leadership last fall. If Mr. Willkie has not destroyed a two-party system in this country, he has at least contributed largely to its destruction. He has told the American electorate not to believe Presidential candidates in the future. He has very definitely jeopardized the two-party system and contributed to the creation of a one-party system and a drift to dictatorship.

My mail for many weeks has brought to me communications from individuals who were wondering if there might have been a conspiracy starting with the nominating convention here in your city of Philadelphia last summer; a conspiracy by forces whose purpose it was to deny to the American people an honest division of opinion on this international meddling issue; a conspiracy to deny to the people of America a chance to make their individual weight and wishes felt on this question of our democracy moving into another foreign war.

Whatever degree of conspiracy did or did not exist, there can be no discounting the degree of betrayal which many people who supported him feel that Wendell Willkie has afforded. His leadership has been indeed far, far removed from the caliber of leadership which was our good fortune in the days of Abraham Lincoln.

AID BRITAIN INSIDE THE LAW

(Radio address February 17, 1941)

If the people of America only knew what was in this so-called lease-lend bill—if they only knew how far it was from being a national-defense bill, or a bill for aid to England—they would raise their voices in louder protest than the American voice has ever been raised before.

Many Americans who know what is in the bill are restraining their voices because of an element of fear that has been injected, fear of retaliation against those who dare to protest this proposed grant of unheard-of power to the President. There is not need to fear honest expression of honest American thought at this time. We are not at war. Instead we are at peace with all the world, and presumably our democracy is functioning as always. Let the courageous American voice be heard. Let there be honest speaking of wishes and interests at this time when, as many of us believe, the future of democracy rests in the decision to be made within the next 2 or 3 weeks by the 96 Members of the United States Senate.

The lease-lend bill is a bundle of concealed dynamite—dynamite that would destroy quite completely the power of the people or their representatives, the Congress, to exercise any voice of influence in the further course that our country may pursue which would lead inevitably to our participation in Europe's war. The bill is a vast grant of powers belonging with the people but given under this bill to the President. It would give him the power to make commitments with no limit to any power upon this earth, commitments which a Congress would quite surely have to back up with appropriations since it would be Congress that granted the power to the President to make the commitments.

It is a bill which, becoming the law, would find the President empowered to open our ports to the war vessels of certain nations at war, for repairs. This would most certainly bring to our very shores submarine warfare and all its challenge to what we certainly would consider our own best interests and defense. The bill would permit the President to give to any power upon earth that he chose, any part or all of our national-defense establishment, including our Navy. This power would include that of giving such part of our national defense as is now on order to another power when it is completed. The bill is one that would empower the President to ignore any law that has been written with a view to keeping us out of war, and to promulgate his own rules and regulations as respects our further contact with the European war. To put it mildly, the lend-lease bill is a go-to-war bill, and its execution would certainly bring those incidents which would leave Congress with no alternative than that of declaring war.

All of these powers are granted in the name of insuring our defense and of helping England. We are told that England is out of money and can no longer continue making purchases of the supplies she needs from us unless we afford her the money and credit necessary; and whose word do we take as to the truth of this declaration? Only that of spokesmen for Great Britain. No American study has been made or permitted of just what might be the holdings of Great Britain in this hemisphere that are convertible to a purchasing power. The truth is that on the basis of Federal Reserve bank figures afforded last fall Britain has much here to draw on still to continue her cash-and-carry purchases of necessities. We are being brought into this war to finance it—to finance the saving of England—even before England had begun to use her own resources to the saving of herself. It has been the same old story of making a sucker of Uncle Sam without a thought of the awfulness that is to follow when we strive again to balance our economy and to operate on a normal basis. When it is found that the repeal of our arms embargo and the enactment of the lend-lease bill, with all its powers to the President, is not enough, from England's standpoint, we shall expect the invitations sure to follow—to send some American boys to the European battlefields to the end that there might be American bloodshed there. In this manner can our interest in the war be expedited to a point where we shall throw our everything into a cause that is so completely foreign to our own.

This all happened once before. We even went so far in 1917 as to believe that we could declare war without having to send men into the service and into Europe. Months after this declaration of war Englishmen were wishing for the shedding of some American blood in Europe so that President Wilson would drive for greater force by America in the European war. Viscount Esher, who was then the right-hand man to the King of England, wrote in his journals on August 3, 1917, this: "No American is likely to be killed before November. This is unfortunate, as Wilson may require to be steadied before then, and only the death of young Americans can insure him stability." Here was a cold, cold prayer for blood. A few days later, after making this entry, Viscount Esher writes in his journals that Henry Morgenthau, at that time prominent in administration circles, as his son is prominent at the present time as Secretary of the Treasury, had asked to see him, and of this visit with Mr. Morgenthau the British nobleman wrote in his journal this—of Mr. Morgenthau's report to him:

"Hitherto American organization has proceeded slowly. There are reasons concerned with the domestic adjustment of American policy that made more rapid progress impossible. But the Government now possesses fuller powers and progress should be accelerated. * * * That there is another aspect of this question Mr. Morgenthau is aware, and he realizes the importance upon the morale of the French Army and the French people of cementing the alliance by shedding American blood at the earliest possible moment. If many lives have to be sacrificed, the influence upon the American people can only be beneficent."

Ah, how cold-blooded was the process then! How easily then we came to feel that American blood was a sacrifice quite necessary! We shall bring ourselves to that point of view again if we permit a continuation of this mad course upon which we have been set and which has now culminated by the offering of the lend-lease bill. All the assurances to the contrary notwithstanding, there will be declared need for American boys in the European war, and those who today plead no such need will be the first to suggest or demand it.

Secretaries in the President's Cabinet decline to tell the Senate Foreign Relations Committee just what is the purpose of all the provisions of the lend-lease bill. Each one suggested to the committee that another member of the Cabinet was better prepared to discuss this than he. Inability to get from the administration a direct expression of purpose in the bill makes it altogether fair that we go to the address by the President himself; his address to Congress shows the base for the lend-lease bill. In that address the President stated eloquently a purpose that this program would serve. Here was his declaration:

"In the future days we look forward to a world founded upon four essential human freedoms.

"The first is freedom of speech and expression—everywhere in the world.

"The second is freedom of every person to worship God in his own way—everywhere in the world.

"The third is freedom from want * * * everywhere in the world.

"The fourth is freedom from fear * * * anywhere in the world."

A beautiful vision indeed, but how shall it be accomplished? By making ourselves an arsenal for all the world? By giving power to the President to underwrite every cause which he might believe to be right, everywhere in the world? And when shall this dream be realized? Well, the President himself tells us when. Quoting again from his January 6 address to the Congress, he said: "That is no vision of a distant millenium. It is a definite basis for a kind of world attainable in our time and generation." There

you have it. In our time and generation. We are going to bring to all the world four essential human freedoms which we in America do not yet enjoy—freedoms which in some particulars are growing smaller and ever smaller even for Americans.

What shall we say of this pattern of purpose for the lend-lease bill which the President laid down in his address to Congress? Shall we call it madness—downright madness—or shall we call it what Wendell Willkie calls "campaign oratory" when he himself is found saying things which he does not believe, things to catch the fancy and the votes of Americans. For months we have witnessed in America in the name of "steps short of war," steps which aggregate finally a march to war. Grant now the powers which the President demands in the lend-lease bill, and the only question that will remain will be one as to just when we might move definitely and actively to war.

American voters, American fathers, American mothers, American boys and American girls, demand to know what is in this lend-lease bill. Demand of your newspapers that they publish the bill in its entirety. It is not so long that it won't bear publication. Then after knowing what is in the bill, write to your own two Senators here in Washington, write intelligently and let them know what you think of it. Here in Washington the impression is strong that the American people are overwhelmingly for this bill. My own guess is that the people of America are overwhelmingly against this bill, when they know what is in it.

There can be no denying that there is a preponderant wish in America to aid England, within the law and within such bounds as will keep us out of the war. This lend-lease bill is not such a bill. Instead, it is a bill establishing new law, new ways to help England at our own expense, new ways to get into the war.

Americans, make yourselves heard. In doing that you not only exercise a right, but you pursue a duty, a duty to be served if the one great remaining democracy upon the face of this earth is to endure.

LEND-LEASE BILL A GRAB FOR POWER

(Address before America First mass meeting, New York, Thursday, February 20, 1941)

Increasingly apparent is that preponderant need for such constitutional provision as well give to the people of the United States chance to vote, and the sole right to determine, whether the United States should engage in another foreign war. In the immediate absence of such a provision within our Constitution it is essential, so essential, that the people of this country voice themselves emphatically in opposition to this pending lend-lease bill if our country is to be saved from the ravages that will follow our plunging again into the hates, the fears, and the wars of Europe.

I never dreamed that in this enlightened age the American people could be so completely blinded and would so absolutely lend themselves to the blinding process to which they have had to submit, as is evident on every hand these days.

Hate and fear, planted by the Lippmanns and the Lawrences and the Winchells and the Dorothy Thompsons and the Roosevelts and the Knoxes and the Stimpsons and the Morgenthaus, have brought our Nation to the brink of the most terrible challenge it has ever known. If we, you and I, permit this so-called lend-lease bill to become the law of the land we shall find ourselves, almost overnight, in war, the very kind of war with which 85 percent of the people of this country have vowed again and again they would have nothing to do. What that kind of war is going to mean, and what our indulgence in it thus far is going to ultimately cost, staggers the imagination. Yet we had better awaken these imaginations of ours and see what we are wishing upon ourselves and upon the generations to follow.

We can't be unmindful of the cost of dollars today when we are pouring out at the rate of ten to twenty billion dollars a year, and would, under the lend-lease bill, make the sky the limit as respects the power of the President to draw dollar aid to Great Britain. We had ought to be mindful of what a billion dollars is. Are you aware of the fact that if every income in the United States of 10,000 dollars or more per annum were to be confiscated by the Government, that it would bring a total income of only $4,000,000,000?

Add to this kind of consideration the death and the heartbreak that will come to every cross road in America, if not to every hearthstone in America, and then be mindful of the fact that, even though we win another war, we shall have won an economic consideration that will find the United States entertaining more "isms" than the world ever dreamed possible upon its combined surface. The shambles that will be ours in an economic way, in a social way. The damnedest, finest ruins the world has ever seen. Not patriotic now, but wait.

The most dangerous column a nation of free people has ever known has been that column of American columnists feeding us daily with the fear of what is going to be our lot if Britain loses this war. I am not ready for a moment to concede that Britain is going to lose the war, however sure I am that Britain isn't going to win the war in the sense that wars have been won in the past. But isn't it passing strange that these very same people who are so fearful about our fortune in the event of British failure to win are the same identical people who were not sufficiently fearful about the future to care a hang about what 50 destroyers might mean to us if the worst that might happen in Europe were to be turned upon the United States?

I am sick and tired of the degree to which we have been caused to feel that our life as a nation is dependent upon somebody else's navy. The only navy in the world that has ever been a threat to any liberty or any policy pursued in the Western Hemisphere is the navy which we are now caused to believe is our first line of defense. We never, never have been dependent upon the British Navy. We are not dependent now upon that Navy, and God forbid the day when we shall let ourselves be dependent upon that Navy.

Much is said now concerning the question of Great Britain and her nationals liquidating their securities in this Western Hemisphere, converting them to dollars that they might continue to buy the help that we are ready to give in the way of supplies needed to help England defend herself. There are billions of that kind of security upon which Britain might draw, yet, with the aid of the columnists we are being educated now to see how unfair it would be to ask Britain to liquidate any further than she has; unfair to ask Britain and her nationals to spend their own resources to save themselves before we start pouring out our resources in their salvation.

Leslie Gould, financial editor of the New York American, tells in his column of how international bankers sought to prevail upon him to open up the way for this kind of propaganda, to write a story to the effect that we should not ask Britain to liquidate further, a story that would say to the American people: "Britain is fighting our war, we ought to be willing to spend some billions in their behalf." Gould tells us that these bankers told him that if he didn't choose to enjoy the scoop of writing and publishing such a story, they could get Walter Lippmann or David Lawrence to do it. What a rotten reflection upon American journalism—my own profession if I have one.

This is the same Lippmann who only this morning reflects upon the noninterventionists in Congress and insinuates that there has been no consistency in our policy of providing a national defense for our own country. That is the same old story that has long prevailed whereas, in truth, our purpose has been that of providing adequately for the defense of the United States. That larger defense has grown increasingly necessary as the Roosevelt administration, cheered by the Lippmanns, has pursued a foreign-policy conduct that requires more and ever more of national defense. A two-ocean navy, a three-ocean navy, a four-ocean navy is quite inadequate if it seeks to run with a policy that finds the President of the United States challenging every power upon this earth. For what?

Under the lease-lend bill the United States is being asked to do for England many, many times more than England's dominions are being asked to do for England. No lend-lease program has been passed by Canada. In Canada's relations with England, she is demanding for all that England buys cash on the barrel, and getting it. If we pass the lend-lease bill, mark my word, it will be the United States cash that England will use in continuing her cash purchases from her own dominions.

We indulge ourselves in a conscription program that makes uncertain for years the fortunes of millions of America's young men. In Canada they conscript as of a limited age for a mere 4 months of military training, which is accompanied by a guaranty that the conscriptees will engage in foreign service only if they volunteer to engage in it.

What monkeys—what sillies we Americans are being made! The Indians have a word for it. Say they: "White man fool Indian once, shame on white man; white man fool Indian twice, shame on Indian."

Advocates of the lend-lease bill paint a picture of it that would have us believe that it was the most innocent piece of legislation that Congress has even been asked to enact. They toss a blanket of denial upon every charge concerning the powers that it will bring to the President. In the name of unity they ask for support of it as merely "aid for England," as "only national defense," as "for democracy." Ah, what a bill we shall pay in the name of these things if the lend-lease bill is made the law!

Americans, don't fool yourselves. With eyes you can read, with ears you can hear that this bill grants very definite powers to the President of the United States, powers in excess of those ever granted to a President even in time of war. In this bill are the powers to the President alone to:

First. Make military alliances with any nations anywhere in the world.

Second. Give away the United States Navy.

Third. Dispose of every scrap of defense material of the Army.

Fourth. Part with every airplane in our Air Service.

Fifth. Hand over to other nations our airplane and other military secrets.

Sixth. Give to foreign governments all our military plans.

Seventh. Open our harbors to a belligerent fleet and so to bring the war to our shores.

Eighth. Seize the ships of other nations and turn them over to a belligerent.

Ninth. To junk all the laws for the protection of labor.

Tenth. To send naval convoys into war zones.

Eleventh. To fix the terms by which our defense materials are to be turned over to another nation.

Twelfth. To determine what payment, if at all, this country would receive in return for these vast grants to another country.

Thirteenth. To saddle upon the United States the costs of a foreign government's war.

Fourteenth. To place upon the taxpayers of the United States the entire cost of the second world war, if we enter it.

Fifteenth. To buy the British Navy.

Sixteenth. To ignore or repeal any existing law which the President considers interferes with his conduct of national defense.

Seventeenth. To govern through administrative proclamation.

With our country at peace, are such powers necessary? Aren't they instead sticks of dynamite that could destroy representative government and substitute a military economy for our own economy?

Help England before England is ready to help herself? Help England even to the extent of completely demoralizing our economy? Help England to the extent of giving to one man the power to tie us directly into that European war? My friends, its insanity, madness, suicide.

Of course, we like to have the world enjoy the privileges which have been in better days the fortunes of us Americans. But we ought to know that it doesn't lie within our power to inflict our ideals upon all peoples. We tried it once. We failed miserably. We swore we would never do it again. But pass this lend-lease bill and we will do it again without any more prospect of winning the cause for which we fight than we enjoyed the last time. Jefferson told us that "For us to attempt to reform all Europe and bring them back to principles of morality and a respect for the equal rights of nations would show us to be only maniacs of another character."

But our President sees nothing insane about his undertaking to such ends. Hear his appeal to Congress a month ago, just preceding the introduction of the lend-lease bill:

"In the future days we look forward to a world founded upon four essential human freedoms.

"The first is freedom of speech and expression—everywhere in the world.

"The second is freedom of every person to worship God in his own way—everywhere in the world.

"The third is freedom from want—anywhere in the world.

"The fourth is freedom from fear—anywhere in the world."

And when is this eloquent dream to be realized? Five hundred years from now, perchance, if we will but devote ourselves intelligently to it? Oh, no; the President in his same message declared: "That is no vision of a distant millennium. It is a definite basis for a kind of world attainable in our time and generation."

Is this madness, sheer madness, or is it what Wendell Willkie would call campaign oratory, just intended to sell a bill of goods to the people in which the seller didn't believe?

There are two large prospects of development under this bill. First, we shall undertake to make delivery of the materials counted essential to Britain's success. Shipload after shipload of American supplies will be sent to Great Britain, carried, of course, for the moment at least, by British ships. One by one these ships are going to be the victims of submarine warfare and warfare from the air. Our program of aiding Britain will be found to be jeopardized by these attacks. Spokesmen for this legislation insist that the President has the power to utilize our Navy in convoying merchantmen if he chooses to so use the Navy. Can anyone doubt that when the success of our program of aiding Britain is jeopardized by submarine and aerial warfare that we are not going to be rather ready to accept convoying by our Navy as an essential if our purpose is to be fulfilled? And when we do that, is there a question in anybody's mind as to what is going to happen sooner or later to one of these naval vessels? And when that happens, who is foolish enough to believe that the Congress and the country isn't going to be ready to go the rest of the way in an all-out war?

Again, here is the provision in the law permitting the President to open our ports to the vessels of any nation he might permit for repairs and for supplies. Does anyone doubt but that this will bring submarine warfare to our very shores, and this being accepted as a challenge to our peace and our security?

My fellow Americans, I plead with you to observe that this lend-lease bill is a direct challenge to every American who is determined that his country shall not get into that European war.

I am bewildered by the prominence of the defeatist attitude that has been planted throughout our population of 131,000,000 people. The papers each day reek with the word that the lend-lease bill is certain to pass, that the fight which we are making against it in the Senate is for a cause already lost.

Believe me when I tell you that the cause is not lost. It is lost only if the American people, after being given full opportunity to know what is in the bill, decline to make their voices of protest heard by their Senators in Washington.

The grab for power which lodges in the lend-lease bill can be defeated only when, and if, the American people catch up with its contents. Every day is bringing increased opportunity for the people to know the truth. Every day enlarges upon the chance to defeat the bill. But I say to you that defeat is accomplished only by the degree to which the American people will make the thinking that is in their heart and in their minds known to their own Senators in Washington, with the result that those Senators may banish the thought that has been planted with them in Washington that there is overwhelming public support for the lend-lease bill.

PEACE TERMS

(Address over National Broadcasting System Saturday afternoon, March 8, 1941)

At this hour administration forces are pressing with all their might to finish without further delay their drive to accomplish enactment of the most terrific grant of power for the Executive ever asked for in America's history.

It is inconceivable that the people, and a Congress presumably representative of them, could be moved as they have been moved, in the very shadow of our experience of so few years ago, and with memory what it is concerning uninterrupted teaching and warning by those who gave this Nation its life and strength. The more I see of the ease with which we can be moved as a people into turning loose our emotions to a point that seems to leave us dull of mind and reckless in a supreme degree, the more I am inclined to believe that except for the existence of the laws of neutrality upon our statute books we would have been plunged into Europe's war and the war in Asia much sooner than now. Of course, we are all aware that the passage of this pending legislation, 1776, grants to the President the power to abandon all these laws of neutrality.

It isn't easy in such an hour as this to devote one's mind to the answering of such a question as is "What peace terms do we want," but that is the subject to which I have been asked to address myself for these few minutes.

What peace terms do we want? To this question I must respond with another: What do you mean by "we"?

Presumably the President speaks for "we." The President is "we." What he says and what he does is an undertaking in the name of 130,000,000 people. Remembering this, it is fair to say that we have no peace terms, that we want no peace at this time; that our lone call is "win the war—crush Hitler." Each and every suggestion of any undertaking to accomplish a peace, negotiated or otherwise, has met only with an emphatic "no" in the official circles of the United States.

With the largest part of the world in the throes of this disease called war, with daggers drawn in a program that can only mean suicide for one and all who participate in the war, it would seem that here in the United States there could be afforded that leadership that would at least strive for whatever chance there might be of accomplishing an end to hostilities now while there is still something to be saved. But instead we find American leadership bent upon going through on lines that other nations have laid down and determined that we shall pour all our energy, including American lives, into the winning of causes that others have declared.

During the last three days of debate on this go-to-war bill effort after effort has been extended to accomplish within the measure a declaration against the use of American troops and our naval establishment on foreign ground. The administration forces have successfully met every such effort and have denied the chance for any such declaration. Not even the appeal of Senator GEORGE NORRIS to offer such an amendment and reassure the mothers of America that we were not going to send their sons abroad to fight in other people's wars could win the favor of the Senate which seems to be set upon giving the President everything that he wants and just as he wants it.

What can it all mean if it doesn't mean that we are about to play the same role that our country played in 1917? We know now that back in 1917 the war would very probably have ended except for our entry into it, that we urged a continuation of the war with the promise of larger participation in it. We have been scored by various English leaders since that time, for having prolonged it and for having prevented the kind of peace that might have been attained in 1917, a peace that could not have been dictated by a victor, but a peace that might have been inclusive of such provisions as would have afforded a more enduring peace. Churchill himself declared after the last war that Europe would have been better off had we stayed out of the war and minded our own business. Are we about to repeat the same awful blunder which was ours then? I wish I could answer this with an emphatic "no" but the evidence is overpowering that we are going over the same futile road that we traveled then, with gain for no one, least of all ourselves and our own country.

Peace? What peace terms do we want? Why, it is so apparent that we want nothing so little at this time as peace. The President has made it plain that what we want is a crushing of the alleged aggressors and that we will talk peace only after that crushing is accomplished. And Americans with minds that have been purposely confused are so often ready to give approval to this policy without a thought to what it must mean. If England is to crush the aggressors on the European Continent she must have tremendous help from the United States, including millions of men as well as oceans of war material; the crushing of Hitler and Mussolini is not going to be accomplished by merely helping Britain to resist the attacks upon England. If the aggressors there are to be crushed they must be crushed by hordes of troops marching into and through the Continent. To crush the aggressors to the west at the same time means activity of a military order which we, and we quite alone, must furnish. If we follow through to the ultimate conclusion on this theory of talking peace only after the alleged aggressors are crushed, we talk about a chore that will in all probability require years and years of endurance and the pouring of blood and of wealth as we have never poured before. It can all mean in the end only the crushing of ourselves and the bringing of economic, political, social, and moral shambles to our own great land.

What peace terms do we want? Well, we ought to want such peace terms at this time as would prevent the suicide to which the world, and now we, appear to be headed. And if we were to find that peace in Europe was not attainable for Europe, we ought to be fighting at least for the continuation of peace for our part of the world. But I fear that only a miracle today, this afternoon or this evening, can accomplish even that. Such a miracle could come to pass only as the masses of American people might succeed in making their objection to this situation known to their representatives in the Senate.

NO FURTHER STEPS TO WAR

(Address over Mutual Broadcasting System network, New York, Friday, March 21, 1941)

What shall be our choice: A united front meekly consenting to adoption of European hatred, fear, and war as American policy and responsibility, or a united front by men and women determined to avoid the economic, social, and political suicide certain to follow our participation in another European war?

That is the choice left to Americans today. Neither choice can be served by us. Each way has its advocates, its leaders, though the leadership is not always as honest about its direction as to permit a people to know where they are going.

It is my choice to contribute to the building of an American front that can be strong in enforcing what I am certain is an overwhelming American determination to more largely mind our own business, to mind our own business at least to an extent that will forever let us be free from those European institutions and influences which destroy progress and freedom—those institutions from which America took leave under the leadership of Washington, Jefferson, Adams, and the patriots of 1776.

War to Europe is as habitual almost as breathing. War has torn and weakened generation after generation of Europeans. Power politics there has everlastingly whipped Europe into roads that had no place or room for such freedom and for such opportunity as we have known in America. So long as we have held ourselves apart and away from involvement in Europe we have grown and prospered gloriously. When we took a single fling at sharing in European causes and at reforming the world back in 1917 we sorely weakened ourselves and slowed up the opportunity for men and women to enjoy the full advantages and opportunities presumed to be the lot of Americans. The burden of that experience starting in 1917 has so weakened us that we have since been staggering. To repeat that experience is only to add hopelessly to the burden already ours, and to complete that sordid job of showing the American way off the world stage.

Obvious, indeed, are the consequences of our underwriting European causes as our own. But however obvious, we are nevertheless definitely marching fast to that underwriting and to the consequences which it invites. Some there are who assert that we are already in Europe's war; that it remains only for the shooting to begin. I insist that we can yet save ourselves from involvement in actual war, and that this salvation rests wholly with the American people and their willingness to continue to express their determination to keep American blood out of this war. But I cannot deny that rapid indeed has been the progress of those who would take us to war but who have operated in the name of keeping us out of war.

Our greatest weakness today is to be found in that broad field of American willingness to concede that our involvement in Europe's war is inevitable. That attitude is the consequence of many months of propaganda intended to make our involvement seem inevitable. We need now to most desperately take hold of ourselves and bring ourselves to realization of this truth—our involvement in Europe's war is only as inevitable as we, the people, permit it to be inevitable. We need to resist this spirit of inevitability with all our might. We need to let experience in the past more largely guide us and to check immediate emotions as are general. A determined people can keep out of this European war if only they will keep alive and vibrant a powerful voice of protest against involvement in the war. It is true that our Government has pursued courses that have been quite contrary to a sound purpose of keeping out of war, but that voice of protest has nevertheless played a powerful part in checking the course that would have been ours except for these protests.

There can be unbelievable transformations and steps in the name of a people when those people permit themselves to be blinded to the obvious and moved only by emotions grounded on hatred and fear. We have seen in our time, indeed we have seen in very recent years, so complete a transformation as must leave us wondering how we could be moved as far as we have been moved in a direction so contrary to that which would best serve the mighty determination of the overwhelming majority of the American people to stay out of war.

We must not, and cannot be unmindful of the steps which have been taken following the last war. We awakened one day to discover that not a single cause which we had declared ourselves wanting to serve when we entered that war as being a cause that could be counted as won. With this awakening came the awful economic consequences of the war, the struggle to readjust our lives and our economy to a peacetime basis. Surely we cannot forget how tremendously great and strong became American determination to never again permit our country to be drawn into another European war. The wish to avoid involvement again in Europe, plus the revelations years later of how we had been moved to war even while leaders talked peace, found the American people demanding the writing of whatever law might help to fortify us against involvement abroad again. In 1936, an enthusiastic and determined Congress set to the task of writing the laws which would prevent our being again involved in Europe for such causes as stood revealed as responsible for our involvement the last time. These laws became known as the laws of neutrality. They forbid Americans to travel in war zones. They forbid loans and credits to nations at war. They forbid the use of our ports and harbors to belligerent vessels. The laws forbid the sale of munitions of war to nations at war. They required nations at war desiring supplies other than munitions to come, buy them, pay for them, and carry them away in their own ships. The laws were enacted in an hour that was free from hate, free from fear. Hours that could be devoted to the strengthening of America, and to the service of America.

Then came the threat of war and war itself to Europe. With the threat came the breeding again of hatred and fear. Propaganda from abroad, propaganda engineered in Washington, propaganda fanned by such Americans as those who affiliate with the Committee to Defend America by Aiding the Allies, put our own fortification against involvement in war under constant attack. Little by little we were brought nearer to involvement in the war. First came repeal of that feature of the neutrality law which forbid the sale of American war supplies to nations at war. Then came our dispossession of destroyers thought to be essential in our own defense. Finally, under the lash of exceeding propaganda, there came the grant of power to the President to ignore the remainder of the neutrality laws or any other law that might stand in his way of giving all-out aid to Britain, and now the appropriation of unheard of billions to the cause of saving the British Empire and destroying Hitler.

All of this, beginning with the determination to build against involvement in Europe again, and ending with this mad, all-out program called the lend-lease bill, has transpired under the leadership of one and the same man, who first encouraged and cheered and then scoffed and damned the course America had set to mind her own business and remain free from entanglement in the meshes of European power politics.

I don't know what historians will do to the course which has prevailed in these last 4 or 5 years. No one can know. But it is going to be surprising if we escape utter condemnation for our inconsistency and our weakness to resist forces so obviously selfish and bent upon making our country again the underwriter of a European war.

That we are underwriting such a war is evidenced today, as it has been for many months. At the moment we are about to pour out seven billions of dollars, and there are among us those who would delay not a day for weighing our ability to do this or for weighing what the consequences can be. About 30 percent of our entire population is resident upon the farms of America. The gross income of that 30 percent of our people last year was less than $7,000,000,000. But we observe the seven billion being advanced for final appropriation these hours by a bewildered Congress that seems to be resigned to the thought that this is not the time to be thinking, but instead to be acting in accordance with the wishes and the dictates of one lone individual.

What will be the next move in the name of a great people who have been caused to entertain hate and fear can only be guessed. Already our leadership is openly acknowledging its concern about accomplishing delivery of the production which $7,000,000,000 will buy, and though they deny that there are plans to convoy these British supplies across the ocean under the protection of American naval vessels and planes, it ought to be freely acknowledged that if in aiding Britain to the extent of $7,000,000,000 of supplies we fail to get those supplies to Britain, there will be growing want to go however much further might be required to accomplish that purpose. Be is called a system of convoying or patrolling, it means immediate involvement in war as soon as it is practiced. And involvement in that war means expenditure of untold of billions in addition to the billions that will be required in addition to the seven to underwrite the alleged needs to those we elect as our Allies.

We may even undertake this dangerous step while avowing a determination to keep out of the war. We moved thus foolishly once before. Back in 1917, when we declared war, it wasn't with the thought of doing anything more than financing our Allies. We were not going to have to furnish men or ships—just dollars. But those who had brought us into it knew better and impatiently awaited the day when a little American blood could be shed in Europe to the end that America might go the full route to war, pitching her might of wealth and of men into the European cause.

It seems to me that this is a thing that Americans ought to be constantly mindful of: that the shedding of American blood in this war is the thing that will take us down the full suicidal route, however strongly determined we declare ourselves to be today against becoming involved. Winston Churchill knew back in 1917 what American blood spilled in Europe would mean, and he wrote of it. He knows today what it will mean, even while he declares that there is no need for American sons in Europe. Every leading Englishman in 1917 knew how urgent

it was that American blood be spilled in Europe. Viscount Esher, a very leading statesman of his day, wrote in his journals as of a period, several months following our declaration of war, that it was unfortunate that American blood could not be shed in Europe sooner than seemed to be in prospect so that America might have her full might into the war on the side of Britain. And in those journals he wrote, following an audience he had had with Henry Morgenthau, as prominent in the administration then as his son is prominent in the administration of our Government now, that Mr. Morgenthau shared the view that American blood must be spilled on European soil soon in order to accomplish full participation by America in the war.

Let's not deceive ourselves. Many of those who talk about the needlessness of American lives being sent to Europe to there bleed and die are in their hearts wanting American blood on the other side of the world more than they want anything else today, and we find ourselves furthering that wish with our Navy clear on the other side of the earth, with convoys and patrols in the offing, with the threat an hourly one that will have American blood shed in a cause which, however inviting of sympathy it might be, isn't worthy of one American life.

What shall and what can a people determined to keep out of war do in hours like this? They ought to be constantly voicing protest against the possibility of convoys and patrols. They ought to be protesting against the movement which is taking our Navy far away from those lands and institutions it was intended to defend. We should protest everlastingly any alleged right resting with the President to send our fighting forces into possessions that are inviting of trouble. We should be protesting with all of our power against the departures of men from promises publicly made. We should be insisting upon a careful weighing of every dollar afforded under the lend-lease program. We should be insisting that, though we are ready and willing to help Britain, we expect Britain to utilize her own wealth in helping herself. We should be jealously battling for preservation of freedom and of the right of Americans to exercise their choice in this business of keeping out of war, and we ought to be encouraging and supporting legislation which would require Congress to refer to the people of America for decision in at least an advisory election of when, if ever, we shall send land, naval, or air forces for service outside the Western Hemisphere or the Territorial possessions of the United States.

These things—all of these things—we must do if we would save ourselves from the awful shambles certain to be the lot of every nation that permits itself to become involved in that return engagement of war to its favorite stage—Europe.

The Horizons of Small Business

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1941

RADIO ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK

Mr. O'MAHONEY. Mr. President, on the evening of March 22 the junior Senator from New York [Mr. MEAD] delivered an address over the facilities of the Buffalo Broadcasting Co., Buffalo, N. Y., on the subject The Horizons of Small Business. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This program on which I speak tonight was scheduled to carry the remarks of the late Representative Pius L. Schwert. To substitute for him, under these circumstances, is one of the saddest duties I have ever undertaken. He was my personal friend and neighbor; he was an outstanding public servant; he was a great American. He always carried on in the face of adversity and he would have us carry on—even though our hearts be full of sorrow over the loss we have suffered with his passing.

Therefore, I have agreed to make these remarks this evening. In doing so, I hope to call to your attention some of the pertinent facts about the horizons of small business.

We have heard it often said in recent years that the new frontiers of this country, now that our geographical frontiers have been conquered, are technological and sociological frontiers.

We have finally conquered our broad land, with its mountains, rivers, plains, and valleys and we have made vast strides toward taming them to our will—and that will, of course, is the national will for a life of greater abundance and happiness for all of our people.

In many fields of internal improvement, we, as a nation, have been bold and courageous. For example, we have built vast dams to control our rivers to the end that they shall contribute life-giving water to millions of acres of farm lands and labor-saving electrical power to our great sprawling cities and to our rural communities; we have converted man-killing dust into corn and wheat in the seemingly unconquerable dust bowl of the Nation; we have taken thousands of families out of tubercular slums and we have brought them into the fresh air and cleanliness of modern habitations; we have not hesitated to pile the resources of our national Treasury behind the vital life savings which our people have invested and deposited in commercial banks; we have taken our boys off the streets and out of unwholesome environments into the great health and character-building camps of the C. C. C.; we have relieved men and women of the great fear of poverty and dependency in their old age; we have saved homes and farms from widespread and reckless mortgage foreclosure; we have found worthwhile and productive employment on public-works programs for the temporarily jobless.

Yes; we have been proudly bold and nationally courageous in many fields. We have recognized that the greatest investment a Nation can make is in the health, happiness, and security of its people. We have found that such an investment always reaps rich dividends in tangible and intangible national wealth.

But there are some fields in which we have been less active. It is to one of those major fields of endeavor that I point tonight—to the field of small business.

I have been giving the problems of smaller enterprise considerable time and attention during the past 5 years because I consider it to be vital to our economy and to our democracy to solve these problems.

A number of congressional hearings have been conducted on my proposals to aid small business during the past few years but the glaring realities of the little businessman's dilemma has only recently come into the spotlight of national attention.

The defense program has rendered more acute the already chronic difficulties of smaller concerns to obtain adequate credit and capital which it must have to survive.

There is abundant evidence that, since the lush years of the latter twenties, the flow of credit and capital to small businesses has been systematically choked. I do not mean to imply that the strangulation of small enterprise through the lack of credit has been an intentional program on the part of banks and of Federal lending agencies. Rather, it has been the result of a tendency which has been allowed to flourish uncurbed.

While the Government has been rightfully solicitous of the welfare of great groups of our people, strangely enough, the plight of little business has received a modicum of attention.

The Reconstruction Finance Corporation has been in existence nearly 10 years and has provided substantial financial aid to many industrial concerns. It is to be commended for the contribution which it has made and is today making. However, its assistance has been but a drop in the bucket if the national needs of small business are surveyed. Furthermore, it has not provided a decentralized, convenient, nor speedy method for extending credit. That type of a method is largely the responsibility of local banks where the businessman has a right to expect he can obtain capital if he has a legitimate need for it and can show reasonable security and promise of repayment.

Unfortunately, the R. F. C. and the Federal Reserve banks (also equipped, in a restricted sense, to extend loans) have been overwhelmed with industrial loan applicants who have been unsuccessful, for one reason or another, in their efforts to obtain loans locally. While the rejections of Federal applications have been high, nevertheless, in the cases where loans have been granted, the record of losses has been amazingly low. In fact, last year the chairman of the R. F. C. explained that his agency made a profit on the vast majority of such loans.

Now, the business of these Federal lending agencies has been too brisk and the record of loan repayments has been too good to substantiate the claim of some bankers that every businessman who deserves a loan can get it at his local bank. As a matter of fact, the situation has reached the point where thousands of small businessmen no longer go through the formality of filing loan applications at their banks. They feel they have at least two strikes on them before they start. As a result, the initiative of smaller enterprise has been sapped; its expansion has been thwarted; its operations have been curtailed.

I am not placing the blame at the doorstep of the local banker. Quite the reverse, I think we should eliminate the obstacles which he claims interfere with the ready extension of sound loans. I am, however, citing the deplorable circumstances which throttle the progress of small business.

This damming up of the flow of credit and capital to the little fellow has, naturally enough, encouraged the growing concentration of economic and financial power in the hands of a relatively few great corporate empires which, in turn, threatens with ultimate extinction the smaller, independent business enterprises.

Conditions exist today in relation to small business which 25 years ago would have been declared impossible. There are communities in this country now in which virtually every phase of business and social life is completely dominated by some great individual corporate organization. The food which the community eats, the clothes which it wears—its schools, hospitals, newspapers—are all owned by a single company. In such an economic environment, private initiative largely disappears and the independent small businessman is entirely banished. It is the road to industrial regimentation and collectivism. It is a warning that one important organism of our democracy is not in sound health. Now is the time to heed that warning. It will not do to wait until the economic damage is complete.

Today war rages in Europe. It is essentially a war of machines and of superb industrial organization. Today our Nation bends every effort to defense production. In this program, little business plays a vital role—an indispensable role.

Behind every assembly line supplying the parts and materials for bombers, pursuit planes, tanks, guns, and the vast array of armaments, there is to be found an army of subcontractors—and those subcontractors are largely composed of the smaller units of industry and manufacture.

I am happy to say that there is an increasing awareness on the part of the Army, the Navy, and the defense authorities that the subcontractor lies at the very heart of the problem of defense production; that only through the widespread utilization of subcontracting can defense production move with the desperate speed which is required. Commendable steps have been and are being taken to gear into speedy operation our smaller plants.

Again and again, however, there crops up the ever-present demand for more liberal capital and credit agencies. Little concerns are found to have antiquated machinery and buildings—they are found to lack capital for expansion—for meeting pay rolls—for purchasing raw materials.

Emergency means are being found to finance small companies which are required to produce essential and strategic defense materials. That is laudable and it should be done. It fails, however, to fulfill the needs of countless other small enterprises which, with adequate credit, could make valuable indirect contributions to defense and to the general welfare of the Nation.

It is my recommendation, and I have it in concrete form in bills now pending in the Senate, that an Industrial Loan Corporation be established within the framework of the Federal Reserve System which can make direct loans to business or commitments to local banks on loans to business. Such a set-up, and I have not the time now to detail its provisions, would operate chiefly through our local commercial banks and would provide a simplified, decentralized, convenient, economical, and speedy system for the extension of credit and capital to smaller businesses.

Additionally, I believe careful attention should be given to the establishment of an Agency of Information at Washington which could supply small industries with current information and assistance of all types. As it is, most small businesses now flounder in the darkness of bewilderment and misinformation.

The horizons of small business are narrowing instead of broadening; its security and stability is threatened; its future is darkened by the specter of credit starvation. We are doing our democracy a disservice by blinding ourselves to its imperative needs. I am appealing for prompt and effective aid to small business.

Unity for Peace

EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1941

RADIO ADDRESS BY HON. BURTON K. WHEELER, OF MONTANA

Mr. CLARK of Idaho. Mr. President, I ask unanimous consent to have inserted in the RECORD a radio address delivered by the senior Senator from Montana [Mr. WHEELER] on March 20, 1941, on the subject Unity for Peace.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

H. R. 1776—a bill granting the President the right to give billions of American tax dollars to finance foreign wars for any country on any continent in the world "and for other purposes" is now the law of the land. The bill was debated fully. A majority of both houses voted for it. The President signed it. It must and should be respected by all our people regardless of their previous opposition to it.

The opponents branded the bill a measure authorizing the President to wage an undeclared war. Its friends in Congress declared it a peace bill—a bill to keep this Nation out of war.

Whether the opponents or the proponents were correct will depend almost entirely upon the future actions of one man—President Roosevelt himself. It is for him to determine by his future course whether or not his spokesman in Congress misled the people. Vast powers are vested in him and all right-thinking Americans will pray that those powers will be used wisely and in the interest of 130 million people here in the United States of America.

To many of us, the President's recent speech carried dark foreboding for the future of the Republic.

To you, Americans who waged a valiant fight against the lend-lease bill, I say—continue the fight—not against the bill—now a law—but against war and against every step which gives dictatorial powers to the President. I am opposed to Nazism, Fascism, Communism or one-man Government in any country under whatever name it may be designated.

I think it is fair to say that nearly all—if not all—proponents of the bill in Congress are agreed:

1. That the President is not authorized to use convoys under the present law.

2. That the law does not authorize the sending of sailors, airplane pilots, or soldiers into combat areas.

3. That the President of the United States has no right—though he may have the power—to authorize or direct our armed forces to wage offensive war.

4. That nothing forbids citizens from continuing to petition their Senators and their President to fulfill campaign pledges to keep the United States out of a foreign war.

5. That Congress may still—if it will—refuse to give billions of your tax dollars to Great Britain without first obtaining Mr. Churchill's war aims—without knowing if the objectives are the extermination of Hitler or the annihilation of 80,000,000 million German people.

6. That Americans should still insist that Congress carefully scrutinize all appropriations to the end that no tax dollars are squandered.

Before going further I want to give full credit to the British propagandists and the Committee to Defend America by Aiding the Allies upon the deadly effectiveness of their propaganda. They have nearly attained their objective—active American participation in a foreign war. They have accomplished it adroitly. Their work has avoided detection by the Nation as a whole—and this notwithstanding the fact that they followed the identical methods of 25 years ago.

Someone has said, "Fool me once, shame on you—fool me twice, shame on me."

In 1812 the British invaded the United States. With men and arms they ravaged our Capitol. We fought force with force. It was army against army. Today in March 1941—just as before the last World War—the British have again invaded Washington—not with redcoats—but with some 2,000 agents and employees. In New York City they have an official propaganda agency for the United States. It is called the British Library of Information. It is a vast network for dissemination of war propaganda.

We can see and recognize armed forces. We can and would conquer a foreign army—but insidious and vicious foreign propaganda can be recognized only by those armed with a knowledge of the facts. Clever propaganda can be combated only with reason and sanity—and even these are ineffective weapons during periods of hysteria.

To illustrate some methods of war propagandizing, I want to read a letter received a few months ago from a responsible former publisher of a daily paper—Mr. A. P. Whiteside, of Foristell, Mo.—I quote:

"He (the American professor acting as a British agent) told me that he had recommended my paper for free newsprint and that his recommendation has been approved. All I had to do was to file my application with J. P. Morgan & Co. of New York and print paper in carload lots would be shipped to me."

Is history now repeating itself?

It is not difficult to secure a congressional investigation of German propagandists, of Russian propagandists, of Italian propagandists, or of the activities of peace organizations or labor unions in the United States. But a proposal to investigate all foreign propaganda—which would include the British—dies slowly but surely in congressional committees.

A real investigation of British and American war propaganda would have revealed much. It would have exposed the propaganda efforts in the United States of all foreign governments. How much money they spent and to whom it was paid. It would have shown the parts played by Mr. Bullitt and other American ambassadors prior to the outbreak of war. It would have shown the promises that were made to foreign governments by American ambassadors—roving or stationary. It would have taken the American people behind the scenes in this great game of war.

A congressional investigation would have shown the people of America that pronouncements by the Committee to Defend America by Aiding the Allies foretell the next administration move toward war. This week that war committee advocated the convoy of ships to Britain, American defense of Singapore and the Dutch Indies, and permission for the British to recruit soldiers in the United States for the British Army. William Allen White, then chairman of the Committee to Aid the Allies, unequivocally stated on December 28, 1940, that American convoys meant war.

And what does recruiting American soldiers for the British Army mean? Winston Churchill could best answer that. In his book, the World Crisis, Churchill states: "Nothing will bring America in on our side quicker than some blood spilled in Europe." American youth killed at Singapore, American youth slaughtered on land and sea—war—that is what the Committee to Aid the Allies advocates today.

And this committee, aided and abetted by war makers, have led the American people to believe their only choice today is war or slavery under Hitler. They have been and are creating a war psychology by making it appear that war is inevitable because peace means slavery. Nothing could be more fantastic. But many honest and sincere people believe that to oppose war, to oppose the delegation of dictatorial powers to the President, is no longer patriotic, is no longer pro-American. Propaganda has made honest though deluded Americans actually believe opposition to war and dictatorship in the United States is pro-Nazi.

All of us who can envision the loss of life and the return of American boys from faraway battlefields with bodies maimed and

minds twisted, and who can see the financial ruin and the utter destruction of democracy that a foreign war would bring to this Republic, gain courage from righteousness of the cause—the cause for peace. We cannot be deterred or dismayed by name calling. We can take it and we can give it. But more important, we expect to continue the fight to keep this country at peace.

Less than a month ago I spoke to the American people, not over a combined network of all great radio chains but over a part of a single system. At that time I asked, and now I repeat the question: "Is the forgotten man of 1932 doomed to be the unknown soldier of 1942?"

Tonight I venture another statement—all-out aid for England, Greece, and China means all-in war for the United States.

Let me read from the President's last speech. I quote: "This is an all-out effort—nothing short of an all-out effort will win." During the 1940 Presidential campaign it was all aid short of war—now it is all-out effort—and the opiate phrase "short of war" is conspicuously lacking.

The Chief Executive told us "all-out effort" included ships, planes, tanks, guns, and supplies of all kinds. Just what else does it include? I hope the answer cannot be found in that single line used by the President: "Dollars alone will not win this war." Does this mean, that if supplies are not enough, troops will be dispatched? What is meant by the President's "bridge of ships" across the ocean? Does this mean convoys? Convoys manned by American sailors who will shoot at and be shot by German sea raiders?

The American people have a right to know how many of our warships, airplanes, tanks, and antiaircraft guns are necessary to aid England? Obviously, the most competent authority on British needs would be Mr. Winston Churchill. Will it be he who determines to what extent our defenses are stripped? Will it be the British Prime Minister who decides how much of the taxpayers money is to be given away? China's needs are known best to Chiang Kai-Shek, the military dictator of China. Will the generalissimo be given a blank check on our war and naval supplies? Will he determine whether or not we send troops to keep open the Burma road? If you approve all-out aid to these countries—who knows best what these countries need—the President, Mr. Willkie, or Mr. Churchill?

Is this what the American people want? Do you want your foreign policy, directly or indirectly, dictated by a European imperialist or an oriental military dictator?

Seven billion dollars for Britain, for China, and for Greece. When we are giving $7,000,000,000 to foreign governments let us consider for a moment what seven billion would mean in American terms. Seven billion is 14 times the value of our 1938 wheat crop—14 years of wheat crops!; 14 times the value of our 1938 cotton crop—14 years of cotton crops!; and it is 6 times the value of the 1938 corn crop. Seven billion dollars for Britain means an additional tax of $234 on each American family and it means $210,000,000 a year in interest for bondholders.

Not many months past—just a year or two ago—some economy-minded Congressman and Senators fought appropriations of millions with which to aid our jobless workers, to build schools, hospitals, and homes. Congressmen who fought millions with which to aid America and Americans today sponsor appropriations of $7,000,000,000. Billions for the British—but what for Americans?

A billion for America is rank idiocy; seven billion for the British is sheer genius.

When this administration thought of our American people, thought of our workers, thought of our farmers, then forty, fifty, or sixty dollars a month for a jobless worker on a W. P. A. project was socialism or communism. Then aid to drought-stricken farmers and parity for agriculture meant disaster and ruin to the Republic. Then $2,000,000,000 for the veterans of the last World War meant bankruptcy for a Nation with a debt of thirty billion. Dr. Townsend was a dangerous radical for suggesting his pension plan, but seven billion would pay a million of our senior citizens $200 a month for nearly 3 years. That was in the days when President Roosevelt—to use his own language—was driving the money changers from the temples of Government and Wall Street lawyers practiced law in New York City.

Today all is changed. Where are the "money changers" and the "economic royalists" now? They have been reinstated in the temples of Government. They have been lured from Wall Street to Washington with White House invitations. They are no longer called economic royalists; they are the dollar-a-year men who dispense billions upon billions of dollars in defense contracts. It is they who sit in the seats of the mighty. It is they who direct the policies of this Government.

It is these fugitives from Wall Street, accompanied and guided by royal refugees and British propagandists, who insist the present war is a crusade against fascism. They told us that Britain entered the present war to crusade against and to crush fascism. Forgotten except to history is official British recognition of Italian conquests of Albania and Ethiopia. Forgotten except to history are British approval of Italian aggression and their own conquests of people and nations. Who believes that Mussolini's Italy with which England sought to avoid war last June was less Fascist than the Italy Britain fights today?

Before the present war the leader of this so-called crusade against dictatorship entertained some startling views on Italian fascism. Mr. Winston Churchill said, "If I were an Italian, I would be a Fascist." These words from the lips of the British Prime Minister are reported in the Sheet Metal Workers Journal of March 1927. Think of it—Mr. Churchill saying, "If I were an Italian, I would be a Fascist." The same Mr. Churchill who would take your sons to fight Mussolini and Hitler; the same Mr. Churchill to whom you are giving seven billions of your tax dollars.

Britain is today fighting Adolf Hitler—the aggressor—not Adolf Hitler, the Nazi. Britain is realistic, not idealistic. So long as the British lion's tail was not twisted, Britain had no quarrel with Nazi Germany. Is it difficult to recall that many Britons—including the late Ambassador Lothian—were great respecters of Nazi Germany prior to 1939? The present British Ambassador, Lord Halifax, went to Nazi Germany to visit and go shooting with Goering, and was known to be persona grata to the Nazis—and they apparently were so to him.

Fascism was not born with Hitler and will not die with Hitler. Fascism is something which springs from a certain type of economic and social soil. Nowhere does there exist such fine soil for fascism as a land economically exhausted and unbalanced by a costly war—and disillusioned by the inevitable tragic post-war awakening. That is the soil in which fascism flourishes. That is the soil which produced Soviet Russia, Fascist Italy, and Nazi Germany. That is the soil which will produce a Hitlerized America—even though Hitler will be dead and buried.

And a nation at war is almost by definition a regimented nation. It operates on the dictatorship principle. The individual is subordinated to one objective—the waging of war. In consequence, civil liberties are curtailed, censorship imposed, industry taken over, labor's right to strike abridged or abolished, and all opposition ruthlessly crushed. Already in the United States we are witnessing the abridgments of precious liberties and constitutional guaranties. What will war and a post-war period do to them? The answer is obvious.

Those of us anxious to preserve civil liberties and peace have been subjected to a smear campaign. Never once has fact been answered with fact, or reason with reason. Instead, cries of "pro-Nazi, Hitler agent, anti-Semite" are shouted at the opposition.

This is bigotry in its vilest form. This is a return to the monarchial concept that the king can do no wrong.

I have said—and I repeat—that there are men in the world who are far more concerned with the restoration or the preservation of their economic and social status than with the welfare of the masses of the people.

I am not interested in the race or creed of these men. I am concerned—and always have been—with the welfare of the great mass of humanity, with the underprivileged with the economic and social status of those who are ill-fed, ill-clothed, and ill-housed.

I abhor and oppose those in this country, or in any country in the world, who make a fetish of the persecution of any minority group. I denounce those who seek to play upon the passions and emotions of our people with this kind of medieval mendaciousness.

Today we witness legislative and administrative actions which inevitably must lead to the denial of the rights of minorities.

A lend-lease bill—an alien concentration camp bill—an anti-strike bill—a wiretapping bill—these are the vehicles of one-man government. They will lead to chains and tears for the minorities in our land.

Wave after wave of every kind of intolerance will roll over our Nation. No minority group, economic, political, racial, or religious, can be certain that it will escape the tide. These are the results of war and of war psychology.

The Constitution of the United States is the basis of our form of government. We were to have a government of checks and balances—three independent branches, each to act as a check upon the others. Inherently and by it we were to be a government of laws and not men. It was to escape the tyrannies and corruption which always have following in the wake of one-man government that this Nation was founded.

Our forefathers placed their faith in laws. Europe has placed her faith in men.

Therein lies the key to Europe's failures. Therein lies the key to our successes—and therein lies our only real hope for higher standards of living—continued progress of the human race—future greatness and peace. Today by our acts we are abandoning the philosophy of government of our forefathers by returning to government of men—one man. Every time some of us oppose granting more power and more power to the President, we are asked, Can't you trust the President? Americans, that is the doctrine that brought chaos and wars to Europe.

The proponents of peace deeply appreciate the magnificent support that untold millions in all walks of life gave us during the debates on the lend-lease bill. We plead for their continued support in a crusade against war—in a crusade of facts to defeat a hysteria born of fear, emotionalism, and sentimentalism but which would lead our country into war and into dictatorship.

On October 23, 1940, at Philadelphia, President Roosevelt declared: "I repeat again that I stand on the platform of our party: 'We will not participate in foreign wars and we will not send our Army, naval, or air force to fight in foreign lands outside of the Americas except in case of attack.'"

Today, we, the American people must unite to help the President keep this solemn promise of peace.

Inflation

EXTENSION OF REMARKS

OF

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1941

LETTER FROM M. S. ECCLES TO HON. WRIGHT PATMAN, OF TEXAS

Mr. BROWN. Mr. President, on March 21 the Chairman of the Board of Governors of the Federal Reserve System addressed to Hon. WRIGHT PATMAN, a Member of the House of Representatives, a letter in which the Chairman of the Board very thoroughly argues the question of inflation, which is disturbing so many persons. I think his reply to the Representative from Texas is a splendid one. I understand it is to be released for publication today; and I ask unanimous consent that it may appear in the next issue of the CONGRESSIONAL RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BOARD OF GOVERNORS OF THE
FEDERAL RESERVE SYSTEM,
Washington, March 21, 1941.

DEAR MR. PATMAN: From time to time my attention has been called to your frequent public utterances on the floor of the House and over the radio, culminating in your recent radio address as printed in the CONGRESSIONAL RECORD of March 17, 1941. You have long charged that the Federal Reserve System is under the domination of the private bankers of the country and more recently you have proposed that the Government finance its entire expenditures through the issue of new money and without the payment of interest. Since these questions are of increasing importance in these times, I feel that your statements should not remain unanswered lest the public be misled into supposing that the issue by the Government of interest-bearing bonds is unnecessary, extravagant, and wasteful, as you contend. Your propositions concern matters in which I have an especial interest and for the purposes of the record I am making this personal reply. While I have no reason to believe that the Board would differ with the substance of this letter, it has not been submitted to the other members and therefore does not necessarily represent their views.

Your plan as described in the CONGRESSIONAL RECORD is for the Government to finance its expenditures by issuing new money and avoiding the payment of interest. In this fashion you would have the Government meet not only its normal expenditures in excess of receipts but also the enormous defense expenditures now under way and in contemplation and ultimately the entire outstanding Federal debt.

The sovereign power of the Congress to authorize such a program is beyond question. What has to be determined, however, is whether it would be for the good of the country to embark on such a course. To my mind it would be disastrous. Plausible as your proposals may be made to appear, there is no escape from the truth that someone must pay for everything. If the Government could save the billion or more a year without causing any corresponding or greater losses to the country, no one could reasonably be opposed to your proposal. I am convinced, however, that the creation of the huge amount of new money contemplated by your plan could only lead to incalculable losses for the country as a whole.

At the outset I think it necessary to dispose of some of your misconceptions on the subject of the banking system. First of all, the interest received by the commercial banks of the country on their Government bond holdings is not an unconscionable tribute, as one might imply from your discussion. The banking system of the country is an indispensable part of our capitalistic economy. Practically all the people make use of some banking service, either directly or indirectly. How would these people be affected by your proposal? If the revenue from Government bond holdings should be taken from the banks, they would seek some other source of revenue to replace it or reduce their disbursements. Obviously they could not raise their lending rates, since the huge amount of new money involved in your plan would drive interest rates even below their present low levels. The banks would be obliged to reduce still further the rate of interest paid on their savings accounts although the savers of the country are now receiving an excessively low rate of return. Beyond that, the banks would have to increase materially their service charges of various kinds, principally for checking accounts. These efforts to replace the revenue now derived from interest on Government securities would impose a new burden upon the people of the country substantially in the same amount as the interest now received by the banks on their Government bond holdings. There is this important difference, however, that the new burden upon savers and other individuals using banking services would fall most heavily upon the more numerous owners of small accounts, whereas the burden of taxes collected by the Federal Government to pay interest on its bonds falls for the most part upon those with ability to pay.

Nor can it be truthfully said that banks make inordinate profits, and that they could operate on a sound basis with less income. During the 10-year period 1930–39 the average rate of net earnings on invested capital by member banks was 2 percent, which is less than a reasonable rate of return. It should be noted that these earnings relate only to banks which survived the great depression. A complete picture would show that during the period 1929–33, inclusive, 9,755 banks failed and their stockholders in nearly every instance lost their entire investment and in many cases paid assessments up to the par value of their stock. During the 5-year period 1935–39 the average rate of return was 6.1 percent, but this better showing was due in large part to the fact that during this period banks were realizing recoveries on losses charged off during the depression and profits on the sale of securities in a steadily rising bond market. Obviously, these are nonrecurring items, without which the earnings for this recent 5-year period would have been substantially lower.

That the banking business is not considered lucrative by the investing public is attested by the fact that during 1940 the average price of common stocks of 19 New York banks was about 55 percent of the corresponding prices in 1926, whereas public utilities stock prices averaged around 80 percent and industrials around 100 percent of the corresponding prices in 1926.

The effect of your proposals upon mutual savings banks, life-insurance companies, educational endowments and other institutional investors who hold Government bonds would be even worse because these institutions would have great difficulty in making up the loss of revenue. They would be compelled to reduce drastically their disbursements. Savings banks would have to reduce still further the rate of interest paid on their accounts, life insurance companies would have to curtail dividends on outstanding policies and charge higher premiums for future policies, and educational endowments would be forced to decrease their support of schools and colleges.

One of your favorite complaints is that the Federal Reserve banks are owned by private bankers and that the Board of Governors in Washington as well as the Federal Reserve banks are operated in the interest of private bankers. These charges will not stand up under examination. The Board of Governors, the members of which are appointed by the President and confirmed by the Senate, is a public body. As to the Federal Reserve banks, you rest your case upon the slender point that the stock of the Federal Reserve banks is owned by the member banks. Congress specifically provided for this, as well as for the rate of dividend, and Congress can change the nature of the stock and the rate of return at will. This so-called stock ownership, however, is more in the nature of an enforced subscription to the capital of the Federal Reserve banks than an ownership in the usual sense. The stock cannot be sold, transferred, or hypothecated, nor can it be voted in accordance with the par value of the shares held. Thus the smallest member bank has an equal vote with the largest. Member banks have no right to participate in earnings above the statutory dividend, and upon liquidation any funds remaining after retirement of the stock revert to the Government. You greatly exaggerate the significance of this so-called stock ownership. At the current dividend rate of 6 percent, it involves the payment annually of approximately $8,000,000 to more than 6,000 member banks, and could be done away with altogether without important effects except to put an end to an illusion created by you and others in the minds of some people. At the same time, it is my view that the Federal Reserve System should be unequivocally a public instrumentality, but the ownership of the stock of the Federal Reserve banks is not the determining factor.

Coming to the principal issues involved in your proposal to issue a constant stream of new money to finance the Government, the reasons why this would be contrary to the public interest may be summarized as follows: (1) Borrowing by the Government at interest, particularly the borrowing of money actually saved by consumers, rather than issuance of currency, is a necessary safeguard against inflation, particularly at this time, and (2) borrowing by the Government at interest is an essential part of the capitalist economy in which we live.

There are times when the money supply should be increased and times when it should not be. It is one of the tasks of the Federal Reserve System to see that the money supply is adjusted to current requirements of the economic situation. The System has powers to supply almost unlimited increases, but its powers to prevent harmful increases or to bring about needed decreases are now wholly inadequate.

The prevailing situation, which is likely to continue during the next few years, does not call for increases in the available supply of money. The amount of adjusted demand deposits and currency, which together constitute the supply of money owned by the public, already exceeds $42,000,000,000 or more than double the amount that existed in 1933 and some $15,000,000,000 more than was on hand at the peak of the boom period of the twenties. A large part of these deposits represents idle funds being held on demand for future investment. In addition, commercial banks of the country have over $6,000,000,000 of reserve funds in excess of their requirements and available as a basis

for a multiple expansion of loans and investments and therefore of deposits. In fact, existing deposits, if utilized at the rate of turnover that prevailed in the twenties, could support a tremendous boom without creation of an additional dollar of new money.

With prospects for improved business under the stimulus of the defense program, it is probable that individuals and institutional investors will find greater demands for their now idle lendable funds, and that these funds will be put to more active use. In the first place, idle funds will be lent to the Government for its defense expenditures, and this will unavoidably put them into active circulation. Then, as business improves, idle funds will be put to use by large and small business units raising new capital. Even beyond this, as prosperity grows, individuals themselves will put into circulation part of their accumulated cash savings by buying goods and services of one kind and another, the purchase of which they postponed in the past when they accumulated those cash savings. It is possible that this expansion of the use of existing funds may go so far that, added on to the present rate of turnover of money and goods and services, it may exceed the productive capacity of our economic system. Such a condition is one of monetary inflation, characterized by attempts to buy things that cannot be bought, that is, by the bidding up of prices of goods, of equities, and of other property—in other words by the usual phenomena of general inflation.

One way of helping to avoid this development is for the Government to finance its expenditures by taxation and by borrowing existing funds. It is better that borrowing be done from the current savings of the public and from past savings now held as deposits of individuals, business corporations, insurance companies, and other fiduciary institutions, rather than from the idle reserve funds of the banking system. Borrowing from the latter results in a further increase in the supply of bank deposits. It amounts to financing with new money which would be dangerous if the supply of deposits were already actively in use and with production already nearing capacity levels. Yet your proposal would court this danger by bringing about an even greater increase in bank deposits. In order to carry out the growing defense program it may at some stage become desirable that borrowing be entirely from current savings—which will, however, need to be larger than now—so that for every dollar the Government spends the consuming public will have spent a dollar less. It may also be necessary to absorb a part of the banks' additional lending power by increasing their reserve requirements, as was indicated by the special report which the Federal Reserve System submitted to Congress on December 31, 1940. Your proposal, on the contrary, would increase manyfold the excess reserves of member banks, through the issuance of new money by the Federal Reserve banks for Government expenditures, and would add enormously to the banks' lending power.

Your plan is inconsistent with the nature of our capitalistic democracy. As our economic system works, a large part of the public saves a part of its income which is invested in homes or in plant, equipment, and the like, which supply current goods and services to others. Or they lend to the Government to meet its expenses in excess of tax receipts. Interest is the most common form of compensation that these individuals obtain for the use of their money. These savings are often not invested directly but are entrusted to insurance companies, banks, and other institutions which do the lending. These institutions receive interest and in turn either pay interest or provide services to savers, as well as meet their operating costs.

Interest on debt—a large part of which is public debt—constitutes income of private individuals, of educational and charitable trusts, of insurance companies, and of banks. A certain part of it pays for the costs of the process of investment. Discontinuance of interest on the public debt, therefore, must be thought of not merely as so much saved the Government or the taxpayer but also as so much income cut off from savers, trusts, institutions, and individuals that require the safest type of investment.

If there were some virtue in your ideas for Government financing, other countries might be expected to follow them. But the fact is that not even the dictator nations and none of the other powers have abandoned the payment of interest on government issues. For all of the boasted efficacy of German financial management, the Nazi government has adhered to strict orthodoxy in paying interest rates, considerably higher than those prevailing in the United States, on its obligations and has sought with much success so far to avoid creating new money. Instead, by heavy and widely distributed taxation, the Nazi government has sought to finance its vast expenditures so far as possible out of existing funds and to avoid monetary inflation, possibly because the memory of the demoralization of the mark after the first World War is still so fresh in German memory.

Financing government by issuing currency would have a double-barreled effect upon the interest income of the public. It would reduce the amount of interest received by savers, and it would increase the amount of money available for investment. As use for these funds was sought, interest rates on all types of debt would decline, until the bare costs of investment could not be met. In such circumstances funds intended for investment would either remain uninvested or would out of necessity be used for the speculative purchase of existing consumption goods, physical property, or equities of various kinds. This would intensify the inflation already generated by capacity production for the defense program if financed by new money. Such conditions would completely demoralize our economic system as now constituted. It would mean the end of capitalism and require the substitution of some other system in its place.

Very truly yours,

M. S. ECCLES,
Chairman.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D. C.

The O'Mahoney Report

EXTENSION OF REMARKS

OF

HON. FREDERICK VAN NUYS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1941

EDITORIAL FROM ST. LOUIS STAR-TIMES

Mr. VAN NUYS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very laudatory editorial from the St. Louis Star-Times of March 12, 1941, entitled "The O'Mahoney Report."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Louis Star-Times of March 12, 1941]

THE O'MAHONEY REPORT

The future course of American life may be indicated, though not decided, by the response to the preliminary O'Mahoney report recommending a new effort to liberate and stabilize our business system.

This is not because Mr. O'MAHONEY's report is drastic in its specific recommendations. Quite the opposite. After 2½ years of voluminous hearings by the monopoly committee the chairman advances only a few concrete proposals for legislation. None of these is new, and only one can be called basic. It may be, indeed, that other members of the committee will want a far more sweeping final report.

Strict enforcement of the antitrust laws has been a pious pledge in party platforms since the Sherman Act was adopted in 1890. (Only recently, under Thurman Arnold, has any administration since Theodore Roosevelt's, attempted to redeem such a pledge, and the results are inconclusive.)

Encouragement to small business and new enterprises through tax relief has been demanded both from conservative and liberal sources. The establishment of a system of privately insured loans to such businesses would avoid the alternative of Government-insured loans.

Federal charters, instead of State charters, for huge corporations which are interstate in scope, is the one "radical" reform Senator O'MAHONEY urges. This, however, to establish "a national rule for national business," he considers fundamental.

The process of business merger and consolidation was not reversed during the depression. The process of technological improvement did not falter; on the contrary, the United States now can produce more manufactured goods, with fewer industrial workers, than ever before. More and more farms have passed out of the hands of small owners into corporation ownership, and the previous owners are either working them as tenants or subsisting on city relief.

There is hope in the picture providing the country recognizes the truth of O'MAHONEY'S declaration that cooperation—genuine cooperation among groups hitherto suspicious and antagonistic—is necessary to abolish economic uncertainties "which seem to threaten even our political system."

There is hope providing we realize that the concentration of economic power, as President Roosevelt said nearly 3 years ago, is leading "toward a concealed cartel system after the European model" instead of maintaining a truly free economy.

There is hope providing leaders of all groups and interests heed Senator O'MAHONEY'S warning (surely not a radical doctrine):

"The danger to democracy does not proceed from those who believe in the authoritarian state, but from our own failure to comprehend the causes of economic instability and to proceed immediately to democratic remedies."

There can be little hope, however, if even the most reasonable suggestion that the Government take the lead in bringing about cooperation in the common interest inspires merely blind denunciation or apathetic resentment.

Those who believe in the free economic system and want to see it work should be first to endorse O'MAHONEY'S proposal for a national conference, in which spokesmen for business, labor, farmers, and consumers may attempt to work out a technique for solving our basic problems within the framework of democracy.

The Vision of Woodrow Wilson

EXTENSION OF REMARKS
OF

HON. ELBERT D. THOMAS
OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1941

ARTICLE BY JOSEPH CONRAD FEHR

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a stimulating article written by Joseph Conrad Fehr, entitled "The Vision of Woodrow Wilson." This article appeared first in the South Atlantic Quarterly, published by Duke University, in January 1941.

There being no objection, the article was ordered to be printed in th RECORD, as follows:

[From the South Atlantic Quarterly, published by Duke University, Durham, N. C., January 1941]

THE VISION OF WOODROW WILSON

(By Joseph Conrad Fehr)

Although there are still many who insist that the greatness of Woodrow Wilson was but the glamour of the moment which died with him, anyone who can interpret the signs of the times can see that the late President's hopes and aspirations for a new world in place of the old are again engaging men's serious thought and attention. Indeed, there is an ever-growing conviction among people generally that by disavowing Wilson's inspired program for a lasting peace—that the nations arrayed against Germany and her allies temper their attitude by high-minded justice, and in place of the historic conception of the Pax Romana (peace by universal empire) adopt a new-world policy for the purpose of establishing peace cooperatively among independent nations—the so-called peacemakers who met at Versailles sowed the very seeds of the portentous unrest now engulfing the entire world.

There is little doubt that the outspoken idealism of President Wilson was largely responsible for breaking the resistance of Germany in 1918. According to his magnanimous view there had been no war against the German people, as such. Although the Treaty of Versailles was not to his liking, and, in fact, betrayed the high purposes that had brought him to Paris, he accepted it only because he sincerely believed that his League of Nations, with its promise of a new reign of reason and restraint, would inevitably remove, one by one, its many injustices. In spite of the compromises he had to make, President Wilson believed that there was a latent nobleness in nations as well as individuals. "Be noble," he seemed to say, "and the nobleness which lies in other men, sleeping but never dead, will rise in majesty to meet thine own." And in order to touch off this divine spark, he boldly set the example of asking nothing for his country, only peace.

Wilson's enemies still argue that he allowed himself to become imbued with a childish naïveté, "impractical dreamer that he was," thereby becoming a dupe at the hands of the ruthless realists he had to cope with. His devoted followers, on the other hand, insist that Wilson's dream of the dawning of a new international era could and would have been realized, in spite of a vengeful peace treaty, if the United States had not rejected the League of his own creation. It is the age-old conflict between two schools of thought—idealism versus realism. This much only seems definitely certain, that without the United States as a member the League was doomed to failure from the start and that the world became once more blinded to those almost divinely conceived principles of national and international right and policy which Wilson championed up to the very time of his death.

President Wilson's two eventful administrations were characterized by a unity of purpose and solicitation for the people's welfare as had not motivated American politics since the days of the founding fathers. He dignified public life as never before. In his masterful hands, government again became an instrument of service for poor and rich alike. He not only made himself the mouthpiece of the people, speaking always "as one having authority," but also as the enlightened prophet of an enlightened people.

By sheer force of mind and character, colored by a mixture of radicalism in the realm of ideals and stubborn conservatism in the application of principles, he seemed to be in touch with the centuries and because he was so intimately familiar with the history of the world he had not only imagination to envision and plan for the future, but the courage to do so as well.

It is, of course, foolhardy to maintain that Woodrow Wilson had no defects. His brilliant and lofty mind, as is so often the case with great men, made him impatient of the simulations and dissimulations of the men he was constantly called upon to deal with. He was often irritated by what appeared to him their lack of vision. No matter what his mistakes, however, it cannot be gainsaid that he was at all times governed by the highest motives. Make-believe was altogether foreign to his make-up, and he could never hide his contempt for mere expediencies. As he remarked of Edmund Burke, he was himself "First and last a master of principles." And when the people of the United States exalted him to the highest position of trust and honor within their gift, the country's affairs were once again in the hands of an expert in statecraft.

Woodrow Wilson sought to lead and guide not only the American peoples, but the peoples of all civilized nations to a higher plane of political life. His power over men and affairs was essentially spiritual. No one can deny that he lifted the eyes, first of his countrymen and then of the world at large, above purely selfish standards and gave them a new measuring rod by which to gage public service. He typified the sort of great man Emerson spoke of, one "who knows that the spiritual is greater than any material force." As such he was a missionary specially called into an incredulous world to convince his fellow men that America had a heart and soul as well as gold and silver. He gave pride of country a new spiritual tone, and when the smoke of battle had vanished away and people everywhere cried out for peace and something stable upon which to rebuild civilization, it was Woodrow Wilson, the President of the United States, who climbed to the summit of the ages to teach mankind that only through love and sacrifice could the world be made a new and really worth while place to live in.

It was this deeply religious force of his constant and sincere nature that captured the world's imagination. No wonder that he was called by some a theorist and a dreamer. His idealism, contagious as it was, was too lofty for most men. But history, as it has repeatedly done with the great characters of the past, must acknowledge the stimulating influence of Mr. Wilson's unwavering idealism. He has said, "Do you covet honor? You will never get it by serving yourself. Do you covet distinction? You will get it only as a servant of mankind." And to prove it he went to work and became the most honored and most distinguished citizen and statesman of his generation. There have been other men of great deeds in times of epochal events, but they have usually been men of little, if any, spiritual growth and comprehension. Few of them were capable of seeing farther than the mere outline of material forces. Like all men of vision and dominating leadership, Woodrow Wilson was destined to pay the usual price for genius—that of being "misunderstood."

America has been blessed with few Chief Magistrates who have been really great men. However, Woodrow Wilson will be known for all time as one of his country's chosen and anointed leaders. His greatness rests not alone upon that cultured mind which he himself so perfectly defined—"a mind quit of its awkwardness, eased of all impediment and illusion, made quick and athletic in the acceptable exercise of power * * * at once informed and just * * * habituated to choose its course with knowledge, and filled with assurance, like one who knows the world and can live in it without either unreasonable hope or unwarranted fear"—but primarily upon his amazing strength of character. His record of accomplishments and deeds as the Nation's Chief Executive during a perilous international crisis is everlasting proof that a scholar and literary man is by training and study capable of being entrusted by any people with leadership in public affairs. Wilson was never so busy that he could not write his own state papers and addresses. It is because they punctuate the very essence of a great man's thinking and emotions that they are such powerful and permanent documents. Long years of academic training as a student and teacher, and then as president of one of the foremost institutions of learning in the land, coupled with a rigorous rearing while a child in a Christian home, combined to develop in him those marvelous gifts of intellect and traits of character which won for him the admiration of the world for all time.

During those quiet but fateful years as student and teacher, Woodrow Wilson was molding his knowledge into wisdom and power. His reputation for learning spread throughout the land, and men of affairs took note of his scholarship and exceptional qualities as a leader of both thought and action. In the fullness of his prime he was called by the people of his State to forsake his vocation as a teacher in order to become their Governor. So successful was he in demonstrating the practical value of his vast academic training and experience that he was after 4 eventful years elevated to the Presidency of the United States by a grateful people, whose enhusiasm had been fired by his voice and achievements.

Thus he came as a crusader, rich in the knowledge of universities and ripe in the wisdom that can only be garnered through a lifelong experience in which a man must first be tried and found true in many a difficult place, preaching and laboring for an interdependent world that would always be at peace. No sooner had he uttered his first inaugural address than America knew that her choice was justified. Here was "a man to the manor born." He seemed to know intuitively all the basic and fundamental principles upon which society rests, and therefore all the virtues and defects of democratic forms of government.

In point of character and intellectual attainments, Woodrow Wilson was too unusual a man to be a typical American. Like those other unusual Americans — Washington, Franklin, Jefferson, Hamilton, Jackson, and Lincoln—he was, however, a typical American in the magnificent use he made of his genius. He had that uncommon faculty of

seeing with his own eyes, and was never satisfied unless he understood the cause and effect of things. In the following paragraph from his essay on Walter Bagehot, a Literary Politician, Woodrow Wilson perhaps best pictures the man and statesman he himself was:

"It is not the constitutional lawyer, nor the student of the mere machinery and legal structure of institutions, nor the politician, a mere handler of that machinery, who is competent to understand and expound government; but the man who finds the materials for his thought far and wide, in everything that reveals character and circumstance and motive. It is necessary to stand with the poets as well as with law givers; with the fathers of the race as well as with your neighbor of today; with those who toil and are sick at heart as well as with those who prosper and laugh and take their pleasure; with the merchant and the manufacturer as well as with the closeted student; with the schoolmaster and with those whose only school is life; with the orator and with the men who have wrought always in silence; in the midst of thought and also in the midst of affairs, if you would really comprehend those great wholes of history and of character which are the vital substance of politics."

Never before had the American people elected as their President a man who was able to measure up to every one of these exacting requirements of the scholar-statesman. But Woodrow Wilson did. Orator, lawyer teacher, he could commune with the muses as well as confer with merchants, manufacturers, and laborers. On the strength of his extensive and varied interests, talents, and abilities he was always able to find "the materials for his thought far and wide, in everything that reveals character and circumstance and motive." No wonder that his eager mental curiosity and fearlessness of character eventually brought him into conflict with men whose interests were on a more mundane level. Although his refusal to be self-cautious had endeared him in the confidence and esteem of the masses, born aristocrat that he was, his detractors finally succeeded in destroying him. As was ever the case, however, the destruction of the man merely gave the vision he gave his life to greater impetus and served to insure its growth and propagation in a world which is still hovering between peace and war.

At heart always "a man of the people," the same as that other American aristocrat, Wendell Phillips, not because he was essentially a common man but because he was a professed servant of the people, Woodrow Wilson never failed to follow the Biblical injunction, "Let Him who would be chief among you be your servant." It was probably this determination to detach himself from class distinctions and narrow points of view and to look at a problem from all angles instead of being governed by mere expedients of the moment which gave rise to that distaste for the practice of law which Wilson carried through life. It was apparently difficult for him to master court procedure, and it seemed to disgust him to see about him men whose talents he justly looked down upon excelling in an "art" that was distasteful to him. 'The life of a lawyer," he wrote of Edmund Burke, whom he so much admired, "would inevitably confine his roving mind within intolerably narrow limits." That exhibits precisely Wilson's own attitude toward the profession of law and no doubt explains many of the other cross-currents of his eventful life. As a lawyer Woodrow Wilson was at his best as a champion and expounder of legal principles.

While Woodrow Wilson was President of the United States his ideals had a special appeal to the youth of the land. His high conceptions of public service and his brilliant manner of discharging the manifold duties of the Presidency served as a concrete demonstration that education was never intended to be merely a means of making a livelihood but for the nobler purpose of acquiring knowledge with a view to developing character and wisdom. He permitted nothing to draw him away from the lofty ideals that he fostered as a young man, and he never suffered them to be smothered in the crucible of everyday struggles, discouragements, and apparent failures. During the tension, excitement, and passion of the World War he steadfastly maintained his sense of proportion—never forgetting that his main object was peace and not war.

And when the war was over he became once more the teacher in a Herculean effort to convince an outraged world that only through the political and economic cooperation of a society of nations could lasting peace be achieved.

Day after day, in the course of a Nation-wide speaking tour in the summer and fall of 1919, Wilson risked not only the prestige of his high office but also his life in order to convince his indifferent countrymen that his plan of a permanent peace, based on the willingness of nations to cooperate instead of seeking to dominate and subjugate one another, was sound. Whether we want to be or not, he argued, the United States is part and parcel of an "interdependent world," which fact alone commits our country to assume the responsibility of promoting "international understanding" as a peaceful member in the family of nations. To do otherwise, he pointed out, this great country would only serve the forces working to bring about international discord and the disintegration of democracy. "You cannot," he said, "trade with a world disordered." And just before he was stricken ill he made the following notable declaration in his speech at Des Moines, Iowa: "The isolation of the United States is at an end, not because we choose to go into the politics of the world but because by the sheer genius of our people and the growth of our power we have become a determining factor in the history of mankind. After you have become a determining factor you cannot remain isolated, whether you want to or not. Isolation ended by the processes of history, not by our independent choice."

Because President Wilson taught his countrymen to think less in terms of material things, important as they are, and to strive more for the durable spiritual heritages left them by their forefathers, men not capable of such "dreams" called him an impractical visionary. As a matter of fact, Wilson could more than likely have readily forsaken the field of scholarship and entered upon a successful and prosperous career as a lawyer had he been so minded. But to his everlasting credit and the ultimate good of humanity, he blinded himself to any selfish desires he may have had for riches, and chose to make his career in the quiet haunts of a university cloister where by indefatigable industry he trained and equipped himself to assume charge of the epochal world events to which a kind providence later called him as a leader of leaders.

Wilson failed in the supreme effort of his life to establish ways and means that would insure universal peace, which Dante, more than 600 years ago, declared to be "the first blessing of mankind." Even now, nearly a generation later, there are critics of Wilsonian policies no kinder than were the critics of 1919. But all that is presently transpiring, either to involve this country in the present world conflict or to keep it our of war, bears witness to the fact that the United States, by and large, is ready to accept Wilson's basic concept of the interdependence of nations. It is becoming more and more evident that the American people, now under the leadership of a Chief Executive and a Secretary of State having the same perspective as the great War President under whom they served, are at last ready to do justice to the memory of Woodrow Wilson. There can be little question that when the history of the twentieth century is written, Wilson will be proclaimed as one of its most heroic as well as tragic figures. And if, as Marcus Aurelius remarked, "The value of a man is the value of the objects on which his heart is set," then Woodrow Wilson's name and fame are unquestionably engraved for all time in the hearts of his countrymen and lovers of peace and justice everywhere, for thinking people throughout the world now see in his work not merely the outlines of a system of world peace in our times but the very warp and woof of a pattern of world readjustment for more than a century to come.

Report of Temporary National Economic Committee

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1941

ARTICLE FROM THE NATION

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD a very excellent article in The Nation of March 22, 1941, referring to the investigation by the Temporary National Economic Committee, and especially to the final statement of the chairman, the Senator from Wyoming [Mr. O'MAHONEY].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Nation of March 22, 1941]

O'MAHONEY SUMS UP

(By I. F. Stone)

WASHINGTON, *March 16.*

The investigation made by the Temporary National Economic Committee under Senator JOSEPH C. O'MAHONEY in the past 2 years and 9 months will rank with the great inquiries of the past, with Frank Walsh's Industrial Commission and Samuel Untermyer's Pujo committee. Like its predecessors, the Temporary National Economic Committee has shown the extent to which this country and its institutions, to echo Lincoln, no longer belong to the people who inhabit it. [The facts are vividly summarized in Senator O'MAHONEY's final statement, a document which deserves to be read by every American.] To a greater extent than ever before, our economy is dominated by the corporation rather than by the individual entrepreneur. These corporations are collective enterprises without collective responsibility. "In popular discussion," Senator O'MAHONEY says, "they are regarded as 'private enterprise.' But how private is such enterprise after all?"

The Senator closed the work of the committee, as he began it, with "a declaration of faith in the traditional institutions of our country." But he makes it clear that when he says "traditional" that is what he means. He does not intend to endow monster corporations, which have often irresponsibly revolutionized our ways of doing business, with the basic immunities with which we protect

personal property and personal liberty. "When one considers the number of policyholders who are the owners of mutual life-insurance companies like Metropolitan and Prudential, wholly national in their operation and effect, the number of stockholders and employees of a utility like American T. & T., or of an industrial like General Motors, and the stockholders, employees, and natural resources of industrials like the Standard Oil of New Jersey and United States Steel, it becomes immediately clear that there is no justification whatsoever for thinking of those units or of dealing with them as though they were natural persons clothed with the rights which are guaranteed to flesh-and-blood persons by the Constitution of the United States." We have passed, in the opinion of the Senator, as of most intelligent people, "from an individual economy to a corporate economy" and must act accordingly. The alternative before us, he says, is "free private enterprise or Government planning."

The chances are that the choice, as in most epigrammatic antitheses, will not prove a real one. Given time, a measure of good will, and a minimum of stability, and the solution will no doubt combine a good deal of both. The Senator himself is all for reviving free enterprise, i. e., enterprise free from interference by corporate monopoly as well as Government official. But the possibility of turning back the clock is certainly a slim one, and his own remedy seems a puny one for so gigantic and revolutionary a change as has taken place since the seventies in our economy. He wants Federal incorporation of all corporations operating in interstate commerce, a measure he and the late Senator Borah long championed. "The first and foremost step," the Senator says, "is to recognize that we must have a national rule for national business." With that none will disagree. Nor with his statement that "it is idle to think that the huge collective institutions which carry on modern business can continue to operate without more definite responsibility toward all the people of the Nation than they now have." But one wonders whether he has gone to the heart of the matter when he says that "the Insulls and the Hopsons, the Coster-Musicas have been able to prey upon the economic system of all the people solely because they were able to secure the separate State charters which enabled them to engage in national commerce, although their creators had neither the desire nor the governmental power to regulate the commerce in which we are engaged." The railroads have long been regulated by the Federal Government, through the I. C. C., but that did not prevent the operations of the Van Sweringens.

One may support O'MAHONEY's proposal for Federal incorporation without having any great confidence that it would prove effective. The Senator wants a national charter law drafted so "as to reduce materially not only the possibilities of evasion of the antitrust law but the difficulties of its enforcement." He wants this law written to "make corporate directors trustees in fact as well as in law." He would regulate subsidiaries through this law and "standardize intercorporate financing."

A steady stream of monographs has been issuing from the crowded archives of the committee. They are well worth watching, as are the concrete proposals put forward by its chairman. Given the complexities of business enterprise and the difficulties involved in even so seemingly simple a matter as the maintenance of competition, it is increasingly likely that some kind of administrative regulation will be necessary. Perhaps an easier way to keep the great collective enterprises of the corporation socially responsible would be to provide by law that large, widely held corporations admit the Federal Government into a share of their management.

Finland

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1941

ARTICLE BY JOHN SAARI

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by the chairman of the Finnish-American relief committee, John Saari, which article appeared in the New York Herald Tribune on Saturday, March 15, 1941. The article explains Finland's present situation and is therefore of great public interest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of March 15, 1941]

FINLAND SEEKS A LOAN—SMALL DEMOCRACY REQUIRES MONEY FOR FOOD SUPPLIES

To the New York Herald Tribune:

I wish to thank you for your commendatory editorial Finland—a Year Ago, appearing in your today's issue. It accurately describes the progress Finland has made in a year—since the peace with Russia—in the rehabilitation of the country and the resettlement of the refugees from the territory ceded to Russia. There is one thing, however, Finland has not yet been able to solve, and that is the food shortage which was caused by the loss of a very productive area to Russia and the additional demand on the remaining arable land to feed the whole population of the country, including the 450,000 refugees from the ceded area; nor the shortage of the imported foods, created by the impediments of the war.

As a result, Finland today is facing a serious shortage of vital necessities of life. The people already are on very short rations, and if it had not been for the loan by our Government last winter and the private contributions of the American people, enabling the purchase and shipment of food from here, the people of Finland would have starved. The shortage of necessities is increasing daily, and the domestic harvest is 7 months off. In fact, some of the essential foods are already exhausted, and the people are depending wholly on foreign supplies for these foods or go without.

Therefore, to save the people of Finland from starvation and the children from becoming deformed and stunted, Finland must have outside aid, and quickly, and the only country from where this aid can come is America.

To illustrate the seriousness of the food shortage today in Finland, let me give you the actual rations of some of the food items: Meats, 13 ounces a week, to be reduced in April to about 6½ ounces (normal American average is about 2½ pounds a week); fats, 6 ounces a week of butter and margarine together; coffee, one-half pound every 2 months; tea, 1.7 ounces a month; sugar, 1 pound 10 ounces a month; fruits, lacking, and cereals (the basic ration of bread and cereals) is about half a pound a day. This ration can be maintained only if imports from abroad can be arranged in the near future; the present resources suffice only to late spring. Clothing, dress goods, and shoes are strictly rationed for lack of raw materials. Finland, too, is a cold country; the people require a great deal more heat-producing foods than the people of warm climates.

The money that our Government lent to Finland is used up, and the private contributions now are very small, due to so many other countries in need. Finland's export trade, too, as you know, is shut off; hence, she cannot get foreign exchange to pay for what she needs. The only way Finland can get dollar exchange today to purchase enough food to save the people from actual starvation, is by another loan by our Government.

The administration, I understand, through the Federal Export-Import Bank, is in position to make further loans to Finland. I hope the administration will find a way to help Finland with another loan. What the minimum amount is that Finland needs until her own crops mature, I do not know; the Minister of Finland can advise on that. But whatever the amount she needs, it all will be spent here for food and clothing. No; the money will not go out of the country; on the contrary, it will help our farmers to dispose of some of their surplus stocks.

We are so absorbed in the British war situation and the means of rendering her adequate aid that we have virtually overlooked everything else that affects the democratic world; for instance, the serious food situation in the little democracy of Finland. True, Finland is outwardly at peace; but the people are fighting just as valiantly now as they did last winter, only against a more insidious, baneful, and demoralizing force—hunger. Finnish morale, of course, is good and strong, but the people are up against a force which can be overcome only by proper food. I am sure that the American people will not let the people of Finland starve.

Furthermore, helping of Finland will not in any way help the enemies of the British. On the contrary, aid to Finland will be to a friendly, independent nation, and also will help to keep democracy alive in that last post of the western civilization. British recognize these facts in allowing shipments of food to Finland.

The food situation in Finland cannot wait for aid until "signs of peace appear in Europe." The question of aid to Finland is immediate, facing us now. Although there are enough Finnish ships to carry the goods needed from here to Petsamo, shipment at the best nowadays is a very slow process, and months of delay may cause irreparable harm to the people.

JOHN SAARI,
Chairman, Finnish-American Relief Committee, Inc.
NEW YORK, *March 13, 1941.*

The St. Lawrence Seaway Survey, Part VI, entitled "The Economic Effect of the St. Lawrence Power Project," Is Now Available.

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 18, 1941

LETTER OF SUBMITTAL TO SECRETARY OF COMMERCE

Mr. CULKIN. Mr. Speaker, a study of part VI of the St. Lawrence Seaway Sur-

vey, now available, is particularly recommended to the Members of Congress from New York State and New England. It is likewise urged that those groups in New York State who are opposing the seaway set aside their ancient but unjustified fears long enough to give this very admirable report their careful consideration and study. It appears from this report, which is amply buttressed by facts and figures, that development of power and navigation in the St. Lawrence will open up new frontiers in the Northeast along industrial lines, frontiers which thus far have not been fully and adequately considered in connection with the seaway project.

The fact is that the Great Lakes-St. Lawrence seaway and power project offers the people of New York and New England an opportunity to make full use of the great natural resources with which Nature has endowed those regions. A great volume of the cheapest power in the history of hydroelectric development will become the basis for great industrial development in New York and New England.

The attention of the doubting Thomases in New York and New England is also respectfully called to the fact that these areas possess, according to the Bureau of Mines, in excess of 4,000,000,000 tons of iron ore, 1,000,000,000 tons of which is the purest ore in the world, outrivaling the famous Swedish and Norwegian ores.

New England and New York possess billions of tons of pyrites available for sulfuric acid, and this hitherto has been untouched. These areas likewise include extensive deposits of salt, assuring an unlimited supply of sodium and chlorine. They likewise possess excellent deposits of graphite and zinc.

This document carries a message of hope not only to New York and New England but to the entire country.

Pursuant to the permission of the House, I append hereto the letter of submittal to Secretary Jones, of the Department of Commerce:

LETTER OF SUBMITTAL

DECEMBER 19, 1940.

The Honorable SECRETARY OF COMMERCE,
Washington, D. C.

MY DEAR MR. SECRETARY: I have the honor to submit to you part VI of the reports of the St. Lawrence survey. This part deals with the economic effects of the St. Lawrence power project. It considers principally the availability of a market for the large amount of hydroelectric power latent in the St. Lawrence River and the effect of this low-cost power upon industry and transportation systems of New York State. The report was prepared by the survey with the generous assistance of Prof. Edgar M. Hoover, Jr., of the University of Michigan, and Mrs. Grace Knott, now with the National Defense Advisory Commission. The maps and charts were executed by Mr. Earl G. Millison, Chief of Graphic Services, and Mr. George Newman, Head Statistical Draftsman, Work Projects Administration. The survey has been fortunate also in having the advantage of criticisms and suggestions on earlier drafts of this report from the following individuals: Prof. James C. Bonbright, chairman, and Mr. Gerald V. Cruise, executive secretary of the Power Authority of the State of New York; Hon. Leland Olds, chairman, and Mr. J. V. Alfriend, Jr., engineer, Federal Power Commission; and Mr. J. A. Krug, Chief Power Engineer, Tennessee Valley Authority.

Even though the survey has been concerned principally with the St. Lawrence seaway, the hydroelectric power aspects were studied because the project has always been considered as a combination seaway and power project; consequently, the net effects of the undertaking could not be evaluated without reference to the influence that hydro power would have upon New York State industry and employment. A final judgment on the benefits of the combined project could not fail to include a thorough consideration of the benefits of cheap hydroelectric power.

In the exploration of future demand for power in New York State, this report considers not only the disposability of St. Lawrence power at the international rapids section, but also that which can be obtained through the redevelopment of Niagara River. This latter has been included because it has been an integral part of the plans of the Power Authority of the State of New York, the duly constituted State agency for the exploitation of the waterpower resources of the St. Lawrence River, and also because the draft treaties heretofore considered by the Governments of the United States and Canada included provisions for the redevelopment of Niagara River. The effect of the inclusion of additional power at Niagara upon the estimates of the report is to make them highly conservative, for if combined Niagara and St. Lawrence power could be marketed, then surely there would be ample market for St. Lawrence power alone. On the other hand, if the St. Lawrence power is developed first, then the estimated effects upon industrial expansion and employment should be reduced possibly by two-fifths, the proportion of new hydro power at Niagara to the combined St. Lawrence-Niagara system.

The estimates of energy requirements in New York State are carried in this report to the year 1950. This does not imply that it would take 10 years to complete the power project. The year 1950 was selected for several cogent reasons. First, it would allow a period of several years of active operation of the new power system so that the full influence of this economical supply of power upon industry would be felt. In the second place, the year 1950 is a convenient signpost from the point of view of statistical technique, for other studies and estimates dealing with population and demand for power have used that year as a basis of computations.

The selection of the year 1950 does not imply that the development of the project need be delayed until a later date. The estimates of future power requirements in this report were based upon the extension of normal trends in various classes of energy demand. Since the initiation of this study, the national-defense program has been unraveled swiftly and in large dimensions. The obvious effect of this program upon demand for electrical energy will be to accelerate and emphasize the amplitudes of growth here indicated. Hence, the anticipated effect should be to telescope time and bring the need for this hydroelectric development nearer than 1950. This will mean, of necessity, expediting the development so as not to be caught with a shortage of power resources in the industrial Northeast. The accelerating effect of the national defense program upon power requirements in New York State will be more fully treated in part VII of the survey reports.

The present report is detailed and technical. The conclusions, and the facts upon which they are predicated, however, are clear and irrefutable. Even when individual procedures and points of detail may be subject to alternative solutions, the final over-all conclusions and their implications are beyond serious dispute.

Briefly, the survey reveals the following facts:

1. The proposed St. Lawrence-Niagara development is designed to make available to the United States additional hydroelectric generating capacity of 1,100,000 horsepower at the International Rapids and 787,500 horsepower at Niagara Falls. The area served by the transmission system planned in connection with this generating capacity coincides approximately with New York State, and contains about one-tenth of the population of the United States.

2. New York State as a whole has suffered a definite decline in manufacturing employment over the past 20 years. In 1919 New York State had 1,228,000 wage earners employed in manufacturing, or 13.5 percent of the national total. By 1937 the number had fallen to 996,000 or 11.6 percent of the national total.

3. The Buffalo area, where Niagara power was being exploited on a large scale between 1895 and 1924, has recently been affected by this apparent cessation of industrial growth. The Buffalo industrial area's percentage share of the national total of manufacturing wage earners rose from 0.97 percent in 1899 to 1.31 percent in 1923, and by 1935 had fallen to 1.13 percent. In 1937 it was 1.23 percent. The chief industries in which this area specializes are chemicals, metal products, paper, and grain products. In all of these industries, the importance of electric energy costs is relatively high.

4. Since 1924 there has been no further expansion of Niagara hydrogenerating facilities, and considerable steam-generating equipment has been added to take care of the increasing demand. Between 1928 and 1939 steam central-station generating capacity in the Buffalo industrial area increased from 252,955 horsepower to 655,324 horsepower, or 159 percent; while in the same interval, hydro capacity has increased only from 624,710 horsepower to 639,758 horsepower, or 2.4 percent. Out of the total increase of 417,417 horsepower in that period, 402,369 horsepower, or nearly 97 percent, was in steam capacity.

5. New York State has expanded its hydroelectric generating capacity much more slowly in the past decade than most other States. While the United States as a whole increased its hydro capacity by 54.7 percent in the decade 1927–37, New York's hydro capacity increased only 12.4 percent. Only 15 States showed a smaller percentage increase in hydro capacity than New York in that period, although New York State is among the most richly endowed in waterpower resources.

6. Due to lack of mineral fuels New York State is at a very substantial disadvantage in steam-power generation as compared with coal- or oil-producing States. Representative large power stations in New York in 1937 paid from 11 to 17 cents per million B. t. u. for their coal, while comparable stations near mines in Ohio, Pennsylvania, and West Virginia paid only 6 or 7 cents.

7. At the present time the cost of electricity to most representative classes of users is higher in New York State than the United States average.

8. Since about the time Niagara power was fully utilized, industries using relatively large amounts of electric power have expanded in other States and regions more rapidly than in New York State. This is particularly true of certain electrochemical and electrometallurgical industries.

It is fairly clear from this summary of facts that New York State will suffer under an increasing competitive disadvantage so long as available sources of cheap hydropower continue to be neglected. In the Buffalo area, where industry has been based on cheap power to a relatively large extent, the threat of stagnation is perhaps even more serious than in the rest of the State. The proposed St. Lawrence Niagara hydrodevelopment offers a new lease on life to New York State industry—a source of cheap electricity which

should make possible the resumption of manufacturing growth.

Based on experience, past trends, and a consideration of the probable future developments, energy consumption in 1950 has been conservatively estimated at almost double that of 1937. The additional generating capacity which must be built during the next decade to supply these estimated requirements is about one-third greater than the entire capacity of the St. Lawrence-Niagara project, which indicates that there is no question of the disposability of the project's output of energy.

As compared with the best possible alternative all-steam plant, the St. Lawrence-Niagara hydroproject promises savings on the State's entire power generation averaging approximately 1 mill per kilowatt-hour, plus the provision of 1,000,000,000 kilowatt-hours annually at very low rates to high load-factor industries. The Power Authority of the State of New York estimates that the annual savings in the cost of electricity to New York State consumers as a result of St. Lawrence-Niagara development would be $26,000,000.

A study of the chief electroprocess industries in New York State leads to the conclusion that this group can absorb at least the additional billion kilowatt-hours tentatively allocated to it on the proposed plans. This degree of expansion would give employment to 7,000 additional men; while in the absence of such new cheap power, the growth prospects of these industries are substantially nil.

The probable effects of a 1-mill power-cost differential on several selected manufacturing industries outside the electroprocess group were likewise investigated. It was estimated that direct savings from such a differential would amount to approximately 0.7 percent annually on invested capital in the chemicals industry, 0.5 percent in the cement industry, and smaller percentages in 15 other industries. Also, on the basis of certain estimates, the total minimum increase in employment in industries outside the electroprocess group, as a result of the 1-mill differential in power costs, would be at least 18,000 wage earners.

As a general rule there is one wage earner in service occupations for every worker engaged in manufacturing in New York State. The effect of the 25,000 new wage earners in manufacturing employment will probably provide 25,000 additional jobs in such auxiliary occupations. Thus the St. Lawrence-Niagara project will probably create, directly as a result of cheaper power, remunerative employment for 50,000 workers more than the alternative all-steam plan. This estimate does not include derivative employment from the sale of household electrical appliances which experience shows would result from low-rate schedules to domestic and farm consumers.

Combining the additional employment prospects for the high-load factor and other industries, and making allowance for complementary trade and service activities and for population not gainfully employed, the saving in power costs afforded by the St. Lawrence-Niagara hydrosteam plant as compared to the alternative all-steam plan was finally translated into terms of economic support for the equivalent of a community of 125,000 persons.

In terms of demand for transportation, the added freight revenue ascribable to the project is estimated at $5,500,000 annually, in addition to at least $3,300,000 spread over the years of active construction.

All these estimates are based on very conservative assumptions, and the result should be considered a minimum. If the past history of Niagara Falls and the more recent experience of T. V. A. is any criterion of what may be expected in New York State as a result of the St. Lawrence-Niagara development, surely the conclusion is justified that this project will be a great boon to the lagging industrial development of New York State, particularly in northern New York. This area, unlike the southern end of the State, is sparsely populated and free from industrial congestion. With access to the St. Lawrence seaway as a cheap form of transportation, and with unusually low power costs, upState New York will receive from the proposed project the necessary stimulus for progress which has been lacking since the exhaustion of new hydro power at Niagara.

Very truly yours,

N. R. DANIELIAN,
Director, St. Lawrence Survey.

Financial and Monetary Principles of George Washington

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1941

ADDRESS BY WALTER E. TRENT

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address recently delivered by Walter E. Trent before Washington College, Chestertown, Md., in connection with the subject of gold and our American monetary system. In this address Mr. Trent develops the early beginnings of our monetary system, and the teachings of George Washington in relation to that subject.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I very much appreciate the privilege of appearing here today. I have heard of Washington College for many years, and I am familiar with your historic and interesting traditions. I am indebted primarily to your alumnus, Mr. William Frazier Russell, for the opportunity to meet you today, as he most considerately suggested to your President, Dr. Mead, that I be asked to speak to you on the subject of the financial and monetary principles and achievements of George Washington.

A few months ago I was associated with our late Senator Pittman in the State of Nevada during his campaign for reelection. I have been a legal, but itinerant resident of the Sagebrush State since the gold-boom mining days of 1906. About 10 days before election the Senator was stricken with a heart attack, which made it impossible for him to complete further speaking engagements. Your Mr. Russell, who happened to be in Nevada at the time, volunteered his services in the emergency and Senator Pittman assigned him to speak in his place at a number of his most important meetings, which assignments Mr. Russell fulfilled with pronounced success, a rather unusual achievement for a stranger in any community. Mr. Russell endeared himself to the Senator and his innumerable friends in the State of Nevada. In a few years' time many of you will be scattered to the four corners of the United States and it may be well for you to remember that similar opportunities for service will present themselves to you as they did to Mr. Russell, and I am sure all of you will respond to every such occasion, both for the common good and for your own.

The people of the United States have been taught that it is impossible to understand the subject of money. George Washington reduced the science of money to its most simple and fundamental state. He considered gold and silver to be the only true moneys. Financial history for the last 150 years has proved that he was right. Paper moneys are not real money. Only those paper moneys which can be converted to gold and silver are worthy to be designated as money. Fiscal and financial practices have become complicated because, periodically, the bankers and Government officials have departed from the teachings of George Washington in respect of the utilization of gold and silver as the basic moneys. George Washington learned the facts of money by his prolonged and diversified business experience and by his profound studies of the monetary history of the European countries and the 13 independent colonies of America.

Since the coinage of money started in this country with the introduction of the pine-tree shilling in the colony of Massachusetts, the citizens of the country have endured 14 separate and distinct experiences in the suspension of payments of gold and silver by the banks and governments. The shortest period was for only a few weeks and the longest for 17 years, from 1862 until 1879. Every panic has been precipitated by a scarcity of specie. Specie is the terminology for both gold and silver. Issues of worthless or depreciated paper moneys drove the metals into hoarding and caused their export to other countries. Successively, every panic was converted into prosperous times when circulation of specie was resumed by the banks and governments.

The colonists of New England brought little money with them and so they were forced to barter amongst themselves. They used various commodities as units of value, such as skins and corn; cows also became legal tender.

The colonists, being desperately short of both capital and production capacity, started shipbuilding and the fishing industry. Their trade was principally with the West Indies. Their coin supply was greatly augmented in this trade and also by the expenditures of visiting buccaneers. But their need of European goods was so great that the maritime merchants carried off the metallic money as fast as it came into the country.

The first mint was built in Boston in 1652. It converted foreign coins into the pine-tree shillings. An effort was made to retain these silver coins in circulation by reducing their silver content below that of the English shillings and by prohibiting their export under drastic penalties. The pine-tree shilling became the standard for the future, but the supply was so inadequate that bartering continued. The differences in quality of the barter currencies led to insolvable problems.

The governors of the New England provinces organized military expeditions into Canada for purposes of increasing their wealth by loot, but the only result achieved was an overproduction of colonial paper money, which immediately suffered depreciation and virtual extinction of value. One expedition against the French colony of Louisburg on Cape Breton succeeded at the cost of enormous paper-money inflation on the part of Massachusetts, Connecticut, Rhode Island, and New Hampshire, but strangely and fortunately, the British Parliament decided to ransom Louisburg from the colonists. The sum paid to Massachusetts, amounting to 140,000 pounds sterling, was sufficient to cancel their depreciated paper. This money was received in foreign silver dollars and copper pennies, which were gradually placed in circulation during 1750. Massachusetts enjoyed a business boom. The West India trade, which had been largely centered at Newport, migrated to Salem and

Boston. A semblance of monetary stability continued until Rhode Island went on a paper basis in 1751. In 1751 Parliament passed an act forbidding any more legal-tender-paper issues, but new war with the French in 1756 involved them once more, as war expenditures had caused the issue of interest-bearing exchequer bills to be redeemed by taxes, which were not forthcoming.

As silver came into circulation in Massachusetts a monetary phenomenon occurred which has plagued the United States and all countries ever since. Gold from the West Indies began entering the Colony, and in 1762 was made legal tender at 2½ pence per grain. This rating made it a cheaper money than silver by about 5 percent. As a consequence, the silver money was replaced by gold. The silver was shipped to countries which maintained higher values for the white metal, but the gold from the West Indies was not sufficient to balance the exchange with England and leave a surplus for local circulation.

Soon thereafter the Colonies were engaged in the War of Independence, all of them under conditions of debt and depreciated currencies.

The Continental Congress issued paper money in 1775 and every year thereafter until 1779. In 1780 all issues of the money had depreciated to almost zero value.

During the Revolutionary War virtually the Colonies' only source of incoming gold and silver was obtained indirectly by the expenditures of the British forces and the personnel of the ships of the French allies.

THE CONTINENTAL CONGRESS

At this stage General Washington's influence appears prominently in rescuing the credit of the Continental Congress by arranging future convertibility of outstanding continental notes. On July 28, 1780, the Congress enacted:

"*Resolved*, That the principal of all loans that have been made to the United States shall finally be discharged by paying the full current value of the bills when loaned, which payment shall be made in Spanish milled dollars, or the current exchange thereof in other money at the time of payment thereof, etc."

The circulation of the defunct Continental bills was stopped by congressional act in 1781.

The next effort by General Washington toward establishing a financial system was his sponsorship of Robert Morris in starting the Bank of North America, through which the future financing to prosecute the war was hoped to be achieved. This bank was chartered by Congress and opened for business at Philadelphia January 7, 1782. The capital was supplied by public subscription to the sum of $70,000, and by Congress, $254,000. Cornwallis surrendered 10 months after the bank started.

It was the first bank incorporated in the United States. It enjoyed high confidence and its notes circulated at par because of specie reserves. The Government sold its interest in 1783, but the bank is still in existence in Philadelphia as a national bank.

Alexander Hamilton, in his report to Congress, refers to the bank as follows:

"The aid afforded to the United States by this institution, during the remaining period of the war, was of essential consequence; and its conduct toward them since the peace has not weakened its title to their patronage and favor."

On January 20, 1783, the preliminaries of peace were signed between England, on the one hand, and France and Spain on the other. The news arrived in America on the 23d of March, in a letter to the President of Congress from Lafayette, who had returned to France soon after the victory of Yorktown. Washington, on the 8th day of June, in view of the approaching disbandment of the Army, addressed a circular letter to the governors and presidents of the several States which he wished to have regarded as his legacy to the American people. In this letter he insisted upon four things as essential to the very existence of the United States as an independent power:

"First, there must be an indissoluble union of all the States under a single Federal Government, which must possess the power of enforcing its decrees, for without such authority it would be a government only in name.

"Secondly, the debts incurred by Congress for the purpose of carrying on the war and securing independence must be paid to the uttermost farthing.

"Thirdly, the militia system must be organized throughout the 13 States on uniform principles.

"Fourthly, the people must be willing to sacrifice, if need be, some of their local interests to the common weal; they must discard their local prejudices; regard one another as fellow citizens of a common country, with interests in the deepest and truest sense identical."

George Washington returned to Mount Vernon and occupied himself with furthering the plans which had entered his mind at the first meeting of the Continental Congress in 1774. His conception was to bring the western wilderness into commercial communication with the seaboard colonies. He fully realized that all of the territory west of the Alleghenies, with drainage to the Mississippi, had available a natural water system of transportation to New Orleans, and hence to the rest of the world, and that if fully made use of before east and west transportation facilities were established, the whole western country commercially and politically would be lost to the original States.

Washington visualized the imperative need of canals and post roads. He studied the four feasible east and west roads: (1) Connecting the Hudson River with Lake Erie through the Mohawk Valley; (2) the Susquehanna River route; (3) the valley of the Potomac River; (4) the James River and an auxiliary canal between the Chesapeake Bay and the Delaware River.

In order to carry out the enterprise of extending the navigation of the Potomac, it became necessary for the two States, Maryland and Virginia, to act in concert. A joint commission met at Mount Vernon in 1785 at which a compact insuring harmonious cooperation between the two States was prepared. Washington suggested to the commissioners that Maryland and Virginia should agree upon a uniform system of duties and upon a uniform currency.

As Washington intended to connect the Potomac River with the Ohio, it was further necessary to invite Pennsylvania to become a party to the compact. It was later suggested in the report from Maryland that Delaware as well as Pennsylvania ought to be considered since the scheme should rightly include a canal between the Delaware River and the Chesapeake Bay and why not also consult these States about a uniform currency? If 2 States can agree upon these matters, why not 4? And still further, said the Maryland message might it not be well, if we are going to have such a conference, to invite commissioners from all of the 13 States to attend it? An informal discussion can hurt nobody; the conference of itself can settle nothing; and if 4 States can take part in it why not 13? Great things were destined to come from these modest beginnings. In fact, the organization of the United States Government eventuated as a direct result therefrom. Washington's original suggestion that the independent monetary controls of the 13 colonies be vested exclusively in the United States Government gradually evolved into their centralization as defined in the Constitution.

Commissioners from all of the States were invited to meet on the first Monday of September 1786 at Annapolis.

"It may not amount to much," wrote Madison to Monroe, "but the expectant is better than nothing, and as the recommendation of additional powers to Congress is within the purview of the commission, it may possibly lead to better consequences than at first occur." The seed dropped by Washington had fallen on fruitful soil. The report of the Commissioners was brought before Congress in October, but action was prevented temporarily by the delegates of Massachusetts.

In an ordinary session this would perhaps have ended the matter, but the winter of 1786–87 was not an ordinary session. All the troubles of the various States seemed to culminate just at that moment. The paper money craze in so many of the States, the distressing paper money excesses of Rhode Island, the riots in Vermont and New Hampshire, the Shays rebellion in Massachusetts, the dispute with Spain, and the consequent imminent danger of separation between North and South had all come together.

In 1783 when the cessions of western lands were creating a national domain, a promising plan had been devised for relieving the country of its load of debt and furnishing Congress with money for its current expenses. There now seemed nothing left for Congress to do but adopt the recommendation of the Annapolis commissioners and give its sanction to the proposed convention. Madison, however, had not waited for this, but had prevailed upon the Virginia Legislature to go on and appoint its delegates to the convention. Under Madison's lead, Virginia played her trump card and chose George Washington as one of her delegates. As soon as this was known there was an outburst of joy throughout the land. It was felt that the time had come when the question of national revenue must be seriously considered. Every week saw fresh converts to the party which called for stronger government. New Jersey followed Virginia in appointing delegates, then Pennsylvania, North Carolina, and Delaware.

Rufus King now brought the matter up in Congress; he moved that Congress should of itself propose a convention at Philadelphia identical with the one which the Annapolis commissioners had already recommended. The motion was carried and in this way Congress formally approved and adopted what was going on. Massachusetts immediately chose delegates and was followed by New York. In April Georgia and South Carolina followed suit; Connecticut and Maryland came in May and New Hampshire somewhat tardily in June. Of the 13 States, Rhode Island alone refused to take part in the proceedings.

In the long negotiation and debates which led up to the signing of the Constitution, the following clause provided against an occurrence of the worst evils that had been felt under the "league of friendship":

"No State shall enter into any treaty, alliance, or confederation; grant letters of marque and reprisal; coin money; emit bills of credit; make anything but gold and silver coin a tender in payment of debts."

So far as the State legislatures were concerned, paper money was to be ruled out forever. But how was it with the Federal Government? By the Articles of Confederation, the Government was allowed to issue bills of credit, and make them a tender in payment of debts. In the Federal Convention the committee of detail suggested that this permission might remain under the new Constitution but the suggestion was almost unanimously condemned. All the ablest men in the convention spoke emphatically against it.

Governeur Morris urged that the Federal Government, no less than the State governments, should be expressly prohibited from issuing bills of credit, or in anywise making

its promissory notes a legal tender. He went over the history of the past 10 years; he called attention to the obstinacy with which the wretched device had been resorted to again and again, after its evils had been thrust before everybody's eyes; and he proved himself a true prophet when he said that if the United States should ever again have a great war to conduct, people would have forgotten all about these things, and would call for fresh issues of inconvertible paper, with similar disastrous results. "Now was the time to stop it once for all." "Yes," echoed Roger Sherman, "this is the favorable crisis for crushing paper money." "This is the time," said his colleague, Ellsworth, "to shut and bar the door against paper money, which can in no case be necessary." "Give the Government credit, and other resources will suffer." "The power may do harm, never good." "There was no way," he added, "in which powerful friends could so soon be gained for the new Constitution as by withholding this power from the Government." James Wilson took the same view. "It will have the most salutary influence on the credit of the United States," said he, "to remove the possibility of paper money." "Rather than grant the power to Congress," said John Langdon, "I would reject the whole plan." "The words which grant this power," said George Rand, of Delaware, "if not struck out, will be as alarming as the mark of the beast in the Apocalypse." On none of the subjects that came up for discussion during that summer was the convention more nearly unanimous than in its condemnation of paper money. The only delegate who ventured to speak in its favor was Mercer, of Maryland. What Hamilton would have said, if he had been present that day, we may judge from his vigorous words published some time before:

"The power to emit an inconvertible paper as a sign of value ought never hereafter to be used; for in its very nature, it is pregnant with abuses, and liable to be made the engine of imposition and fraud, holding out temptations equally pernicious to the integrity of government and to the morals of the people." Paterson called it "sanctifying iniquity by law."

The same views were entertained by Washington and Madison. There were a few delegates, however, who thought it unsafe to fetter Congress absolutely. To use Luther Martin's expression, they "did not set themselves up to be wise beyond every event." George Mason said he "had a mortal hatred to paper money," yet, as he could not foresee all emergencies, he was "unwilling to tie the hands of the legislature." "The later war," he thought, "could not have been carried on had such a prohibition existed." Randolph spoke to the same effect. It was finally decided, by the vote of nine States against New Jersey and Maryland, that the power to issue inconvertible paper should not be granted to the Federal Government.

An express prohibition, such as had been adopted for the separate States, was thought unnecessary. It was supposed that it was enough to withhold the power, since the Federal Government would not venture to exercise it unless expressly permitted in the Constitution. "Thus," says Madison, in his narrative of the proceedings, "the pretext for a paper currency, and particularly for making the bills a tender, either for public or private debts, was cut off."

The first session of Congress under the Constitution began on the 4th of March 1789. General Washington was inaugurated President on the 30th of April following the opening of Congress. In his first annual address, January 8, 1790, President Washington portrays his profound and continuing interest in establishing a hard-money basis by the following statements.

"Uniformity in currency, weights, and measures of the United States is an object of great importance and will, I am persuaded, be duly attended to."

In his second annual address of December 8, 1790, he stated:

"The establishment of the militia, of a mint, of standards of weights and measures, of the post office and post roads are subjects which I presume you will resume, of course, and are abundantly urged by their own importance. We shall also never lose sight of the policy of diminishing the public debt as fast as the increase of the public resources will permit, and are particularly sensible of the money considerations which present a resort to the auxiliary resources furnished by the public lands."

In his third annual address of October 25, 1791, President Washington stated:

"The rapid subscriptions to the Bank of the United States, which completed the sum allowed to be subscribed in a single day, is the striking and pleasing evidence which presents itself not only of the confidence in the Government but in results of the community. The disorders in the existing currency or small change, a scarcity so peculiarly distressing to the poorer classes, strongly recommend the carrying into immediate effect the resolution already entered into concerning the establishment of a mint. Measures have been taken pursuant to that resolution for procuring some of the necessary artists, together with the necessary apparatus."

The Congress responded to General Washington's importunities by the act of April 7, 1792, establishing the first mint by the United States. The act provided for the coinage of gold, silver, and copper, based on the decimal system. The eagle, or $10 gold piece, was to contain 247½ grains; the half eagle, or $5 gold piece, to contain one-half of the above gold; and the gold dollar, one-tenth of the amount. The gold dollar and the double eagle, $20 gold piece, were not authorized for coinage until March 3, 1849). The silver dollars, or units—each to be of the value of the Spanish milled dollar as then current, and to contain 371.25 grains of pure silver; the decimal silver coins at the same rate, the dime being the smallest coin authorized. By this act both gold and silver were made monetary standards at the value ratio of 15 grains of silver to 1 grain of gold.

Until this time the Spanish silver dollar had really been the standard of value, but there was less than $2,000,000 of coin in the United States at the time with a population of 4,000,000 people—less than 50 cents per person. In order to increase the stocks of gold and silver coins the Congress enacted the act of February 9, 1793, making the gold and silver coins of Great Britain, France, Spain, and Portugal legal tender in the United States. Ten additional acts of the same character were enacted between 1798 and 1843, giving legal-tender status in the United States to the gold and silver coins of additional countries of Europe, Mexico, and the principal countries of South America. These acts were not repealed until 1857, at which time California had made the United States the leading gold-producing country of the world. The new mint at San Francisco had been in operation since 1854.

Finally, President Washington in his sixth annual address, November 19, 1794, reports:

"The mint of the United States has entered upon the coinage of the precious metals and considerable sums of defective coins and bullion have been lodged with the Director by individuals. There is a pleasant prospect that the institution will, at no remote date, realize the expectation that was originally formed of its utility."

F esident Washington appointed Alexander Hamilton Secretary of the Treasury, September 11, 1789. On January 9, 1790, he submitted his first report on the public credit, in which he concurred in the language of the resolution of the United States House of Representatives, which had requested the report, as follows:

"That an adequate provision for the support of public credit is a matter of high importance to the honor and prosperity of the United States."

As a basis for debt settlement Hamilton stated:

"It is agreed on all hands that the part of the debt which has been contracted abroad and is denominated the foreign debt ought to be provided for according to the precise terms of the contracts relating to it."

Of the most profound interest concerning Washington's determination to abolish public debt is the opening paragraph of the report of Alexander Hamilton to the Senate on public credit, January 1795, as follows:

"The President of the United States, with that provident concern for the public welfare which characterizes all his conduct, was pleased, in his speech to the two Houses of Congress at the opening of the present session, to invite their attention to the adoption of a definitive plan for the redemption of the public debt, and to the consummation of whatsoever may remain unfinished of our system of public credit, in order to place that credit, as far as may be practicable, on grounds which cannot be disturbed, and to prevent that progressive accumulation of debt, which must ultimately endanger all government."

The main part of the debt was domestic, consisting of about two-thirds principal and one-third interest. The Hamilton plan included assumption of the debts of the several 13 States which existed when they entered the Union under the Constitution of 1789. The Southern States strenuously opposed the assumption because their debts relative to population were much less than those of the North. The North was much interested in refunding of all debt, and was profiting immensely by the acquirement of depreciated currencies by anticipating their return to parities. Hamilton carried through his plan of assumption by having the Northern States agree with those of the South to locate the Capital in what is now the District of Columbia. The consolidated unredeemed debt of the United States and the debts of the separate colonies amounted to $76,100,000. The plan took effect January of 1795.

This total debt, together with the war debt of $103,000,000 created during the war of 1812–15 was discharged by 1836. Washington's plan of refunding bonds payable in specie was passed and skillfully executed by Hamilton. He depended largely on revenue from the sale of public lands in which he was not disappointed. The payment of the debt of 1814 again was successful on the issuance of specie bonds after the country had been on a paper basis since the British had captured Washington, August 14, 1814.

Since 1933 the United States has purchased all gold and silver offered from all countries at prices fixed by the Treasury. All gold, including that produced in the United States, has been withdrawn from circulation and its citizens deprived, under the Gold Act of 1934, of the right to own or use gold money. The gold actually has been paid for by the Federal Reserve banks by the granting of deposit credits, but notwithstanding this fact, both

the banks and the depositors are deprived of its use.

The withholding of gold from circulation has caused a profound change in the fiscal and financial conditions of the United States. The Government has had to expand the public debt by billions of dollars and will be compelled to continue the debt increase during whatever period of duration the gold remains hoarded by the Government. For the period 1934–40 the public debt has increased an average rate of about $3,000,000,000 per year, but due to the abnormal costs of defense preparation and war conditions the war debt will from now on increase from $7,000,000,000 to $10,000,000,000 per year.

If the gold and silver from now on continues to be withheld from active use an adequate rise in national income will thereby be prevented. It is difficult to visualize a billion dollars. Mr. Al Smith, of New York, some years ago wished to discredit the administration because of the billions of expenditures occurring. He tried to simplify the visualization of a billion dollars by saying that if $5 bills were placed end to end they would reach to the moon and back and in addition thereto encircle the world innumerable times. This illustration made the visualization more difficult. It is quite simple to contemplate a billion dollars in thinking of it in terms of the population of the United States. It represents $7 each for 130,000,000 people. A maximum debt perhaps of $700 per person will be attained before the debt reduction commences.

The recurring plague of war debt once more frowns upon young America. Six separate and distinct times the country has been oppressed with the debts accrued by six wars. Each time gold and silver has been the base upon which debt extinction was achieved. Following the War of 1812–15 came the Mexican War of 1846–48 with its special debt of $63,605,000, the payment of which was made possible by the record gold production from California, which started in 1848. Then came the Civil War with the resulting debt of $2,783,000,000, which was liquidated by means of continuing gold production of California and new production of gold and silver from Nevada and other Western States. The Spanish-American War was financed by President McKinley by the issuance of gold bonds and the coinage of all silver bullion in the vaults of the Treasury and all currently produced silver. The debts of the great war were well on the way to extinction by the redemption of the gold bonds issued to finance the war. The 208,000,000 ounces of silver loaned to Britain to save the credit of British India from its redundant issue of paper rupees was a prime factor in the success of Britain's participation in that war. This fact is eloquently testified to by Ambassador Lord Reading in a speech at a dinner of farewell tendered him by the English Speaking Union, February 12, 1921, in New York.

"My views on this subject are too well known to need repetition, and were I so minded I could relate tales during my experience in America on the four visits to it during the war which would take a long time in telling, but each incident of which would impress upon you most deeply the value and generosity of American friendship. There is just one incident to which I will briefly refer which has not been told you. During the war, as you know, every attempt was made to sow dissension in the Empire by insidious propaganda. Every attempt was made to create distrust of the British and of the British Empire. There arose in India a situation which is not known to the general public, but gives material for a story which illustrates American good will and friendship as well as anything I know during the war—except, perhaps, the greatest event of all, when President Wilson agreed that American troops should be brigaded with the British and the French if they were needed.

"It was a moment when, owing to the war and to this propaganda, there was a great scarcity of silver in India as well as elsewhere, and in India it was of more consequence than in most places. There was a moment at which we were very hard pressed to find the metallic reserve, particularly the silver which was necessary in India, it being incumbent that the paper-note issue should be convertible immediately into the silver rupee. Owing to this great scarcity our difficulty was to find the silver. There was no means but one; that seemed impossible. In the vaults of the American Treasury there were vast stores of silver preserved there as the financial backing against the notes which were issued—silver which could not be disturbed, no matter how much it was wanted. It could not be taken out of the vaults of the United States except by act of Congress; to whatever party they belonged, all legislators joined in an endeavor to meet the situation by passing an act of Congress without discussion, because discussion would have been serious.

"Practically without any debate this measure was passed in almost record shortness of time. It became a law within a very few days of its seeing light (Pittman Act, April 1918). The vast millions of ounces of silver from the vaults were released and were sent across by arrangement between America and ourselves to India, with which America had no concern but simply because it was necessary at that moment to help the British Empire. Nothing was said of this. Even the newspapers—remember the newspapers were conscious of it—knew as well as possible what was happening; but they did not mention it because they knew that if they did they would detract largely from the generous services that America was rendering and they passed it over in silence. Nothing has been heard of it or said of it since. I do not know myself that now, long after war, America has ever claimed in any way our recognition of that service.

"I only instance this for the purpose of bringing home to the mind of the British people not only what America can do if she once sets her mind to do a thing but I want strongly to impress upon you the generosity with which America responded to the demands which were made upon her."

The seventh war-debt crisis the greatest of all time, confronts the rising generation. You who are here today and others of your generation will inherit the problems of solving the financial difficulties of your country. It would be well for all of you to feel a responsibility in acquiring a practical understanding of money. After many years of study I have become a devoted disciple of George Washington in his conviction that gold and silver alone are the real moneys and that paper moneys, while necessary for the convenience of transacting business, have no inherent values unless they can be exchanged for either gold or silver; that when paper becomes anything other than proxy moneys for gold and silver, it is dangerous money, and inevitably leads to hard times and panics.

Young ladies and gentlemen of Washington College, will you challenge the problem, following the precepts of George Washington and those who have followed him, or will you resort to experiments which have had no successful precedents? Your President and the Congress have provided for you the world's greatest accumulation of gold and silver, which now virtually unused, is available for use in your country's needs.

Planting of Trees for Soil Conservation

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1941

EDITORIAL FROM THE DIVIDE COUNTY FARMERS PRESS, CROSBY, N. DAK.

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Divide County Farmers Press, of Crosby, N. Dak., of March 21, 1941, on the subject Saskatchewan Plants Trees.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Divide County Farmers Press, Crosby, N. Dak., of March 21, 1941]

SASKATCHEWAN PLANTS TREES

The Federal Government's program for farm shelterbelts lends itself particularly well to the needs of northwest North Dakota, and it is hoped that Congress, while appropriating large sums for other purposes, will not neglect to provide funds necessary for continuance of this work.

Evidence accumulates that trees are an essential part of any program for soil and moisture conservation in this territory, and that Federal assistance is needed if the program is to be extended along the lines which will meet our requirements satisfactorily.

Long ago Jim Hill and his railroad, in planting thousands of trees along the right-of-way to stop snow from drifting over its tracks, proved to the satisfaction of most of us that trees are practical here.

Work of hundreds of farmers—like George Frye, of Stanley—who on their own initiative have planted and maintained groves of trees on their farms for years, offers all the additional proof that is necessary.

Thousands of shelterbelts in the northern plains area have done rather well—well enough to show their value—although many of them now need replacement.

Experimental plantings of farm shelterbelts in the Minot area, established under the Prairie States program, also are looking well at this time.

We especially need field plantings of trees in large numbers to mitigate the force of winter winds, to stop blowing of soil, and to trap snow on the fields, where its falls. The Federal Government's program carries out this aim better than any plan so far advanced.

Experience in establishing trees and shrubs in fields of the Bottineau soil conservation district and in farm shelterbelts farther east and south, where the Federal program has been underway for several years, should serve as a guide for practical extension of the program in our region, where it is so vitally important.

Narrow strips of trees along quarter lines in every cultivated section, with other narrow strips of shrubs at intervals, running north and south in large fields, and other plantings placed in strategic spots wherever practical, would do much to preserve the soil and to aid in water conservation in this territory.

Saskatchewan's problem is similar to ours, and it is noteworthy that in the past 5 years 11,000,000 trees have been distributed and planted in that province under the program of the Prairie Farm Rehabilitation administration. This work, according to George Spence, director, is part of the Dominion's program of moisture and soil conservation in the prairie provinces. Generally speaking our Canadian neighbors are hard-headed when it comes to spending money and undertaking large-scale programs. If trees are the recognized need of Saskatchewan, they are not less important to the prairies of northwest North Dakota.—Minot Daily News.

Special Committee on Un-American Activities

REMARKS

OF

HON. MARTIN DIES

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

Mr. DIES. Mr. Speaker, the steel industry is one of the most vitally important of all our industries from the standpoint of national defense. Billions of dollars in defense contracts have been let to the concerns in this industry. Today a strike is threatened in one of the largest of the steel concerns. During recent weeks there have been strikes in some of the smaller steel plants.

The issue which confronts us in this situation has nothing to do with the rights of organized labor, nor is there any disposition on the part of anyone to condone any faults of management in the steel industry. The issue is strictly one of Communist operations in the steel industry for the sole purpose of obstructing the progress of the national-defense program.

I have here before me today a mass of evidence which our committee has gathered, evidence which will show something of the degree to which the Communist Party has concentrated its efforts in the steel industry. I shall put into the RECORD some of the Communist names which our committee has assembled, and shall designate the Communist affiliations of each of these persons. The picture as a whole is an alarming one. From its very inception the Steel Workers Organizing Committee of the C. I. O. showed a strong disposition to place on its pay rolls scores of organizers who had records of Communist Party membership.

This has been in line with the basic strategy of the Communist Party, which is one of organizing in the most important of our industries regardless of the numbers of workers employed there. I call upon the Members of this House to ponder the facts which I shall put into the RECORD.

The following record of Communist infiltration into the steel industry through the Steel Workers Organizing Committee will serve to show something of the Communist menace in this vitally important national-defense industry:

William K. Gebert, member of the Communist Party and one-time member of the party's central committee; has been located in Pittsburgh as the chairman of the Communist Party's steel organizing campaign; has had the use of office space used by Philip Murray in the headquarters of the S. W. O. C. Gebert has a long record of activity on behalf of the Communist Party, including the following: Contributor to The Communist; contributor to the Workers Monthly; contributor to The Party Organizer; contributor to The Daily Worker; contributor to the official organ of the National Miners Union; contributor to International Press Correspondence; representative of the Trade Union Unity League; district organizer of the Communist Party in Chicago; organizer for the National Miners Union, official of the International Workers Order; signer of the call to the second congress of the American League Against War and Fascism; and honored by the Michigan State executive committee of the Communist Party for 25 years of service in the revolutionary movement.

Jack Johnstone, member of the Communist Party; Member of the national committee of the Communist Party of the United States, according to the testimony of Earl Browder; has directed all activity of the S. W. O. C. in the Chicago and Gary area where Communist organizers were involved. Johnstone's record of Communist Party activity includes the following: National organizer of the Trade Union Unity League; candidate for United States Senate on the Communist Party ticket in Illinois in 1940; instructor in the Chicago Workers School; member of the credentials committee of the Sixth World Congress of the Communist International; contributor to the Daily Worker; contributor to the Party Organizer; sponsor of the Mother Bloor banquet; contributor to the Communist; member of the National Mooney Council of Action; and speaker at the sessions of the Communist International.

Ben Careathers, member of the Communist Party; has been on the pay roll of the S. W. O. C. Careathers' record in the Communist Party includes the following: Convicted and sentenced a few days ago in Pittsburgh for fraud in connection with the circulation of the Communist Party's election petitions in Pennsylvania; candidate for Lieutenant Governor on the Communist Party ticket in Pennsylvania in 1938; candidate for State treasurer on the Communist Party ticket in Pennsylvania in 1940; delegate to the Seventh World Congress of the Communist International; chairman of discussion group at the National Negro Congress; and instructor in the Pittsburgh Workers School.

William Hill, member of the Communist Party, and one of its section organizers; has been organizer for the S. W. O. C. Hill's Communist Party record further includes the following: Discussion leader at the National Negro Congress, and contributor to Soviet Russia Today.

George Powers, member of the Communist Party; has been one of the district directors for the S. W. O. C. Powers' real name is Morris Pobersky. He was born in Russia, and was first active for the Communist Party in Minneapolis. Powers testified before our committee that he had forgotten his real name. He was cited for contempt by the House of Representatives for refusal to answer questions before our committee. He has just been sentenced to 2 years' imprisonment in Pennsylvania for fraud in connection with the circulation of the Communist Party's election petitions. Powers' record of activity for the Communist Party also includes the following: Organizer for the Trade Union Unity League; candidate for the State legislature in Pennsylvania on the Communist Party ticket in 1940; district secretary of the Communist Party in Pittsburgh; speaker at the National Party Builders Congress in 1938; member of the American League Against War and Fascism; and organizer for the Communist Party in Georgia under the name of M. H. Powers.

Tom Meyerscough, member of the Communist Party; has been on the pay roll of the S. W. O. C. Meyerscough was formerly president of the National Miners Union, an affiliate of the Trade Union Unity League, which was in turn affiliated with the Red International of Labor Unions.

Joseph Howard, member of the Communist Party and organizer for the Communist Party in Birmingham, Ala., on the pay roll of the S. W. O. C. Howard was Alabama delegate to the Communist Party Convention in 1934.

Lloyd Brown, member of the Communist Party and Communist Party organizer; has been organizer for the S. W. O. C. Brown has also been district organizer for the Young Communist League, and a contributor to the Young Communist Review. He has been connected with the National Negro Congress as well.

Jack Russak (or Rusak), a member of the Communist Party according to testimony before committee; has been on the pay roll of the S. W. O. C. Russak has also been district secretary of the International Workers Order in Chicago.

Joe Weber, member of the Communist Party, has been on the pay roll of the S. W. O. C.; and has also been the chief organizer of the Farm Equipment Workers' Organizing Committee which has been on strike at International Harvester for several weeks. Weber was a member of the National Mooney Council of Action, a sponsor of the Chicago Race Relations Conference, and a signer of the call for the Provisional Committee Trade Union Conference for United Action—all fronts for the Communist Party.

Ethel Stevens, member of the Communist Party, also a secretary of the Communist Party in Gary Ind.; has been a paid organizer of the S. W. O. C. Ethel Stevens has also been an instructor in

the Chicago Workers School and a contributor to the Party Organizer.

Jess Gonzales, member of the Communist Party, has been Communist Party organizer in Denver, Colo.; has been on the pay roll of the S. W. O. C.

Eleanor Rye, member of the Communist Party; has been on the pay roll of the S. W. O. C.; was Chicago organizer for the National Negro Congress. Eleanor Rye was a member of the national campaign committee of the Communist Party in 1936.

Clarence Irwin, member of the Communist Party, according to testimony before committee; has been adviser to Martin Young, alias Leon Platt, one-time district organizer of the Communist Party in Pittsburgh; has been on the pay roll of the S. W. O. C. Irwin was a member of the national executive committee of the American League Against War and Fascism in 1935.

Israel Berenstein, alias Blaine Owen, alias Boris Israel, member of the Communist Party; was sent to Pittsburgh by the central committee of the Communist Party to work with William K. Gebert. Berenstein's father has been the representative of Amtorg on the Pacific coast. Under the name of Blaine Owen, Berenstein has been a member of the International Workers Order and a reporter for the Sunday Worker. Also, under the name of Blaine Owen, he went to Spain to fight for the Loyalists. Under the name of Boris Israel, Berenstein has been a contributor to the New Masses and to New Pioneer, both Communist Party publications.

Doyle Glormer, member of the Communist Party; has been an organizer for the S. W. O. C. Glormer has also been a reporter for the People's Press.

John Steuben, member of the Communist Party; has been a section organizer for the Communist Party; has been on the pay roll of the S. W. O. C. This man's real name is Itzok Ryshak, in addition to the name of John Stevens, Martin Rijak, and Izak Rijack. This man was fined $300 and given 30 days in jail in Mahoning County in 1937 for "malicious destruction of property." The court records show the charge as entered against John Steuben alias Stevenson. At the same time Robert Burke was found guilty of inciting to riot. The Eye Opener, official publication of the S. W. O. C. in Butler, Pa., had the following to say concerning John Steuben, alias Stevenson:

> We could go on and defend Mr. Stevenson, but we wish to keep personalities out of this matter. A discussion of Mr. Stevenson's past or communism's future has nothing to do with the basic principles of the C. I. O. We wish to point out—and note that we are not admitting any of the charges against him—that even if it were true that Mr. Stevenson has been a Communist has nothing to do with the work he has been doing at Butler.

Despite the refusal of the Butler, Pa., S. W. O. C. to admit the facts concerning John Steuben, alias Stevenson, there is not the slightest doubt possible that he has been one of the most active Communist Party organizers in the United States. There is also no doubt possible concerning his conviction for the malicious destruction of railroad property. He entered a plea of guilty to the charge. All of this took place before he was employed by the S. W. O. C. Steuben, or whatever his right name may be, has been a contributor to The Party Organizer, a contributor to The Communist, organizer for the Communist Party in Youngstown, Ohio, instructor in the Pittsburgh Workers School. The Communist Party Yearbook for Ohio in 1937 lists him as a leader of the Communist Party in Ohio. In 1938 Steuben was one of the chief witnesses before the La Follette committee of the United States Senate.

Joe Mankin, member of the Communist Party, according to testimony before the committee, has been on the pay roll of the S. W. O. C. Mankin has been an official of the International Workers Order.

Richard H. Lawry, member of the Communist Party, according to testimony before the committee, has been on the pay roll of the S. W. O. C. Lawry was a witness before our committee last year. In his own testimony he declared that he had been active on behalf of the Workers Alliance and the Unemployed Councils, and that he was district president of the International Workers Order. Lawry has also been president of the League for the Protection of Minority Rights, a Communist front organization. In December 1939 Lawry was appointed supervisor of the United States Census for the third and fourth districts of Pennsylvania.

Helen Anderson, member of the Communist Party, and also secretary of several Communist Party units, has been on the pay roll of the S. W. O. C.

Norman Ross, member of the Communist Party, delegate to New York State convention of the Communist Party in 1938, speaker for the American League for Peace and Democracy, organizer for the Young Communist League, sent to Canada to organize for the S. W. O. C.

Joe Cook, member of the Communist Party, has been a paid organizer for the S. W. O. C. Cook has been connected with the Friends of the Abraham Lincoln Brigade.

Ralph Shaw, member of the Communist Party, has been State secretary for the Communist Party in Missouri, also candidate for the United States Senate on the Communist Party ticket in Missouri in 1940, contributor to the Communist, has been a paid organizer for the S. W. O. C.

Mrs. Mineola Ingersoll, member of the Communist Party, member of the advisory board of the International Labor Defense in Illinois, office secretary of the American League for Peace and Democracy in Chicago, has been on the pay roll of the S. W. O. C.

R. McKinney, member of the Communist Party, has been on the pay roll of the S. W. O. C. McKinney was a member of the Provisional Committee Trade Union Conference for United Action, a Communist Party united front.

Robert L. Crudden, member of the Communist Party, contributor to New Masses, correspondent for the Daily Worker and for International Publishers, contributor to The Communist, has been on the pay roll of the S. W. O. C.

Gertrude Haessler, member of the Communist Party. When the S. W. O. C. began its drive in Buffalo, Gertrude Haessler appeared on the scene. One of the directors of the S. W. O. C. in Buffalo has testified before our committee that Gertrude Haessler appeared "out of nowhere" and was promptly made educational director for the campaign. This woman is the author of the Communist Party's booklet entitled "Shop Paper Manual." In this booklet, Gertrude Haessler revealed an extremely important item in the Communist Party's strategy of organization in labor unions. She said:

> This means that more factors should enter into consideration than mere numbers of workers in the factory. It is a small shop in a decisive war industry or a large shop manufacturing, let us say, buttons. If it comes to a choice, then the former by all means should be chosen.

In other words, the Communist Party is not so much interested in helping the largest possible number of workers as it is in organizing where it can do the most damage to our national security. Gertrude Haessler has a long Communist Party record which includes the following: Translator for the New Masses, instructor in the Workers School, editorial board of New Pioneer, contributor to the Party Organizer, contributor to the Daily Worker, and head of the Communist Party's shop paper committee. After serving for the S. W. O. C. in Buffalo, Gertrude Haessler was placed in charge of adult education in the W. P. A.

I have by no means exhausted the list of active Communists who have penetrated the steel industry through the S. W. O. C., but the foregoing list is sufficient to indicate the menace of Communists in this most important national-defense industry. We ignore this menace at our great peril. Our committee is in possession of indisputable evidence that the Communist Party, through its members and organizers in the S. W. O. C., are working toward a complete tie-up in the steel industry, an industry which has billions of dollars in defense contracts.

In addition to the names which I have cited, our committee has heard sworn testimony which identifies scores of other S. W. O. C. organizers as members of the Communist Party. Furthermore, our committee is in possession of evidence which shows that hundreds of employees in steel mills have recently signed the Communist Party's election petitions.

Naturally, I have no way of knowing precisely how many Communist Party members are on the pay rolls of the S. W. O. C. as of today. I do not have access to the account books of the organization, and they alone would tell what the situation is at the moment. It is, however, an indictment of this labor organization that it ever allowed so many Communists of public record to infiltrate into its organizing work.

Bureaucracy A Menace

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

EDITORIAL FROM THE DETROIT TIMES

Mr. SHAFER of Michigan. Mr. Speaker, under leave to extend my remarks I include the following editorial Bureaucracy A Menace, which appeared recently in the Detroit Times:

[From the Detroit Times]

BUREAUCRACY A MENACE

The situation of the bituminous coal industry in the United States, under the dictatorial Guffey Act, was analyzed in a comprehensive manner the other day by B. C. Forbes in his column, Business and Finance, which appears in this newspaper.

This situation, according to Mr. Forbes, is the nearest approach to pure socialism that we have had in the United States.

It involves the arbitrary fixing of minimum prices.

It has increased the cost of soft coal to American consumers by not less than $40,000,000 annually.

It has virtually eliminated competition from one of the most important industries in the Nation.

The American people may not wish to change this situation, and indeed might not be able to change it if they wished.

But they should at least be informed about it and understand it.

As Mr. Forbes says, "What Washington has done to the soft-coal industry it aspires to do in many other directions, namely, usurp dictatorial powers."

And if the situation prevailing in the soft-coal industry should ever be broadened to include all, or even many, of the vital industries of the country, the United States would automatically become a Socialist country and not a democracy.

"The term 'defense' is on everybody's lips," says Mr. Forbes.

"But there is another form of defense which should be occupying the mind of every responsible citizen, namely, the defense of the system of government which contributed incalculably to our rise to world leadership."

It would simplify this problem immeasurably if the American people could be made to understand what it means to have socialized industry.

It means complete control of industry by bureaucratic agencies of the Government—in other words, political control.

And, of course, it will ultimately mean political control of labor, too.

It certainly means, as experience in the soft-coal industry proves, not only fixed prices but higher prices.

Nothing is every economically done under political bureaucracy.

Favoritism and patronage are the inevitable implements of the political bureaucrat.

Extraagance and inefficiency are the tools of his trade.

His aim is not to provide goo .s and services that are essential to the people at a minimum cost, but to build up a position of power for himself and to perpetuate himself in that place.

Bureaucracy must rule high-handedly and iron-handedly, because its methods eventually become oppressive and obnoxious, and it must anticipate this reaction by being in a position to compel submission.

A free people cannot afford to rely upon its ability to unseat bureaucracy when it becomes oppressive and obnoxious, for by that time it- powers have become so deeply rooted as to be nearly absolute.

For an illustration of this, let us now witness with what difficulty the bituminous coal industry of the United States endeavors to deliver itself from its present bureaucratic stranglehold.

The Guffey Coal Act expires next month, and before extending it the Congress is supposed to determine if it has been beneficial or otherwise.

Let the American people observe carefully how tenaciously the agencies of political bureaucracy will seek to retain their grip on this industry, and how zealously they seek to hold their great power.

Let the American people note how difficult it is to unseat bureaucracy in this instance, and restore the traditional American system of conducting the vital affairs of our national life.

Then let the American people ponder deeply upon the prospect of having other vital American industries and activities, and perhaps ultimately all of them, fall into the same plight.

Surely these observations and reflections will suggest to the American people, if they still care and have the will and courage to keep the historic American system of free enterprise and democratic government, that the means and methods of halting socialism must be included in our provisions for national defense.

Middle Westerners Are Americans, Too

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

EDITORIAL FROM THE OMAHA WORLD-HERALD

Mr. MUNDT. Mr. Speaker, there is an increasing and an unjustified tendency on the part of some eastern editors, columnists, and radio commentators to take unto themselves the authority to speak for all America. This type of professional provincialism indicates a genuine lack of perspective on the part of these writers and speakers, and ignores the significant fact that the center of population of this Republic is today located some place in Indiana and that many, many more people like west of the Allegheny Mountains than live on the eastern seaboard. An old-fashioned lesson in geography might have a salutary effect upon some of the public commentators of the times.

The attached editorial from the Omaha World-Herald was recently reprinted in the Sioux Falls Daily Argus Leader. Thus, since it is authored by the editor of one of the great newspapers of the Middle West and approved by another outstanding newspaper in the heart of America, it merits thoughtful reading by Members of Congress and by writers and speakers who have not recently visited the agricultural sections of the United States and whose comments therefore reflect far too narrow a cross section of American public opinion.

[From the Omaha World-Herald]

MUST WE RULE BY FORCE?

"The isolationist belt" is dealt with unsparingly, even savagely, by Raymond Clapper in his today's article.

Like a good many others, this able correspondent has become frankly warlike.

He sees a great white light and reads the writing on the wall. It tells him that "force and the threat of force will rule the world for some time to come." And he has decided that it is the force of the United States of America that must do the ruling.

Therefore we must get in there—into Europe, into Asia, into Africa—and join in the fighting.

Bluntly he charges that "the isolationist belt"—our own Midwest—has been "frightened into self-defeating paralysis by appeals to fear hysteria."

Among its unworthy fears he lists fear of war, fear of offending Hitler, fear that England will out-trade us, fear of losing our democracy, fear that our Budget can't be balanced.

And so—shame on us!

Clapper's attack is significant not in itself but because it voices the anger of the war-minded in and out of the administration. The people of the great interior States are finding themselves held up to scorn as cowardly, without vision or intelligence, their patriotic spirit subnormal.

It is not strange if midwesterners are perplexed. For their attitude now is the same as it was only 3 months ago.

It was then the attitude not alone of Raymond Clapper but of President Roosevelt as a third-term aspirant, and of Wendell Willkie, his opponent.

Both candidates promised solemnly and publicly not to lead this country into war. They promised not to send our armed forces to fight in Europe or Asia. They promised to make our America strong in self-defense. Mr. Willkie, for one, warned repeatedly of the danger of losing our democracy. Mr. Roosevelt promised as repeatedly to preserve it. Mr. Willkie warned repeatedly of the deadly menace of an unbalanced Budget. Mr. Roosevelt had recognized the danger and had promised repeatedly to avert it. As for "offending Hitler," neither candidate had hesitated to do that publicly, and the Midwest had joined heartily in the chorus. And as for England outtrading us, we doubt if then or now it has affected the Midwest consciousness. That, if it influences the present frame of mind, is a seaboard fear.

Why is it shameful for the Midwest to have held firm to its convictions for as long as 3 months?

Why is it gloriously brave and patriotic for candidates and their spokesmen to have changed—once election day was past?

The Midwest is unable to understand. Is that because its intelligence is of a low order?

But the Midwest does understand, as it did 3 months ago, why it is averse to war, why it cherishes democratic liberties, why it dreads crushing debts threatening catastrophe, why it values a free economy, and why it hates Hitler, who stands against everything the Midwest holds dear.

The Midwest does not believe that now, or ever, will it be necessary or wise for our own country to set out to "rule the world by force and the threat of force."

No one so much as suggested that astounding policy in the late campaign. No candidate would have dared.

The Midwest believes we have enought to do to rule ourselves as a free people; to preserve our own rights and liberties here at home; to banish the "fear of fear and the fear of want" from our own confines before setting out, crussding with armies and navies to establish freedom and security for "all peoples, everywhere." We think this latter an order impossible of fulfillment.

If adherence to these beliefs and convictions are hysterical then the Midwest is subject to that charge. But the truth is, there is no hysteria—not here in the cornlands and wheatfields. Our people are soberminded and thoughtful. The hysterical screams Mr. Clapper hears come from beneath his open window.

Rubber

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

EDITORIAL FROM THE SAN JOSE MERCURY-HERALD

Mr. ANDERSON of California. Mr. Speaker, in these days of feverish haste on national-defense projects it appears to me that Congress can well afford to give some careful consideration to those strategic materials in which the United States is deficient. Particularly at this time do we need an ample supply of rubber and yet we continue to overlook the fact that this product can be grown successfully in our own country. The Congress is subsidizing many important activities including agriculture, shipping, defense industries, and others. Funds are being expended in attempting to develop a supply of rubber in Central and South America with no regard to further developing a domestic industry that has tremendous potential possibilities. When are we going to wake up?

Under leave to extend my remarks in the RECORD I include the following timely editorial from the San Jose Mercury-Herald:

THE RUB IN RUBBER

More power to the Salinas Chamber of Commerce in its effort to rouse a little Federal interest in the guayule rubber enterprise in our neighbor valley.

World's largest rubber users, we have suddenly discovered that in days we were preoccupied developing our own country we let Brazil lose its rubber business to East Indian possessions of England and Holland. Now the Federal Government is subsidizing its return to Brazil for self-protection and as a "good neighbor" gesture. It is also spending $100,000,000 to encourage American synthetic rubber production.

Meanwhile the Federal Government refuses to send a representative to investigate natural rubber potentialities at Salinas, even though the chamber of commerce has offered to stand all expenses, and even though Salinas guayule growers and refiners have pioneered this enterprise since 1912, bucking foreign monopoly and economics to develop a new American industry unaided.

Salinas guayule men, in the best spirit of American enterprise, have cross-bred the primitive Mexican desert shrub until it produces more rubber, have invented better production methods until guayule rubber can be made for 20 cents a pound. That's a fourth the cost of synthetic rubber and only a half-cent above the foreign monopoly price, but the guayule rubber is of such superior quality that the Salinas plant's limited output to date is all taken by a national tire firm.

Perhaps Uncle Sam would bother more about the Salinas guayule men if they had located in South America and flirted loudly with Hitler—for an American loan. Perhaps we must continue to pour our good-neighbor grease on hemispherical wheels, squeaking ever louder. But why in the name of rubber self-sufficiency must we do it by frowning on the one domestic-rubber enterprise that has proven practical—and one that offers breathtaking agricultural and industrial potentialities for this region.

Conservation and Utilization of Oil and Gas

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

ADDRESS BY J. HENDRIX ALPHIN

Mr. HARRIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of J. Hendrix Alphin before a State-wide oil and gas proration hearing at Magnolia, Ark., March 21, 1941:

It is my pleasure to appear before you gentlemen that are charged with the duty of protecting, conserving, and seeing to the proper utilization of our State's most valuable resource—oil and gas.

It is also my honor to be appointed by our Governor, the Honorable Homer M. Adkins, as Arkansas' representative on the Interstate Oil Compact Commission, which our State has been empowered to join through action of our recent legislature and the efforts of our Governor.

Knowing that your docket is filled and there are many important matters you must hear and pass judgment upon this afternoon, my remarks will be very brief, but I will attempt to make them pointed.

First, a word about the compact. The Oil Compact Commission is composed of representatives from the States of Arkansas, California, Colorado, Illinois, Louisiana, Michigan, Nebraska, New Mexico, Kansas, Oklahoma, Texas, and Wyoming. These States contain over 97 percent of the known oil reserves of the Nation and are now producing over 95 percent of the Nation's daily supply of oil. For your information, I will hand you a tabulation showing the position of each of these States in the oil industry at the conclusion of my remarks.

The compact has been authorized by the National Congress for the express purpose of allowing the compacting States to meet together periodically and discuss informally their experiences in the prevention of waste of oil and gas in their respective States. Progress has been made as a result of these meetings, voluntary progress, for there is no compulsion in the compact. There is no need for compulsion since the strength of the compact is contained in the force of enlightened public opinion.

The compact has nothing to do with the fixing of allowables—a question I have been asked several times. The member States believe that each of them is capable of knowing the proper production quota for his respective State. They believe they can decide these, and other waste-prevention measures, at home and without Federal intervention. They oppose Federal control of our oil resources.

I believe in the compact, having attended their meetings in an unofficial capacity since it was formed in February of 1935. They are getting the job done, and we of Arkansas will do our part toward assisting our sister States prevent waste of oil and gas.

Now, that brings me to my second thought, and that concerns our immediate affairs here at home.

Our oil and gas commission, you gentlemen, enjoy an enviable reputation for honesty and plain dealing. Everywhere I go there is praise for the conservation progress of our State. That is splendid, and I am sure that all present here today join with me in complimenting you. The engineers tell me that our oil pools are in fine physical condition, and I am glad to know that.

However, gentlemen, another problem has arisen, as you know, and the way you meet and solve this problem will decide the judgment the people of our State pass upon you and upon the oil and gas companies exploiting our resource. We will help you, all of us, but I caution you, respect our trust.

I have attended your hearings without exception; I attended your informal conference this morning; I attended the O. V. A. hearing in Little Rock early this month; I have read accounts of the meeting of the southern Governors in New Orleans; and, gentlemen, I realize you have a problem in our newly discovered gas fields, but I also realize in your hands rests an opportunity, a sorely needed opportunity, for all of us here in Arkansas.

Be not unmindful of the things that have happened in other gas areas of the Southwest. The Panhandle Field of Texas, the world's largest, that contains not a single major industry in its vicinity, but finds itself in the deplorable condition of having its production piped to the industrial East. Then there is the Monroe field of Louisiana, only a short distance away, that has had its very heart sucked out to satisfy the industrial East, with only minor benefit to the good people of that State.

The gas from the Monroe Field, a part of it, is piped to St. Louis, where it is used to calcine our bauxite. The Monroe Field is being depleted and I have been informed that the gas from Lafayette County's giant pool, McKamie, may replace it. I say, gentlemen, if our gas and our bauxite are both hauled out of the State for processing, then that is what I call rubbing your nose in it.

Be not unmindful, gentlemen, and you operators here, that over 90 percent of the gas used in our kitchen stoves and to turn the wheels of our industries is imported into the State. I say that before we accept 3 cents a thousand cubic feet for our gas to be exported into some other State, let's see if we cannot replace a little of the expensive gas here for the home folks. You gentlemen of the department of public utilities think that over.

I have taken up more of your time than I intended, but let me leave this parting thought.

See that our gas is produced properly so we can recover all of it from the earth, see that these companies do not waste it, help us use as much of it here at home as is economical.

We are willing to space our wells along the best pattern, we are willing to abide by

efficient production practice, we are willing and anxious to see these companies save and make money in Arkansas.

But, gentlemen, we expect to be given a fair shake in this game. Some of the money the companies save we want spent here in Arkansas for the good of our people—and if this does not come about, I promise you, someone is going to find himself between the hammer and the anvil.

United States reserves and production

Reserves, Jan. 1, 1941, 18,745,250,000.

Production, daily: Current, 3,615,000 barrels.

OIL COMPACTING STATES

State	Reserves, thousands of barrels		Daily production, barrels	
	Jan. 1, 1941	Percent, total	Current	Percent, total
California	3,375,000	18.2	617,250	17.1
Wyoming	310,000	1.6	74,500	2.1
Colorado	24,000	.1	3,600	.1

Miscellaneous	2,000	.1	7,090	.2
Total	443,500	2.3	148,760	4.1

A Voluntary Defense Tax

EXTENSION OF REMARKS

OF

HON. JARED Y. SANDERS, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

Mr. SANDERS. Mr. Speaker, within the last few days, this House has passed a bill appropriating $7,000,000,000 to implement the lend-lease bill (H. R. 1776), and a bit later the House also passed H. R. 4124 containing an appropriation of $4,000,000,000 for national defense. Thus, in just 1 week, something like $11,000,000,000 have been appropriated. Other appropriations have been made for the same purpose.

These measures were required by the emergency that confronts us and have been passed in accordance with the wishes of an overwhelming majority of the people of this country.

The only way to finance aid to Britain and the national-defense program is by taxation. The Ways and Means Committee of the House is now studying our tax problem and can be expected to report a revenue-raising bill before long. Such a bill will not read pleasantly for anyone. Anyone who tries to tell you that we can get by without all of us footing tLe bill is simply misleading the people.

However, I believe that our people for the most part feel like Mr. John Dakmak, who is a citizen of my home city of Baton Rouge, La., and who, according to the public press, recently contributed a thousand dollars to the United States Government in the form of a voluntary defense tax. Many people in Louisiana are stated to have made voluntary defense-tax contributions, ranging from $1.50 to $1,000. Of course, not many of us are in the position to give $1,000, but I feel that most of our people are willing to meet whatever contribution is called for by the Government.

I desire to include in my remarks a news report from the Baton Rouge (La.) State-Times of March 19, 1941, which reads as follows:

GIVES $1,000 FOR DEFENSE

A $1,000 contribution in the form of a voluntary defense tax was paid by John Dakmak, proprietor of the Paramount billiard hall on Third Street, when he filed his income tax here last week.

Explaining that he did not want any publicity about the contribution, he said he was glad he was "able to give the money to the fund."

"In times like these," he said, "all should do anything which we are able to do for the protection of our country."

Mr. Dakmak was born here. He is unmarried.

Reports from New Orleans stated that about 200 persons in this State had made voluntary defense-tax contributions ranging from $1.50 to $1,000. All returns have not been checked yet.

A Song of Idaho

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

POEM BY MRS. J. W. CURTIS

Mr. WHITE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit for insertion a poem written by Mrs. J. W. Curtis, of Lewiston, Idaho. This poem has received wide publication in the West and is to be included in an anthology of American verse being prepared in New York. The poem follows:

A SONG OF IDAHO

I sing a song of this great State,
The greatest one of forty-eight,
  Oh, Idaho, my Idaho;
O'er hill and dale the gentle breeze
That whispers through the lofty trees,
Joins in my simple melodies
  For Idaho, my Idaho.

We see the wondrous timbered hills,
Mighty rivers and rushing rills
  In Idaho, my Idaho;
The silent mountains grandeur lend,
As toward the sky their peaks ascend,
And beauty's in each river's bend
  In Idaho, my Idaho.

Oh this great climate gives us health,
Valley and mountain give us wealth
  In Idaho, my Idaho;
Just see the fields of golden grain
And luscious fruits of vale and plain,
Then join with me in this refrain,
  Oh, Idaho, my Idaho.

Years ago the brave pioneer,
Lured by thy greatness, settled here
  In Idaho, my Idaho;
And peopled valley, hill, and plain
With a valiant, progressive strain
Who gladly join in this refrain,
  Oh, Idaho, my Idaho.

—*Mrs. J. W. Curtis, Lewiston, Idaho.*

Only the Pure May Die

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

EDITORIAL FROM THE BINGHAMTON (N. Y.) SUN

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Binghamton (N. Y.) Sun:

[From the Binghamton (N. Y.) Sun of March 14, 1941]

ONLY THE PURE MAY DIE

The Army's draft ban on former convicts is stirring a storm of protest throughout the country. The Army's contention is that it wants only men with clean records and society wants to know whether the Army is too good for men who, having paid their debt to society, must make a place for themselves in life, or whether they are too bad for the Army.

Armies are formed for the purpose of subduing a common or particular enemy. War legalizes maiming and killing. Whether defensively or offensively, combatants must be wounded or must die. Those who kill and survive, return as conquering heroes, soon to be forgotten.

Criminals come from the "big houses" where men die, whether by the noose, electric chair or gas, because they, without benefit of government, took matters in their own hands and killed.

Young men are being torn from their schools, jobs, and homes these days to enter the service and have nothing to say about it. Selective service was supposed to be a big gamble in which no favoritism was to be shown and the millionaire's scion was to be on a level with the janitor's son. There was not to be any immunity in cases where young, able-bodied men had no dependents.

As it turns out, for every former convict turned down, a clean young man must substitute for him, or it amounts to as much in any case. Why should they be penalized? It would seem that these former convicts, under the rigid discipline of Army life, would

be in better position to make the most of the opportunity to rehabilitate themselves. They have known discipline and the penalty for violating it. Would they be better off, left to drift back to the old ways of life?

A comparatively small percentage of felons is vicious, incorrigible. Case-hardened criminals have made admirable soldiers in other armies. But how about the fellows whose feet slipped just enough to merit indictment and conviction; those who forged a small check, hit and ran, stole a car or happened to be short in accounts? The uniform might easily help them bury the past and point a smoother path to the future.

Under the present set-up only the good are fit to fight and die. Hitler's hoodlums make pretty fair fighters. Anyway, what are we training the boys for, battle or a cotillion?

Conservation and Utilization of Oil and Gas

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

ADDRESS BY HON. HOMER M. ADKINS

Mr. HARRIS. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following address by Hon. Homer M. Adkins, Governor of Arkansas, before a State-wide oil and gas proration hearing at Magnolia, Ark., March 21, 1941:

It affords me much pleasure to be here today and observe the proceedings of the Commission, talk with producers and royalty owners, obtain the views of the outstanding men of science, and the great leaders of the industry, who have come here today to lend us assistance in the search for the solution of the problems with which we are confronted.

On behalf of the State of Arkansas and its people, let me extend a hearty welcome to those citizens of our sister States who are our guests today. We thank you for your presence here, for your kindly interest, and for your valuable assistance.

For more than 20 years Arkansas has been well known as an oil-producing State—Smackover will always be a significant name in the early history of oil in the Southwest.

But we do not need to live in the past. Within the past year 5, and within the past 4 years 13, new pools have been discovered in Arkansas. There are in Arkansas at present 31 untested known structures, covering an aggregate area of more than 100,000 acres, believed likely to produce oil and gas.

From 1919 to the present there have been drilled 9,753 wells in search of oil and gas, resulting in 6,780 oil wells, 706 gas wells, and 2,267 dry holes.

Arkansas has produced a total of more than 525,000,000 barrels of oil and the estimated reserve in her present producing fields exceed 300,000,000 barrels.

In 1940 we produced 25,000,000 barrels of crude oil and 22,000,000 gallons of natural gasoline. Approximately one-half of our crude oil production is being processed through the six refineries located in Arkansas.

It is apparent, therefore, that the oil business is a major factor in the economic life of this State. Petroleum is now third in value on the list of commodities annually produced in Arkansas, and may soon be first.

Two years ago a statute providing for controlled production was adopted. During the consideration of that measure, a suggestion that national market demand should be considered as a factor in fixing allowables was definitely rejected. Thus in the very outset Arkansas served notice that production control was to be administered solely to prevent physical waste, and from the standpoint of what was to the best interest of Arkansas producers, Arkansas royalty owners, and Arkansas citizens generally, and that her right to seek the most favorable position possible in the national and world markets was to be in no way abridged. This policy has been and will continue to be uppermost in the minds of the members of the Commission in fixing allowables.

The known gas reserves of Arkansas hold even greater promise.

During 1939 the total consumption of electrical power in Arkansas was slightly more than 567,000,000 kilowatt-hours.

Based upon estimates that 15 cubic feet of gas represent 1 kilowatt-hour of power, the State's known present gas reserves of 763,000,000,000 cubic feet would each year for a period of 90 years supply the fuel to produce an amount of power equal to the total consumed in the entire State during 1939.

The State is rich in raw materials that lend themselves to profitable processing through the use of natural gas as the agent. Among these raw materials available is bauxite, over 3,000,000 long tons of metal ore; timber, over a million acres of productive forest within easy hauling distance of where I stand; and limestone in practically unlimited quantities. These are only a few of the many.

Scientific processes now convert raw material into a multitude of uses. Natural gas into synthetic rubber, alcohol, dry ice, and toluol—the basis of TNT. Early this month one of the leading technologists of the Southwest told me that our timber could be converted into smokeless powder.

Our wood, we know, can be processed into cellulose—the foundation of plastics, one of the country's fastest growing industries. It seems further that this cellulose can be nitrated to nitrocellulose and then granulated into smokeless powder.

Thus there appears upon the horizon the picture of a great industrial empire rising here in Arkansas as a direct result of discoveries of these great gas reservoirs. But a cloud partially obscures the picture. Some contend that on account of its large sulphur content this gas cannot be made commercial. Others, apparently equally well informed, contend that the extraction of this sulphur presents no serious engineering or financial problem. Most of these gas reserves produce distillate, which can be produced only in conjunction with large quantities of gas. The people of this State will not long endure a wasteful method of production, which saves only the distillate and utterly wastes the greater product, the gas. Nor will they be content to see this gas consumed in wasteful enterprises, or the greater part thereof piped away to feed industrial furnaces in other States. A proper use for this gas must be quickly found, or arrangements must be made to return it to the reservoir for the benefit of those who come after us and who doubtless will have the wisdom to apply it to its proper use.

The primary responsibility of finding a present suitable use for this gas must of necessity rest upon those who own the oil and gas leases covering these structures. A few weeks ago the oil and gas commission, at the urgent request of the lease owners interested, and after a full hearing, declared one of these fields, McKamie, to be a gas field. It is unnecessary for me to remind the lease owners that paragraph 11, subsection I of section 9 of act 105, defines as waste which is prohibited by the act "permitting gas produced from a gas well to escape in the air." It is clear, therefore, that a use for this gas must be found or it must be returned to the reservoir.

The State of Arkansas and its representatives stand ready to cooperate fully with those operators who in good faith are now seeking, or will seek, methods of making this gas available for the industrial expansion of Arkansas.

On the other hand, the despoilers (and as yet I have no reason to believe there are any) who should seek to waste these reserves without consideration for the interest of Arkansas and her people will find all of the power of a sovereign State and the hands of her citizens turned against them.

St. Lawrence-Great Lakes Seaway

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

RADIO ADDRESS BY HON. A. A. BERLE, JR.

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. A. A. Berle, Jr., Assistant Secretary of State, over station WMAL, National Broadcasting Co., March 22, 1941:

Last Wednesday, in Ottawa, the Government of the United States and the Government of Canada signed a pact which is known as the Great Lakes-St. Lawrence agreement.

Now, the Great Lakes-St. Lawrence development is the last great development possible in North America which could compare in importance with, let us say, the Panama Canal.

The St. Lawrence agreement contemplates two huge undertakings.

The first is the building of a dam across the St. Lawrence River near Massena, N. Y., capable of developing 2,200,000 horsepower of electricity. There are also provided additional works at Niagara Falls which will preserve the beauty of the falls—and incidentally develop a large amount of additional power there. The United States will spend about $110,000,000 for its share. It is planned to go ahead and develop this electric power immediately.

The second big job is the authorization of a deep-water canal around and locks to bypass the dam. This will make it possible for an oceangoing ship to come from anywhere in the seven seas and dock at Buffalo, N. Y., or Cleveland, Ohio, or Detroit, Mich., or Chicago, Ill., or Duluth, Minn., or any other Great Lakes port. It will connect the whole of the Middle West with the whole of the open sea.

The engineers tell us that under normal conditions it will take about 3½ years to build the dam and about 4 years to build the canal. This can be speeded up somewhat if we put the job on an emergency basis.

We want to start work on the dam as soon as the Congress approves the agreement and passes the necessary legislation. The sooner the better. We have to move fast on this phase of it. We need the electricity, and we need it now.

The seaway is arranged a little differently. The agreement calls for its completion in 1948. But Canada and the United States have agreed to watch the situation, so that they can push the seaway at once if circumstances require it for the national defense. Or they can postpone it if in the opinion of experts war efforts call for handling it differently.

There is a story behind both of these projects.

The chapter about the dam and the need of electric power is the most interesting, because it is the most urgent. It is this:

The Lord Almighty so built the Continent of North America that most of the water in the northeast quarter of the Continent forms streams and rivers which flow into that huge collection of reservoirs we call the Great Lakes. This is an enormous amount of water. All of it funnels out to the sea through a single great millrace, which is the St. Lawrence River. If that water is ever harnessed, it will make the largest and cheapest supply of electricity available anywhere in the wide world.

HOOVER FOR SEAWAY

Seven years ago President Roosevelt foresaw the need of using this power, and urged that a treaty with Canada be ratified so that the two countries could harness and use it. This was not a partisan matter; the treaty had actually been negotiated when Herbert Hoover was President. That treaty was not ratified, principally owing to the activities of the railroad and utility lobby in Washington—a lobby which, incidentally, is still on the job. Opponents of the project said—and many people were simple enough to believe them—that nobody would ever need that much power. The real point, of course, was that they did not want anyone to interrupt a power monopoly which then had things pretty much its own way.

Well, it is now 1941, and here is the situation. We are using all the electric power we can buy, or scrape, or beg, in the St. Lawrence Valley, and in the Niagara Valley, above it. We are borrowing on temporary agreement, all the electricity that Canada can spare for us. We are building our industries on the chance that Canada will graciously go on giving us the power that we need. But we know that Canada bitterly needs that power today for her own national defense.

POWER BADLY NEEDED

Still worse, we have American companies begging us to get vast additional quantities of electricity—to borrow it, or buy it, or take it from Canada—although Canada has none to give. I have on my desk now letters from the O. P. M. asking me to get them more power at Niagara; and requests from the Federal Power Commission asking whether we cannot get even more power from Canada for the St. Lawrence Valley. When I asked why they wanted this, I was told that the United States needs aluminum for airplanes, and chemicals for explosives, and electric furnaces for the new metals we put into planes and tanks and shells and rifles. I was told that we could not keep up the schedule in our rearmament unless electric power could be found to make the aluminum, to run the plants, to weld the steel, to keep the assembly lines moving.

Even if there had been no European war, and if we had not had to rearm, our figures show that we should have needed all the St. Lawrence power by the year 1948. So we have to start the job in the next 2 or 3 years anyhow. Because we have to rearm, and because Canada is fighting, we need the power as rapidly as we can get it—we ought, in fact, to have got started long ago.

So we do not have any time to lose. We must get the power and get started right away, and push it through as fast as we can. Meantime, we must use every temporary makeshift we can work out. We will use steam when we can—but you cannot get steam generators in quick time. It would take longer to get steam generators for 2,200,000 horsepower than to build the dam. But we only dare to use makeshifts if we know that at the end of 3 years or sooner if possible we shall have new supplies of electricity coming along to keep the mills going.

You ought to know this story for a very simple reason. You are going to hear it said that there is no sense in building the St. Lawrence Dam: It will not be done "in time" to be of use in our national defense. The people who tell you that are the same people who thought in 1934 that you never would need all this power. Today they all agree that it was a mistake not to build the St. Lawrence Dam 7 years ago—and jump to the strange conclusion that we ought not to do it at all. These people are like the man with the leaky roof. When the weather was fair the leak didn't need to be mended. When rainy weather came, he said it couldn't be mended. Finally, the roof fell to pieces.

This time we must not make the mistake that was made 7 years ago. Everybody hopes that the war may be over before 3 years have passed. But since nobody can guarantee that, we must not take any chances. We thoroughly believe that Great Britain will win this war, but we propose to be fully prepared for defense, no matter what happens. We think that there will be total victory for peace-loving nations in Europe. But if there is not, we are going to be set for the total defense of our own country and our own hemisphere. That means having electricity and plants and planes and ships and guns enough to do the job. I do not think we can afford to be stopped in our preparedness by any group of interests whose desire is to keep electricity scarce and prices high.

SEAWAY DEFENSE FACTOR

The other end of the story has to do with the seaway. We may well be in a position in which we will need that seaway as much, if not more, than we need the St. Lawrence Dam and its electric power.

The world needs ships, millions and millions of tons of them in ordinary peacetimes. In time of war she needs even more. Now, this war is less than a year and a half old. Five million tons of shipping have already been sunk. The German Government tells us that the war on shipping has only barely begun; they are going to uncork their really heavy drive to sink ships this spring. If they make this threat good, the ships which are the life line of our commerce, and the bridge for the defense of Britain, and which make the life of half the world possible, will be at the bottom of the Atlantic Ocean. We are the only Nation in the world which can build ships in large quantity today. We are doing so now. Every shipyard on the Atlantic and on the Pacific coasts is already working to capacity. They are building the merchant ships as fast as they can; but they are also building the two-ocean navy which we know now is needed for our national safety. All these shipyards, taken together, are nowhere near enough to do the job that has to be done.

The logical place to do a great part of that job is of course in the Great Lakes region. It is far inland and cannot be attacked. It is near the great steel plants which make the girders and hulls from which the ships are built. It is in the area where the engines which drive the ships are manufactured, and where the skilled labor is available.

It will surprise many of you to know that during the World War—the first World War, in 1917—we built ships in the Great Lakes. And, God forgive us, because we had never had the brains to dig the St. Lawrence Canal, we cut these ships in two and floated them in parts down to Montreal and then put them together again.

We could lay down a heavy cruiser at Chicago today and have the seaway open before she could be put into commission and sent out to sea. The moment work begins on the seaway, I expect you will find naval construction beginning in the Lakes—clearing the seacoast yards for more immediate needs.

UNLOCKS GREAT LAKES AREA

That is why the Great Lakes-St. Lawrence agreement authorizes the building of this seaway so that we can unlock the huge resources of the Great Lakes with its ore and its industry. They are unlocked, for use in peace, if peace shall come; they are unlocked for national defense if things go badly overseas. You will see why we have to think of this when you remember that the entire American merchant fleet is only 7,000,000 tons, and that our shipyards can only build a million tons a year—at a time when the Germans have been able to sink half a million tons a month.

Again you will hear people say about the seaway: "Why do it now? It won't be ready in time." But I should like to ask: Well, suppose we don't do it now, and suppose the time comes when we need it and are not ready? If we fail to fill our industrial lamp now that we can, when we need it most, the light will go out. Statesmanship has to be built on better sense than that.

REAL ANSWER TO DICTATORS

We have had the most careful and elaborate studies of the Great Lakes-St. Lawrence project. They show pretty conclusively, that the completion of the seaway, like the completion of the St. Lawrence power, will be excellent business for everybody, all around. If you are interested, you can get those St. Lawrence survey reports from the Government Printing Office.

I believe that the Great Lakes-St. Lawrence project is the best answer to dictators, who say that democracy cannot act. It is a magnificent undertaking in a great time. Two free nations, Canada and ourselves here pool their resources in friendship, for their common welfare and their common defense. I hope you will support the approval of the Great Lakes-St. Lawrence project as a measure for protection in need, and for production and prosperity when God grants us peace again.

Fort Peck, Mont.

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

FORT PECK, MONT.

1. Has accommodations right now for from 5,000 to 10,000 men in training.

2. Can be expanded in short time and at minimum expense to accommodate from 20,000 to 30,000.

3. Is ideally situated for training men for service in northern climates.

4. Has ample and excellent housing facilities for commissioned and noncommissioned officers and families.

5. Has thousands of acres of varied terrain, Government owned, ideally adapted for tank

maneuvers, rifle, artillery, and bombing ranges.

6. Has large laundry, cold storage, and warehouse installations for 5,000 to 10,000 men.

7. Has hospital schools, stores, restaurants, laboratory, administration, and other buildings.

8. Has water supply and sewage system ample for a camp of 15,000 men, and which can be easily and speedily increased.

9. Has large recreation hall, largest theater in the Northwest, and athletic fields.

10. Has unlimited supply of natural gas, with elaborate distribution system for heating, cooking, baking, shop, and industrial uses.

11. Town of Fort Peck and adjacent territory are already under Army control and supervision.

12. Has extensive railroad yards, and Government-owned short-line rail connection with transcontinental Great Northern Railway.

13. Has large, well-equipped machine shops, garages, and material-storage yards.

14. Site is contiguous to Fort Peck Lake, largest body of water in Northwest, suggested by military experts as ideally adapted for seaplane base.

Wheat Grades Should Be Based on Milling Value

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

HOUSE CONCURRENT RESOLUTION NO. 12 OF KANSAS LEGISLATURE

Mr. HOPE. Mr. Speaker, under permission to extend my remarks in the RECORD, I am submitting a copy of House Concurrent Resolution No. 12 recently adopted by the Legislature of the State of Kansas.

I believe that the suggestions contained in this concurrent resolution should receive the careful consideration of the Department of Agriculture and that the study requested should be made. In view of the fact that new types and varieties of wheat are constantly being developed, it is important that research and study be continuously conducted by the Department of Agriculture in order that grades and standards reflect the real value of wheat for milling and industrial purposes.

The resolution is as follows:

House Concurrent Resolution No. 12

Concurrent resolution urging the Secretary of Agriculture of the United States to make an immediate study and revision of Federal standards for wheat to the end that farmers will be paid for their wheat more nearly on a basis of true value and quality

Whereas the Federal grain standards put undue stress on test weight of wheat as a grading factor, thus penalizing types having light test weight, but excellent baking quality, and putting a premium on types which have heavy test weight, but inferior baking strength; and

Whereas the Federal standards require hard red winter wheat to have test weight of 60 pounds per bushel to grade No. 1, while the standards for hard spring wheat require test weight of only 58 pounds per bushel for No. 1 grade, thus penalizing our Kansas turkey types: Now, therefore, be it

Resolved by the House of Representatives of the State of Kansas (the Senate concurring therein), That the Kansas Legislature urge the Secretary of Agriculture of the United States to make a thorough and immediate study of the wheat grades, making such revisions as are needed, to (1) remove the present disparity in test weight requirements between No. 1 and the lower grades in hard red winter wheat versuse hard red srping wheat, and (2) to more definitely describe the milling and baking qualities of hard red winter wheats of Kansas, to the end that farmers will be paid for their wheat more nearly on the basis of its true industrial value than is practical under the present Federal grain standards; be it further

Resolved, That copies of this resolution be sent by the secretary of state to the Secretary of Agriculture of the United States, and to each member of the Kansas congressional delegation and to each of the United States Senators from Kansas.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ALBERT G. RUTHERFORD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

EDITORIAL FROM THE SUSQUEHANNA (PA.) TRANSCRIPT

Mr. RUTHERFORD. Mr. Speaker, the St. Lawrence seaway proposition is attracting much attention throughout the East. The people most affected by this scheme are against it. Why the President is so set upon putting this measure through is beyond their comprehension. The following editorial from the Susquehanna Transcript, Susquehanna, Pa., shows that the editors of our small dailies are not being hoodwinked and understand the folly of the whole proposition:

[From the Susquehanna (Pa.) Transcript]

ST. LAWRENCE WATERWAY FOLLY

The Congress now has the say as to whether or not a tremendous sum of money needed for other purposes shall be wasted in deepening the St. Lawrence River, making it into a commercial stream. How silly it is to contemplate such foolishness.

The St. Lawrence River is 1,900 miles long, more than twice as long as the Susquehanna River from Otsego Lake, at Cooperstown, to the mouth in Chesapeake Bay. The St. Lawrence is an important stream; always has been, and serves a fine purpose "as is."

To deepen and widen the stream, making a 24-foot channel for freight and passenger carriers, is about as necessary as deepening and widening the Susquehanna River from end to end—or in sections—for the same purpose.

Imagine even dredging the Susquehanna River from Susquehanna to Binghamton, and the installation of a lock or two, to carry freight and passengers with the Erie and Lackawanna railroads on either side. That, in brief, is the picture now complete concerning what it is planned to do with the St. Lawrence, except that the St. Lawrence project covers many more miles.

Railroads and bus lines now serve all the territory of the St. Lawrence on both sides of the border. Water power developments are not needed, as steam plants can be operated at less cost, the figures show.

As a defense measure, the St. Lawrence with a 24-foot stage of water will not admit any boats of size; and as far as creating ship-building yards on the interior to be reached by the widened and deepened river, that is uncalled for. Thousands of miles of the American seacoast, Atlantic and Pacific, are untouched and yet can be used at small cost compared to the St. Lawrence development.

The taxpayers' money to be dumped into the "deeper and wider" St. Lawrence River can be put to better use in defense work, all of which will become more apparent as the spring and summer come.

A Narrow Road—Let Us Try To Stay on It and Get Through

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

LETTER FROM HON. FRANCIS CASE, OF SOUTH DAKOTA

Mr. CASE of South Dakota. Mr. Speaker, under permission granted by the House, I place in the RECORD the following letter which I have written to people in my district:

HOUSE OF REPRESENTATIVES,
Washington, March 24 1941.

To the people in the Second Congressional District:

As you know, since I have been in Washington I have believed that you were entitled to know what goes on here that directly concerns you. I think you are entitled to know that, despite all disclaimers you may hear, official Washington is in the war—with money, materials, guns, ships, planes, everything except men on the firing line.

Because it will affect you individually, I think you are entitled to know so that you can plan accordingly.

Please do not interpret this as a political statement. When the lease-lend bill was introduced I said that it was a bill to wage war with everything except men. I tried to make that clear by sending marked passages from the bill and letting you see what the bill itself said. A few, perhaps, thought I was trying to make a political statement. I was not. I was simply trying to say in plain language what the bill meant.

THE PRESIDENT'S STATEMENT

So now I think you should have a frank picture of the situation because it concerns you. Up to 2 weeks ago, most statements by responsible leaders in the administration to the effect that we were in the war, were behind closed doors. In his speech to the

White House correspondents, however, the President publicly promised:

"Unqualified, immediate all-out aid for Britain, Greece, China, and for all governments in exile. * * * From now on," he said, "that aid will be increased, and yet again increased until total victory has been won."

The President further said that 5 minutes after he signed the lease-lend bill he started shipments on the $1,300,000,000 authorized from materials on hand. From the viewpoint of those who believe the United States should "guarantee the four freedoms" to all the world, the President made a magnificent speech, without question one of the greatest of his career. But it means war—if present efforts fail.

Now this will change what you and I otherwise would or could do. On this basis the Government officially supplying one belligerent with aid to insure "total victory" we can no longer claim or hope for the privileges of a neutral while performing the functions of a belligerent. Neither as a Nation nor as loyal citizens of that Nation.

We have been told all along that the lease-lend bill was a peace bill. I believed and said that I believed it was a war bill. I fought it. I voted against it. I voted for every amendment which, in my judgment, would make it less of a dictator-war bill, including the 12 weak but restraining amendments added by the Senate. But it is now the law and the President, as director of the Nation's foreign policy, and as Commander in Chief of the Army and Navy, has begun operations under its terms.

YES, BUT HERE WE ARE

I feel with many of you that it was not necessary for us or for other nations to be in the present situation. But here we are—involved in the war, committed to "total victory." It may still be possible to get along without sending our men into the fighting. I shall oppose that to the bitter end.

Our only chance to do that, however, rests upon two things:

1. Making ourselves "too strong for any other nation to attack" (as many of you heard me say last fall).

2. Avoiding those "incidents" which start shooting.

In taking his oath of office a Member of Congress swears to protect his country against all enemies, foreign and domestic. We are now taking sides in the war—officially. As a nation we are providing guns for one side in the fight—not merely permitting private firms to sell them. To take sides and not to look to our own defenses would be suicide. That was what I did not like in those early inflammatory remarks of the President. You may remember that I recalled the words of another Roosevelt—T. R.—who said, "Speak softly and carry a big stick."

All of us are going to do some things we do not like. Last week I voted for a $7,000,000,000 bill, after trying in vain to get out of it the provision which I thought most dangerous—funds to repair foreign vessels in our harbors. But, during previous days I had heard testimony from General Marshall, Chief of Staff, General Brett, Chief of the Air Corps, and William Knudsen, director of the O. P. M., which made me think that after we had started actually to supply arms to a belligerent, we better buy protection where we could get it, at least until our big bombers get into production. The bill provides that the articles can be turned over to our own defense agencies if desired.

WE ARE IN THE CAR

My situation might be likened to that of a rider in a car. I may tell the driver, "Don't go down that road. Here is a stopping place. Here is a place we can turn off. Please don't go down that road. It is narrow. It is rough. It endangers every one of us."

But if he goes on, and I am riding in that car, and all the people I love and hold dear are riding in that car, do I tell him I will not help him buy enough gas to get across the canyons and the swamps and the mountains?

No, when he passes the fork of the roads, when the road is too narrow to turn around, when he has burned the bridges behind us, I do my best to help him keep on the narrow road, treacherous though it may be. I do my best to help him to get through.

I have no doubt of the loyalty and patriotism of the people of South Dakota. They sacrifice and they give and they pay. It is precisely because you do, that I have thought you were entitled to my frank and honest estimate of the present situation.

Loyally and sincerely yours,

FRANCIS CASE.

Sale of Alcoholic Liquors at Military Bases

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

RESOLUTION BY MASS MEETING OF THE UNITED DRY FORCES

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions adopted at a mass meeting of the United Dry Forces, held at the National City Christian Church, Sunday, March 23:

Whereas the greatest misfortune has come upon humanity in the history of the world, in what threatens to become a world-wide military conflagration that may end in the wreck of civilization, a conflict between two irreconcilable theories of government—democracy and dictatorship, Christianity and totalitarianism; and

Whereas our President has called this Nation into that conflict as the world's last hope, and mobilized its youth in the selective-service camps to prepare to meet this call all-out conflict which is to determine the fate of the world for generations to come, and that only men physically, mentally, and morally fit to lead, fly, and fight can endure the strain of modern mechanized methods of warfare; and

Whereas the collapse of the French Army and its defeat by the more abstemious Germans was declared by the French Government to have been due in the first instance to alcoholism among the soldiers and its concomitant social and sex evils; which is reminiscent of the statement of David Lloyd George in the House of Parliament, after witnessing the human wrecks from overindulgence in alcoholic liquors, returning from the front in the first World War: "We are fighting Germany, Austria, and drink, and the worst of these is drink"; and

Whereas Chief of Staff Gen. George C. Marshall has lately warned of immoral conditions existing within the areas outside the camps, and has called for their removal in protection of our soldier sons from the traffic in liquors and licentiousness when they are on leave from military duty: Therefore be it

Resolved, That we call upon our President to defend our defenders by immediately abolishing the sale and consumption of all alcoholic liquors in the forts, training camps, cantonments, flying fields, and all military bases on land and sea, wherever the American flag flies; and

Resolved, That we call upon Congress to enact immediately such legislation, with severe penalties for its violation, as will protect the youth of the Nation from this recognized "fifth column" in the Army and in all forts and camps, as an act of patriotic service in defense of the flag, and the protection of the Nation's youth from the formation of habits that will unfit them for their best service while in the Army and impair their physical health and moral character for their civic duties, should they survive the conflict: Be it further

Resolved, That we call for the immediate passage of bill S. 860, introduced by Senator SHEPPARD in the Senate, and Congressman HOUSTON in the House, and such other measures as will be found essential to carry out these recommendations in this all-out war against the enemies of democracy and the American way of life, to which our President has summoned the Nation.

The Late Harry B. Swan

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

ADDRESS BY HON. BOURKE B. HICKENLOOPER

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following eulogy presented by the Lieutenant Governor of Iowa at the funeral of Harry B. Swan, of Atlantic, Iowa, State chairman of the Republican State committee, who was recently killed in an accident:

To stand today in the silence beside one with whom yesterday we walked; to show in hushed reverence the respect and love that yesterday's association brought; to gain comfort and courage from the memories that fill our hearts; to know deeply the sorrow of great loss; all are the sacred rights of humanity and brotherhood.

Today we come, all of us, and countless others who are with us in spirit, to claim those rights and in some small way pay tribute to our friend Harry Swan; and to bring such comfort to a devoted wife and loved ones as sympathy and sincerity may give. In so doing we may, in turn, soften our own sorrow with the memories of yesterday.

Man was not meant to stand alone; the upsurge of all humanity has been marked by the interdependence, in varying degrees, of each upon the other, and some are specially endowed with those qualities that attract and hold the confidence and loyalty of their fellow men. Harry Swan possessed those qualities in a high degree; he early assumed the moral responsibilities that so distinguished his later years and enabled him to discharge every trust with honor and ability. His early life in this community, where he was born, speaks eloquently of his basic character. He was schooled in industry and integrity and their tenets took deep root in his life. He chose the law for his vocation; those who knew him best know

that this choice was moved by his sense of justice and right and from a natural aptitude for fair and equitable adjustment of differences between his fellow men rather than from any mercenary urge. He was a leading figure in his college affairs, in spite of the fact that he worked to earn a substantial portion of the cost of his education, and his leadership, as always, inspired trust and confidence in his associates.

After his admission to the bar he came back to his home town to enter the practice of law, but very shortly the call of his country in war caused him to follow the path of duty and he entered the Army. Again his leadership brought him recognition and to the rank of first lieutenant; he was honorably discharged as such at the war's end. He returned to Atlantic and the practice of law and has lived here ever since.

The natural understanding that Harry had of his fellow men, his instant sympathy with those in distress, and the integrity of his private and public conduct soon established him as a leader among those who knew him and brought countless people to his door; his judgment was sound and the continued growth and extension of his clientele throughout western Iowa bespoke these qualities as well as the brilliance of his professional ability. No colleague ever had occasion to question his word; no client ever had cause to complain of any neglect of duty. He represented his obligations with the highest fidelity and he discharged his trusts with utmost honor. It was not in his nature to take mean advantage of an adversary nor to use his abilities to oppress or destroy; on the contrary, he guided his affairs by the rules of conscience and equity and he could stand before all mankind without fear.

Quite naturally, he became interested in politics; as a lawyer he knew that government and its forms can protect or destroy human rights and he gave of his time, energy, and ability to local affairs; the mark of his contribution has been stamped permanently in the structure of this community. More extensive political interest led him to the head of the county organization of his party and his local success made him the natural choice as chairman of the Seventh Congressional District and then to the post of chairman of the Republican State central committee. Here he had opportunity to bring to bear all of his tremendous ability and his success was outstanding. With quiet courage and sound judgment he brought together divergent opinions; he was never autocratic but was a leader, accepting and using the best and discarding and refusing to use anything petty or small. Every act and policy he tested by the rules of honesty and he inspired unbounded trust. He sincerely respected the rights of those opposed to his party and, in turn, few men could command such sincere respect as he from those same opponents. His leadership and success in Iowa made him a rising national figure; his counsel and advice on public questions were sought and many matters of national importance bear the mark of his stable judgment. His stewardship to the end was one of high intelligence, faith, and honor.

The tragedy of his passing appalls us; at once we form the question "Why?", but it is never asked for it is not ours to question; sufficient be it that we have been helped by knowing him; he will continue to sit in our councils and walk by our side; his physical absence will but add strength to memory, and we may say, with the poet—

"Well blest is he who has a dear one dead,
A friend he has whose face will never change—
A dear communion that will not grow strange
The anchor of a love is death."

The thread of life is slight indeed; its strength is governed by the mysteries yet unsolved; and the curtain that conceals the great unknown is often made of flimsy stuff. When sorrow darkens all our thoughts we sometimes feel that all is gone, yet one thing death can never conquer—one all-comforting possession that dispels the gloom—that is the light of memory. It transcends the tomb and illuminates the dark avenues of loneliness; it grows brighter with time and brings comfort to those who grieve; it is the one sure means of contact across the void.

This heritage of memory is man's great comfort; it recalls the path that others have traveled. In memory we learn the lessons of great accomplishments and are stimulated to go forward by their example. If we lean upon memory it will help avoid the pitfalls of the future, and it puts its sheltering arms about us in present sorrow. The physical existence is transitory and mortal; but when that existence ceases then recollection and memory bring immortality for our aid and comfort.

Harry Swan's work is not done; so long as we recall his complete devotion to his wife and home, his loyalty to his friends, the wisdom of his advice and the moral honesty of his mind and character, his influence will be felt and we are and will be better for the privilege of knowing him. Indeed, he has lifted the veil and is walking unafraid in the unknown; perhaps we wonder where that path may lead but faith can answer all our queries; it has not been given us to know; one has said,

"Strange, is it not? that of the myriads who
Before us passed the door of darkness through,
Not one returns to tell us of the road
Which, to discover, we must travel too."

But again I say that faith is comfort—and because the all-wise Voice has spoken we are content—the sorrow of the moment will be replaced by the comfort of memory.

Today, we bring assurance to wife and loved ones that we, too, knew and loved him; that we, too, are better because of our association.

Harry Swan was a man of courage—of loyalty—of honor. His intelligence and leadership were freely given; his influence has been felt by his fellow men in near and far places; all who knew him trusted him. What more can be said of any man?

The temptation may be great to dwell in the speculative realm of "what might have been", but that can bring regret alone. "What might have been" must always be submerged to the inevitable command of the divine judgment and we accept, as best, those things over which we have no control and sometimes little understanding, being thankful only for the good that we have been permitted to share.

And so we say farewell, but as the echo of that parting dies, we open wide our hearts in the glorious realm of memory.

The Easier Way

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

POEM BY EDGAR A. GUEST

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by Edgar A. Guest, which has a special bearing on the problem of labor and the national defense. It was sent to me by a constituent, L. F. Alexander, of Fort Wayne, Ind., with the suggestion that it be prominently displayed in every defense plant in the country.

[From the Fort Wayne (Ind.) News-Sentinel of March 18, 1941]

THE EASIER WAY

(By Edgar A. Guest)

Before the time for blood and tears
Before the days of heavy hearts
Before the dark and dreadful years—
Let's win the war before it starts!

A little faster hand and wrench!
A little longer hand and drill!
'Tis happier service at the bench
Than being sent to die or kill.

From every cupola and dome
Now let the streams of metal run,
Let's win the war in peace at home!
Better the hammer than the gun!

Before the days of bomb and mine
Of sorrow, anguish, and regret,
Speed up! Speed up, production line.
Let's win the war with toil and sweat.

Distribution of Power at Canby, Oreg.

EXTENSION OF REMARKS
OF
HON. WALTER M. PIERCE
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

STATEMENT BY THE BONNEVILLE POWER ADMINISTRATION

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following release of the Bonneville power administration:

[Bonneville Power Administration Information Service]

The Canby, Oreg., city council advised the Bonneville Power Administration today that as a result of progressm made possible by the distribution of Columbia River power during the past 12 months retail power rates to Canby customers will be reduced by an average of 16 percent effective probably in April.

"The new rate reduction is the second to be announced by the city since its purchase of Columbia River power," Canby's Mayor J. R. Vinyard said. "The first was announced 1 year ago at the time the city executed its power contract with Bonneville. Naturally we are pleased with the showing we have been able to make and with the benefits and conveniences gained by Canby power users.

Combination of the two reductions represents an overall cut of 43 percent in domestic power rates and 50 percent for commercial customers.

"Canby rate cut brings its charges for power below the standard retail rates recommended by Bonneville as a suitable basis for the operations of most of its power distributors," Administrator Paul J. Raver commented. "I am gratified that the remarkable results of Columbia River power sales during the past year have enabled Canby to make such a drastic reduction in power charges."

"Canby's situation proves that Bonneville's low standard retail rates are conservative and practical and within reach of almost any publicly owned power distribution system which is in a position to buy Columbia River power at wholesale.

"Canby, by virtue of the fact that it has a long-established system, is free of debt, and has the benefit of astute and competent management, has been able this week to announce rates that, in some brackets, are the lowest in the United States. There is no reason why these rates cannot ultimately be met by other northwest public systems using Columbia River power."

The new Canby residential rate follows:

	Cents
First 50 kilowatt-hours per month	2½
Next 50 kilowatt-hours per month	1½
Next 100 kilowatt-hours per month	1
Next 600 kilowatt-hours per month	½
Over 800 kilowatt-hours per month	¾

Minimum bill, 75 cents per month.

Commercial lighting and power rate:

	Cents
First 150 kilowatt-hours per month	2½
Next 350 kilowatt-hours per month	1½
Next 1,000 kilowatt-hours per month	1
Next 13,500 kilowatt-hours per month	.7
Next 50,000 kilowatt-hours per month	.5
Above 65,000 kilowatt-hours per month	.3

For customers with demands greater than 10 kilowatts the excess of demand above 10 kilowatts will be charged at 95 cents per kilowatt.

For use in excess of 360 times the demand the energy charge shall be 50 percent of the otherwise applicable rate, except that no energy shall be billed at less than 2½ mills per kilowatt-hour.

Canby officials point out that customers who use more than 250 kilowatt-hours of power each month will have the benefit of the lowest retail rates in the country. For power in less than this quantity, Tacoma and Eugene rates are still slightly lower. For customers using 500 kilowatt-hours per month on the residential rate the bill at the new Canby rate would be $4.50. At the Eugene rate the bill would be $5.80 and at the Tacoma rate it would be $5.30.

In the new rate schedule Canby has pioneered in the direction of providing lower rates for irrigation users and for commercial customers using electricity for heating. The new commercial power schedule which would apply to irrigation installations of 10 horsepower or larger provides that the rates named in the schedule shall be reduced 50 percent for customers who use their equipment more than half of the time. This means that a rate of 3½ mills per kilowatt-hour is available for the smaller customers making long hour use of their irrigation equipment, such as is possible for irrigation users. Canby officials point out that the area served by the Canby municipal plant has excellent possibilities for the development of irrigation, and it is expected that the new rate provisions will give great impetus to this development.

Canby also adopted a new rate of 7 mills per kilowatt-hour for commercial electric space heating installations. This is one of the lowest commercial electric-heating rates in effect anywhere.

Canby's earnings during the first 12 months in which Bonneville power was distributed at the standard resale rates were sufficient to pay all costs of operation including depreciation, and to provide for payment to the city of a tax equivalent equal to the taxes that a similar private utility would pay, plus an additional payment equal to 6 percent on the city's investment in the electric plant. Surplus earnings after all these deductions amounted to $4,000 for the 12 months, or 26 percent of revenues. The new rates are also expected to result in surplus earnings after providing for tax equivalents and return on the city's investment.

St. Lawrence Waterway

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

EDITORIAL FROM THE MILWAUKEE JOURNAL

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of March 22, 1941:

[From the Milwaukee Journal of March 22, 1941]

GET THE WATERWAY STARTED

If the United States Senate had ratified the St. Lawrence waterway treaty in 1934, America would today have, completed or nearing completion, a mighty arm for defense. There would be power enough from this development to answer any fear of a power shortage. The current would be there to run all the aluminum plants necessary.

The shipbuilding problem would be solved, or nearing solution, in the same way. The great inland lakes would be open for the shipbuilding industry. Great Lakes shipyards, close to materials and an adequate body of labor, could be developed in comparative safety from attack.

President Roosevelt now makes an attempt to recover from that mistake of the Senate by negotiating a new agreement with Canada. It is not a formal treaty but it requires congressional approval. The President, it is clear, is trying to meet conditions as they are today. Power is adjudged to be the immediate need, so the emphasis is on power. But the canalization of a waterway is not forgotten; it is provided for over a course of years.

Canada, actually at war, is not in a position to spend money on internal improvements as she was 7 years ago. So the Canadian part of the work, which is mainly waterway improvement, is to be spread over a span of years.

America, on the other hand, will go ahead with the improvement of the International Rapids section. There is our main job, as it was also our main job by the provisions of the treaty that was not ratified. We shall count the money as a part of defense expenditure.

The cry will be raised—is being raised—that since this agreement requires only majority congressional approval, here is a dodge around the constitutional provisions requiring a two-thirds approval by the Senate of a formal treaty.

In a sense, this is true. But it must be remembered that the President, and the Lake States for that matter, had experience with the kind of opposition that balked the formal treaty. There could be enough of it to win over a third of the Senators, even though the arguments were contradictory and unsound. Maybe it will be impossible to deceive a majority of Congress.

We know the same opposition would be met again in consideration of a formal treaty because the contradictory assertions of such organizations as the Transportation Association of America are already being revived.

The association says, for instance, that the waterway is not feasible because it would not be used enough by oceangoing vessels. Then it says that so much traffice would be diverted as to upset the American transportation system. Which is correct? Both conclusions cannot be.

The association says farmers would not be benefited because there would not be the supposed lowering of rates. Then it says the Middle West's industry would be ruined by foreign goods coming through the waterway—this importation being made possible, of course, by cheaper rates. One assertion or the other is hay wire.

The President has chosen a method of gradual planning and progress in developing the project. This requires a permanent planning body, which is provided for in the agreement. To leave the project thus fluid and capable of change may, in the end, prove to be the wiser course. The old treaty fixed the development completely.

The 7 years lost cannot be made up. Nobody can say today whether the development will prove a defense measure, so far as the present European war is concerned. But Mr. Roosevelt has taken the safe course. He proposes to get the project under way. The Great Lakes area will be with him on that.

Bituminous Coal Act Should Be Extended

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

Mr. DIRKSEN. Mr. Speaker, the Bituminous Coal Act of 1937 was administered by a Bituminous Coal Commission created by the terms of the act. The act itself provided for conservation of coal resources, the stabilization of the coal industry, and for the creation of a coal code. The life of the act was limited to 4 years.

As a member of the subcommittee of the Appropriations Committee on independent offices, which dealt with appropriations for the Bituminous Coal Commission when it was an independent body, there was ample opportunity to get a first-hand knowledge of the administration of the act. It is unfortunate indeed that the original Commission staged a very inefficient and tragic performance. The Commission itself became a catch-all for patronage and political appointments and became one of the most inept agencies of government.

The most disconcerting thing about this performance was the enormous waste of years in promulgating a coal code. The record will show that even a three-man court in the District of Columbia which was inclined toward liberality disavowed the first price structure set up by the Commission because the statute was not followed. This decision was unanimous and was something of a reflection upon the inefficiency of the Commission.

The administration of the Bituminous Coal Act was finally transferred to the Department of the Interior under the provisions of plan No. II, submitted to Congress by the terms of the Reorganization Act of 1939. Evidently the Presi-

dent himself recognized the incapacity and the inefficiency of the Bituminous Coal Commission in administering the act.

The present Bituminous Coal Division was set up in the Department of the Interior by an order of the Secretary of the Interior dated June 16, 1939. This Division has therefore functioned less than 2 years in the Department of the Interior.

It is my considered opinion that this act is entitled to a full and fair opportunity so that it can be determined whether the basic purposes of the act can be accomplished in bringing stability to the bituminous-coal industry. In view of the earlier maladministration of the act, it can scarcely be said that there has been such full opportunity, and hence I am in favor of a further extension of the life of this act.

Program for Forest Lands

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

RESOLUTION OF THE RAPID CITY CHAPTER OF THE IZAAK WALTON LEAGUE OF AMERICA

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted unanimously by the Rapid City Chapter of the Izaak Walton League of America at their regular meeting on March 14, 1941:

RAPID CITY CHAPTER,
IZAAK WALTON LEAGUE OF AMERICA,
Rapid City, S. Dak., March 14, 1941.

The following resolution was unanimously approved at a regular meeting of the Rapid City chapter of the Izaak Walton League of America, held in Rapid City, S. Dak., March 14, 1941.

REDFORD H. DIBBLE, *Secretary.*

PROGRAM FOR FOREST LANDS

All forest resources—land, soil, forest, range, watershed, wildlife, recreation, etc.—regardless of ownership, should be protected from depletion, developed, and utilized in the best interests of all the people. These resources should be made to contribute to the fullest extent to the permanent solution of social and economic problems, to national defense, and to permanent human welfare and security. The Federal Government should make its own lands outstanding examples of good management. Since the forest problems are inextricably bound up with the use of land for other agricultural purposes and with other agricultural problems, forest-land problems should be fully correlated therewith. As a partial contribution to the above, the following steps are necessary and at the same time will increase national wealth and provide much-needed employment: Therefore be it

Resolved, That the delegates assembled in this annual convention of the Izaak Walton League of America express their grave concern over the lack of a comprehensive national program of forestry and urge that such program be adopted; be it further

Resolved, That the Izaak Walton League of America go on record as follows:

1. The enactment of additional legislation and the appropriation of such funds as may be needed to make the national forests of South Dakota and of the Nation as a whole serve as models of practical and scientific management of forest land; to add to the present national-forest system additional areas needed to create a permanent forest economy; to regulate run-off and control erosion; and to insure proper management of large areas of submarginal lands.

2. Public regulation of private forest lands to insure that they are kept productive and that there may be adequate supplies of forest products for the normal needs of the Nation as well as in times of emergency.

3. Perpetuation and management of the fish and game resources as one of the natural assets of the State of South Dakota and of the United States as a whole.

4. Further development of the recreational possibilities of the State of South Dakota and the national forests of America; be it further

Resolved, That copies of these resolutions be sent to the President of the United States, the Vice President of the United States, the Secretary of Agriculture, the Secretary of the Interior, and the Speaker of the House of Representatives.

An American's Right To Work

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

Mr. HOFFMAN. Mr. Speaker, on the floor on several occasions I have called the attention of the House to section 7 of the National Labor Relations Act, which reads:

Employees shall have the right to self-organization; to form, join, or assist labor organizations; to bargain collectively through representatives of their own choosing; and to engage in concerted activities for the purpose of collective bargaining or other mutual aid or protection.

Several times an effort was made by me to amend that section by adding the four words "or not to join," so that the first part of the paragraph would read:

Employees shall have the right to self-organization; to form, join, or not to join, or assist labor organizations—

And so forth. My efforts in behalf of all those American citizens—and there are some 30,000,000 of them—who want to exercise the right given them by the Constitution to work for a livelihood, without being required to join any organization or to pay whatever fee might be assessed by the officials of a union, have been opposed by those who advocate the closed shop. The closed shop means that no one shall work in a given industry unless he belongs to a union. One of those who on the floor has fought frequently and vigorously my every effort to give American workingmen the right to work is the gentleman from Georgia [Mr. RAMSPECK].

I do not question the gentleman's sincerity, nor do I question his good judgment, but I cannot agree with him. He frequently talks about the right to bargain collectively, and he has had not a little to say about the right of unions to enforce their rules and regulations upon all workers.

So today, to show you how some of these unions get their members and how they act, I am printing herewith a news story carried by the press on March 20 showing something of the things that are happening now and which shows you, too, how employees are actually prevented from bargaining collectively, from exercising their rights as employees. All those who believe that they are doing labor a service by insisting upon the closed shop in defense industries should read this account as well as the story from Gary, Ind. This Chicago story is as follows:

HARVESTER MAPS PLANS TO REOPEN MCCORMICK PLANT—A. F. OF L. WORKERS READY TO GO THROUGH C. I. O. PICKET LINE

Officials of the International Harvester Co., in an all-day conference yesterday, formulated plans to reopen the company McCormick works in Chicago.

This plant, at Blue Island and Western Avenues, has been shut down nearly 3 weeks by a strike of the Farm Equipment Workers' Organizing Committee (C. I. O.) The company's nearby tractor works at 2600 West Thirty-first Street has been closed for 7 weeks by an F. E. W. O. C. strike.

POLICE PROTECTION PLEDGED

Although no official statement was made by the company after yesterday's meeting, it became known that the McCormick works would resume operations perhaps by the end of this week or early next week. Capt. John Prendergast, chief of the uniformed police of Chicago, said that whenever the plant was ready to open adequate protection would be given to any employees who desired to return to work and that striking workers would not be permitted to interfere with their actions.

More than 1,000 members of the recently formed McCormick works A. F. of L. union attended a gathering at Twenty-fifth Street and Claremont Avenue and cheered speeches by organizers who announced the union would go through the C. I. O. picket lines to work as soon as the doors of the plant are opened.

Ernest Pugh, C. I. O. regional director, said he has sent telegrams to 200 presidents of locals in the Chicago area, asking them to attend a meeting in the Midland Hotel tonight to discuss ways to help the Harvester strikers.

OTHER LOCALS MAY PICKET

"We will draw up some sort of plan," he said. "It may take the form of financial aid or it may mean that other C. I. O. locals will help in the picketing."

At the Richmond, Ind., Harvester plant it was announced that arrangements for reopening would be made as soon as adequate protection could be furnished those employees willing to work. The Richmond plant also is shut down by C. I. O. action, but it has been announced that more than 700 of the 1,164 workers have signed petitions asking that operations be resumed.

The F. E. W. O. C. called its strike at the tractor works in Chicago on January 29, 7

weeks ago yesterday, and 6,500 workers there have been idle since. At this plant the C. I. O. union is the legally designated bargaining agent.

PEACE ATTEMPTS FAIL

Numerous attempts at negotiation have failed. Union demands are for a basic minimum wage of 75 cents an hour for men, and 65 cents for women instead of the present 62½ cents; elimination of piece work and adjustment of wage inequalities, and payments to men called into military service.

There has been no move to reopen the tractor plant. The situation there is somewhat different from that at McCormick. At the latter plant there has been no designated bargaining agent since the National Labor Relations Board in early February dispossessed an independent union on the ground it was company dominated. (This is denied by the company.)

The McCormick employees continued to work until February 28, when a detail of about 50 C. I. O. men invaded the plant, called out their members, and forcibly ejected others. There were a few fights, and the non-C. I. O. forces refused to leave until the company, fearful of the disorders, shut off the plant power and requested that all the workers leave.

A. F. OF L. MAJORITY CLAIMED

Harry O'Reilly and Irving Brown, A. F. of L. organizers, now claim a substantial majority of the McCormick workers, and their insistence on reopening has been a large factor in the company officials' decision. They have said repeatedly that their union has no complaint about wages and hours and that it wants to get its members back to earning. The 6,000 McCormick workers are losing about $200,000 in pay weekly, and the tractor workers are losing about the same amount.

The A. F. of L. has requested a plant election under N. L. R. B. supervision, but the C. I. O. has refused to agree on this.

The F. E. W. O. C. has a soup kitchen near the tractor works, but gives no benefits to offset the loss of wages. It was learned that hundreds of letters, some from C. I. O. members, have been received by the company and the A. F. of L. union pleading for a chance to work.

Many of these men who make more than a dollar an hour on piecework in many cases are said to be opposed to the C. I. O. demand that such work be abolished. The company has produced figures to show that pay in its plants here is higher than in similar units anywhere in the country.

"WE WANT WORK," PAYLESS STRIKE VICTIMS ASSERT—HARVESTER MEN HIT C. I. O. UNION TACTICS

Investigation yesterday tended to show that the rank and file of workers at the tractor works and McCormick works of the International Harvester Co., which have been shut down for weeks by C. I. O. strikes, are growing impatient at their lack of income and lay the blame principally on the union.

In an effort to get at the real sentiments of the men in the ranks, the Tribune sent out reporters with instructions to interview workers at random, including C. I. O. members, members of the American Federation of Labor, and independent workers, and to quote the men verbatim.

HERE ARE THE FINDINGS

From the answers these general facts were discovered:

1. Many of the idle men are nearly destitute, and others have about exhausted their savings.

2. Many are willing and anxious to return to work at their old scale of pay and consider it adequate.

Some of the answers, with the identities of those interviewed concealed, follow:

Mr. A. (C. I. O. member at the tractor works): "We have been on strike 7 weeks. I am in debt. I had some money saved, but my wife has been sick, so that is all gone. I averaged $45 a week when I worked. What is going to happen to all of us? Why don't the union and the company get together and open the plant? If the tractor works were opened, I would be in the front line going back to work. I am sick of unions that do nothing but hurt us. I had a good job, and I want it back, right now."

QUITS C. I. O. FOR A. F. OF L.

Mr. B. (former C. I. O. member at the tractor works): "I joined the C. I. O. union when it was started and voted in by tractor-plant men. I just quit the C. I. O. and have joined the A. F. of L. in the hope they can get us back to work again. I worked here for 18 years and always got good money. The little bit that I have left from my savings is going fast. If the company opens the tractor works, I will be in there working, and nobody is going to stop me. This thing is no joke with us, and I don't think many of the workers here wanted to go out."

Mr. C. (independent worker at McCormick works): "We got thrown out of the plant by the C. I O. It was a rotten deal. I had a good job in department 75 as a pot packer and made more than $8 a day on piecework. Why should I have to work on an hourly rate when I can make more for myself on piecework? The C. I. O. says they want to do away with piecework. They don't mean this because why should a man who is afraid to work make as much as a good worker? A man ought to be paid for what he can do, and the C. I. O. knows most of the good workers want piecework and those that don't like work want a high hourly rate. But how can the company make any money if they have to pay by the hour, whether you do your work or not? I don't want to join any union; I just want to go back to work. Why should I pay to be allowed to work"?

WON'T JOIN EITHER UNION

Mr. D. (independent worker at McCormick works): "I will not join either union. I have worked here 25 years and have always made good money. When the plant closed I was making $9 a day. During the depression, when the plant was practically shut down, the company let me and many others work 3 days a week, even though there was little to do. The company also gave me some ground at Irving Park Boulevard and Cumberland Avenue to raise a garden on. They let me borrow money and sent a nurse out when my wife was sick. They also sent food and paid my rent. I want to go to work. It is not right that a few C. I. O. men should stop me. All my friends want to work. Why doesn't the company open the gates? We'll go in."

Mr. E. (A. F. of L. worker at McCormick works): "I have a wife and two children and I worked in the gray iron department at McCormick and was an independent. Now I have joined the A. F. of L. In this department 900 men were working when about 50 C. I. O. men rushed in and attempted to get the workers to strike. There were only about 20 C. I. O. men among the 900, and none of them went because they did not want the strike either. We stayed at our work until the power was shut down and the superintendent told us to go home. I averaged $9 a day. We had no trouble and why should the C. I. O. be allowed to threaten workers?"

FATHER OF SIX TELLS STAND

Mr. F. (independent worker at McCormick works: "I will not join any union until they show they can help me. I have six kids. I have worked here 30 years. No union ever did anything for the McCormick workers. If I have a raise coming I get it; the company makes us feel like one big big family. No union got me $8 a day like I get here when I work, and no union will stop me working when the doors open."

Mr. G. (A. F. of L. member at McCormick works): "For 15 years I worked as a molder in the McCormick foundry and averaged $8 a day. I have joined the A. F. of L. because I don't know anybody, even their own members, who wanted to go on the C. I. O. strike. Why doesn't the company open the gates? What are we outside for? I have been helped by the company and they will help me again. I know the A. F. of L. will never do what the C. I. O. did at McCormick. I go back when the doors open."

Susan B. Anthony

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

MEMORIAL SERVICES AND ARTICLE

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks, I include a description of the memorial services to Susan B. Anthony, recently held, commemorating the anniversary of her birth, which celebration took place in the Capitol February 15, 1941. I also include an article on the trial of Susan B. Anthony.

The matters referred to follow:

[From Equal Rights for March 1941]

MEMORIAL SERVICES TO SUSAN B. ANTHONY

There was a sense of drama in the one hundred and twenty-first celebration of the anniversary of the birth of Susan B. Anthony, equal-rights pioneer and suffrage leader, which took place February 15, 1941, in the same Capitol to which Miss Anthony made pilgrimages year after year, for half a century, speaking innumerable times before Congress, asking for the enfranchisement of women.

Representatives of 75 organizations, totaling millions of American women, paid tribute to the crusader for the cause of democracy.

In the brightly lighted Crypt, the Women's Monument was the center of the reverent throng. This monument, the work of Adelaide Johnson, noted sculptor, including the busts of Miss Anthony, Lucretia Mott, and Elizabeth Cady Stanton, was presented to the United States Government by 45 women's organizations in 1921.

The United States Marine Band Orchestra, under the leadership of William F. Santelmann, played Handel's Largo, with William F. Peiffer conducting. Later in the program they played the Melody of Peace, by Martin. The Honorable C. WAYLAND BROOKS, junior Senator from Illinois, spoke on the topic "How the Republican Party furthered the work of Susan B. Anthony"; the Honorable JOSEPH F. GUFFEY, junior Senator from Pennsylvania, talked on how to make the fourteenth amendment a success; and the Honorable JOHN W. FLANNAGAN, Jr., of Virginia, talked on a Congressman's impression of Susan B. Anthony. Mrs. Maud Howell Smith, dramatic reader, read Miss Anthony's address to the court in 1873, when she was tried and fined for voting illegally, she having persuaded the election commissioners that women were enfranchised by the fourteenth amendment. Miss Helen Elizabeth Brown, lawyer from Baltimore, spoke on the topic

How the fourteenth amendment failed; and Mrs. George Mesta, congressional chairman of the N. W. P., paid a glowing tribute to the pioneer leader as she laid the large memorial wreath on the statue. Mrs. Pinckney Estes Glantzberg, legislative chairman, New York League of Business and Professional Women's Clubs, presided with poise and power throughout the meeting.

Quoting first from Senator BROOKS' eloquent address:

"The part played by the heroic women in building this, the greatest civilization on earth, is the most romantic story of the civilized world. Their efforts in building homes, their courage in helping cross frontiers, their loyalty during war, had raised them to a height of appreciation not enjoyed anywhere else in the world. But to bring about their full right to participate in the affairs of their Government took a courage a little different from the courage displayed in any other place in the lives of other American women.

"Consequently, history records the events of the lives of a number of famous women of the United States, and among these, stands high on the list, the name of Susan B. Anthony.

"In these days, when women may be doctors, lawyers, artists, architects, or may engage in any other profession or occupation they may choose, these facts alone are a monument to the memory and life of Susan B. Anthony, whose undaunted courage made these opportunities a reality.

"I do not boast of the part of the Republican Party played in bringing about the adoption of the woman-suffrage amendment, but, with pride I review the fact that the Republican National Convention, in 1916, for the first time in history, included a woman-suffrage plank in its platform, and the then Republican candidate for the Presidency, now the Chief Justice of the United States Supreme Court, the Honorable Charles Evans Hughes, expressed himself in these words: 'My view is that the proposed amendment to the Constitution of the United States granting votes to women should be submitted and ratified, and the subject removed from political discussion.'

"It was significant that in the State that I have the honor to represent, the State of Illinois, in appreciation of the attitude of the Republican Party and its standard bearer, the women voted two to one for Mr. Hughes for President of the United States.

"It was only a further fulfillment in Illinois of the effort of Illinois' great contribution to the march of freedom in America, for Abraham Lincoln, elected to the Presidency from that State, not only freed the slaves but was in favor of woman suffrage as well.

"It is significant that when the suffrage amendment passed the House on January 10, 1918, by a vote of 274 to 136, exactly 40 years from the time the suffrage amendment was first introduced in Congress, 82 percent of the Republican Congressmen voting on the measure voted in favor of it.

"On February 10, 1919, the vote on the suffrage amendment occurred in the Senate, and stood 63 to 33, and of the 63 favorable votes 32 were Republicans. In other words, 44 Republicans in the Senate—32 of them voted for the amendment; and on May 21, 1919, the Republican House of Representatives passed the measure by a vote of 304 to 89. This was 42 votes above the required two-thirds majority.

"On June 4 the measure passed the Senate by a vote of 66 to 30. Of the 49 Republicans in the Senate at the time 40 voted for the amendment; and thus we may conclude that in the march of liberty the Republican Party has played a magnificent role: First, in electing Lincoln President to save the Nation and set men free; and, second, in advancing and finally succeeding in securing the adoption of the woman-suffrage amendment. But that was yesterday.

"To maintain the gains thus far attained, and to press constantly on for a greater social justice, the Republican Party stands dedicated to the continued march of liberty and the preservation of this, the finest form of government on earth."

In introducing the next speaker, Senator JOSEPH F. GUFFEY, of Pennsylvania, Mrs. Glantzberg said, "We are always grateful to him, a liberal champion of the rights of women; he comes from Pennsylvania, the Quaker State. Lucretia Mott, Susan B. Anthony, and our beloved Alice Paul, the leaders in this movement, are Quakers whose lives and religion signalize the equality of the sexes. He is the brother of our intelligent, beloved, and courageous friend, Emma Guffey Miller."

Senator GUFFEY said, in part:

"As we gather tonight in the crypt of our Nation's Capitol, may I, figuratively speaking, direct your gaze upward 300 feet to the very top of the dome which is surmounted by a heroic bronze figure of a woman, officially known as the Statue of Freedom.

"The history of this figure is analogous to the struggle of the women of the United States for legal equality.

"History does not make clear who conceived the idea of having a woman represent freedom at a time when both tradition and law classed her 'with idiots and children.'

"However, Thomas Crawford, an American sculptor living in Rome, was commissioned to execute the statue, and he made the plaster model in 1857, but soon after died. In April 1858 the model was put on the brig *Emily Taylor* and started for Washington. This ship sprung a leak and had to lay by at Gibraltar for repairs. Repairs made, she again set forth only to encounter terrific weather which necessitated throwing part of the cargo overboard and again putting into a harbor for safety—this time Bermuda—where the vessel was condemned and sold and what cargo remained, including the model for freedom, placed in storage.

"Several months later a New York firm notified Captain Meigs, who had charge of the work at the Capitol, that a steamer had arrived with some statuary consigned for the United States Government.

"This was welcome news until it was discovered that only part of the lady had arrived. A year later all sections of the figure reached our shores and the contract was let for the bronze replica to be made by a firm in Maryland. By that time the Civil War was in progress and all work on the statue stopped. Several months later work was resumed and by November 1862 the Statue of Freedom was completed and placed on the Capitol Grounds for the public to see. More than a year later the work of elevating the statue to its lofty position was begun; one by one, four sections were riveted together and finally, on December 2, 1863, the fifth and last section was fastened in place.

"The populace cheered, the Stars and Stripes were unfurled, a salute of 35 guns was fired, and thus the architectural design of this great building was complete.

"I wonder if it ever occurred to the lawmakers of that day how inconsistent they were in exalting the figure of a woman to represent freedom and at the same time remain deaf to the pleas which Susan B. Anthony was making to be granted the simple right of suffrage.

"It is almost 80 years since this statute was given to the Nation as an emblem of Freedom, and though women have been given the right to vote they are still without that legal equality which is theirs by natural right because the Supreme Court has not interpreted the Constitution as including women among persons.

* * * * *

"In case of murder, theft, arson, or payment of taxes, our laws make no distinction between men and women; both pay equal penalties. But in numerous other legal particulars the discriminations are most unfair and unjust.

"To deny a woman the right to earn a living because she is married is as logical as it would be to force me, a bachelor, to get married before I could vote on laws affecting married women.

"To make laws that deny women the right to bargain for their own wages and hours of labor is not only primitive reasoning but the acme of selfinishness and indifference.

"Some people still think that the vote conferred legal equality on women, but from many decisions of the Supreme Court we know it to be otherwise. When the Constitution was written its primary objective was to insure the rights of the individual against the Government, to establish fixed limits within which government could operate, and to reserve to the people all other powers. This was to make certain that the inalienable rights of the individual might never be imperilled by an autocratic majority. The makers of the Constitution wanted law to apply with justice to all; they wanted every individual to have equal protection under the law; and the Constitution was not fully accepted by the people until the Bill of Rights, guaranteeing such protection, was made a part of the Constitution. In the fifth amendment we find the phrase, 'due process of law,' which has been interpreted to mean that 'all laws must be in conformity with the fundamental principles of th Constitution.'

"It remained, however, for the fourteenth amendment, to define more clearly the rights and liberties of individuals. It reads:

"'All persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States and of the State in which they reside. No State shall make or enforce any laws which shall abridge the privileges or immunities of citizens; nor shall any State deprive any person of life, liberty, or property without due process of law; nor deny to any person within its jurisdiction the equal protection of the law.'

"What an explicit definition of equality before the law and yet in the light of court decisions what an empty hope it has been for American women.

"Men and groups of men operating as corporations have received every right guaranteed under this amendment, but the highest courts do not look upon women as coming under the protection of the fourteenth amendment. Since the passage of this amendment a number of tests of the status of women have been made, but all decisions have left women exactly where they were before the Constitution was written.

"On the other hand the humblest male is afforded every protection of the law. For example, in the famous case of a Chinese laundryman, Yo-Wick (118 U. S. 356), who was forbidden by a local California ordinance, to carry on his trade in a certain section while white men could, was granted by the Supreme Court every right and privilege under our constitution. All liberty-loving men approved this decision, forgetting that at the same time no American-born woman was granted the same protection as the alien Chinaman.

"There were several decisions of this type which gave great hope to women until within recent years the Supreme Court reversed itself and closed the door of equality to women.

"Despite rights and privileges which have been granted by some Federal and State statutes, the only guaranteed constitutional right which women possess is the right to vote.

"Other rights and privileges granted by the States and the Congress to women may be repealed at will, hence the need for a constitutional amendment which will guarantee them 'Equal Justice Under the Law.'

"Those words are carved over the portals of the marble palace where the Supreme Court resides, but what a travesty that sentiment becomes when we examine the many laws regarding women which are entirely contrary to the spirit of the fourteenth amendment.

"Chief Justice Hughes wrote a number of years ago, 'The Constitution is what the courts make it.'

"Even though the membership of the Supreme Court may at times render decisions under the fourteenth amendment favorable to women, another membership may annul them. Therefore, the only secure method to establish equal justice for women is by writing into the Constitution an amendment which will state 'Men and women shall have equal rights throughout the United States and every place subject to its jurisdiction.'

* * * * *

"The struggle for woman's freedom under the law has been subject to as many vicissitudes as the Statue of Freedom before it reached its proud pinnacle, but bear in mind that even the roughest voyage has an end.

"So let us hope that will be the history of the equal-rights amendment. May the period of its uncertainties soon cease; may your cry for justice soon become one of thankfulness that at last you have entered into full legal privileges and protection under the Constitution. Then the Statue of Freedom will come to life."

Hon. JOHN W. FLANNAGAN, Jr., Representative from Virginia, paid a brilliant tribute to Susan B. Anthony, in part:

"I pause to pay simple tribute to those inspired pioneers of thought whose signal fires illuminate the past, embellish the present, and cast their reflected glory down the pathway that leads to the future. Those select men and women of vision who, like Paul, in the face of calumny, derision, and persecution, remained steadfast and true and were 'not disobedient unto the heavenly vision. * * *' Possessing a soul free from bondage to precedent or servitude to custom, the vision of Susan Brownell Anthony unforged the shackles that enslaved the voice of her sex in the affairs of state, placed in their hands the rightful heritage of all freemen, the ballot, and thus brought to democracy fresh troops to battle for future social and economic advancement."

Helen Elizabeth Brown, of Baltimore, gave an extemporanecus address on "Why the Fourteenth Amendment Did Not Work." In part, she said:

"The fourteenth amendment declared as plainly as possible that all persons born or naturalized in the United States are citizens and should have the equal protection of the law. What happened? Many Members of Congress held this view. The Attorney General of Nebraska, also, so ruled. In 1872 and 1873 women tried to vote. They were denied the right. They turned to the courts for redress."

She related the case of Virginia Minor in 1872. Mrs. Minor, when refused the right, appealed to the Supreme Court Justice Waite took 14 pages to explain his views. He said the fourteenth amendment declared women were persons. It did not take the fourteenth amendment to make women citizens. Women were gathered together in communities. They owed allegiance to these communities and the communities owed them protection. But when women demanded the right to vote they were not included. Women were then ruled out of the Constitution and have been out ever since. Miss Brown also cited the case of Mrs. Myra Bradwell, who tried to be a lawyer in the State of Illinois in 1872 and was denied. She appealed to the Supreme Court. Justice Bradley said the fourteenth amendment could not be used as a barrier to protect females in their right to earn a living. No woman should have a career apart from her husband. The domestic sphere is the domain of women. Their paramount task is that of wife and mother. Hence women lost their rights not because of any defect in the fourteenth amendment but because of court rulings alone. Susan B. Anthony spent a lifetime freeing women, which also included men. Women are now out of the Constitution and it will take the equal rights amendment to get them back. Miss Brown closed by quoting Miss Anthony on her deathbed as saying, "Failure is impossible."

We were delighted to have with us also, unexpectedly, the president of the National Women's Christian Temperance Union, Mrs. Ida B. Wise Smith, who gladly shared the platform with the other speakers to pay tribute to Miss Anthony, as the friend of Frances Willard, founder of the W. C. T. U. Mrs. Smith appealed to the many young women present exhorting them to embrace the privilege of working for a continuation of effort to secure women's rights. She said that Miss Anthony thought when women got the ballot they would win all their rights. This did not happen. Those rights are not yet won. Mrs. Smith referred to the long friendship between Miss Anthony and Frances Willard, whose "heavenly birthday" was commemorated on February 16, in Statuary Hall. She called Miss Anthony and Miss Willard the "maiden mothers of reform." Mrs. Smith said the members of the national W. C. T. U. have always stepped right along with the women who have been working for political rights. She concluded with a wish to speed us on our way, in continuing the work of Miss Anthony and was glad to pay tribute to that noble pioneer herself. In the course of her remarks she quoted the noble Frances Willard as saying "Death is but a bend in the river of life, which sets our current heavenward;" and further, "In death we shall pass to the life where activities are not succeeded by weariness."

The presiding officer, Mrs. Pinckney Estes Glantzberg, summed up the effect of Miss Anthony's efforts in the following interesting analogy:

"Not long ago, Dr. Edward P. Cheyney, one of our great historians, made an address on the agitator in history, using agitator in the honorable sense. He defined the agitator as 'One who, striving to bring about some social or political advance, enlightens ignorance, stirs indifference, arouses courage, or in other ways lifts men from the dead level of willing acceptance of bad existing conditions.' His examples are striking, omitting, as he does, the Great Obvious One. He names John the Baptist, Jean d'Arc, John Ball, Clarkson, Wilberforce, and Romilly, giving the reforms finally effected through the years of what to the agitators themselves seemed futile effort, the gains being made inch by contested inch. 'Whenever a man or woman has a warm dissatisfaction with things as they are, is keenly alive to the desirability and possibility of change, boldly speaks out what he thinks, and takes some active part in efforts for reform, he is essentially an agitator. They are the precursors of progress. They are the men and women who will not let us sit down and accept things as they are.'

"He or she represents what is apparently an indispensable factor in all social progress. Of this great company, Susan B. Anthony is one—an agitator for freedom for one-half of all humanity.

"The constant temptation of humanity is to sink into conservative inaction; the agitator, whether in the past or in the present, is the man or woman who keeps us stirred to our work.

"Wanted, then, an agitator, a real living troublesome agitator who will not let us be comfortable until the work for freedom is accomplished—another Susan B. Anthony."

THE TRIAL OF SUSAN B. ANTHONY

(By Amelia Himes Walker)

PROLOGUE

Ladies and gentlemen, let us not forget that this is the winter of 1941. Let us imagine that it is June of the year 1873. Almost a century has passed since the Declaration of Independence was written by Thomas Jefferson, and proclaimed as the faith of our Nation. Almost a century since Abigail Adams wrote to her husband, John Adams, asking that women be granted more rights in the Constitution of the Nation.

It is almost a quarter of a century since a group of women, mindful of their great responsibilities to this expanding Nation, met in Seneca Falls, N. Y., and drew up a new declaration of independence for women, asking for equal rights under the law of this maturing Republic.

It is 10 years since the Battle of Gettysburg decided the fate of the Civil War, and ended forever in America the enslavement of the colored race. Following the useless carnage and destruction of the finest young men of the North and South, the Negro man found himself honored by full citizenship and equal rights with the white man. Congress had passed the fourteenth and fifteenth amendments which had guaranteed these rights for all time.

But the women of the United States, in spite of their education, of their possession of property, of their equal burden of taxation with men, were denied all rights of citizenship, and were classed under the law with children and idiots.

At a Presidential election the previous November 1872, Susan B. Anthony, having read in a newspaper in Rochester, N. Y., the notice of registration of citizens, exhorting them to register without fail, had gone to the polls with her sister and had registered. Fifty women in Rochester had done the same; 14 were from the same ward as Miss Anthony. Of course, the men in charge of the registration could not legally prevent women from registering their names as members of their chosen parties. And bright and early on the 5th day of November, Susan and a number of her friends went to the polls and voted. And on Thanksgiving Day, which at that time was on the last Thursday of November, those 14 offending citizens were informed that they were to be prosecuted by the United States Government.

During the intermediate period between November 28, 1872, and January 21, 1873, Miss Anthony, in the eye of the law a prisoner, but the marshal, though somewhat uneasy, left her free to attend her lyceum engagements and attend woman suffrage conventions. A singularly anomalous position for a criminal traveling around the country as a teacher of morals to the people, wasn't it?

Her trial was held on the 18th of June 1873.

To all of us, citizens of 1941, the arguments used against the prisoner were ridiculous and ludicrous.

The fact that the judge ordered a verdict of guilty from the jury and then did not allow the jury to render a verdict, is a shocking travesty of justice.

So that we may comprehend more clearly the brilliant mind of this woman who struck this bold blow for the women of future generations, the closing scene of the trial will now be presented. (It is verbatim.)

THE TRIAL OF SUSAN B. ANTHONY

The COURT. The prisoner will please stand up. Has the prisoner anything to say why sentence should not be pronounced?

Miss ANTHONY. Yes, Your Honor, I have many things to say; for in your ordered verdict of guilty, you have trampled underfoot every vital principle of our Government. My natural rights, my civil rights, my political rights, are all alike ignored. Robbed of the

fundamental privilege of citizenship, I am degraded from the status of a citizen to that of a subject. And not only myself individually but all of my sex are, by your honor's verdict, doomed to political subjection under this so-called republican Government.

JUDGE. The Court cannot listen to a rehearsal of arguments the prisoner's counsel has already consumed 8 hours in presenting.

Miss ANTHONY. May it please Your Honor, I am not arguing the question, but simply stating the reasons why sentence cannot, in justice, be pronounced against me. Your denial of my citizen's right to vote is the denial of my right of consent as one of the governed, the denial of my right of representation as one of the taxed, the denial of my right to a trial by a jury of my peers as an offender against the law, therefore, the denial of my sacred rights to life, liberty, property, and the pursuit of happiness——

JUDGE. The Court cannot allow the prisoner to go on.

Miss ANTHONY. But Your Honor will not deny me this one and only poor privilege of protest against this high-handed outrage against my citizen's rights. May it please the Court to remember that since the day of my arrest last November this is the first time that either myself or any member of my disfranchised class has been allowed a word of defense before judge or jury——

JUDGE. The prisoner must sit down. The Court cannot allow it.

Miss ANTHONY. All my prosecutors from the eighth ward corner grocery, politicians who entered the complaint, to the United States marshal, commissioner, district attorney, district judge, Your Honor on the bench, not one is my peer, but each and all are my political sovereigns. And had Your Honor submitted my case to the jury, as was clearly your duty, even then I should have had just cause of protest, for not one of those men was my peer; but native or foreign, white or black, rich or poor, educated or ignorant, awake or asleep, sober or drunk, each and every man of them was my political superior, hence, in no sense, my peer.

Even under such circumstances, a commoner of England, tried by a jury of lords would have far less cause to complain than should I, a woman, tried before a jury of men. Even my counsel, the Honorable Henry R. Selden, who has argued my case so ably, so earnestly, so unanswerably before your honor, is my political sovereign. Precisely as no disfranchised person is entitled to sit upon a jury, and no woman is entitled to the franchise in the courts, and no woman can gain admission to the bar, hence judge, jury, counsel, must all be of the superior class.

JUDGE. The court must insist—the prisoner has been tried according to the established forms of law.

Miss ANTHONY. Yes, your honor, but by forms of law all made by men, interpreted by men, administered by men, in favor of men and against women; and, hence, your honor's verdict against a United States citizen for the exercise of that citizen's right to vote simply because that citizen was a woman and not a man.

JUDGE. The court orders the prisoner to sit down. It will not allow another word.

Miss ANTHONY. When I was brought before your honor for trial, I hoped for a broad and liberal interpretation of the constitution and its recent amendments, that should declare all United States citizens under its protecting aegis—that should declare equality of rights the national guaranty to all persons born or naturalized in the United States. But failing to get this justice—failing to get a trial by a jury not of my peers—I ask no leniency at your hands, but rather the full rigors of the law.

JUDGE. The court must insist (here the prisoner sat down). The prisoner will stand up. (Here Miss Anthony arose again.) The sentence of the court is that you pay a fine of $100 and the costs of the prosecution.

(And Miss Anthony was never required to pay her fine. Yet it was 57 years after this shocking travesty of justice before women won the right to vote in 1920. May our right of jury service in the State of Maryland and our amendment to the Constitution of the United States giving us equal rights under the law be granted us this year so that our Government may be a true democracy indeed.)

Miss ANTHONY. May it please your honor, I shall never pay a dollar of your unjust penalty. All the stock in trade I possess is a $10,000 debt, incurred by publishing my paper, The Revolution—4 years ago, the sole object of which was to educate all women to do precisely as I have done, rebel against your man-made, unjust, unconstitutional forms of law, that tax, fine, imprison, and hang women, while they deny them the right of representation in the Government; and I shall work on with might and main to pay every dollar of that just debt, but not one penny shall go to this unjust claim. And I shall earnestly and persistently continue to urge all women to the practical recognition of the old revolutionary maxim, "Resistance to tyranny is obedience to God."

S. 935

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

LETTER OF HON. J. H. BANKHEAD, OF ALABAMA, RELATIVE TO S. 935, AND ANSWER THERETO BY HON. REID F. MURRAY, OF WISCONSIN

Mr. MURRAY. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include a letter from Senator BANKHEAD in regard to the agricultural bill S. 935, an accompanying digest of the bill by him, and my answer thereto:

UNITED STATES SENATE,
COMMITTEE ON APPROPRIATIONS,
March 18, 1941.

Hon. REID F. MURRAY,
Member of Congress, House Office Building, Washington, D. C.

DEAR CONGRESSMAN: I am enclosing you statement on the cotton phase of S. 935 introduced by me. This bill provides for parity price loans. I hope you will carefully examine the figures which I am submitting. Unless legislation is enacted at an early date, it will be too late to be effective for this year's crop.

Sincerely yours,

J. H. BANKHEAD.

S. 935—EXPLANATION BY SENATOR BANKHEAD

COTTON

Objectives:

1. Increase the income of the farmers.
2. No additional appropriations.
3. No increase in loan stocks.

Production, 12,000,000 bales (under present allotment.)

Approximate average present loan rate, 9 cents.

12,000,000 bales at 9 cents or $45 per bale	$540,000,000
Soil-conservation payments	100,000,000
Parity payments	90,000,000
Total income	730,000,000

MY PLAN

1. Income (assuming reduction of 2,500,000 bales by paying farmers $40 per bale for reduction):

9,500,000 bales at 14½ cents or $72.50 per bale	$688,750,000
Pay for taking 2,500,000 bales out of production at 8 cents or $40 per bale	$100,000,000
Soil-conservation payments	100,000,000
Total income	888,750,000

Increase in income, $158,750,000.

2. No additional appropriations:

Appropriation now available for parity payments	90,000,000
20 percent of appropriation for Surplus Marketing Administration	40,000,000
Available from existing appropriations	130,000,000
Cost to decrease production 2,500,000 bales, at 8 cents, or $40 per bale	100,000,000
Cost to secure title to loan cotton	10,000,000
	110,000,000

Thus the plan would be financed without additional appropriations.

3. No increase in loan stocks:

	Bales
Normal production under present allotments	12,000,000
Reduction	2,500,000
Actual production	9,500,000
Consumption (domestic)	9,000,000
Surplus needed for selection of grades and staples and for small exports	1,000,000
Total consumption	10,000,000

Thus there would be no increase in loan stocks.

If additional cotton is needed by the trade, the Secretary can release it from Government-owned cotton.

On August 1, 1941, the surplus will be 12,500,000 bales, of which the Government will own about 11,000,000. If a normal crop is produced this year and there is no reduction in planted acreage, the surplus August 1, 1942, will be increased to 15,000,000 bales.

LOAN COTTON

1938 crop, 2,000,000 bales.

The loan, plus carrying charges, makes the amount required for withdrawing the cotton more than the market price.

Title cannot be acquired until August 1. The bill provides that owners of this cotton who do not promptly assign title to the Government cannot participate in the parity-price loan.

1940 crop, 2,800,000 bales.

DEMAND NOTES

Present cost for withdrawal, 9.64 cents.

Market price March 1, 10.26 cents.

Amount required to pay borrowers for their equity, $10,000,000.

With the supply of free cotton adjusted to the domestic consumption, the trade would buy all the crop at the loan price and none of the new crop would go under loan.

AMOUNT OF NEW LOAN

Parity price, 15.87 cents.

If conservation payments are deducted, the loan price would be 14½ cents.

Result:

1. Increase of $158,750,000 in income of farmers.

2. No additional appropriations.
3. No increase in loan stocks.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 24, 1941.

Hon. J. H. BANKHEAD,
United States Senator,
Washington, D. C.

DEAR SENATOR BANKHEAD: I wish to acknowledge receipt of your letter of March 18, enclosing digest of bill S. 935 introduced by you in the Senate.

There are so many angles to all agricultural legislation that one hesitates to make comments without clarifying and supporting any statements made. One is accused of sponsoring a sectional viewpoint in spite of any effort made to maintain a national viewpoint.

With this thought in mind, I want to frankly state that I am in sympathy with the objectives of your bill. However, this bill must, of necessity, be considered, not only in the light of cotton benefits, but also in the light of all other crops as well.

Up to the present time the cotton interests have had the following subsidies: (1) A. A. A. payments made to the six leading cotton States, alone, of about $124,793,000. (2) Up to January 1, 1940, received 45 percent of the parity money disbursed in the United States and in 1940 had $96,000,000, or 47 percent, of the $203,000,000 disbursed. (3) Cotton received $40,994,857 of the $52,584,456 spent for export bounty last year. (4) It is further subsidized out of the Federal Treasury in order to pay the storage charges of $1.50 per bale on over 11,000,000 bales, or a sum of $15,000,000 to $20,000,000 annually. (5) Cotton has an annual subsidy of nearly one-half million dollars to discover new uses for cotton. (6) Millions of dollars are being spent in giving away cotton mattresses and other cotton goods subsidized by the Government. (7) Another cotton subsidy is the cotton stamp plan and the diversion program which cost $516,330 last year, directly for cotton, and due to the reduction of the acreage of cotton and the increase of production of peanuts it took over $12,000,000 out of the Federal Treasury to divert peanuts. (8) Cotton farmers, as well as others, are being financed for fertilizer with the subsidies of soil-conservation money to grow more surpluses, to have larger storage charges, to receive more diversion, to provide more export bounty, and more money is appropriated to find new uses for surpluses.

In addition to the foregoing, we have done two other things: (1) We have furnished 100-percent subsidy from the Federal Treasury to start up new cotton farmers. We have purchased these farms with the Government furnishing all the money and set them up in business with 40-year loans at 3-percent interest. We have set them up to compete with men who are already farming and who are, and would now be, paying 4- and 5-percent interest if the present administration had not been outvoted on the question. We are making tenants out of landlords faster than we are making landlords of tenants. We have purchased some 12,234 farms at an average cost of $5,721 and have also built our city cousins, through the United States Housing Administration, up to August 1, 1940, 90,436 housing units which averaged $4,350 apiece, and we pay from the United States Treasury an average of $193 per unit per year toward the rent for the next 60 years. While we have been performing this humanitarian act, we have been doing something else hard to name. We have, up to January 1, 1940, driven 96,135 farmers from their homes because they could not pay an average interest charge of $112 on an average $2,800 loan. This is evidently false humanitarianism and a fake social gain. During the past few months Dr. Black has tried to correct some of the evils of this situation.

(2) We have been appropriating other millions of borrowed Federal money under the guise of rural relief and aid to cooperatives. We have been appropriating around $150,000,000 per year for rural relief. Mr. Edward O'Neal states that we are spending $40,000,000 of this in overhead and over $20,000,000 of it here in Washington. I have written to the Secretary of Agriculture for verification of these figures but have not heard from him as yet. My colleague, Hon. H. P. FULMER, in speaking of these funds, said, as shown in the CONGRESSIONAL RECORD of March 6, 1941, "this would enable the farmers in association on a cooperative basis to build refrigeration plants, small canning plants, fruit-drying plants, and woodworking plants out in those parts of the country where we have unemployment running rampant and where you are spending money today to investigate migration from the farms." Are we to continue private enterprise, or are we to abandon it?

I feel justified in opposing this legislation, as the canning factories of this Nation and of my State are having enough trouble to keep going without having the Federal Government furnish 100 percent of the funds to start new businesses in opposition to people now in business and in opposition to farmers in other areas now raising canning crops. Most anyone can see through the smoke screen of calling them cooperatives because the United States Treasury is the great cooperator on these projects. Our background of cooperatives in Wisconsin leads us to believe in cooperatives which mean what they say, and the bank of cooperatives can take care of the financial needs of any crop in the land. I have a list of the 20 federally subsidized canning factories in the United States and would be glad to make a copy for you if you should care to have it for your files. Four out of the twenty are already acquired by the Government or are being foreclosed on at the present time.

Senator BANKHEAD, I would like very much to cooperate with you on a farm program which was not filled with cross purposes. I would like to lend my every effort to (1) a farm program which was for the benefit of all formers and not only the few; (2) one that included all crops and did not result in the farmers of some States receiving 20 to 25 percent of their annual income from the United States Treasury, and farmers of other States receiving 1 to 2 percent from the same source; (3) one that gives parity to all crops for the part of the crop consumed in this country; (4) one that, if subsidies are to be paid out of the Treasury, they should go to the real farm people of this country and to the people who live on and operate their own farms; (5) one whereby the parity price is based on the amount of crops produced by this family-sized farm. Communal farms are not needed in this country, and their promotion by the present administration will not be to the benefit of our agricultural people; (6) one whereby money appropriated for agricultural purposes would be used for agriculture and would find its way into the pockets of the farm people of this country.

My colleague, Hon. FRED L. CRAWFORD, of Michigan, states that we have had 26 bills in Congress in connection with cotton which have called for over $1,900,000,000 from the Federal Treasury. It is surely time that we all cooperate with you in bringing some constructive farm legislation before Congress.

The congressional district in Wisconsin which I have the honor to represent has had a much higher percentage of Federal farm foreclosures than the cotton States. The percentage on January 1, 1940, was 50.2 percent.

I have always tried to improve the present A. A. A. I have tried to show its cross purposes. Your letter and digest is one more example of a crying need for a (1) sane land policy in our country and (2) a farm program with benefits for the many and not the few and one based on common sense and common justice.

Please accept this letter in the spirit in which it is sent, and be assured of my wholehearted cooperation for constructive legislation.

Sincerely yours,
REID F. MURRAY, M. C.,
Member Committee on Agriculture.

How the C. I. O. Works

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

NEWSPAPER ARTICLE FROM GARY, IND.

Mr. HOFFMAN. Mr. Speaker, much has been said on the floor about the right of union men to organize. It is about time, that right being conceded, that something be said about the right of men and women, who do not want to submit to the rule of a union, to refuse to sign up.

Here is a news story from Gary, Ind., which appeared in the press on March 21. I quote:

WOMEN OF GARY STEEL MILL GIVE VIEWS ON C. I. O.—DESCRIBE TERRORISM IN MEMBER DRIVE

Since February 25 the Steel Workers' Organizing Committee (C. I. O.) has periodically picketed the huge tin and sheet-metal mills of the Carnegie-Illinois Steel Co. in Gary, where 9,000 men and women are employed.

There is no strike in progress. The union's avowed purpose is to force all employees who do not belong to the organization to join. Nonmembers who refuse to pay the $3 initiation fee and the first month's dues of $1 are barred from their work by the pickets. Gary policemen stand idly by.

The union's agreement with the management has expired but its terms continue in force, although the union has given 30 days' notice of intention to terminate them. The company is preparing to enter negotiations on the union's demand for an increase from 62½ to 72½ cents an hour in the minimum wage.

The Tribune sent a reporter to interview workers to determine their sentiments regarding the C. I. O. round-up. Below are the comments of some women workers, who number 1,500. Each of them spoke frankly about her reasons for refusing to join and her desire for an opportunity to work. And each of them was willing for her name to be used. This was in contrast with most of the men interviewed, who talked but asked that their names be withheld for fear of beatings and sluggings by union hoodlums in reprisal.

WHAT WORKERS THINK

Helen Bar Scharf, 552 Adams street, Gary, assorting room worker 14 years in the company's employ:

"I rode to the mill on a bus. Two C. I. O. men got on and ordered all passengers off. I said I had paid my fare to the mill and that was where I was going. The C. I. O. men went back to two men who had refused to leave. They refused again. Then Frank Grider [S. W. O. C. subdistrict manager in Gary] got on and the three union men pulled one of the workers off.

"A supervisor for the Gary Railways [operator of the bus] was aboard. I said to him,

'You know that when we pay our fares on this bus we are insured for $10,000.' 'Yes, I know,' he told me. 'Are you going to let this go on?' I asked. 'There is nothing I can do,' he said. 'What's wrong with the Gary police?'

"The union men went back to Mr. Titus, the other man who refused to leave, and told him to get off or sign up. He answered that he was a war veteran and belonged to the American Legion, and he didn't see why he should have to join any organization to be allowed to work in America. Grider told his men to get him. They pulled Mr. Titus off the bus.

"Then they came back to me. They pulled my right arm and got me out of my seat. I fell into the opposite seat, so they pulled my left arm. I struggled, but they finally got me to the door of the bus. Frank Grider got outside and pulled my left leg. I managed to land on my feet, but I have been black and blue ever since, and a finger on my left hand was pulled out of joint.

"A bus then drove up with 60 girls. None was a member, so it was sent back after I had been put on it. We went to the Gary police station where we were advised to go to the county seat at Crown Point. We went to Crown Point and tried to see Prosecuting Attorney Felix Kaul and Sheriff John Knott, but couldn't. So we went home.

"I will not join the C. I. O. What did it ever do for the workers?"

VETERAN JERKED OFF BUS

Mary Tomak, 1550 Grant Street, Gary, assorter:

"I saw Frank Grider and two pickets jerk a middle-aged man from a bus. The man said, 'I fought for my country in the last war and you fellows don't have to tell me what to do. I'm not too old to fight yet.' Frank Grider instructed the men to get the —— and they tried, but a plain clothes policeman interfered."

Sophie Wolcszyn, 1700 Cleveland Street, Gary, assorter:

"Our bus was stopped at the entrance and we were ordered off. Pickets jumped and seized girls who wouldn't get off, and forced them off. As private automobiles came up they were stopped. Pickets boarded them if the men had no union cards.

"Many of these pickets were drunk and used profane language. The cars were driven into a lot littered with whisky bottles. There union officials were ready to sign up anyone with $4. A few cars tried to go through the picket line. One of them was stopped. The driver was yanked out and beaten.

"A burly picket whose breath reeked from liquor asked us, 'If you won't pay your fee why don't you go home and give your job to someone who will?' Someone accused him of being drunk. He blew his vile breath in our faces and said, 'Here, you punks, you wanta get drunk, too?' "

Julia Halas, 805 Monroe Street, Gary, assorter:

"I usually drive to work but I took a bus when picketing was going on. At a mass picket line, we were all ordered off. I got off, but several girls were yanked off. One was bounced from one seat to another and finally dragged off by the legs.

"I have tried to find out what the C. I. O. has done for us workers and what we will get if we join. I asked a girl member. She answered. 'You know the soft-drink machines around the plant would not be here if it weren't for the C. I. O. And what about the short socks we are allowed to wear to work? Don't you remember that we always had to wear long stockings. Don't you appreciate anything?' "

MOLEST MOTHER, DAUGHTER

Margaret Elkins, 4009 Park Avenue, Gary, black plate department worker:

"My mother and I work in the mill. We drive to work. When I drove to the picket line I had my doors locked. I was told to open the doors or windows but I refused. The pickets said they would turn my car over. They all grabbed one side and lifted it into the air. My mother screamed. Then they let the car down and lifted it again. Then they shouted that I would have to turn the car around.

"So I did and drove home. My mother and I will never join a union like that."

Elizabeth Nuzzo, 1191 West Forty-first Street, Gary:

"I work in the assorting department. There are about 500 in this department, 247 of them girls. Eighty-one girls have not joined, and the others joined only because they were bluffed into paying their money. Some of them didn't get a receipt; so they couldn't get to work until the next day anyway. What a racket.

"After the pickets had gone we went to work. The C. I. O. girls were told by Sam Taylor of the C. I. O. grievance committee to quit working with us, but we kept on working. Foreman Frank Riley made a speech telling us the company had a contract with the C. I. O. (the C. I. O. has bargaining rights for its own members only) but that there was lots of work and we could have it whether we belonged to the union or not.

"Taylor climbed up on a table and said, 'We don't give a damn what the company's policy has been. Either join or go home.' He came by later when a C. I. O. organizer was trying to tell us what the C. I. O. could do for us and told the organizer:

" 'Don't talk to those——. We'll get them into the union if we have to club them.'

"The department was shut down because C. I. O. girls were ordered not to work. I wouldn't join this union even if the company wanted me to."

THE UN-AMERICAN WAY

Edna Thomasson, 4960 Cleveland Avenue, Gary, tin-mill worker:

"I had heard rumors of the mass picketing for a couple of months. Girls would say that if we didn't join the union we would lose our jobs. As an American I resented being told that I had to pay my way into the mill.

"Not being a union member, I was left standing outside in the bitter cold one morning of the picketing. A girl refused to get off a bus. Several men tossed her out into the crowd. A gentleman standing there ran up and said, 'You can't treat ladies that way.' They hit him.

"I didn't realize things like this could happen in America."

Mr. Speaker, just when will Congress try to protect American citizens?

The Indomitable Spirit of the Britons

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

LETTER OF SIR HARRY LAUDER, OF STRATHAVEN, SCOTLAND, TO AN AMERICAN FRIEND

Mr. LUTHER A. JOHNSON. Mr. Speaker, we are deeply interested at this time in securing all first-hand information concerning the morale of the people in the British Isles as they undergo the severest test ever endured by any people in withstanding the barbaric attacks made upon them by the Axis Powers.

Recently it was my privilege to read a letter written in Strathaven, Scotland, by one well known in America, Sir Harry Lauder, to his friend in New York City, Mr. Jesse Eldot. Sir Harry Lauder has entertained thousands of Americans with his humor, his homely philosophy, and his Scotch songs. He is, perhaps, almost as well known here as in his native home of Scotland. It will be recalled that during the last World War he lost his only son. He is well advanced in years, and is now living in Scotland, and it has been quite a long while since he visited America.

His letter to Mr. Eldot typifies not only his courageous and indomitable spirit, but it also reflects the temper and the fiber of the British people in this grave crisis; and, under leave granted to extend my remarks, I submit herewith this letter:

LAUDER HA',
Strathaven, February 2, 1941.

MY DEAR OLD FRIEND JESSE: What a mess this worl' is in, but as the old Scotch body said, wait, "They'll catch it." I am very busy raising funds for every fund imaginable and we need all we can get. We are now in the front line, hard hit, but we are all willing to sacrifice and struggle to help our country out of the hell we are in. We sure are fighting a religion—the worst idea that has ever struck civilization—and we must destroy it and we will. We fight for God and country till we win, win, win, and win we must and shall.

We are waiting on the Hun coming over and he'll get a warm reception. We pray and trust in God for our liberation. What the enemy has done is beyond all human idea. What they have done to other states is beyond expression. When the history of this war is written the half of humanity will not believe it. We do not know what any moment may bring to us. Death and destruction faces us always, and what a peaceful view from my home here presents. One would think, thank God for a haven like this; but we sing a "starry night" and think of all our good friends in America and all over the world. I have a thought we shall all meet again in jubilation.

All our love.

As ever,

HARRY LAUDER.

National Maritime Union

REMARKS

OF

HON. MARTIN DIES

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

Mr. DIES. Mr. Speaker, I have just received reliable information that the leaders of the National Maritime Union have definitely agreed to call a general strike in the event that Harry Bridges is ordered deported. Because of the seriousness of this threat, I desire to place in the RECORD the record of the National Maritime Union, a completely dominated Communist organization.

The National Maritime Union has its roots in the Marine Workers Industrial

Union. The Marine Workers Industrial Union was one of the affiliated organizations in the Trade Union Unity League, which was an out-and-out Communist affiliate. The T. U. U. L. was headed by William Z. Foster and was affiliated internationally with "red" international labor unions, with headquarters in Moscow.

In this statement I give you the leaders of the National Maritime Union and their records, which they cannot deny; and again I call upon the administration and upon responsible labor leaders and upon industrialists to take immediate action to expel from their ranks and their employment those who are no more nor less than the agents of foreign powers determined to sabotage our national defense. [Applause.]

MARINE WORKERS INDUSTRIAL UNION

Mr. Speaker, the National Maritime Union had its roots in the Marine Workers Industrial Union. The M. W. I. U. was one of the affiliated unions in the Trade Union Unity League which was an out-and-out Communist Party federation of labor organizations. The T. U. U. L. was headed by William Z. Foster and was affiliated internationally with the Red International of Labor Unions with headquarters in Moscow.

The Marine Workers Industrial Union never sought to conceal its connections with the Communist Party and other Communist-controlled groups. (See exhibit No. 1.)

CURRAN'S CHARGES

In the early days of the National Maritime Union, Joe Curran was among those who frankly charged the N. M. U. with domination by the Communist Party. In letters addressed to Peter Innes, Jr., Curran made his position clear on this matter. In his own handwriting, on August 23, 1936, Curran wrote to Innes, as follows:

> I frankly do not believe there is anything here as I believe the C. P. have broken all our chances up.

Again, with reference to the Communist Party in the National Maritime Union, Curran wrote to Innes, as follows:

> They think they are big shots now the C. P. have about got control of the outfit now with Tommy Ray director of operations here in New York.

(See exhibits Nos. 2A, B, 3.)

Tommy Ray, according to the testimony of several witnesses before the Special Committee on Un-American Activities, is the Communist Party's dictator in the National Maritime Union.

CURRAN SWITCHES TO COMMUNISTS

It is the testimony of Peter Innes, Jr., and others that Curran switched from his critical position on the Communist Party to a position of complete following of the party line. This occurred late in 1936 when, according to Innes and others, Curran joined the Communist Party.

The evidence of Curran's subsequent closeness to the Communist Party is overwhelming. Instances of his connections with the party's organizations are listed below, as follows:

First. Curran's autograph on the delegate's card of Kenneth Goff at the eighth national convention of the Young Communist League. (See exhibit No. 4.)

Second. Curran speaking for the American Youth Congress along with Harry F. Ward and Max Yergan. (See exhibit No. 5.)

Third. Curran's article in the Champion Labor Monthly for September 1938, a publication of the Young Communist League. (See exhibit No. 6.)

Fourth. Curran's article in the Fraternal Outlook for June 1939, official publication of the International Workers Order, which is completely controlled by the Communist Party. (See exhibit No. 7.)

Fifth. Curran's speaking at a mass meeting of the International Workers Order. (See exhibit No. 8.)

Sixth. Curran's signing, along with many avowed members of the Communist Party, of the golden book of American friendship with the Soviet Union. (See exhibit No. 9.)

Seventh. Curran's membership on the Progressive Committee to Rebuild the American Labor Party which is the alleged Communist Party faction in the American Labor Party. (See exhibit No. 10.)

Eighth. Curran's speaking at the Conference on Constitutional Liberties in America, a gathering where such outstanding members of the Communist Party as Elizabeth Gurley Flynn also spoke. (See exhibit No. 11.)

Ninth. Curran's sponsorship of the American Relief Ship for Spain, one of the several Communist Party front organizations which raised funds for Loyalist Spain. (See exhibit No. 12.) The acknowledged Communist Party member, Marcel Scherer, was also a trade-union sponsor of this organization.

Tenth. Curran's signing of the Call to the Mexican and Spanish American peoples Congress, an out-and-out Communist Party affair. (See exhibit No. 13.)

Eleventh. Curran's article in Fight magazine, the official publication of the American League for Peace and Democracy. (See exhibit No. 14.)

Twelfth. Curran's signing of the letter to Attorney General Robert H. Jackson in the name of the National Emergency Conference for Democratic Rights. (See exhibit No. 15.)

Thirteenth. Curran's membership on the Murray Defense Committee, along with the representatives of numerous other Communist-controlled groups. (See exhibit No. 16.)

Fourteenth. Curran's speaking at a mass meeting in Madison Square Garden on an occasion when the Communist Party paid for the use of the building. (See exhibit No. 17.)

COMMUNIST PARTY PAYS THE BILL

According to a communication from the president of Madison Square Garden Corporation, the Communist Party of New York, through its treasurer, paid the corporation the sum of $3,500 for the use of the Garden when Harry Bridges was the featured speaker. (See exhibit No. 18.) The money was paid by certified check, drawn by D. Leeds, who was at that time the treasurer of the Communist Party of New York. (See exhibit No. 19.)

CHARLES L. KEITH

The educational director of the National Maritime Union of America is one Charles L. Keith. (See exhibit No. 20.)

Keith is an avowed member of the Communist Party. At the recent New York State convention of the Communist Party, Keith placed the name of Al Lannon in nomination for Congress. Lannon has long been active in the affairs of the National Maritime Union and its predecessor, the Marine Workers Industrial Union, and is a member of the national committee of the Communist Party of the United States. (See exhibit No. 21.)

CORBY PAXTON

The editor of the Pilot, official publication of the National Maritime Union, is Corby Paxton. (See exhibit No. 22.) A letter from Paxton to Mike Quin shows that Paxton was a member of the Communist Party in San Francisco, unit F, No. 9. (See exhibit No. 23.)

BEN RISKIN

A letter from the People's Press, signed by Ben Riskin, deals with the support of the seamen's strike of 1936 by this Communist-controlled publication. (See exhibit No. 24.) Riskin was formerly on the editorial board of the New Order, official publication of the International Workers Order. (See exhibit No. 25.)

MARINE TRAINING SCHOOL

For several years, the Communist Party conducted a marine training school in which party workers were trained for organizing among seamen. (See exhibits Nos. 26A–28B.)

MAY DAY PARADES

On May 1, 1940, the National Maritime Union was in the front of the march in the Communist-controlled May Day parade. The N. M. U. has participated in these parades for several years. (See exhibits Nos. 29, 30A, B, C.)

COMMUNISTS ABOARD THE SHIPS

The Daily Worker recounted how Communists threw the ship's library overboard in order to compel the crew to read only Communist literature. (See exhibit No. 31.)

Witnesses before the Special Committee on un-American Activities have pointed out the dangers of sabotage which even a few Communists among the crew are able to commit.

CHANGE IN LINE

The seamen's unions under the control of the Communist Party have, like all party-controlled organizations, changed their "line" in conformity with the shifting policies of the party itself. The evidence touching this single question is set forth in large volume in the publications of the Communist Party and of the affected unions.

Construction of Naval Vessels in Great Lakes Seaports

REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

Mr. YOUNG. Mr. Speaker, in today's Washington newspapers there is news of importance to the country and news that is exceedingly welcome to the workers and industrialists of Ashtabula, Lorain, Cleveland, and all other Great Lakes ports, in that the Rush-Bagot treaty between this country and Great Britain of 1818 has been modified to facilitate the defense of both Canada and the United States from external attack, in permitting the construction of war vessels in Great Lakes seaports.

On January 15 I wrote to the Secretary of the Navy urging that the Rush-Bagot treaty with Great Britain be modified, and that its provisions be waived by an agreement, so that not only war vessels could be constructed at Great Lakes ports, but that they could be commissioned there, manned there, armed there, and that these squadrons be trained on the Great Lakes, and before they go through the Welland Canal down the St. Lawrence to the ocean, that they be equipped and prepared for immediate action. I am happy that the State Department, at this time, has procured modification of this treaty that has been in existence for 123 years.

One by one old ties have been severed. Flintlock muskets, tallow dips, stage coaches, and moustache cups have gone, and now this out-moded agreement between our country and Great Britain, adopted directly after the War of 1812, has been set aside in the interest of national defense. The people of this country should rejoice. In particular, the people of the Great Lakes communities have reason to be very happy over this. [Applause.]

Mr. Speaker, for the information of the House, the following is my letter of January 15, 1941, to the Honorable Frank Knox, Secretary of the Navy:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 15, 1941.

Hon. FRANK KNOX,
Secretary of the Navy,
Washington, D. C.

DEAR MR. SECRETARY: One criticism I hear of our defense program is that small industry in the Middle West is not being permitted to participate.

In this hour of great peril to Western Hemisphere security time is of the essence in the construction of a two-ocean navy—our first line of defense.

During the year or so following the Treaty of Ghent ending the War of 1812, the British Government proceeded to increase their naval forces upon the Great Lakes. The American Government conceived it would be unwise to enter into a naval rivalry. Our Government proposed that there should be a limit to the size and number of armed vessels kept by each nation upon the Lakes, or that both nations should abstain from maintaining armed forces beyond that used for the revenue service. British officials at first refused. Later, when our Congress authorized the construction of a large number of naval vessels on the Great Lakes, British officials reopened negotiations. I find that on August 2, 1816, Mr. Monroe proposed "in the spirit of the peace which so happily exists between the two nations" that the naval vessels of each on the Lakes should be dismantled. Finally, upon April 16, 1818, an agreement was ratified by our Senate, and since that date, at you know, there have been no American or British warships on the Great Lakes other than one training vessel of each country.

My view is that this agreement with Great Britain should be modified and its provisions waived so that our Government could commence immediately the construction of mosquito torpedo boats, destroyers, submarines, and gunboats in Great Lakes ports. I urge complete construction of such warships, commissioning of these ships, and training of the crews on the Lakes. These warships, after holding maneuvers in the Great Lakes and after the personnel has been thoroughly trained, should then be sent through the canal and down the St. Lawrence fully equipped for action.

This, Mr. Secretary, seems to me would bring our national-defense program closer to our people in Ohio, Illinois, and other States bordering on the Great Lakes and would give more of our people a direct opportunity to feel that they were doing a great deal to preserve our way of life. Employment would be given to thousands in the shipyards of Great Lakes cities such as Chicago, Cleveland, Lorain, Duluth, more naval vessels would be constructed during the next few years, and war vessels so constructed could properly be given names historically significant to people of Ohio, Michigan, Illinois, and other States, and enlistments would be stimulated, particularly in the Middle West.

That something like this has never before been done surely is no argument against this proposal; and I do hope, Mr. Secretary, that you will consider this important matter and take it up at a Cabinet meeting.

Most respectfully,
STEPHEN M. YOUNG.

Mr. Speaker, not only the Secretary of the Navy, but officials of our State Department, deserve proper credit for acting with promptitude and in a forthright manner in bringing about the modernization of this century-and-a-quarter-old treaty.

A Practical Farm Program

EXTENSION OF REMARKS
OF
HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

ADDRESS OF HON. ALBERT S. GOSS, OF WASHINGTON, D. C.

Mr. AUGUST H. ANDRESEN. Mr. Speaker, under leave granted to me, I am pleased to have printed in the CONGRESSIONAL RECORD the address of Hon. Albert S. Goss before the National Farm Institute at Des Moines, Iowa, on February 22, 1941. Mr. Goss is one of the outstanding authorities in this country on farm credit.

Mr. Toastmaster, distinguished guests, ladies, and gentlemen, every night we are admonished over the radio to beware of substitutes. I regret the circumstances that have caused me to substitute for Mr. Taber, master of the National Grange. I regret that you are denied the privilege of hearing from him. I regret the last-minute shift that has brought me here under a misunderstanding as to the exact subject I was to speak on, for you will find that I am not going to talk on the subject assigned to me as it appears on the program. You will also find that Ed. O'Neal and I didn't do any collaborating. You may conclude that we have some sharp differences of opinion. Differences of opinion, you know, are what make horse races and bring out all sides of the question. The Bureau and the Grange may have some differences, but on the whole they involve minor details. On the essential objectives of agriculture, we are in hearty accord. On the question under discussion, the differences are not as great as they may sound. They are largely a matter of timing. The Bureau is approaching the problem more from the immediate or emergency standpoint, while you will see that we are approaching it from the long-range or permanent-remedy view.

The subject, Needed Improvements in the Farm Program, is rather difficult to speak on, for it seems to imply adjustments perfecting the existing procedure. While there have been many fine accomplishments, such as soil conservation, rural electrification, crop insurance, marketing agreements, and others, I feel that the basic existing program is nothing more than an emergency program, and much of what has been done must be undone before a sound and permanent farm program can be developed.

On the other hand, we are still in an emergency, and some of the emergency practices must be continued for the time being. No lasting or sound economy has yet been developed. The war boom alone has brought temporary relief, if such it can be called, and unless we can develop an economically sound program, while war conditions exist, we will find, when the war is over, that we face worse conditions than we have yet seen. When the war is over we will face a different world. It is hard to conceive of a war-ravaged world being able to buy much of anything for cash. In general, we should strive to develop our economy along two major lines.

First, we should try to bring into balance the purchasing power of all groups within our own country, for right here at home are the choicest markets of all the world, if our economic system is such that there is an equitable or parity income for all who serve the common good, and thus obtain the broadest possible purchasing power.

Second, agriculture should develop a type of production which will not only supply our own needs, but one in which its export crops could be readily exchanged with nations which produce the things we must import. If we consistently build our program around these two basic principles, we will pass through the difficult years of peace adjustment with the least dislocation and jar.

For many years we have been treating symptoms instead of basic causes. The problem is so broad that no single remedy is possible. Agriculture's difficulties are due to many different causes, varying with each commodity and almost with each community. The National Grange has approached this

problem from a broad standpoint, as will be indicated by the following statement of policy embodying 17 points. It will be noted that some of them deal with emergencies, and some of them with a permanent long-range program. The statement follows:

SUMMARY OF GRANGE PROGRAM

"The first and foremost duty of the Nation is to defend America, and to preserve American ideals. We must build a system of defense that will be strong enough to meet any emergency, and we must do it with utmost speed.

"As a part of our scheme of national defense, it is vital that agriculture, our fundamental industry, be given proper consideration and placed on a sound basis. Agriculture asks for fair treatment rather than for special privilege. It seeks economic justice rather than subsidy. The National Grange advocates the following principles:

"1. Give agriculture its fair share of the national income. So long as farmers are compelled to buy at prices that have been raised artificially, while selling at a lower level, it is imperative that some form of benefit payments be continued until a better method of correcting this disparity is developed.

"2. Establish a plan by which groups of producers may elect to make use of a quota system to maintain prices for their products on the domestic market comparable to the prices they have to pay. [This is one of the essential points and has purposely been left broad for reasons which I will enlarge upon.]

"3. Assure the American market to the American farmer to the limit of his ability to supply it.

"4. Terminate at the earliest possible date all trade treaties that are proving harmful to agriculture.

"5. Remove all unnecessary trade barriers between States.

"6. Encourage research to find new uses for farm products, thereby diminishing the harmful effects of agricultural surpluses.

"7. Provide incentive payments to encourage production of new crops which may prove useful, especially in contributing to an efficient national defense. [We might have added, to develop a type of production designed to stimulate world trade.]

"8. Continue distribution of surplus food products to the needy, especially under the food-stamp plan.

"9. The Federal Government should take proper steps to assist in the development of a better farm marketing system.

"10. Restore the Farm Credit Administration as an independent agency of the Government, and maintain the lowest interest rates consistent with a sound loaning policy. [This is the subject I would really have liked to talk on. I consider it of major importance.]

"11. Continue soil-conservation and land-use programs, but never as a means to promote crop control.

"12. Practice greater economy in the affairs of government—National, State, and local.

"13. Maintain an adequate system of transportation, giving free play to the forces of legitimate competition.

"14. Encourage the further development of farmer-owned and controlled cooperative associations to reduce the present excessive spread between producer and consumer.

"15. Maintain the family-sized farm as the standard of American agriculture and discourage large-scale or corporation farming, thus upholding America's greatest bulwark of democracy.

"16. Promote a more satisfactory rural life through development of educational facilities, good roads, and rural electrification.

"17. Encourage cooperation, good will, and mutual understanding between agriculture, industry, and labor to promote the common welfare."

Almost every point in the program would justify use of the time allotted on the whole subject. So I will confine my remarks to the first and second points.

BASIC TROUBLE WITH AGRICULTURE

The basic trouble with agriculture—once our chief industry—is that it has been treated as a stepchild in the rearing of the economic family. When we first embarked on a policy of encouraging manufacturing by erecting tariff barriers, Alexander Hamilton pointed out that we would increase the living or operating costs of every man, woman, and child in America, and that we must extend equal protection to all, including the exporting industry of agriculture, if we were to preserve a well-balanced economy. This we failed to do. On the contrary, in order to keep other groups and industries abreast of the protected industries, we have gradually adopted various types of protective devices for our transportation—truck, rail, water, and air—for our insurance companies, for our financial institutions, for labor, and for scores of other industries, but agriculture has not been brought under the protective system.

It is true that many plans have been tried, but have either proved inconsequential or not effective, because of two basic problems that have been ignored. We have not recognized that agriculture is different from most industries because many of its branches have been dependent upon exports, and we have not recognized the difficulties in the way of organizing six and a half million farmers to protect themselves from cutthroat competition. This trend has been going on for years and agriculture has been gradually slipping into a position of greater disadvantage year by year, until recently it has been receiving the lowest percent of the national income in our history. When 25 percent of our people, with over forty billions invested in plant and equipment, even at present depleted values, receive a bare 11 percent of our national income, and when a good portion of the receipts are expended in taxes, labor, and other unavoidable production costs, something is decidedly wrong. Forty-five percent of our people are either engaged in farming or directly dependent upon the income of farmers for a livelihood, and when our system subjects 45 percent of our people to scant rations, it is no wonder that the whole Nation has unsuccessfully struggled with the recovery problem, for this problem will never be solved until there can be a more equitable distribution of the national income. If the proper balance could be restored, the increased purchasing power of this 45 percent of our people would soon solve our recovery problem.

America produces the greatest per capita wealth among nations and for a dozen years has had the largest percent of unemployment. We have been saved from having the greatest poverty and distress as a result of maldistribution of the wealth produced, largely by subsidies and charity. This is not only the farm problem, it is the problem underlying national recovery.

Farm income comes from the sale of farm products. We all know how surplus production drives down price. Frequently a large production brings the farmer less gross income than short crops. The farm-income problem therefore narrows down to the imperative necessity of having prices for farm products in economic balance with other industries. We know this is impossible on export crops. But is it impossible for the American farmer to get an equitable price on the crops consumed domestically? If we have to accept a foreign price on both the domestic portion and the export portion, agriculture's position is hopeless unless we can reduce our production to meet our domestic needs.

In the first place, this probably cannot be done, as the experience of the last few years has proved. In the second place, if it could be done, it is not an economically sound solution of the problem. It is not more sound to expect agriculture to keep out of the export business than it is to expect the automobile industry, or any other manufacturing industry, to stop exporting. Did you ever stop to consider that every step of progress civilization has made, down through the ages, has been marked by a greater consumption of goods and services? Deliberately to try to create prosperity by creating a shortage is defying economic law, and when we do that we bring on a whole train of direful consequences. The only answer, therefore, is an American price for the portion of our crops consumed domestically. In other words, a two-price system. I might say here that I did not collaborate with CLIFFORD HOPE, although we agree with him just 100 percent.

There are a number of ways in which this can be done—some simple, some complicated, some involving strong Government control, some strong farmer control. Whatever we do, we must be realistic and recognize that farmers have not been able to do the job themselves and must have help. I am not advocating gifts or subsidies. They are demoralizing. They can never be more than barely enough to avoid utter collapse. They keep the recipients in a beggar frame of mind psychologically and a beggar condition physically. What I advocate is such practical aid as will bring the farm income up to a comparable position with that of other industry. Then, and not until then, will there be stability in our national economic life.

THE PLACE TO BEGIN

How is this to be done? There are two distinct schools of thought with reference to it. One argues that if industry is put on its feet prosperity for agriculture will follow. The other says that agriculture must be put on its feet before there can be full prosperity for labor and industry. In answer to the first school, we need but recall that labor and industry enjoyed the greatest prosperity in our history during the 1920's, while agriculture lost its shirt. We lived off our working capital until our accumulated wealth was reduced 40 percent and the bankrupt condition of agriculture and the back country was one of the most potent factors in bringing on the unprecedented collapse of the early 1930's.

Turning to the second school of thought, whenever agriculture has enjoyed a substantial income, labor and industry have always prospered. A comparison of the number of people gainfully employed, with farm income, will show that with every increase of farm income, men were put to work, and with every decrease, they lost their jobs.

This is no mere coincidence. There is a sound reason for it. The farmer is the largest consumer of any class. Let us compare him with the doctor, the lawyer, or the workingman. Each consumes about the same amount of food, and shelter, and clothing, and transportation, and entertainment. But in addition to this the farmer, in order to get any income at all, must operate a small manufacturing plant, in which he consumes farm machinery, fertilizer, fencing, stock and implement housing, labor and everything that goes into the manufacture of farm products. In other words, the farmers run more than 6,000,000 small factories and pay all the cost of upkeep of such operation. So a dollar of farm income immediately goes into a type of circulation which puts men in industry to work. It has been figured that for a score of years, approximately every $275 of increase in farm income has put 1 more man to work.

As an indication of what this means, we all know what is meant by parity. Although the farm income during the 5-year period 1924 to 1929 was 5 percent below parity, it represented a goal we have been struggling

to attain ever since, so let's call it normal, just to illustrate my point. The average farm income during the last 5 years, when our present farm program has been in full operation, has been two and one-half billion dollars less than normal, or three billions less, if Government payments are deducted. The difference between normal and the farm income of the past 5 years would put 10,000,000 men to work.

HUGE SURPLUSES DEPRESS PRICES

This does not sound as much of a problem today as it would have seemed a year ago, before the war situation completely changed the economic picture; but we must not forget that these war conditions are temporary; that they will disappear, soon we hope, and that we must have a sound foundation under our economy if we are not to be plunged into a depression worse than the last. So we can ill afford to continue the basic maladjustments which now exist. Now is the time to take preventive steps.

Congress realized this in 1933 and attempted to meet the situation by a number of steps, including the Agricultural Adjustment Act, which relied upon the processing tax as a means of making a two-price system effective. This tax applied to but a few commodities, and before it could be put into effective operation it was declared unconstitutional by the Supreme Court. At that time a great mistake was made. Instead of developing other means to meet the situation, we reasoned that if our farm problems were due to surplus production, the most effective remedy would be to abolish the surplus. I have previously pointed out two reasons why this is unsound. Let us see what happened. I will take cotton. Without attempting complete accuracy, I will use well-rounded figures to illustrate what I am driving at. We determined there must be a sharp reduction in cotton production and paid farmers to reduce acreage some 30 percent. They cut out their poorest land, took the benefit payments to buy more fertilizer, and raised more cotton than ever.

Neither Dame Nature nor human nature submit to regimentation gracefully, and when it became apparent that it was impossible to adjust production to that nicety which would result in just enough to force up prices but not enough to create want, another approach was taken. The theory of controlling price through shortage was retained, but this time it would be a controllable shortage of the ever-normal granary, made possible by crop loans. We loaned cotton farmers 10 to 12 cents a pound to hold their crops off the market on the theory that buyers would be compelled to go into the market and pay the price the farmers demanded, at least the loan price. But what happened? Instead of Europe meeting our price theories, they increased production in other parts of the world, so that some millions of acres were put into cotton in India, Egypt, and Brazil, and they ran off with our cotton markets. On the other hand, no farmer would sell for 7 cents a pound in the world market if he could borrow 10 cents a pound under terms which would not require him to repay the loan, and we piled up millions of bales of cotton, until last year we had a 13,000,000-bale carry-over.

Now, there is just one reason why cotton dealers buy cotton. They expect to sell it for more than they paid. And with 13,000,000 bales of surplus cotton overhanging the market, there was just one direction the price could go. In other words, cotton loans gave the farmer a better price than the market afforded at the time but piled up trouble for the future. What happened to cotton happened in only a less degree to wheat, corn, and other products, until the net result of our efforts to force up prices through artificial shortages has been to create the greatest surplus problem in our history. Mark this well: If it were not for the war, we would see prices at the lowest ebb since 1932 because of these surpluses. If it were not for these surpluses, we would see the highest prices since the twenties because of the war. It would be comic if it were not so serious. That is the reason I say we must undo much of what has been done, forget academic theories, and start on a sound program based on realities.

Do not misunderstand me. I am not opposed to the advantages of an ever-normal granary, but I want to point out emphatically that the creation of such a surplus will bear down the farmer's price and assure a low income unless steps are taken to control the domestic price. Neither am I opposed to the proper use of crop loans. I see two such uses. One, a limited one to avoid dumping and permit crops to flow to market in an orderly manner; the other, a strictly emergency measure for controlling prices. As such, they are effective and may be justified as temporary expedients until a basic remedy can be put into effective operation. Used too much, or too long, they are breeders of future trouble. I might point out that the loan plan as presented by Mr. O'Neal this morning is made contingent upon controlling the supply and preventing a surplus. If this can be done, the plan will work.

The basic trouble with crop loans is that they do not permit the crops to flow to market. This is the basic trouble which time and again has defeated any system of price fixing. In my judgment, no system of price fixing will work unless it provides an effective means of permitting the surplus to flow to market at whatever the export market will bring. If this is done, an economically sound method of establishing a compensatory domestic price is possible. This the Grange advocates. It has not limited its advocacy to any one plan. In my judgment, no single plan can be developed which will cover every commodity. It is no more possible to give cotton and milk the same treatment than it is to include eggs and wheat under one program. Nevertheless, I am confident that there is a practical program for most farm crops and that the problem can be solved.

DUAL PRICE SYSTEM WORKABLE

For the benefit of those who say that a dual price system is an economic impossibility, I would like to illustrate by suggesting that it would be entirely possible to establish a Government corporation, through which every pound of wheat would be sold. That corporation could establish a domestic price to the farmer of $1 per bushel and could sell for domestic use at $1.50 per bushel. The margin would enable the corporation to give away our 25-percent surplus to feed war-torn Europe and have money left over. I don't advocate such a plan, because there is a better way, but it can be done.

Or, to use another illustration, where effective cooperative marketing groups exist and where 75 percent of the producers of a crop would so petition, every producer could be compelled either to market through a cooperative or with a private agency which would maintain the same price schedules as the cooperative, all under Government supervision, to see that such schedules were just to producer and consumer alike. This is somewhat in line with the marketing agreements which have proved the most effective measure the present administration has devised, and I believe some such adaptation can be worked out for perishable crops.

You may have noted some details in the second proposal of the Grange as I read it. These details recognize certain sound principles. First, under any system designed to give agriculture a fair price someone must estimate the domestic and export quotas—not production quotas, but marketing quotas. Having determined these, the allocation of quotas to individuals should be done with the cooperation of the farmers themselves. Let me digress and say that we believe in farmer ownership and farmer control of the whole farm set-up. We oppose centralized control and resent the practice of making up a program in Washington, taking it out and selling it to the farmers with high pressure salesmanship and one-sided presentation, and then calling it the farmer's program.

Let me digress again right here to point out that at this point provision could be made for establishing a sliding scale on domestic quotas which would encourage the family-sized farm and discourage corporation and large-scale commercial farming. Then production control would begin to operate under the self-enforcing laws of economics rather than under regimentation of man-made laws and regulations. Personally, I believe this is justified because I think the very safety of America depends on maintaining the farm home and a prosperous family-sized farm agriculture.

Were there time, we might discuss in detail two or three other means which might be applied to certain crops. It seems to me, however, that what is needed most to improve the agricultural situation is an enabling act which would set up a board with broad powers to apply any one of a half-dozen measures, or more, in the manner which would best meet the problems of any crop or any locality. I believe it is entirely possible to find means to assure prices which will prove compensatory to the good farmer on most of our basic farm products. Nothing will cure slovenly farm practices, or unintelligent production. Here an altogether different type of remedy is necessary, and that is education. In large sections of our country, that is a crying need. But education will do little throughout some of the large producing farming areas which are contending with impossible economic conditions.

In closing, let me remind you that for 20 years we have struggled with this problem and made no progress. Is there any sound reason why we should not try something direct and effective?

We still have the right to repeal laws if necessary, but certainly the trial would not result in worse conditions than have prevailed during the past 20 years. Certainly we could not do more violence to economic law than we have done during the last dozen years.

Irish Have Played a Vital Part in Development of United States

REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1941

ADDRESS OF HON. VINCENT F. HARRINGTON, OF IOWA

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks, I am pleased to include a copy of the speech delivered by our colleague the gentleman from Iowa [Mr. HARRINGTON] at the ninety-second annual dinner of the St. Patrick Society of Brooklyn, N. Y., held at the

Waldorf-Astoria Hotel in New York City on Monday, March 17, 1941.

The speech delivered by Mr. HARRINGTON on that occasion follows:

To the United States; yes, to each and every one of them and the glorious history of them all. Within the borders of each there is no Irishman who would not be given a warm welcome. By the same token there are none of our people who would not feel at home and proud of our ancestry because of the significant and vital part which our race played in the birth and development of all of the 48.

In fact, the history of the United States is so emblazoned and glorified with the names of brave and brilliant men and women of Irish blood who have helped in the struggles for the freedom of our democracy and the personal liberties guaranteed to us under our constitutional Bill of Rights, that I shall pay tribute in passing by mentioning the names of but few. They do not need it. They belong to the ages just as surely as do Washington and Lincoln. One of the most eloquent voices raised in the Continental Congress on behalf of freedom was that of John Rutledge. Need I recall to this audience the deservedly illustrious names and achievements of Charles Carroll of Maryland, Maj. Gen. John Sullivan, who opened the Revolutionary War on land by the storming of Fort William and Mary; of Commodore Barry, or the O'Briens? I want to recall briefly the epic of Maurice O'Brien and his five sons. It deserves telling, and always delights good Irish hearts.

The British warship *Margaretta* came to anchor in Machias Bay, Maine, in May 1775. She had been sent to subdue the rebellious colonists. Maurice O'Brien, with his five sons, got together a band of patriots, and they put out in their fishing boats and promptly captured this proud British ship of war. Angered and humiliated, the British admiral sent two more war ships, the *Diligence* and the *Tapnaguish*, to punish the colonists, and to recapture the *Margaretta*. Instead, Maurice O'Brien and his five sons, heading a band of patriots, again put out in their fishing boats and promptly captured these two additional British warships. Jeremiah O Brien, the oldest son, sailed with the three prizes to Watertown where the Provincial Congress was in session, and delivered them over to the Congress to become a part of the first American Navy.

Truly it has been said that Commodore Barry was the father of the American Navy, but that the O'Briens might be classed as its grandfathers.

But the fame of Irishmen and their great exploits is not confined to New England or New York or Philadelphia, or for that matter, to any one section of the country or era of its history. The Great Plains of the Middle West from the Alleghenies to the Rockies, and from Canada to New Orleans, felt the vigorous, intelligent hand of the Irish.

On the slopes of the Pacific, and in the great Southwest the names of Irishmen are enshrined forever. At the Alamo in Texas, at Custer's last stand on the Little Bighorn River in Montana, the Irish served with valor and distinction. In fact, the history of the winning of the West is so interwoven with the lives of the sons and daughters of Ireland that a notable western historian says of them that "They and their descendents are more nearly the truly great Americans, because they are the building Americans, than any other nationality which came to the shores of this continent from the time of its discovery."

Builders—yes; builders all—not alone with hands, but with minds and hearts and souls as well. In every profession, the arts and sciences, in every walk of life, you have found the Irish among the leaders since the beginning of the westward expansion and before and continuing on up to the present day.

No race has given the world greater names, or abler statesmen, more successful generals, more eloquent orators, more enchanting poets, more entrancing musicians, more powerful religious leaders, more energetic entrepreneurs, than have the Irish people.

Among those whose names are famous as pioneers in the development of western industry we find James C. Flood, James G. Fair, and William O'Brien, who developed the gold and silver mines of the West. Cyrus McCormick invented the reaper and other agricultural implements which revolutionized farming in America, and the great Mississippi Valley was transformed into the bread basket of the whole Nation.

But gold and silver and improved farm machinery were not enough—until another Canadian-born Irishman, James J. Hill, laid the third foundation stone of the wealth of the Northwest by building its first great railroad system, thereby giving effect to its magnificent economic potentialities. The story of Jim Hill's masterful planning, his untiring efforts, his ability to overcome obstacle after obstacle, until at last he completed a great transportation system from Chicago to the Pacific coast, is in itself one of the great business romances of modern times.

If it is true, as it has been said, that the "Irish built the railroads of America," then it is doubly true in the case of western railroad development, because it was to the railroad camps of the sixties, seventies, eighties, and nineties that many of the Irish immigrants flocked for employment; and throughout the West today the sons and grandsons of these people are to be found as leaders in hundreds of communities.

It was men such as these who helped to hew this great western nation out of the primeval forests and granite-walled mountains—always in the forefront were the indomitable Celts.

But that is not the only contribution of the Irish of the plains and mountains. What of religion, medicine, education, poetry? Archbishop Ireland stands out as a Gibraltar of Christianity in the West. To him, perhaps more than to any other, must go great credit for the vision, the courage, the hope of the western pioneer. So great has been his influence for good that even today the work that he wrought in colonization has given the States of Iowa, Minnesota, Wisconsin, the Dakotas, and Montana, particularly, populations which are more truly, humble, God-fearing Americans, than any.

And who does not recall the lovely lyrical, earthy ballads of James Whitcomb Riley, or the philosophical mysticism of the poems of Father Charles O'Donnell, both of Indiana?

Who in the educational world does not remember the story of Thomas Halfpenny, sometimes called the schoolmaster general of Illinois; and who is there who does not recall with a prayer in his heart the skill of that great surgeon, Charles Murphy, of Chicago?

To be a bit more recent and in still another field of endeavor, does anyone here have to be reminded that the great Boston College football teams of the past few years have been coached by a South Dakota Irishman, Frank Leahy; or that those wonder teams which Fordham has been turning out are coached by that Irish wit from Wisconsin, Jim Crowley?

And so, my friends, whatever the calling—wherever in this grand country of ours we may chance to be—of one thing we can be certain—there'll always be Irishmen of distinction.

In closing I want to repeat a story which applies to this last statement.

In the young Irish disorders in Ireland in 1848 there were nine men tried and convicted of treason against Her Majesty the Queen. All were sentenced to death, but before passing sentence the judge asked if there was anything that any of them wished to say. Thomas Meagher, speaking for all, said:

"My lord, this is our first offense, but not our last. If you will be easy with us this once, we promise, on our word as gentlemen, to try and do better next time. And next time—sure we won't again make the mistake of being caught."

Thereupon, the indignant judge sentenced them all to die—to be hanged by the neck until dead and drawn and quartered in the approved fashion.

But passionate protests from all the world forced Queen Victoria to commute the sentences, and the nine men were banished for life and transported to far away, wild Australia.

In 1874 word reached the astounded Queen that the Sir Charles Duffy, who had just been elected Prime Minister of Australia, was one of the nine men whose sentences she had commuted and who had been banished 26 years before. On the Queen's demand the records of the rest of the transported men were revealed, and this is what the amazed British ruler found had happened to the other eight who had been banished with Duffy:

Thomas D'Arcy McGee, Member of Parliament, Montreal; Minister of Agriculture and President of Council of the Dominion of Canada.

Richard O'Gorman, Governor General of Newfoundland.

Morris Lyene, Attorney General of Australia; and

Michael Ireland, succeeded him in that office.

Terence McManus was a brigadier general United States Army, as was Patrick Donohue.

John Mitchell was a prominent New York politician and the father of New York's later mayor, John Purroy Mitchell.

Thomas Meagher, who had done the talking for all nine men at the time of their sentencing, had been Governor of Montana.

So it seems that Irishmen will be successful any time, anywhere, under any circumstances. We are a strange mixture of success, happiness, and sometimes melancholy. The tear and the smile oftentimes sparkle on the cheek together. The warm, deep, impetuous temperament of the Irish must have been the inspiration for these few lines from Santayana:

"O world, thou knowest not the better part,
It is not wisdom only to be wise,
And on the inward vision close the eyes,
But it is wisdom to believe the heart."

And so again I say to the Irish of the United States—north, south, east, and west—they have built, and planned, and fought, and studied well; but in so doing they have not forgotten the dictates of their souls, nor of their hearts.

Agriculture During and After the National-Defense Crisis

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

RADIO ADDRESS BY DR. JOHN LEE COULTER

Mr. AUGUST H. ANDRESEN. Mr. Speaker, under permission granted to me, I take great pleasure in presenting the views of Dr. John Lee Coulter on the important matter of agriculture during

and after the national-defense crisis, to the Members of Congress and the country. Dr. Coulter is one of the leading agricultural economists of our country.

The address follows:

At this time, when so much special consideration is being given to foreign wars and to national defense (by the Government and by writers and speakers in the press and over the radio), it may be wise to pause for a few moments to ask about the Nation's welfare from the point of view of food products, fiber and textile materials, leather products, sugar, and the many other special products of agriculture. I shall, therefore, devote the short period at my command to a brief discussion of such problems as—

(1) Will there be enough of all of these important farm products for all of our people?

(2) To what extent must we depend upon imports to supply our national requirements?

(3) Are there any important surpluses available for export or to accumulate as reserves?

(4) Would it be desirable to curtail production of some farm products while encouraging the expansion of others?

(5) What about the price structure and inflation?

(6) What chance is there for farmers to reach price parity or to gain a fair share of the national income?

These are only a few of the vital problems confronting the people of this country, from the standpoint of agriculture. Since time does not permit a full outline and discussion of all of different aspects of agriculture's situation, we shall limit ourselves to only a brief reference to these.

HOW NEARLY SELF-PROVIDING IS THE UNITED STATES?

1. Clearly, our first problem is whether there will be enough of all important agricultural products to supply the people of this country during this crisis. The answer is "yes." The United States is in an entirely different position from Great Britain or the Continent of Europe or the great Chinese-Japanese Empires or other great areas on the face of the earth. Fortunately, the United States, extending from the Canadian border to the Gulf of Mexico and from the Atlantic to the Pacific seaboard, has such a wide range of temperature, of rainfall, of soils, of altitudes, etc.—indeed, such a wide range of all of the important natural features—that it may be said without fear of contradiction that no other similar area and no other country in the world is so abundantly provided with so nearly every important agricultural product—grains and seeds, fruits and vegetables, livestock products of every sort, and important special products such as sugars, starches, oils and fats, and the like.

Even such exotic or foreign products as bananas, coffee, and cocoa are readily available in Latin-American countries immediately south of us. Only a few special agricultural items such as tea and rubber are not available in the Western Hemisphere in quantities sufficient for our normal use. And now science is advancing so rapidly that we may presently find ourselves producing in factories synthetic rubber and such fibers and other products as are not available to us in their natural form. On this point it may unquestionably be stated that the United States is more nearly independent of outside sources than any other nation, large or small, on the face of the globe.

Many students, political leaders, businessmen, and others—hearing of the world struggle for food and other farm products—are often led into the false position of trying to drag us into the same struggle.

WHAT ABOUT OUR NEEDS FOR IMPORTS?

2. From what I have already said, it appears that the second question has largely answered itself. The United States does not need to depend in any large measure upon foreign areas for products of agricultural origin except such exotic items as already referred to—like tea, coffee, cocoa, rubber, etc. It is true that in normal times we do import considerable quantities of various products of farm origin, especially of fibers such as silk, jute, wool, linen and coarse fibers such as hemp and sisal. But in the case of many of these, the people of this country could very well get along for long periods without great worry, and many of them or their equivalents could readily be produced by our own farmers or in synthetic factories.

WHAT ABOUT EXPORTS OF SURPLUS PRODUCTS?

3. Our next question had to do with the problem of exporting burdensome surpluses of a few staple farm products. During normal times the United States has been one of the world's greatest surplus producers of certain nonperishable products such as cotton, tobacco, and wheat, and has had considerable quantities of some other important farm products available for export. Our principal markets for these products have been Great Britain and various western European countries together with Japan. All of these are now involved in military activities. In other words, our export markets for perhaps two-thirds of our surplus products are now largely closed to us. As a result, one of the leading problems confronting agriculture in the present crisis is what to do with these surplus products.

SHOULD WE ATTEMPT TO REDUCE SURPLUS ITEMS AND EXPAND OTHER PRODUCTS?

4. During the great World War tremendous armies moved back and forth over Europe and destroyed literally millions of acres of wheat, oats, barley, and rye, as well as sugar beets and other crops. Large portions of the gardens, orchards, and vineyards were destroyed, and untold numbers of livestock were consumed during the emergency. A tremendous market was opened for most of our surplus farm products and prices doubled in a relatively short time. But an entirely different situation presents itself during the present struggle. Destruction in the warring areas is being held to a minimum, and increased production is being stressed. Now our problem really is, Shall we continue to produce these surpluses and accumulate great warehouses full of cotton, tobacco, wheat, and other items, or devote more attention to other farm products?

WHAT ABOUT THE PRICE STRUCTURE?

5. Turning to the domestic market, attention is frequently called to the fact that many millions formerly unemployed will presently be fully engaged as a result of the vast defense program now being organized. It is suggested that with the reemployment of five or ten million workers, there will be a tremendous increase in the domestic demand for food, textiles, leather, and all other farm products. It is even suggested that domestic prices of these farm products may again advance to relatively high levels.

Lest this point of view be overemphasized, it may be well to remember that during the long depression period, through which this country has been passing, practically all of the unemployed have been fed and clothed. If they were unable to purchase supplies from normal earnings, they have been largely provided through government or other channels. While it is true that the least prosperous would undoubtedly buy more meats, dairy, and poultry products, fruits and vegetables if they were financially able, it probably would not be wise to conclude that the demand at home will be increased to such an extent as to justify any hope for—or fear of—run-away prices due to change in domestic demand. If there should be a large shift from cotton, tobacco, wheat and other surplus crops to the livestock items, fruits, vegetables, etc., it is more likely that the prices of all would suffer.

If there is a great upsurge in prices, it is more likely to be due to an unsound economic structure, unwise increases in wage rates, or other undesirable situations.

And in this connection it will be well for those engaged in agriculture to bear in mind that prices of commodities and services which farmers must buy may advance at as great a rate or even more rapidly than prices of products which farmers have for sale. Since there is nothing to indicate a great expansion in the market for such commodities as cotton, tobacco, wheat, and some other stable products, it is more likely that agriculture will be less well off as a result of the national-defense crisis now receiving almost universal consideration.

WHAT CHANCE IS THERE FOR FARMERS TO ATTAIN PRICE PARITY OR INCOME PARITY?

6. The last question stated is particularly pertinent at the present time because of the fact that during the last 3 years (1938, 1939, and 1940) the National Department of Agriculture has continued to report that, in spite of all efforts on the part of the Government, farmers have received an average of less than 80 percent of what is defined as price parity, which was set as the goal in order to attain for agriculture a fair share of the national income.

Another way to state this question is to inquire whether it is likely that new conditions in the world, including our own national-defense program, will be of such a character as to bring farm prices and farm income into harmony with prices in general and national income in general—in face of the fact that the Government, after years of experimentation and effort, has failed to accomplish these desirable goals.

Now, I have reviewed only a few of the special problems which clearly are going to face those interested in the welfare of agriculture. There is nothing in the picture thus far to indicate great gains for farmers as a result of the new wars now raging in most other parts of the world or as a feature of the national-defense boom. In other words, there is nothing to indicate that farmers may hope to secure a more equitable share in the national income. The situation thus far, in the new wars which are raging, is entirely different from that during the great World War of 25 years ago.

ARE WE PREPARED TO FACE THE PROBLEMS WHICH MUST BE MET WHEN PEACE TAKES THE PLACE OF WAR?

Even so short a discussion as that which is possible in 10 or 15 minutes would be incomplete without a concluding reference to prospective conditions when peace is restored and great wasteful and extravagant programs have come to an end. Undoubtedly much of the world is already weary of the conflict and wishes that somehow destruction and waste might be brought to the earliest possible close.

Whether peace comes soon or is long delayed, what the outcome may be, and how the terms of peace are finally negotiated are not a part of my statement. I am only presenting some of the leading problems of agriculture which should not be left to solve themselves.

From the standpoint of agriculture and of national welfare, it is important we begin even now to consider the difficult problems which must present themselves with the close of wars and national-defense programs. If, as a result of pyramiding wages, prices, and values, the United States, along with the rest of the world, moves into a new period of uncontrollable inflation because of unsound and unwise economic programs, must we again pass through a great period of deflation and depression? Must we again face a period of vast unemployment and distress? Must we again face a period of bankruptcy and economic chaos?

My only conclusion at the moment is that it would seem that, as part of the great national-defense program, the time had already arrived when thoughtful and deliberate consideration should be given to the probable situation after the fury of wars have spent their force. If we merely stand by and hope that demand for farm products will increase, that farm prices will be improved, and that farmers' share in the national income will be more just, and, at the same time, assume that new burdens will not come to farmers in the form of taxes and higher prices for all goods and services purchased, is it not likely that we are indeed living in a fool's paradise, engaged in wishful thinking, and counting upon short-time gains to conceal the distress of long-time losses?

If I had one wish more than any other to express, it would be that agricultural leaders, and all others interested in both agricultural and national welfare, begin to turn their attention now not only to the immediate problems involved but to the long-time difficulties which may confront us as a result of present chaos.

San Francisco Bay and Hunters Point

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

Mr. WELCH. Mr. Speaker, for many years the strategic importance of San Francisco Bay and Hunters Point, with its immense drydocks, which are among the largest drydocks in the world, has been stressed by the Navy and War Departments.

The recent purchase of Hunters Point by the Government was based on the findings and report of special naval boards on many occasions. Nearly 25 years ago a special commission appointed by Congress, having Admiral J. W. Helm as senior member, reported, in part, as follows:

San Francisco Bay is the only body of water on the Pacific coast south of Cape Flattery offering a safe anchorage from wind and weather to a large number of ships which can be entered under all ordinary conditions of wind and sea.

San Francisco Bay has ample anchorage, with a good holding ground for a fleet of any size.

Later Admiral Charles F. Hughes, then Chief of Naval Operations, made the following statement:

San Francisco Bay is, as you know, the principal harbor of the Pacific coast. To my mind, it belongs to the Nation; it is not the property of California nor of the cities that are on its shores. From its natural advantages and its location, San Francisco Bay is certain to be the major continental fleet base for any extensive campaign in the Pacific. It will be the point where the fleet will concentrate at the beginning of a war.

When the bill authorizing the purchase of Hunters Point was before the Committee on Naval Affairs, former Chief of Naval Operations Admiral William D. Leahy made the following statement during the hearings:

The program does not provide for a naval drydock in the San Francisco Bay area capable of taking a major capital ship. The privately owned drydocks at Hunters Point, lacking in the equipment necessary for repairs to our large war vessels, are not a satisfactory solution to the Navy's problem in time of war.

In my opinion, the Navy should acquire the Hunters Point drydocks and should provide weight-handling facilities, power connections, galley, latrines, storehouses, and an assembly plant to permit the overhaul of our largest vessels in conjunction with the Mare Island Navy Yard.

On March 8, 1939, in hearings before the Committee on Naval Affairs, the Chief of Naval Operations made the following statement with regard to the need of naval docking facilities:

The situation confronting the Navy with respect to adequate drydocking facilities is of serious concern to the national defense. Docking facilities on the west coast and in Hawaii are now inadequate to meet the needs of the existing fleet in time of peace. Even with the completion of the drydocks now under construction at the Navy Yards, Mare Island and Puget Sound, the peacetime situation will become steadily worse unless further relief is afforded as vessels now under construction or authorized are added to the fleet.

The question of docking facilities has been the subject of exhaustive study and analysis in the Navy Department over a great many years. Shortages exist in all sizes of docks to meet peacetime and wartime requirements. As a result of these studies the Department has outlined a program of additional docking facilities considered essential for the proper support of the fleet in the Pacific.

The results of the studies mentioned in the second paragraph of the above quotation indicate the absolute need for 13 additional drydocks on the west coast and in Hawaii if the overhaul requirements of the Navy now in being, under construction, or authorized are to be met. As regards sizes of these additional docks, these are as follows:

Battleship and carrier	2
Cruiser	2
Destroyer and destroyer leader	9

During these same hearings Rear Admiral Ben Moreell, Chief of the Bureau of Yards and Docks, made an equally strong presentation before the committee urging the purchase of Hunters Point.

During the consideration of the bill, now Public Law No. 106, the Naval Affairs Committee, by resolution, requested the appointment of a special naval board to make further study and negotiate for a purchase price for Hunters Point and Hunters Point drydocks. This special board subsequently reported unanimously in favor of the Government acquiring the property and agreed on a purchase price of $3,933,572. In addition to the purchase price, an additional $2,000,000 was appropriated for the necessary equipment referred to by Admiral Leahy.

It has developed that the $2,000,000, in addition to the purchase price of the property, is entirely inadequate to meet the present emergency. Both Admiral Harold R. Stark, Chief of Naval Operations, and Rear Admiral Ben Moreell, Chief of the Bureau of Yards and Docks, recommend an additional appropriation of $2,500,000 at this time to adequately equip Hunters Point for the repair of larger naval vessels.

The special board on Hunters Point drydocks, in its report to the Secretary of the Navy, made particular reference to inadequate drydock facilities on the Pacific coast, as follows:

Studies of shipbuilding and drydock facilities, both naval and commercial, show that on the Pacific coast there are at the present time only one existing naval drydock and another under construction which will accommodate battleships and aircraft carriers. (Dock No. 3, at Hunters Point, which is a commercial dock, is not taken into consideration for reasons which will be made apparent in the next paragraph.) Both of these docks are located at the Puget Sound Navy Yard, Bremerton, Wash. In other words, in a coast line some 1,260 miles long, naval facilities for docking our capital ships exist at only one point, namely, the northern terminus of our coast line. Except during the summer months, operations of the fleet are carried on at least 1,000 or more miles to the southward of this point. This means, in effect, that for the greater part of the year any of our major ships requiring regular or emergency docking in naval docks must steam on the order of 2,000 or more miles. With excellent facilities available in the San Francisco Bay area, such a procedure is economically unsound. Furthermore it is illogical to presuppose that, in the event of a national emergency, concentration of all of our major ships would take place at only one point, and that point the most northern one, of our Pacific frontier. Thus, both from economic and strategic viewpoints, the establishment of a naval drydock capable of taking care of our capital ships in the San Francisco Bay area is fully warranted. * * *

The power-length ratios of naval vessels are many times greater than those of commercial vessels and, as a consequence, the normal commercial yard does not have the shop capacity nor the weight-handling equipment which are essential for proper overhaul of naval vessels. As was pointed out, the Hunters Point dock is lacking in even the minimum essential facilities for minor overhaul and the present owners have failed to provide these facilities on the ground that the income from their plant does not warrant the necessary expenditure.

There are two graving docks at Hunters Point—the larger of the two will dock any ship that can pass through the Panama Canal. The smaller dock can accommodate ships of the cruiser type.

Hunters Point drydocks in San Francisco Bay and the Bremerton Navy Yard drydocks are the only docking facilities along our entire Pacific coast—extending more than 2,000 miles from Canada to Mexico—which are capable of handling large ships, such as men-of-war, airplane carriers, or large merchant ships, for repairs. The Hunters Point drydocks are advantageously located about midway between the Canadian and Mexican borders, while the Bremerton facilities are 815 miles north of San Francisco Bay. As a matter of fact, if you will follow the great triangle extending from the Aleutian Islands to Hawaii and thence to the Panama Canal, often referred to by the Navy Department, there are only four drydocks within the triangle—two on the Pacific coast, one at Pearl Harbor, and one at the Panama Canal.

The Mare Island Navy Yard, located on the northerly end of San Francisco Bay, under normal conditions employs approximately 3,000 men. Today there are over 17,000 men employed in that yard. This force is being increased daily. By reason of inadequate housing facilities, thousands of men journey miles to their employment in this particular navy yard. There are men living in the vicin-

ity of Hunters Point who travel daily to the Mare Island Navy Yard, making a 60-mile round trip back and forth to work, necessitating the payment of four bridge tolls. It is estimated that 75 percent of the work at the Mare Island Navy Yard is reconditioning and repairs. This is the very purpose for which the Government purchased Hunters Point—to recondition and repair the larger ships f the Navy.

It should be known and without any intended reflection on the Mare Island Navy Yard, which was built on the upper end of San Francisco Bay during a period before vessels of the present draft were contemplated, that 30 percent of the present tonnage of our Navy could, under no circumstances, be taken to the Mare Island Navy Yard for repairs.

The Navy which is the first line of our national defense consists of three links—the Navy, the merchant marine, and facilities to build, dock, and repair ships, all of which are interdependent upon each other.

Regardless of the warning of the highest naval authorities for years, including the recent statement by that eminent authority on naval affairs, former Chief of Naval Operations, William D. Leahy, the Bureau of the Budget disregarded these appeals and warnings and eliminated the reasonable request for an appropriation of $2,500,000 to complete the necessary equipment of Hunters Point.

Based upon my own lifetime study of these Pacific coast marine matters, I most urgently recommend Congress appropriate these funds that the Hunters Point drydock facilities may in fact become the great defense asset intended.

Payment to the San Carlos Apache Indians

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

MEMORIAL FROM THE ARIZONA STATE LEGISLATURE

Mr. MURDOCK. Mr. Speaker, throughout the Seventy-fifth and Seventy-sixth Congresses I have endeavored to get through a measure which would correct a mistake made by our Government in regard to some lands lying south of the Gila River in Arizona and known as the San Carlos strip. This legislation is needed to deal justly by the Indians and also certain white settlers who are now occupying the land. We did pass the bill early in the Seventy-sixth Congress but in such a form as to merit a Presidential veto. On February 14, 1940, the House gave further consideration to this legislation, which had passed the Senate and been several times reported out unanimously by the House Indian Affairs Committee. This legislation has again been introduced, and the following memorial from the Arizona State Legislature requests favorable action on it at this time.

The memorial is as follows:

House Concurrent Memorial 2

Concurrent memorial relating to authorization by Congress of payment to the San Carlos Apache Indians for lands ceded by them and the reopening of the lands to location and entry

To the Congress of the United States of America:

Your memorialist respectfully represents:

A bill (S. 254) is now pending in the Congress to authorize payment to the San Carlos Apache Indians for the lands ceded by them in the agreement of February 25, 1896, and reopening the lands to mineral entry and making them a part of the public domain.

The bill in question is designed to rectify errors made by governmental agencies in permitting citizens to homestead lands in the so-called San Carlos strip and in issuing patents to the State of Arizona and leases to other persons for lands therein, whereas under the agreement above referred to the land shoul' have been opened to mineral entry only.

The proposed bill appears to provide the only equitable method of preserving the rights of all parties concerned, and all parties concerned favor passage of the measure. It is unjust that citizens who have expended much time and money in developing lands in the San Carlos strip should be ousted therefrom when the fault lies not with the citizens but the governmental agencies. It is likewise unjust that the lands be used without compensating the San Carlos Apache Indians therefor; and it appears that, if other settlement be not soon made, the Indians and the Indian Service will demand complete restoration of the lands involved.

Wherefore your memorialist, the House of Representatives of the State of Arizona (the Senate concurring), prays, That the Congress of the United States speedily enact S. 254, authorizing payment to the San Carlos Apache Indians for lands ceded by them, and reopening those lands to mineral entry, in order to settle for all time the confusing and conflicting claims to the lands, and to do justice to all parties.

Kenneth Farrand Simpson

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

Mr. REECE of Tennessee. Mr. Speaker, one of the saddest sights to me in Washington is that of this Capitol when the flags are flying at half mast.

There is nothing morbid about my feeling, and it certainly is not fear. Rather I find myself musing about the shattered dreams, the broken plans, and the unfulfilled intentions of some late and lamented colleague who may or may not have been a close friend or associate. For, only a few mortals in the eleventh hour of their life have been privileged to cry out in all truth:

My work is done. I have carried out all my plans and ambitions.

That more of us are not enabled to do that is perhaps the greatest tragedy of life. Perhaps it is fate, perhaps it is our own fault, because we have somehow failed to use fully each shining minute and hour that life placed at our disposal. I do not know. I do not expect to ever know in life.

What I do know is that when my friend Kenneth Farrand Simpson died recently, a useful life was shattered in midflight. Still gloriously young, he had apparently ventured only a few steps toward his goal of great usefulness to this Nation. His service as a soldier and his great serevice to his Nation and party had only whetted his ambition to one day work harder among us and help make the Nation's laws and play his part in guiding us toward more peaceful intercourse with other nations.

I had ample chance to study him closely and to learn his ideals. I found him high-minded, eager, intensely devoted to his party and strikingly loyal to his friends. Party meant much to him. We owe him much for having infused such tremendous energy and revitalizing influence in again making his party a powerful factor in governmental affairs—city, State, and Nation.

At 45, Kenneth Farrand Simpson had gone far along the road of life. At 45 he had gone farther in fact than many of us here assembled may have the privilege of going. How close he came to his ultimate goal none of us can know, but if he could speak it would be to urge us on to our best and to be loyal to our dreams and faithful to our ideals.

He was that way on earth and the fact death has removed him from us does not seem to dim the courage his presence seemed to ever infuse.

The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

AN ANALYSIS OF AGREEMENT PERTAINING TO THE ST. LAWRENCE SEAWAY

Mr. BEITER. Mr. Speaker, a cursory glance through the context of the new agreement between Canada and the United States for the construction of what has become known as a St. Lawrence seaway, would indicate that there is very little difference between that and the proposed treaty of 1938 for the same project.

I have studied the new agreement carefully, comparing it with the proposed treaty of 1938, and find some significant changes in phraseology, meaning, and intent. There are many of my colleagues who would be interested in this analysis, I believe, and therefore, under leave to extend my remarks in the RECORD, I include the following which sets out article by article, the provisions cited in the proposed treaty of 1938, and those in the present agreement:

St. Lawrence Seaway and Power Project

Agreement of 1941	Proposed treaty of 1938
Article I	
The Commission: Article I of the agreement calls for the establishment of a Great Lakes-St. Lawrence Basin Commission consisting of not more than 10 members of whom an equal number shall be appointed by each Government. By an exchange of notes the Governments may change the number of members on the Commission, provided, however, that an equal representation of each Government be maintained (subpar. 1, 4). The Governments, by an exchange of notes, shall prescribe rules and regulations for conduct of the Commission, and may extend or abridge its powers and duties, and upon completion of its duties, may terminate its existence (subpar. 4).	The Commission: Same as in agreement 1941.
Divisions of work: The Commission is to allocate construction to the two Governments in such a way that each Government shall construct the works within its own territory or an equivalent proportion in the International Rapids section (subpar. 1-b).	Division of work: Same as in agreement 1941.
Other duties of Commission: To prepare plans and specifications for construction work in the International Rapids section, in accordance with controlled single-stage project (238-242) for works in the International Rapids section; to approve all contracts in behalf of the Governments for works in the International Rapids section; supervise construction, and submit annual reports to the Governments, on the progress of the works; to certify to the Governments upon completion of the works, and perform other duties assigned to it, by the agreement.	Other duties of Commission: The Commission could prepare plans and specifications in the International Rapids section in accordance with any one of the projects described in the report of the joint board of engineers with appendixes, dated July 13, 1927. It provided, however, that any modifications, which might be agreed upon, of any joint board of engineers' plan, could not increase the proposed total cost of the project as estimated in the aforementioned joint board of engineers' report. This discretionary power differs from the single project (238-242) called for in the current agreement. This article also stipulated the Commission was to serve as an advisory body to the two Governments for the purpose of coordinating all plans for the comprehensive development of the Great Lakes-St. Lawrence Basin. This is not included in the present agreement. The remaining duties were the same as present agreement.
The countries further agree: The Commission shall have authority to employ such persons and make such expenditures as may be necessary; may avail itself of governmental agencies, officers, etc., as may be available; that remuneration and general expenses, etc., of its members shall be paid by the respective Governments and that other expenses of the Commission except as provided for in Article III shall be borne by the Governments in equal moieties (subpar. 2).	The countries further agree: The provisions are the same, with the exception that no mention was made as to the manner of remuneration for general expenses of the general Commission, etc.
Both Governments agree to permit entry into their countries within the work areas involved in the agreement—International Section, Niagara River Section—of personnel necessary to carry on the work and to exempt such personnel from the operation of their immigration laws and regulations within those areas. The same thing applies in the case of materials, should the Commission allocate certain construction works for one Government to perform in the territory of the other Government (subpar. 3).	The same provisions were made to cover exemption of immigration laws from customs, excise, and other imposts, whether Federal, State, or Provincial.
Article II	*Article II*
Financial obligations of Canada: According to this article, Canada agrees to construct works in the international rapids section allocated to Canada by the Commission, and to operate and maintain or arrange therefor, works situated within Canada (subpar. a). Canada further agrees to complete at a date not later than December 31, 1948, the Canadian links in the seaway, including the Welland Canal deepening, providing, however, that war conditions or defense requirements justify a modification of this period of time when Canadian work shall be completed, the Governments may, by exchange of notes, defer or expedite their completion (subpar. b).	Financial obligations of Canada: The provisions were just the same. The date of completion was set at not later than December 31, 1949. The proviso for deferment of Canadian work was not included.
Article III	*Article III*
Financial obligations of the United States: According to this article, the United States agrees to construct works in the international rapids section allocated to the United States by the Commission and to operate and maintain or arrange therefor, works situated within the United States (subpar. a). The United States further agrees to supply funds for the construction, design, and supervision, of all works in the international rapids section, with the exception of machinery and equipment for the development of power and for rehabilitation works on the Canadian side (subpar. b). The United States also agrees to complete work in the international rapids section and in the Great Lakes system above Lake Erie at a date not later than the date of completion of the Canadian links of the seaway (subpar. c).	Financial obligations of the United States: The provisions were just the same.
Article IV	
Development of power in the international section: The Governments agree they may install or arrange for installation of such machinery as may be required for the development of power at such time as may be most suitable in respect to their power requirements (subpar. a). The Governments agree, in view of the need for coordination of plans for the development of power in the International Rapids section, that the Commission may arrange for engineering services in either country with any agency authorized to develop power in that section of the St. Lawrence (subpar. b). Permitted diversions: Except as modified by article VIII, the Governments agree each country shall be entitled to the use of one-half of the water available for power in the International Rapids section (subpar. c). Control of flow in International Rapids section: The Governments agree that the flow of water through the International Rapids section and out of Lake Ontario shall be so controlled and regulated as to maintain present depths of water for navigation and shipping purposes in the harbor of Montreal and the navigable channel of the St. Lawrence River below that city, and so that power developments in the Canadian section of the St. Lawrence River shall not be adversely affected (subpar. d). Test period required: Upon completion of the works they shall be operated with the maximum water level held at 238.0, sea level datum, for a test period of 10 years, or shorter period as may be approved by a board or authority established under provisions of paragraph (f) of article IV. Should the board decide the maximum water could practicably exceed 238.0, the Governments may, by exchange of notes, subject to the terms in the notes, authorize an operating elevation exceeding 238.0 (subpar. e). Board to control diversions, regulate flows, etc.: The Governments may, by exchanging notes, provide for a board or authority to control or supervise the diversion of water in the International Rapids section, to regulate the flow out of Lake Ontario and through the International Rapids section of the St. Lawrence River, and to report on the feasibility of increasing the head under which the power plants at the International Rapids section may operate (subpar. f). Provisions for 14-foot canal: During construction of works in the International Rapids section adequate facilities for maintaining existing 14-foot navigation in that section shall be provided (subpar. g).	
Article V	
Ownership of works constructed: Nothing in the agreement confers upon either Government proprietary, legislative, or administrative, or other jurisdiction in the territory of the other, and they agree that all works constructed under the agreement's provisions shall constitute a part of the territory in which they are situated.	

PROPOSED TREATY OF 1938	AGREEMENT OF 1941	PROPOSED TREATY OF 1938
In this proposed treaty, the United States did not have to pay for the powerhouse superstructures nor the side canals and locks located on the Canadian side as in accordance with the present agreement.	*Article VI* Other canals permitted: Either Government may construct alternate canals and channels for navigation in the International Section, or in waters connecting the Great Lakes, within its own territory, at any time. Water may be utilized for such purposes.	*Article VI* Other canals permitted: The same provision was included excepting that approval of the Commission was required.
Provisions just the same.	*Article VII* Rights of navigation in St. Lawrence River and Great Lakes system: Both Governments agree that the Great Lakes and St. Lawrence River system, notwithstanding the provisions for termination contained in any treaties, shall be open for navigation to the citizens or subjects, ships, vessels, and boats of each Government.	*Article VII* Rights of navigation in St. Lawrence River and Great Lakes system: In this article the following quotation appeared: "Nothing in this article or in any other article of this treaty shall be construed as infringing or impairing in any way the sovereignty of the United States of America over Lake Michigan." The remaining provisions as to navigation were included.
Article IV Development of power in the international section: The provisions were just the same with the exception that the article stated the Governments might construct powerhouses as well as install machinery at such time as their requirements for power might dictate.	*Article VIII* Diversions: Each Government within its own territory must measure the quantity of water diverted from or added to the Great Lakes system. It shall file such records with the other Government semiannually (subpar. a).	*Article VIII* Diversions: Same provision.
The Governments agree that the Commission shall arrange for engineering services with any agency in either country authorized to develop power in the International Rapids section.	Other diversions allowed: Each country has the exclusive right to use boundary waters in quantities equivalent to any waters diverted into the Great Lakes system from watersheds lying wholly within their particular country at all points below the point of entry of such waters added to the Great Lakes system from other watersheds (subpar. b).	Other diversions allowed: Provisions were substantially the same.
Permitted diversions: This article provided that the equal diversion of water for power purposes in the International Rapids section was to be controlled daily.	If either Government authorizes diversions—except as permitted in the preceding paragraphs—they agree to give immediate consideration to any objecting representations made by the other Government. It is agreed that should it be impossible to otherwise reach a satisfactory settlement, that the matter will be submitted to an arbitral tribunal which shall be empowered to direct such compensatory and remedial measures as it may deem just and equitable. The arbitral tribunal shall consist of three members—one appointed by each Government and a third, the chairman, selected by both Governments. This applies to any diversion made in excess of that permitted in either country on January 1, 1940 (subpar. c).	Instead of this section applying to diversions in excess of those permitted on January 1, 1940, it stipulated that water should not be diverted through the Chicago Drainage Canal in excess of the amount established by the Supreme Court by decree rendered April 21, 1930, and that diversion through that canal would have to be reduced to that amount by December 31, 1938. Any diversion made in excess would be considered "emergencies," and in the event the Canadian Government took exception, the matter was to be submitted for final decision to an arbitral tribunal, similar to the provisions proposed in the new agreement. The proposed treaty also stipulated that no diversion of water other than that referred to in connection with the Chicago Drainage Canal would be permitted to another watershed unless approved by the International Joint Commission.
Control of flow in International Rapids section: The provisions were just the same with the exception that no mention was made concerning the control of flows through the St. Lawrence River International Rapids section so as to not adversely affect power developments in the Canadian section of the St. Lawrence River.		Compensatory and regulatory works: Provision just the same.
Test period required: No such provision appeared.	Compensatory and regulatory works: The Commission is required to report upon the desirability of regulatory and compensatory works in the Great Lakes system and should the Governments approve these, prepare plans and specifications for the works and recommend allocation of their costs. The Governments are to make arrangements for their construction through exchange of notes (subpar. d).	
Board to control diversions, regulate flows, etc.: No provision for this board or authority.	*Article IX* The Niagara Falls project: The Commission shall prepare plans and specifications for works in the Niagara River, taking into account the recommendations of the Special International Niagara Board. These works are to distribute and control waters of the Niagara River so as to prevent erosion and enhance the scenic beauty of Niagara Falls.	*Article IX* The Niagara Falls project: Provisions were substantially the same.
Provisions for 14-foot canal: Not directly mentioned in proposed treaty but included in the plans of the International Joint Board of Engineers, one of which by terms of the treaty had to be substantially followed.	The Governments may make arrangements by exchange of notes for the construction of such Niagara River works, including temporary diversions to facilitate construction. The cost shall be borne in equal moieties.	The provisions were the same with the exception that the Governments were required to make arrangements for the construction works. The remaining provisions were substantially the same.
Article V Ownership of works constructed: Provision is just the same.	Notwithstanding amounts specified in article V of the Boundary Waters Treaty of 1909, the United States may authorize an additional diversion within the State of New York, above the Falls, at a rate not exceeding 5,000 cubic feet of water per second, and Canada may, within the Province of Ontario, divert a like amount, upon completion of the Niagara River works.	Provisions the same.

AGREEMENT OF 1941	PROPOSED TREATY OF 1938
The Commission is required to test Niagara River construction works under a wide range of conditions and to certify to the Governments the effect of such works and make recommendations respecting water diversions. In doing so, the Commission shall take special cognizance of scenic beauty of the Falls and rapids, the requirements of navigation on the Great Lakes system, and efficient utilization and proportionment of waters for power purposes. The Governments may, by exchanging notes and concurrent legislation, determine the methods by which these purposes may be attained.	The provisions were the same excepting that the Commission was required to report on the equal and equitable diversion for power purposes, rather than just the efficient and equitable as in the present agreement.
Article X	*Article X*
Claims: Each Government agrees that provisions for the disposition of claims and satisfaction of valid ones occurring in the territory of the other in connection with construction by such Government of works authorized by the agreement, shall be made (subpar. a). Each Government is released from responsibility for damage or injury to persons or property in the territory of the other caused by any action authorized by the agreement other than damage or injury covered in the preceding paragraph (subpar. b). The governments agree that each will assume responsibility and expense in acquisition of lands required to carry out the agreement.	Claims: No provisions made for these claims. Provisions were substantially the same.
Article XI	*Article XI*
Ratification: The agreement is subject to the approval of the Congress of the United States and the Parliament of Canada. Following such approval it shall be proclaimed by the President and ratified by the King of Great Britain. It shall become effective on the day of exchange of the instrument of ratification and a copy of the proclamation which shall take place at once.	Ratification: The treaty shall be ratified in accordance with the constitutions of the two governments. Same provisions.

Wisconsin Legislature Wants More Dairy Products Served to Our Armed Forces

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

RESOLUTION OF THE LEGISLATURE OF WISCONSIN

Mr. GEHRMANN. Mr. Speaker, in the permission given me to extend my remarks I wish to include a joint resolution passed by the Wisconsin Legislature memorializing the President of the United States, the Congress, the Secretaries of War and the Navy to provide our armed forces with adequate dairy foods.

I have previously taken this up with the Secretary of War and was advised that the daily cheese allowance is one-fourth ounce per enlisted man. We in Wisconsin, where more than 50 percent of the Nation's cheese is produced and where we know the value of good cheese in the daily diet, feel that this one-fourth of an ounce of cheese per day is not playing fair with the dairy industry, which is by far the largest single agricultural industry in America. I am certain that all the boys from Wisconsin serving in the armed forces would eat several times that amount if it were available.

While I have been advised by the Quartermaster General that the boys are given a liberal allowance of milk, I still feel that a great many men would rather drink milk than either coffee or tea if it were permissible for them to choose. Certainly no food or combination of foods comes nearer to being a balanced ration than does good clean milk from healthy cows. I am certain that our Wisconsin Legislature would not have passed this resolution if they did not have facts upon which it is based, namely, that many Wisconsin men have let it be known that they would like more dairy products in their daily ration.

Why not give them what they like best? I am sure that nobody will object. They deserve the best we can give them, even if the cost should be a trifle higher than it is at present.

The resolution follows:

Assembly Joint Resolution No. 4

Joint resolution memorializing Congress, the President of the United States, the Secretary of War, and the Secretary of the Navy to use their offices, powers, and influence to cause our armed forces to be furnished with adequate dairy foods.

Whereas it appears that oleomargarine is used almost to the exclusion of butter, cheese, and other dairy products in feeding the armed forces of the United States; and

Whereas it is common knowledge that dairy products are far superior in food value to any substitutions; and

Whereas it is desirable that the industrial benefits from the defense program be distributed uniformly throughout the Nation; and

Whereas the dairy farmer has not received his equitable share of the increased business resulting from the defense program or any previous Federal program: Now, therefore, be it

Resolved by the assembly (the senate concurring), That this legislature respectfully memorializes the Congress of the United States, the President of the United States, the Secretary of War, and the Secretary of the Navy to use their offices, powers, and influence to cause our armed forces to be furnished with adequate dairy foods; and be it further

Resolved, That properly attested copies of this resolution be transmitted to the President of the United States, the Secretary of War, the Secretary of the Navy, to both Houses of the Congress of the United States, and to each Wisconsin Member thereof.

VERNON W. THOMSON,
Speaker of the Assembly.
ARTHUR L. MAY,
Chief Clerk of the Assembly.
WALTER S. GOODLAND,
President of the Senate.
LAWRENCE R. LARSEN,
Chief Clerk of the Senate.

The Power Situation in the Northwest

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

LETTER FROM THE SECRETARY OF THE INTERIOR TO THE EDITOR OF THE PORTLAND (OREG.) DAILY JOURNAL

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication sent recently by the Secretary of the Interior to the editor of the Portland (Oreg.) Daily Journal:

[From the Portland (Oreg.) Daily Journal of March 21, 1941]

A LETTER FROM THE SECRETARY OF THE INTERIOR OF THE UNITED STATES

WASHINGTON, *March 14, 1941.*

To the EDITOR OF THE JOURNAL:

I have read the editorial appearing in the Oregon Daily Journal on March 6, in which you discuss my recent statement relative to Governor Sprague and the power situation in the Northwest.

I will not seek to match the malapert invectives employed by you, as apparently you excel in that field. However, I feel called upon to analyze a few of your statements and to present, if you will accord my letter space in your newspaper, a few of the facts involved.

The Honorable WALTER M. PIERCE, former Governor of Oregon, said in the House of Representatives on March 6 (the date of your editorial) that "Under pressure of defense this great monopoly (the Aluminum Co. of America) has attempted a repetition of its wicked and scandalous monopolization of Niagara power. It would now monopolize, for a single private industry, the present

available power of the greatest power stream on earth. There is a perfect setting for this proposed monopolization—a Governor ready to fight for Alcoa, a complacent State utilities commissioner, and a legislature controlled against public power. A subservient press streamlines the effort."

I would emphasize that this analysis of the situation was made by an honored citizen of Oregon who has received repeated votes of confidence from the citizens of that State.

Had I not renounced any effort to match you in the employment of invective and innuendo, I would be tempted to call attention to the Congressman's concluding sentence: "A subservient press streamlines the effort." I cannot, for the same reason, now dwell upon the application of that statement to your editorial. Nor can I now speculate on the reason for the omission from your editorial of any reference to the more than $1,000,000 spent since 1935 by the privately owned utilities in attempts to influence elections in the Northwest. I will, therefore, reserve for another occasion the observation that it appears to have been spent in an effective manner.

You state that "what irked and alarmed Governor Sprague, Mayor Riley, of Portland, and many others in Oregon was not so much what Mr. Ickes did in refusing Alcoa additional power but the high-handed and arbitrary manner in which he did it." The law governing the administration of Bonneville was passed by the elected representatives of the people, including many of those from Washington and Oregon. That law provides that we shall "prevent the monopolization thereof (the power generated by Bonneville) by limited groups."

Simple arithmetic demonstrated that Alcoa, if its request for more power had been allowed, would have a monopoly of the power available for industrial consumers. In fact, Alcoa, if we had granted its request, would have under contract, for an indefinite period, 55 percent of the ultimate installed firm capacity of Bonneville.

What, then, was high-handed or arbitrary in refusing the request for more power? We could not do otherwise under the law. To determine that two and two make four may be arbitrary and high-handed, but it is the right answer.

Is it, in your opinion, high-handed and arbitrary to enforce the law? Or is it high-handed and arbitrary only when its enforcement is felt by monopolies?

Although the Aluminum Co. of America was denied additional power, as required by law, another company, the Reynolds Metals Co., was enabled to commence operations in the same area. The power available for industrial purposes will, therefore, be fully utilized.

Do you not believe that the diversity of interests resulting therefrom will contribute to the economic stability of the Northwest? That is one of the benefits contemplated by that section of the law which precludes monopoly.

Perhaps light can be thrown on your position respecting monopoly by an observation derived from one of your statements.

You say that "Westerners were pioneering in the power field before Mr. Ickes knew the difference between A. C. and D. C." Perhaps that is so. But I am versed in economic philosophies and yours smacks of that in vogue in B. C.

In another choice bit of vitriol you suggest that "The West neither needs nor wants a tin-crowned Washington bureaucrat to give it lessons in power utilization or to crack the whip and yell 'Giddyap! Whoa!'" Your individual preference, apparently, is for a gold-plated Wall Street market manipulator who will crack the whip for eastern-controlled holding companies.

I doubt if sober analysis of your editorial by you will result in any pride of authorship, for you say, in effect, that the West does not want the Federal Government to construct such projects as Bonneville, Grand Coulee, and Boulder Dam. Or is your position that, now that they are constructed, or nearing completion, you want the Federal Government to turn them over to the holding companies for exploitation?

I stand, as I have always stood, for the development of these resources by and in the interests of the people, as determined by the Congress; not by and in the interests of monopolies. I will administer the law as passed by the Congress; not as interpreted by those who serve a private interest.

So,

"Lay on, Macduff;
And damn'd be him that first cries, 'Hold, enough!'"

Sincerely yours,

HAROLD L. ICKES,
Secretary of the Interior.

Flanner House of Indianapolis—An Institution of Unique Characteristics That Might Well Serve as a Pattern for Other Industrial Centers

---

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1941

Mr. LUDLOW. Mr. Speaker, in the city of Indianapolis, in the district which I have the honor to represent in the Congress, there is an institution which has demonstrated a great capacity for service in improving conditions among our colored people and which may well be considered and evaluated as an example of what might be accomplished by similar institutions located in other centers of population.

This institution is known as the Flanner House, and its function is to prepare Negroes for practical service along the lines of their various aptitudes. It derives its name from Frank W. Flanner, a philanthropist of far-seeing vision, who donated three lots and a building to establish the institution which was founded in 1898 by a group of white and colored citizens to meet a specific social need among colored persons.

Since 1925 more than 2,500,000 southern Negroes have moved into the industrial North. Thousands of them came to Indianapolis in response to the great demand for unskilled labor which followed immediately after the first World War. A recent study of our local problem indicates that 88.5 percent of all Negro family heads were not natives of Indianapolis. Most of them, because of their background, were not fitted for life in a large industrial community. With the coming of the depression they found themselves out of work and untrained to meet the keener competition for jobs. They became a problem to themselves and consequently to our community.

PROBLEM CREATED IN ALL INDUSTRIAL CENTERS

This trend has indeed created a real problem, not only in Indianapolis but, broadly speaking, in all of the industrial centers of the North. In Indianapolis the answer has been found in the Flanner House, which, during 43 years of service, has been working unceasingly and intelligently toward the solution of this problem arising from Negro migration northward, which has become especially acute during the last 15 years. Through it the interests of many of our Indianapolis people of both races have been directed toward making a larger proportion of Negro citizens self-supporting and self-reliant. By promoting Negro welfare, Flanner House has been markedly successful in promoting the welfare of our community as a whole. Through the interest of the Board of Trustees, composed of prominent local citizens, white and Negro, a most efficient staff has been built up, capable by training and experience to direct its work effectively, with Cleo W. Blackburn at its head as superintendent. Frank B. Flanner, an outstanding businessman of Indianapolis, is president of the board of directors. The vice president of the board is F. B. Ransom, a nationally known leader of the colored race. There are 22 members of the board of directors and 69 members of the advisory committee, comprising solid, substantial men and women of both races. Governor Henry F. Schricker, of Indiana, and Mayor Reginald H. Sullivan, of Indianapolis are among the members of the advisory committee.

A THREE-FOLD PROGRAM

The essentially rural background of our Negro population has made it necessary that Flanner House offer a three-fold program, as follows:

First. Education for living in a large industrial city.

Second. Vocational training to enable this group to earn its living.

Third. Leadership training to the end that their efforts as citizens may be directed in the best channels.

The main purpose of Flanner House is to train Negroes along practical lines, thus enabling them to take their part in the activities of the workaday world and assuring them of the happiness and self-respect that come from self-support and a realization of the Negro's best opportunities for service.

The institution maintains vocational training departments of various kinds, an employment department, which is one of its most valuable instrumentalities of service; a health department; social service department, and so forth.

In my home city and State Flanner House is at this time very much in the public eye because of a drive just recently begun to raise a fund to construct a new institutional building. This drive is in most competent hands. Harry V. Wade is the general chairman of the campaign; Russell W. McDermott is chairman and Mrs. Kin Hubbard, widow of the distinguished humorist, vice chairman of the special gifts division.

PLANS FOR NEW BUILDING

The new Flanner House will be equipped to attack the great problems of poverty, sickness, dependency, and crime.

It is planned as a modest fireproof building which will serve as headquarters for important city-wide activities of the agency.

The new building will provide for a vocational-training program, including woodwork, metal crafts, sewing, laundering, maid craft, cooking, and training of gardners, chauffeurs, housemen, and caretakers; teaching upwards of 600 young men and women a year as against 250 in the present quarters. This at no additional cost.

The new building is designed to provide for an adequate up-to-date nursery and nursery school to care for more than 100 youngsters of working mothers. Currently, facilities for this important work are almost completely worn out and the present cramped quarters provide no isolation room, no adequate bathing facilities and no equipment for an education program.

The new Flanner House through its expanded recreational facilities will be a powerful agent in the prevention of delinquency and crime by keeping Negro youth wholesomely occupied during leisure hours. In the new building will be a gymnasium-auditorium which will make available recreational facilities to hundreds of boys, girls, and adults not now being served.

Last year the 4 health clinics at Flanner House served approximately 1,000 different patients. The new building will make available medical and dental clinic services for more than 2,000 persons annually. This expanded program will have a direct bearing upon general community health.

In 1940 the Flanner House free employment department received 21,000 applications for jobs. Although operating in woefully overcrowded quarters, the department was able to place 6,500 applicants. The new building is designed to expand this department, rendering more efficient service to employer and employee alike, and removing hundreds of additional families from relief rolls. Here, indeed, the well-known Flanner House tradition—helping others to help themselves—will find its full expression.

The decision to build a new Flanner House was reached only after more than 2 years of careful research and analysis on the part of representative Indianapolis citizens.

The financial objective of the building program, $150,000, will make possible grounds, building, equipment, and necessary maintenance.

BOOTH TARKINGTON'S TRIBUTE

Booth Tarkington is a warm friend of Flanner House, and I quote a statement made by him a few days ago, entitled "Flanner House," as follows:

"United we stand, divided we fall" is a familiar statement of a truth recognized by all Americans. We know it is true, and especially in this year of 1941 we know that its truth is being tested and that if we don't strongly unite in friendly cooperation with one another, it's not impossible that we may weakly slip into cruel divisions fatal to all of us. Flanner House in Indianapolis is a bright and encouraging symbol of the sort of voluntary union that helps to keep us strong; and the fact that in this serious year Flanner House plans to expand is a good omen, indeed. Every citizen of Indianapolis who has at heart the welfare of Indianapolis Negroes knows something of the sturdy influence of Flanner House, where colored people are helped sensibly—taught how to make themselves useful and self-supporting and self-respecting, and therefore happier. Even more important, however, than its provenly successful work of turning helpless Negro citizens into capable Negro citizens is the fact that Flanner House is by no means merely a charity supported by richer white people for the alleviation of the lot of poorer colored people. No; Flanner House is the result of the united efforts of those enlightened colored people and white people who have what has been called educated hearts, and who, working together in good will, contributing together their time, intelligence, and money, have made Flanner House valuable to the life of their city.

Indianapolis can benefit now from a greater, a larger Flanner House; and if we generously manage to give that to ourselves, we shall also be contributing in no small measure to the all-American defense that first and last depends upon our being one people indivisible.

MY TELEGRAM TO MR. M'DERMOTT

Mr. Speaker, in conclusion permit me to say that I, too, have a great heart interest in Flanner House because I know the well-springs that motivate it. I have witnessed it in operation over a long period of years and I have seen much good come from its beneficent activities. On the opening day of the drive I sent to Mr. McDermott the following telegram, which expresses my true and sincere interest in the project, based on personal observation:

WASHINGTON, D. C., *March 14, 1941.*
Mr. RUSSELL W. MCDERMOTT,
Indianapolis, Ind.:

Flanner House is a credit to our community, to our State, and to our Nation. Every dollar invested in it is an investment in human progress and human happiness. It is an investment to help to make the world better. I am sure that our people recognize the value of Flanner House and its beneficent activities, and regard it as a splendid community asset, and I hope that all who can render assistance in the drive that is now beginning will exercise the utmost liberality in supporting it. I would have been greatly pleased if I could have returned to Indianapolis to be with you today and to testify by my presence to my great interest in Flanner House, and the movement in its behalf, of which you are a chosen leader. Although my exacting committee duties make it impossible for me to leave Washington at this time my heart is with you, and I am wishing you the utmost success in your drive.

LOUIS LUDLOW.

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

ARTICLE BY JAY FRANKLIN

Mr. KILBURN. Mr. Speaker, the St. Lawrence seaway and power project is one of the soundest economical and practical proposed developments which will come before this Congress. I ask unanimous consent to have printed in the RECORD an article by Jay Franklin, which appeared in the Washington Evening Star on Monday, March 24, 1941, and which gives a new angle on the subject:

[From the Washington Evening Star of March 24, 1941]

Behind the Government's decision to push through the St. Lawrence seaway and power project as a part of national defense lies the realization that a shortage of industrial power has been driving industry out of New York State.

The proposed development on the International Rapids will harness 1,100,000 horsepower of hydroelectric energy, while nearly 800,000 additional horsepower will be tuned in at Niagara Falls for American use, with comparable amounts available to Canada. This will constitute the largest single source of hydroelectric power in the world.

The release of this energy, which will largely be for use in New York State, will make possible a 25 percent reduction of rates, with annual savings to industries and private consumers of about $26,000,000 annually. This represents a "social investment" of nearly $900,000,000, capitalized at 3 percent, as against a total cost to the United States Government for the combined power and seaway project of $166,000,000. While the engineering estimates are not conclusive, the costs have been allocated as follows: Of the $266,000,000 required to complete the works at the International Rapids, $150,000,000 is to be contributed by New York State ($90,000,000) and Canada ($60,000,000) in return for power allocations. While Canada undertakes to deepen the Welland Canal, the United States Government will spend $50,000,000 to dredge the 86-mile stretch of the Detroit and Lake St. Clair Rivers and the 63-mile stretch (including a new lock) on St. Marys River at Sault Ste. Marie.

JOBS FOR 50,000 WORKERS

The need for this additional power in New York State—to convert the St. Lawrence into an industrial pistol aimed at Hitler's new Europe—is shown by studies of the St. Lawrence survey. Since 1919 manufacturing employment in New York State has dropped from 1,228,000 to 996,000 in 1937. This decline is partly due to failure to develop industrial power. In the 10-year period, 1927–37, while the United States as a whole increased its hydro capacity by 54.7 percent, New York State increased by only 12.4 percent.

So far as labor is concerned the St. Lawrence-Niagara project is expected to create industrial jobs for 50,000 more workers than could be served by the alternative plan for steam-power generation, with savings equivalent to the economic support of a community of 25,000 people. So far as the farmers are concerned the electricity to be distributed by the New York State Power Authority will be available at savings equal to two-thirds of the present rates—with corresponding advantages to the dairy industry and to residential consumers.

Following hard on the St. Lawrence agreement will come the pending proposals for an Arkansas Valley Authority, to create industrial power west of the Mississippi River. This also has a defense angle, since the greatest and best deposits of bauxite are located in Arkansas and the production of aircraft can be economically decentralized once the industrial power is made available by developing the hydroelectric resources of the Arkansas River.

SELF-DEFEATING "LOGIC"

As with the original Federal power development at Muscle Shoals, the national-defence emergency provides an occasion to undertake developments which a more far-

sighted national policy would have undertaken in time of peace. The argument that it is too late to develop these great assets now must be balanced against the argument heard in 1934 (when the Senate rejected the first St. Lawrence Treaty), that there was no need for additional power at that time. To accept this self-defeating "logic" would be to condemn the country as a whole to continuous frustration and to the ultimate failure of dynamic democracy.

National defense is a pretty big tent, and this is a pretty big enterprise, but the Roosevelt administration is committed to the belief that this is a pretty big country and we can do big things in a big way, unhampered by the petty motives and the narrow interests which hamper the thinking and the doing of less spacious lands and less enterprising peoples than our own. So Washington expects the St. Lawrence agreement to win swift approval from a Congress which is now learning to think and act in billions.

Charge of Monopoly Should Not Cause Rights of Little Man To Be Overlooked—Cotton Warehouse Bill Should Pass to Protect Farmer, Little Warehousemen, Local Community, and the Government

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

Mr. PATMAN. Mr. Speaker, the argument will be made by the opponents of S. 262, as it was made before the Committee on Banking and Currency, that the passage of S. 262 will freeze the Government-owned cotton in the interior warehouses and cause them to have a monopoly on the storage. Such a charge will not hold water.

It is true that the Federal Compress & Warehouse Co. has stored at this time about 20 percent of the Government-owned cotton in the interior, and the Anderson-Clayton Co., on the ports and in the interior, has about 10 percent of this cotton. In all, the two have about 30 percent of the Government-owned cotton in storage. While charges are being hurled back and forth from one side to another about monopoly, we should not overlook the real independent small warehousemen, who have 70 percent of this Government-owned cotton.

It should also not be overlooked that although the Federal Compress & Warehouse Co. has a large part of this cotton, it is owned by 9,700 stockholders, or an average of more than 100 stockholders to every warehouse, and these stockholders reside in the communities where the warehouses are located, and many of them are farmers.

If this bill (S. 262) is not passed, the Commodity Credit Corporation will accept such bids as they desire to accept on the future storage of the Government cotton. The idea of competitive bids impresses one of its fairness. However, on second thought, one will quickly realize that competitive bidding should not apply to a product like cotton, where it must be shipped hundreds of miles to be stored by the lowest bidder and the freight rates must be paid in cash.

The Commodity Credit Corporation would be opposed to being forced to accept the lowest bid. It is known that there are other factors that should be taken into consideration and it would be against the interest of everyone concerned for the lowest bid to be accepted in some cases. The Corporation still desires to retain the right to reject any and all bids, although very low, and to enter into negotiated bids instead of competitive bids, so the controversy is not about competitive bidding entirely.

It should be remembered that the interior warehouses, if permitted to do so, will bid just as low or lower for this cotton as the port warehouses. The bids submitted were not fairly presented, and therefore the interior warehouses could not bid. It will take the passage of S. 262 to right this wrong.

Regarding the question of freezing the cotton in the interior warehouses, if this bill passes, I suggest that the contention is absolutely without merit. There are 1,600 warehouses bidding against one another on this cotton, and in the localities where the cotton is stored there are other warehouses in competition, and where removal charges will be practically nothing. Whereas if the cotton is sent to the ports, a few people own the warehouses, as there are only 45 in all, it will certainly be frozen or the Government compelled to pay any rate fixed by the owners of these port warehouses. It is a beautiful theory to say that the ports can bring the cotton in from the interior without extra expense because the freight rate is always added on export cotton anyway, but let us consider what will happen when you get it stored in the port warehouses. There will be no competition, as these warehouses are so few and are so closely held. Then if an interior warehouse bids a lower price, the Government will have to spend several dollars a bale to ship the cotton to the interior warehouse where the lower rate is available. Then when it is needed for export, several dollars must be paid to ship it back to the port for export.

If S. 262 becomes a law, the Commodity Credit Corporation can still move any cotton it desires to move to the ports, if the warehouses now storing this cotton refuse to give the rate which the Commodity Credit Corporation demands. In other words, if S. 262 becomes a law, no interior warehouse will have a monopoly, and the rate that will be collected by the interior warehouse for storage must be acceptable to the Commodity Credit Corporation or the cotton can be moved.

Further, regarding the charge of monopoly, I believe that the Members of the House will admit that a Member of Congress is anxious to carry out the will of the people whom he has the honor to represent. If a Member from a cotton-growing section should vote for a bill that is against the farmers' interest and in favor of a monopolistic warehouse concern, his chances for reelection would not be so good next time. In other words, a Representative from a farming section is certainly not going to vote against the interest of a great majority of his voters and constituents, in order to favor some big concern, as alleged at the hearings. He would be very foolish to do so, and Members of Congress do not usually deliberately do something against the interest of the people in their districts.

It should be noted as one of the strongest points in opposition to this charge of monopoly that every Member of Congress from a cotton-growing district is in favor of this bill, S. 262. It is, therefore, inconceivable that anyone would say that any Representative in this Congress who represents cotton growers is favoring a monopolistic storage trust in preference to the farmers of his own district. I repeat that the passage of this bill is in the public interest and should be passed.

If this bill is not passed, the Commodity Credit Corporation will ship 2,000,000 or more bales of cotton to the ports. It will require an expenditure of between four and five million dollars to make the shipment. It will require the services of 15,000 boxcars that are needed in our preparedness program. If Uncle Sam had the money—cash in hand—a surplus, it would not be good business for him to ship this cotton to the ports when he has no assurance that there will be no more than a 48-cent saving per bale, since the contract for storage at the ports is good for only 1 year, and it will require on an average of $2.18 a bale to get it there. In this case the Government would have to borrow the money to pay the freight.

I respectfully submit that even if the Government could save $5,000 a day, which I deny, it would not be in the public interest to accept such a saving when it would cost the suffering cotton farmer more than $17,500 a day.

Monopoly Threats in a Crisis

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

STATEMENT OF WILLIS J. BALLINGER, ECONOMIC ADVISER TO THE FEDERAL TRADE COMMISSION AND DIRECTOR OF STUDIES

Mr. COFFEE of Washington. Mr. Speaker, Willis J. Ballinger, the economic adviser to the Federal Trade Commission, is a young man of great ability, splendid courage, and possessed of a penetrating comprehension of the grave problems confronting the United States in a period of crisis. He was a classmate of mine at Yale University. Recently he made a remarkable statement to the Temporary National Economic Committee which I believe worthy of republication in the CONGRESSIONAL RECORD. In it

he discusses the general subject of military preparedness and antitrust enforcement. He calls attention to the dangers of allowing our antitrust laws to be thwarted and circumvented on the excuse of national defense. He very properly points out that it is a great danger to allow monopolies to be further entrenched and strengthened during the crisis.

I append hereto his statement, which is self-explanatory.

Mr. Chairman, since the Temporary National Economic Committee began its work, a situation has arisen which threatens to render difficult a strengthening of the antitrust laws for an indefinite period.

The Nation is now embarked upon a vast program of military preparedness. Over the past year there have been indications that a strong effort will be made to curb antitrust enforcement for the period of the emergency. It is contended by some that an enforcement of the antitrust laws during the period of the present emergency will hamper the effort to expedite national defense.

The antitrust laws have been suspended in effect during previous periods of military preparedness. Since the passage of the Sherman Act in 1890, the United States has never engaged in war or preparation for war but that the antitrust laws were practically disregarded. This was particularly true in the World War of 1918.

The Commission believes that antitrust enforcement will materially help and not hinder the objective of our present program of national defense. It believes that failure to enforce the antitrust laws during the present emergency may have very serious consequences for the future security of our democracy. Nearly a quarter of a century has passed since the first World War. Any abandonment of the antitrust laws at the present time will be a more serious matter than it was 25 years ago.

The Honorable Thurman Arnold, Assistant Attorney General of the United States, has already stressed to this Committee the useful role of antitrust enforcement in protecting Government purchasing from exploitation during the present period of emergency. We wish to emphasize other reasons why an enforcement of the antitrust laws during the present emergency is a matter of great importance.

The objective of our present defense program is to make American democracy secure form external destruction. The history of democratic government, however, has demonstrated that democracies may be destroyed from the inside as well as from the outside. Democracies have perished in the past at the hands of conquerors. They have also been wrecked from the inside. Roman democracy, for instance, was permanently put out of business by Romans. The modern democracy of Germany was destroyed by local leaders. The wreckers of the German democracy got part of their opportunity from a misfunctioning economic system.

There are enough facts at hand to know that in the case of Germany, monopolistic business which restricted production and aggravated unemployment was a factor contributing to the economic chaos which culminated in political dictatorship.

The relationship between free enterprise business systems which fail to "sustain standards of living acceptable to the people" and political dictatorship was recognized by Hon. Joseph C. O'Mahoney, chairman of this committee, when he said, on January 15, 1941:

"If, however, we are frank with ourselves, we must realize that if the democratic world had succeeded in the past in distributing the products of commerce and industry among the masses; if it had been successful in preventing the growth of the proletariat, there never would have been such a thing as the rise of the totalitarian system.

* * * * *

"The truth of the matter is that we are today faced by the appalling alternative of so adjusting our economic mechanisms as to preserve free, private enterprise in order to enable it to provide stable employment of the masses, and of seeing big government in one form or another take over the controls. The crisis in Europe has arisen because the democratic governments of Great Britain and France permitted the exponents of statism to fasten their theories upon three great nations by their own refusal to face the economic facts. They temporized with disaster. They permitted a large segment of the population, both in the cities and in the country, to become a propertyless class, and they closed their eyes to the fact that by neglecting to make the system work equitably for all, they were inviting the destruction of democratic capitalism, the very basis of which is the ownership of property by individuals."

Why are the products of industry not effectively distributed among the masses in a system of democratic capitalism? Why do free enterprise business systems break down into plutocracies and proletariats? Because government permits the growth and operation of predatory business practices in industry and finance.

Our democracy had a serious problem of internal security before the problem of protecting that democracy from any external menace became apparent. President Roosevelt recognized this fact when he said in his message to the Congress which led to the creation of the Temporary National Economic Committee:

"Unhappy events abroad have retaught us two simple truths about the liberty of a democratic people. Both lessons hit home.

"The first truth is that the liberty of a democracy is not safe if the people tolerate the growth of private power to a point where it becomes stronger than their democratic state itself. That, in its essence, is fascism—ownership of government by an individual, by a group, or by any other controlling private power.

"The second truth is that the liberty of a democracy is not safe if its business system does not provide employment and produce and distribute goods in such a way as to sustain an acceptable standard of living.

"Among us today a concentration of private power without equal in history is growing.

"This concentration is seriously impairing the economic effectiveness of private enterprise as a way of providing employment for labor and capital and as a way of assuring a more equitable distribution of income and earnings among the people of the Nation as a whole."

The present crisis of rearmament is different from the one that confronted the Nation in 1916. We entered the present crisis with an economic system still suffering from depression. In spite of tremendous efforts on the part of government, our economic system was still unable to afford employment to millions. Millions of workers were unemployed when the Defense Commission was created.

Military preparedness is not going to solve this unfinished problem. Government spending and war industries will undoubtedly create a large amount of employment. But when the present emergency is over, the problem of unemployment in peacetime industries will return. We will be right back where we left off when the Defense Commission was created. Indeed, the situation may be worse. The Nation will be burdened with heavy taxes to pay the cost of rearmament. Many workers engaged in peacetime industries before the present emergency arose will undoubtedly be drafted for wartime industries, and they, too, will be faced with the problem of peacetime reemployment.

At this juncture in our affairs we must make up our minds about antitrust enforcement in terms of the following consideration: "What were the factors that prevented our system of private enterprise from affording full employment before the present crisis of rearmament arose? If monopolistic practices were an important factor, it would seem to be common sense to proceed with their elimination during the present emergency, so that at the end of the road of rearmament our free enterprise system will be more capable of affording employment. If our free enterprise system becomes less capable of affording work at the end of the emergency than it was when the emergency started, because we permitted a further growth of factors reducing its capacity to provide employment, a serious situation may be encountered. Another period of widespread and prolonged unemployment for millions of Americans could furnish an efficient economic cause menacing from the inside the security of our democracy.

It is clear that a suspension of the antitrust laws during this emergency would further the growth of monopolistic practices in industry. It remains, therefore, to consider whether monopolistic practices in business were an important factor in preventing full employment before the present emergency began.

President Roosevelt, in his message to Congress which resulted in the creation of the Temporary National Economic Committee, stated that private enterprise had too long been unable to "furnish jobs or income or opportunity for one-third of our population."

The President also said: "In output per man or machine we are the most efficient industrial nation on earth.

"In the matter of complete mutual employment of capital and labor we are among the least efficient.

* * * * *

"One of the primary causes of our present difficulties lies in the disappearance of price competition in many industrial fields.

* * * * *

"Managed industrial prices mean fewer jobs. * * *

"When prices are privately managed at levels above those which would be determined by free competition, everybody pays.

"The contractor pays more for materials; the home builder pays more for his house; the tenant pays more rent; and the worker pays in lost work."

The President referred to noncompetitive industries as industries "which choose to hold their prices rather than to move their goods and employ their workers."

He commented that monopoly "destroys the buying power of the Nation as a whole."

The President also pointed out that monopoly and free enterprise were incompatible:

"Private enterprise in the United States is ceasing to be free enterprise, and is becoming a cluster of private collectivisms; masking itself as a system of free enterprise after the American model, it is in fact becoming a concealed cartel system after the European manner."

Referring to a program for eliminating specific trade and financial practices, including those which restrain trade, vitally affecting the successful functioning of free enterprise in American business, the President said:

"It is a program whose basic thesis is not that the system of free private enterprise for profit has failed in this generation but that it has not yet been tried."

This message of the President was sent to Congress on April 29, 1938.

Between the enactment of the Sherman law in 1890 and the World War of 1918, antitrust enforcement was highly sporadic and in general ineective in preventing the growth of monopolistic practices in business. During the World War of 1918, monopolistic practices received a great impetus. During

the twenties, when business had a "free hand, practically undisturbed by Government intervention,"[1] restraints in trade continued to multiply.

The N. R. A., which operated to afford industry the opportunity to engage legally in price fixing and restriction of production activities, further increased the load of trade restraints which our free-enterprise system had to carry. The lack of funds for effective antitrust enforcement during the greater part of the depression, has further aggravated the situation.

Since the date of the President's letter leading to the creation of the Temporary National Economic Committee, progress has, of course, been made in antitrust enforcement. It is significant that coincidental with substantially larger appropriations for the Department of Justice more antitrust suits were commenced in the courts in 1940 by the Department than occurred in the preceding 10 years. Mr. Arnold told this committee that he still had a long way to go. The Federal Trade Commission, too, knows that effective antitrust enforcement is still a large task.

Important businessmen have testified that holding prices up has a very serious effect upon industry's capacity to employ.

The views of Mr. Ford are well known. They can be paralleled by those of other automobile executives. Mr. Alfred P. Sloan, Jr., said:

"Stabilization means a higher price level. * * * (It) discounts individual aggressiveness and ability and penalizes the new and better to protect the vested rights of the past. * * * One thing is perfectly evident today. Those who have followed the practice of lowering the cost of goods and services are the ones who show the smallest amount of unemployment and have, therefore, made the most progress toward recovery. On the other hand, those who have followed * * * the principle of stabilization have progressed the least."[2]

Among economists the weight of opinion is that monopolistic practices do restrict employment and standards of living for the people.

We wish to put into the record at this time the conclusions reached by an important economic research organization. On a grant of money from the Falk Foundation the Brookings Institution of Washington, D. C., undertook a comprehensive survey and appraisal of the factors retarding economic progress in the United States. The findings and conclusions of the institute are found in five volumes: America's Capacity to Produce, America's Capacity to Consume, The Formation of Capital, Income, and Economic Progress, and Industrial Price Policies in Economic Progress.

There is little doubt that there was unutilized capacity in American industry during the twenties. Our industrial plants, our laboring force, our technology could have produced more goods and services than were in fact produced. All during the twenties there were enormous sales efforts. Installment credits were abused to the point where they resulted in inducing consumers to buy more goods than they could afford. There was a continual emphasis by various industries and Government on the necessity of expanding foreign trade by means of credits and otherwise. There was also evidence from manufacturers themselves that industry was capable of producing a great deal more. It is reasonably clear that the great problem of American business during the twenties was not how to produce more but how to sell what had been produced.

The Brookings Institution estimated that during the peak year of business activity—1929—only approximately 80 percent of our productive capacity was being utilized, and that there was "20 percent of practical, reclaimable slack."

Was there need among the masses of the people for more production during the twenties? Data published by the Census, the Income Tax Section of the Treasury Department, the Bureau of Agricultural Economics, and various private and other governmental studies afforded an opportunity to form a reliable opinion on this question. A number of studies made during this period all pointed to very low incomes for the great majority of those gainfully employed during the twenties. These studies showed that the requirements of the masses of the people for even the elementary necessities of food, clothing, and shelter, were far from satisfied.

The Brookings Institution estimated:

In 1929 there were approximately 27,474,000 families in the United States consisting of more than one person, and 2,351,000 persons classified as families because of their occupancy of individual living quarters.

In addition, there were some 6,637,000 income-receiving individuals living outside of family groups—in hotels, etc. The total number of income-disposing units was thus about 36,462,000.

Approximately 16,000,000 families, or 60 percent of the total number of families, had incomes less than $2,000.

Approximately 20,000,000 families, or 71 percent of the total number of families, had incomes less than $2,500.

The Brookings Institution commented:

"A family income of $2,500 at 1929 prices was a very moderate one, permitting few of the luxuries of life."

The following was interpolated at the time this statement was read to the Temporary National Economic Committee:

"Dr. ANDERSON. Would the display of data of this sort be complete without indicating what the upper brackets had by way of income at a comparable time?

"Mr. BALLINGER. Yes; I could give you that information.

"Dr. ANDERSON. Obviously the upper brackets were overloaded, proportionately speaking, with income at their disposal, much of which they could not use in the consumption of goods. Wouldn't it be necessary to indicate that in order to complete the data?

"Mr. BALLINGER. I will put that in. Before I come to that I would like to finish the figures of distribution in the lower-income brackets, and I will add this. This was, unfortunately, left out by the printer.

"About 32 percent of unattached individuals and 1-person families, some 9,000,000 income-disposing units, had incomes under $2,000. Distribution between farm families and nonfarm families was very striking. In 1929 there were approximately 5,800,000 farm families and 21,674,000 nonfarm families. The total income for farm families amounted to seven and two-tenths billions of dollars. This income for farm families included an allowance for rent and farm produce consumed and included also the earnings from nonfarm activities of all members of the family. Consequently, the average income of the farm family in 1929 was $1,240 as compared with $3,226 for town and urban families.

"Now, concerning the concentration of income in the upper brackets, here are a few facts: Only 2,000,000 families in 1929, or 8 percent of the total number of families, had incomes in excess of $5,000. About 600,000 families, or 2.3 percent, had incomes in excess of $10,000; 11,653,000 families with incomes of less than $1,500 received a total of about $10,000,000,000. At the other extreme 36,000 families having incomes in excess of $75,000 received an aggregate income of 9.8 billions of dollars. It would thus appear that one-tenth of 1 percent of the families at the top received practically as much as 42 percent of the families at the bottom of the scale."

Why did our economic system, with the capacity to produce more and a great need for more production, fail to turn out more goods and services during the 1920's?

Was there any deficiency or bottleneck in the production mechanism? The Brookings Institution was unable to find any. The supply of raw materials, both agricultural and mineral, was abundant. There was no dearth of manufacturing capacity. The transportation system could have carried more goods. Marketing and merchandising establishments and facilities were abundantly adequate for the stocking, handling, and selling of goods as they passed from the hands of producers to general consumers. Our economic system was not short of fuel or other forms of power. There was enough labor to produce more goods. Money and credit were adequate for the needs of business.

Why was our economic system unable to produce more during the 1920's?

There are a number of competent economists who believe that the fundamental trouble was a lack of buying power among the great majority of the American families. These families simply did not have sufficient income to buy more goods. Our economic system will not produce more goods unless such goods can be bought. Consequently, unused productive capacity in our economic system will not be put to use unless there is sufficient buying power to call it into operation.

At this point it is important to emphasize that the utilization of all existing unused capacity to produce in our economic system will only be a step toward a larger goal. Even if our economic system had produced all it could during the 1920's, much more production would have been necessary if living conditions for the masses of the people are to be substantially improved. The Brookings Institute estimated that production would have had to have been stepped up 75 percent in our economic system in 1929 to do this, whereas the use of all unutilized capacity in our economic system during the twenties would have increased production by only 20 percent. But the use of idle capacity and the further enlargement of productive capacity in the economic system will both depend on our ability to find some way of increasing the purchasing power of the masses. Mass production "marks the highest level under man's productive programs."[3] However, "we cannot have the economics of mass production save in an economy of mass consumption. Each is the condition of the other."[3]

What is the best way to increase the buying power of the great majority of consumers in America? What have we been doing about this problem?

Some radical thinkers have proposed that we divide up wealth or income. This is a proposal which has periodically appeared in America and at times appealed strongly to many people. We do not see any way that wealth could be arbitrarily equalized without having the Government own all business. Redistributing income equally would be an administrative job of impracticable proportions. Furthermore, a reasonable inequality in income acts as a valuable stimulant to industry and enterprise, and is highly desirable. The Brookings Institute also discourages radical proposals to divide up wealth or income.

The most obvious method by which the income of the masses might be expanded is through an increase of money wages. This is the method which has been most widely discussed in recent years. It is the method which has been most steadfastly advocated by labor organizations in this and other countries.

While admitting that wage increases resulting from union activities have been helpful, the Brookings Institution was of the opinion that this method had limitations.

[1] President's message to Congress, April 29, 1938.

[2] P. 29, Industrial Price Policies, Public Affairs Committee, Inc.

[3] Brookings Institution, Income and Economic Progress.

One important limitation is that increasing wages increases purchasing power for only a part of our consuming population.

According to the 1930 census the total population of the United States was 122,775,046, of which 44,636,770 were classified as farm population, while another 9,183,453 lived in towns having less than 2,500 inhabitants. This rural population was approximately 44 percent of the total population.

Furthermore, the money wage method of increasing purchasing power does not extend to those employed in connection with Government activities or to those employed by educational, philanthropic, or charitable organizations or to those engaged in personal or domestic service.

The number of individuals employed in personal or domestic service was, in 1930, 4,952,453. The professional group numbered 2,253,884 in 1930.

Moreover, there are many small shopkeepers and tradesmen who fall outside the wage system. Finally, only a part of the wage-earning population itself is effectively organized to obtain higher incomes through trade-union activities. Many wage earners are either unorganized or ineffectively organized.

The wage-increase method for increasing purchasing power has another drawback. The Brookings Institution points out that sometimes wage increases cause higher prices and thus decrease the purchasing power of the many millions who live outside the wage system.

Wage increases have undoubtedly been useful in increasing the purchasing power of wage earners, but something must be done to add to the incomes of the many millions whose purchasing power is not increased by this method.

The most effective way to increase purchasing power among all consumers is to reduce prices. This way involves no radical philosophy. It is a way which is fundamental to the theory of capitalism. The classical economists who blueprinted what we call "modern capitalism" particularly stressed the relationship of the distribution of income to economic progress. They clearly perceived that a way must be found to make it possible for the masses to buy the additional goods and services made possible by technological progress which would enable the capitalistic system to produce more goods for the same or less effort. Otherwise, technological advances in efficiency would accrue to only a small class, who would obtain excessive and unwarranted profits through holding prices up while lowering the cost of production.

The classical economists envisoned capitalism as an economic system whose fundamental principle was to secure a wide dissemination of well-being among the masses as a result of technological improvements. Capitalism was intended to function in the interest of all the people, and not for the enrichment of a few. The economic philosophers of the eighteenth and nineteenth centuries clearly recognized that the ability of capitalism to produce more goods because of lower costs would be entirely conditioned by the ability of the system to produce sufficient income to purchase the increased production. The competitive mechanism was relied upon to do this. Increased efficiency would make possible lower prices. Competition would insure the actual reduction of prices. Thus existing income would be increased by a reduction in prices. The expanding demand required to take increased quantities of goods off the markets would be automatically created by the reduction of prices.

The price reduction method of increasing purchasing power among the masses eliminates group and sectional friction in our economic system. It gives at once "to every consumer a larger return for his money."[4]

Furthermore, the price reduction method sets in motion a process whereby not only is the existing capacity of our economic system to produce fully used, but the system is permitted to increase its capacity to produce. Through this process the capitalistic system works constantly toward higher levels of prosperity for the people as a whole.

Such a process does not deprive capital of its just reward or fail to compensate enterprisers for the risks they incur in promoting and conducting business. Under this process a free enterprise system is expanded to the fullest degree. The fullest employment of capital and labor is afforded, and the material well-being of the people is progressively advanced.

The Brookings studies declare:

"The broad highway along which continued economic progress must be sought in the avenue of price reductions. When this road is followed, the benefits of technical improvements are conferred automatically upon all the population. Maximum opportunity for expansion of production and the free interchange of goods, both between different divisions of our domestic economy and between nations, is thus provided. Such a method, instead of centering upon a redistribution of an existing amount of income, promotes the progressive erection of additional income, and its prompt and thorough dissemination among the entire population."

Moreover, when all American industry travels the road of price reductions, our industry becomes more effective in foreign markets. Getting prices down in American industry will not only benefit domestic business, but will make it possible for that part of our business which must seek foreign markets to improve its competitive position in those markets.

If reducing prices is the most effective way to promote the fullest use and expansion of our economic system, what has prevented the use of this method? The Federal Trade Commission knows that price reductions over large areas of business have been prevented for many years because of the wide-spread operation of techniques to restrict production, maintain or enhance prices. This, of course, is our opinion, and we have had very practical contact with the problem. The Brookings Institute, too, express an opinion on the reason why price reductions in business have not operated to permit the fullest use and expansion of our economic system:

"It is, however, evident from the facts disclosed in our general study of the distribution of income, that the competitive process upon which we rely to disseminate the benefits of progress has failed to function with expected effectiveness. Accordingly, we must now seek to discover what factors or forces have impeded the operation of the price-reduction method of distributing income.

"The method of continuously expanding markets through a persistent reduction of prices as efficiency increases has, in a considerable measure, ceased to operate in American business. Price stabilization policies have in many lines come to stand in the way of a dissemination of the benefits of business progress, and have therefore tended to nullify the results of technological advance. This unexpected outcome of the evolution of the capitalistic system obviously requires explanation.

"The basic economic policy which we are enunciating does, however, definitely attack what we regard as a serious abuse of the profit system and the institutions of private capital which have grown up in modern times. This is the tendency to centralize economic advantage, to protect existing business enterprises by protecting the price structure. For more than 50 years this tendency has been developing through the devices of corporate consolidations, pools, trusts, cartels, trade associations, and code authorities. Particularly since the World War, and often with the active assistance of Government, efforts have been going forward to stabilize existing business situations, and to underwrite the prosperity of individuals, corporations, or large business groups by attempting to stabilize prices. We believe the evidence is clear that such attempts, however well intentioned, are dangerously shortsighted."

Now, Mr. Chairman, the failure of competition to function effectively in industry during the twenties was a factor in causing the collapse of business in 1929. During the twenties there were large sums available for investment. One of the principal places where savings could have been soundly invested should have been provided by industry willing to build new plants and expand productive capacity. Only a part of a very large amount of savings, however, found its way into new industrial plants. The reason for this may be found in the following statement by the institute:

"Instead of producing all the goods possible and pressing them into consumptive channels, business enterprisers held production in leash with a view to maintenance of prices and of stable conditions.

"Second, and of more fundamental significance, the actual rate of growth of new plant and equipment during these years was held in hand. Instead of being expanded to the fullest degree possible, the growth of new capital was adjusted to the growth of consumptive demand. Funds were available, labor was available, and materials were available with which to expand productive capacity much more rapidly than it was in fact expanded."[5]

The widespread existence of interferences with competition in business during the twenties is also testified to by a report of the Federal Trade Commission to the President of the United States in 1921. The Commission was asked by the President to report on conditions which it thought basically responsible for the decline of business in 1921.

The Commission reported that "the following are among the principal causes * * *:

"(1) The excessive price of many basic commodities, prominent among which is coal, which vitally affects the cost of other commodities.

"(2) The existence of the typical corporate monopolies and agreements in violation of the antitrust laws.

"(3) Open price associations in many cases not yet challenged by the law, yet tending to bring about and maintain unduly high prices.

"(4) Interference with the channels of trade by distributors, trade associations, particularly by activities tending to maintain an unnecessary number of inefficient regular dealers while shutting out new dealers seeking to sell at lower prices."

Much of the savings during the twenties were therefore forced, in many cases, to seek unsound channels of investment. The mirage of prosperity was largely created by financing promoters of unsound securities, by building apartment houses, and developing land booms for which there could be no reasonable expectation of utilization. This kind of profligacy had to have its day of termination. A few major collapses of unsound and fantastic investment structures pricked the bubble of business confidence and helped to plunge our capitalistic system into a severe depression.

[4] Income and Economic Progress, Brookings Institution.

[5] P. 139, Formation of Capital, Brookings Institution.

The Commission's letter states, and Brookings' studies clearly infer, that if competition had functioned effectively during the twenties idle capacity in industry would have been utilized. Productive capacity would have been expanded "much more rapidly than it was, in fact expanded." The thrift of the American people would have been devoted more to the sound end of materially raising the level of prosperity for all the people; and with savings and investment in better balance, the depression of 1929, if it had to come at all, would not have been so severe.

Mr. Chairman, during the present depression the failure of competition to function effectively in business has been an important factor in preventing the full recovery of our free-enterprise system. In 1932, 127 distinguished American economists declared in a joint statement:

"The most competent economic opinion, as well in Europe as in this country, can be cited in support of the view that a strong contributing cause of the unparalleled severity of the present depression was the greatly increased extent of monopolistic control of commodity prices which stimulated financial speculation in the security markets. There is growing doubt whether the capitalistic system, whose basic assumption is free markets and a free price system, can continue to work with an ever-widening range of prices fixed and manipulated by monopolies." (Federal Trade Commission's Report to the President, November 1934, p. 39.)

Making competition function effectively in business offered one of the soundest ways of getting American business entirely out of the depression. The Government borrowed large sums to give purchasing power to the unemployed and to stimulate buying power through public enterprise, but these efforts were frequently frustrated by the ability of industries to raise prices. The increased purchasing power provided was pocketed in many cases without bringing full employment. During the depression public relief and public construction were frequently financed at controlled price levels. Thus governmental activities to stimulate buying power failed generally to get business under way on its own power. There was a way to do this; only we neglected it. The thorough breaking up of trade restraints in business would have stimulated competition to reduce prices. This would have generated a substantial and sound demand for the production of more goods. The response to this demand would have automatically caused the employment of more workers. Our economic system would have been started on the road to recovery under its own power.

Under conditions of modern industry a difference of a single cent in the price of a product to consumers often involves a large increase in purchasing power for the masses.

In 1937 a difference of a cent on the price of a gallon of gasoline would have involved an increase of purchasing power for consumers of over $200,000,000.

In 1937 a difference of a cent in the price of a quart of milk would have increased the purchasing power of consumers by approximately $375,000,000; a saving of 2 cents per quart would have increased this to $700,000,000.

A difference of a cent on the price of a loaf of bread in 1938 would have increased purchasing power among the consumers of the Nation by approximately $120,000,000.

I could multiply these illustrations. There were many dollars of increased income at stake for the great mass of the American people during the twenties and during the present depression if fair and open competition in industry had not been throttled by combinations in restraint of trade, price-fixing, production control, and other monopolistic practices.

Today we have on our hands two critical problems. There is the problem of swiftly rearming the Nation. There is also the problem of looking beyond the emergency, of accomplishing as much as possible during the emergency toward preparing our free enterprise system to afford the fullest employment and the greatest prosperity to the people as a whole when war industries have done their job. Another period of widespread and prolonged unemployment when rearmament is over may imperil our free institutions.

It is encouraging that some of the Nation's most important businessmen agree with us that during the period of emergency we must not neglect this task.

Only a month ago Mr. Charles E. Wilson, president of the General Electric Co., said before the convention of the American Institute of Electrical Engineers at Philadelphia, Pa.:

"There must be a complete, realistic comprehension of the fact that the world—our Nation included—is passing through what history may later record as the second stage of a revolutionary movement of the masses—a movement born during World War No. 1 and likely to last, with intermittent armistices of one kind or another, for two or three decades more.

* * * * *

"Today the practical controlling fact is that hundreds of millions of people throughout the world have been persuaded, to the point of evangelistic conviction, that the capitalistic system is the cause of the economic insecurity of the common man and that, as the root of his economic ills, this system must be drastically modified, or failing that, destroyed.

* * * * *

"At this time, when our future economic security is at stake, we must call upon all of our vision and imagination, upon all of our resources, upon all of our ingenuity, and, above all, upon the same deep sense of service that now motivates us, as we move forward in providing the materials for our physical security, to the end that all employables will be kept employed, and that the preponderant majority will find employment on the pay rolls of the private-enterprise system."

To this end Mr. Wilson specifies that the country needs:

"A wholly free and enterprising system of free enterprise.

"The free flow of all goods, purchasing power, and enterprise capital for production.

"The encouragement and development of new inventions, accompanied by aggressive pioneer product promotion."

Hand in hand with the great ultimate benefit of making our democracy more secure after rearmament, collateral benefits of great importance will also be realized from antitrust enforcement. During the present national emergency we must produce as much as possible of consumers' goods. The antitrust laws must prevent consumers' goods industries from conspiring to restrict production or raise prices.

The more real wealth we are able to produce during the present period of emergency, and the more afterward, the greater will be our ability to pay for the cost of rearmament. This will be a large cost, and is likely to impose a heavy tax burden upon industry in the future.

For 50 years a philosophy of restricting production in industry has been steadily advancing. This philosophy has robbed the past of untold material well-being. It has divided the farmer and the laborer, the laborer and the capitalist, the rich man and the poor man, and generated a dangerous lack of confidence in private enterprise. It has sown seeds of destruction for our free institutions by promoting a faith in collectivistic government. Before national defense we had made progress toward subduing this enemy within our gates. We cannot stop now.

Our plea is that antitrust enforcement and national defense should work cooperatively to defend our democracy from within as well as from without.

The Responsibilities of the Republican Party

EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

ADDRESS OF HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS

Mr. DITTER. Mr. Speaker, the Republican National Committee at its meeting which was held here in Washington yesterday, reelected as its chairman the Honorable JOSEPH W. MARTIN, JR., minority leader of the House.

At that meeting Mr. MARTIN delivered an address which challenged the devotion and loyalty of those Americans who believe in the two-party system of government and who continue in their conviction that the Republican Party has a most important role to play in this critical period of our Nation's history. The address, Mr. Speaker, is a clarion call to every American who cherishes the heritages which are ours as free men and who look to the Republican Party for the safeguarding and perpetuation of these heritages.

Mr. MARTIN'S address follows:

Everyone in this country wants national unity wherever and whenever national unity aids in the preservation of America and the security of our people. No one wants national unity in anything which is not for the best interests of the Nation. No real American wants unity in any policy or any movement which would destroy the two-party system of government in America.

Time and experience have demonstrated the two-party system of government to be the only system which will preserve the American way of life. It guarantees the right of life, liberty, and the pursuit of happiness. It has built a strong America. It will preserve a free America. We must maintain in this country a strong opposition party if we are to remain a constitutional republic.

There is a vital need today for a vigorous, virile Republican Party. That need is the greatest in our history. The safety and security of our people depend upon an intelligent, constructive, and courageous opposition.

We are at this hour in the midst of a great national crisis. Vast and unprecedented powers have been given to the executive department of the Government. Bewildering sums are being spent for defense, and in the name of defense. Enormous taxes are soon to be imposed upon our people. We stagger along in the direction of war. We are face to face with the possibility of national bankruptcy.

This picture is not a pleasant one, but it is the realistic one. This is no hour for "echo men." It is a time demanding courage and honest thinking. Our first thought must be the welfare of our country.

A vigorous, courageous Republican Party is essential to police and audit the New Deal administration as it revels in the spending of thirty or forty billions of dollars and in the possession of vast and unparalleled powers granted it only because of the urgent needs of national defense. We must police and audit the New Deal administration to

protect our country from financial, political, and social bankruptcy.

We must police the great powers granted to the President to assure as far as possible their wise administration. We must be ready to fight to restore those powers to the people's representatives when the emergency has ended. We must police the bureaus and the men to whom the fate of the Nation has been entrusted. Their work must be done efficiently, honestly, economically, and on a nonpartisan basis. We must audit those who have been entrusted with the handling of sums so vast they are beyond comprehension. Our national debt is already enormous. We cannot tolerate extravagance or dishonesty. Racketeering must have no place in our national defense. We Republicans in Congress must perform the thankless but patriotic and essential task of policing and auditing those in charge of our national defense. The scandals of 1918 must not be repeated.

We Republicans have a vastly important function in this national emergency. The safety and security of our Nation are at stake. We must not fail. We will not fail.

There is, of course, a genuine need for national unity in our defense plans. Republicans, Democrats, and independents must stand together in support of measures to make our country invincible against any assault, whether it comes from the outside or the inside of the country. Events abroad must not distract us from the vigilance required at home. Our greatest danger is still from insidious inside forces. We must exert our influence against all menacing influences.

A grave responsibility rests upon us all, whether we be Republican or Democrat, employer or employee, public official or private citizen. We must all unselfishly contribute all we can to our national security. Those who may seek to take advantage of this perilous hour to exploit the Nation's needs to their own profit or to advance their own selfish interests will sooner or later find themselves condemned as traitors and outcasts by the power of public opinion. We simply cannot tolerate profiteering.

This is no time for strikes or lock-outs which will prevent us from achieving at the earliest possible moment an adequate national defense. Waste of time, waste of money, waste of men—these are the fatal mistakes which could end the glorious reality of free America.

The Nation is demanding production, and more production. It demands efficiency and it demands patriotism above selfishness. The call is imperative; as Americans who love their country; as Americans who prize its priceless liberties, privileges, and advantages; as Americans determined to remain free, let us press forward with our defense program. As we go forward with these defense plans, let our fervent prayer be that we can preserve America from having to send millions of our boys to the trenches. Let us never, for a moment, lose sight of the suffering and the perils which would come with our participation in another World War.

Now as to strictly party matters, there is no reason for Republicans to feel discouraged over the campaign of last fall. Under the vigorous, dynamic leadership of Wendell Willkie we polled more than 22,000,000 votes. No impartial observer would deny this was a good majority of the free votes in the country.

Outside of the 10 Southern States, the Willkie vote was 47.3 percent of the total, which is especially significant as he was opposed by the strongest candidate it was possible for the Democrats to nominate.

Today in 20 of the 48 States in the Union we have Republican governors.

The Republican congressional candidates, outside the same 10 Southern States, based on major party totals, received 50.3 percent of the vote.

Excepting again the 10 Southern States, we find the Republicans carried 1,120, and the Democrats 936 counties in the other 38 States. If the strength of a party is in the county seats, then, indeed, are we a virile party. These figures are more impressive when we remember that in 1932 we carried only 363, and in 1936 only 438 counties. In these county seats are the shock troops who will bring to us merited victories in 1942 and 1944.

Our principal weakness is in the large cities. The New Deal carried most of the big Northern States because of the majorities it rolled up in one or two large cities.

Yes, the 1940 election showed the strength of the supporters of the American way of life. With this as a basis, we must press forward. The outlook is not at all discouraging. We are better organized today than at any time in the last 12 years. We have once more developed some strong State leadership, and there is an enthusiasm which has great potential possibilities.

The great objective of the last campaign must continue to be the objective of the Republican Party. Truth and justice will eventually triumph. As patriots banded together in a great cause, let us go forward to the battle to retain the American way of life, and to build a finer and better America. Millions of Americans are looking expectantly to us. We must not fail them.

St. Patrick's Day Address

EXTENSION OF REMARKS

OF

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 21, 1941

ADDRESS OF HON. WILLIAM T. BYRNE, OF NEW YORK

Mr. MERRITT. Mr. Speaker, it is with a great deal of pleasure that I ask unanimous consent to extend my remarks and include therein an address delivered by our colleague, Hon. WILLIAM T. BYRNE, at the celebration of the Hibernian Society of Savannah, Ga., on St. Patrick's Day, March 17, 1941.

It was my good fortune to be present at this testimonial to the patron saint of Ireland and listen to the stirring patriotic remarks of the gentleman from New York [Mr. BYRNE].

The address follows:

Mr. President, my fellow guests, and gentlemen of the Hibernian Society of Savannah, "I am delighted to be in Savannah tonight. I always accept every invitation that I can possibly meet for the celebration of St. Patrick's Day. There I know I shall find that essence of good fellowship, that makes the evening's splendid influence memorable and lifts the soul into an atmosphere that one likes to live in. When that is mixed with the flavor of southern hospitality you have a mixture and an amalgam that you cannot excel anywhere."

My dear friends, the salutation that I have just delivered is the introductory remark of President William Howard Taft, delivered at your one hundredth anniversary dinner on May 1, 1912.

You have honored me with the subject title of "The United States," and it seemed highly appropriate that I should quote the words of that great President who honored you with his presence on the occasion of your most outstanding celebration, the one hundredth anniversary of the organization of your magnificent society.

Today we commemorate the life of an illustrious saint, and the glories of an honorable and ancient race. Today we applaud and sing the praises of our fathers and mothers in the skies. Today all of the memories of our youth are rekindled and revivified by the recollection of the joy that this day brought to the hearts and souls of our fathers and mothers when they celebrated, as we are today, the life and accomplishments of St. Patrick and the land he purified from evil and consecrated to justice and liberty. It is manhood which St. Patrick sanctified, which O'Connell humanized, and Emmet crowns. It is a manhood which succeeded over hardships such as the world has never seen, a manhood that, true to the teachings of its patron saint, is divine in its humanity and human in its divinity.

For the purpose of securing a satisfactory background of historic facts regarding the influence of Irish men and Irish women in the South, particularly in Georgia and Savannah, I read a little book entitled "The Irish Race in America," by Edward Condon, published in 1887, and when I came to chapter 6, which carried the title "The Irish in the South," I was more deeply thrilled than the limitations of time tonight will permit me to express. I found much in this chapter that reminded me of your very beautiful Story of a Century, published in 1912, and I found the early history of many of the families who have contributed so gloriously to the growth and development of your magnificent State and city, they having come to this part of our great country from Ireland as early as 1607, and at page 67 of this little book I was thrilled to find a reference to Savannah, which I quote: "At the first public meeting of the Sons of Liberty here in Savannah, July 14, 1774, John Glenn was chairman, and amongst those present were S. Farley, J. Bryan, W. Gibbons, J. Winn, E. Butler, and several others bearing Irish names."

I am assuming that in this gathering tonight there are those among you who have in your veins the blood of some of those who attended that meeting of the Sons of Liberty held on the 14th of July 1774.

I must restrain myself in the use of extravagant language in giving a word picture of the value of Irish men and Irish women to the growth and development of the United States of America. Again because of time limitation I can only cite the participation of our Irish brethren in the Revolutionary Army as a concrete illustration of what Irishmen have contributed throughout the history of our country to make it the Nation it is today.

Before an English parliamentary inquiry in 1779 Joseph Galloway stated that the American Revolutionary Army and Navy was composed of about one-half Irish; there were over 1,500 commissioned officers of Irish blood in the Revolutionary Army and Navy, and two of Washingtons' secretaries, Reed and Casey, were the sons of Irish immigrants, and Moylan, McHenry, and Fitzgerald were all natives of Ireland; and it is interesting at this time to find that among the privates in Washington's army, selecting but 15 Irish names, that there were 695 Kellys, 494 Murphys, 327 Connors and O'Connors, 531 McCarthys, 332 Ryans, 266 Rileys, 266 Sullivans, 248 Daughertys, 243 Connollys, 321 Burkes, 230 O'Briens, 178 O'Neills, 184 Fitzgeralds, 155 Donnellys.

At least seven of the signers of our Constitution were Irishmen, five born in Ireland and two in America; those born in Ireland were Thomas Fitzsimmons, Pierce Butler, George Read, James McHenry, and John Rut-

ledge, and Daniel Carroll and William Few were of Irish descent. The Irishmen who were signers of the Declaration of Independence were Charles Carroll, Matthew Thornton, George Taylor, and those of Irish descent were George Read, Thomas McKean, Thomas Nelson, Edward Rutledge, and Thomas Lynch.

An Irishman was the first under the Stars and Stripes to capture a British ship of war, and an Irishman took $2,000,000 worth of sea prizes from the British Navy to assist this country in gaining its freedom.

An Irishman won the last battle of the Revolution on the seas just as 7 years before he had won the first under the Stars and Stripes, and when the Confederation was dead and the Union had been formed, George Washington made this Irishman senior officer of the United States Navy, and where Washington had placed him Adams and Jefferson kept him, and the Irishman who did all this was Fighting Old Jack Barry.

My enthusiasm for the patriotism, valor, and courage demonstrated by the Irish, not only in the United States but everywhere in the world, is very deeply imbedded in the stories that came to me from my dear departed father who was born in the County Kildare, August 1, 1839, and who at the age of 4 in his father's arms, in September 1843, heard Daniel O'Connell deliver one of his greatest orations for the annulment of the union with England. My father committed to memory this entire address and upon the slightest provocation would recite it, in season and out of season, to those who would be willing to listen. The following quotations would bring tears to his eyes and, I feel confident, to the eyes of every Irishman who loves the aspirations and heroism of the Irish people:

"Yes, among the nations of the earth, Ireland stands No. 1 in the physical strength of her sons and in the beauty and purity of her daughters. Ireland, land of my forefathers, how my mind expands, and my spirit walks abroad in something of majesty when I contemplate the high qualities, inestimable virtues, and true purity and piety and religious fidelity of the inhabitants of your green fields and productive mountains. Oh, what a scene surrounds us! It is not only the countless thousands of brave and active and peaceable and religious men that are here assembled, but Nature herself has written her character with the finest beauty in the verdant plains that surround us. Let any man run round the horizon with his eye and tell me if creative Nature ever produced anything so green and so lovely, so undulating, so teeming with production. The richest harvests that any land can produce are those reaped in Ireland; and then here are the sweetest meadows, the greenest fields, the loftiest mountains, the purest streams, the noblest rivers, the most capacious harbors, and her water power is equal to turn the machinery of the world. Oh, my friends, it is a country worth fighting for, it is a country worth dying for."

It was in this country that the Irishman found the temple of liberty and the open door to success.

Wherever liberty has called for aid, wherever there have been great contests in behalf of justice and for the uplifting of humanity, Irishmen have played a noble part in writing the history of the world.

"These are the reasons that we today celebrate the Irishmen's membership in the citizenship of our glorious country; these are the reasons why we today commemorate the life of an ancient race and an illustrious man; these are the reasons why today we sing the praises of our mothers and fathers in the skies.

"If I were a sculptor, I would chisel from the marble my ideal of a hero. I would make it the figure of an Irishman sacrificing his hopes and his life on the altar of his country, and I would carve on its pedestal the name of Robert Emmet.

"If I were a painter, I would make the canvas eloquent with the deeds of the bravest people who ever lived, whose proud spirit no power can ever conquer, and whose loyalty and devotion to the hopes of free government no tyrant can ever crush; and I would write under the picture Ireland.

"If I were a poet, I would melt the world to tears with the pathos of my song. I would touch the heart of humanity with the mournful dirge of Ireland's wrongs and Erin's woes. I would weave the shamrock and the rose into garlands of glory for the Emerald Isle, the land of martyrs and memories, the cradle of heroes, the nursery of liberty.

"Tortured in dungeons and murdered on scaffolds, robbed of the fruits of their sweat and toil, scourged by famine and plundered by the avarice of heartless power, driven like the leaves of autumn before the keen winter winds, this sturdy race of Erin's sons and daughters have been scattered over the face of the earth, homeless only in the land of their nativity, but princes and lords in every other land where merit is the measure of a man."

"O Ireland, isn't it grand, you look
Like a bride in her rich adorning;
And with all the pent-up love of my heart
I bid you the top of the morning."

The Interior Warehouse

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

Mr. BROOKS. Mr. Speaker, the bill which we have been discussing for some time, S. 262, being commonly known as the cotton warehousing bill, is due to come up for final consideration Wednesday. This bill means so much to Louisiana as a whole, and especially to north Louisiana, that I am no longer content to remain silent on this vital matter.

Some of my colleagues have already dwelt upon a phase of this matter which I think is of especial importance to the Nation as a whole, but I feel that further discussion of it will be appropriate.

The hearings on this bill show that all Government-owned and Government-loan cotton is located in 43 port warehouses and in some 1,700 interior warehouses, in the proposition of 8,800,000 bales in the interior and 1,900,000 bales in the ports. This bill will allow 33⅓ percent of this cotton to remain or be placed in port warehouses and the remainder to remain on storage in the interior until the time for sale. The port warehouses are owned by some 26 separate interests. Under this bill the amount of cotton presently stored in the ports will be materially and equitably increased. This bill then will be fair to the ports of the Nation and at the same time fair to the interior.

Roughly, I have pictured the situation at the present time. The bill is designed to, more or less, maintain this ratio as a fair and equitable one for the storage of Government-owned and Government-loan cotton. Without this bill, the Federal Commodity Corporation having already asked for bids will now proceed to move this cotton from the interior where it is grown and originally stored and place it in port warehouses almost to the limit of Government cotton. Thus, without action, the present status of this matter will be materially changed to the hurt of the great area of our country which produces the cotton.

To a large extent, the question is whether we shall continue to try to favor the small independent business or whether we shall further proceed to consolidate the business of the Nation in large groups to the injury of the small individual. They say, of course, in opposition, that one of the interior warehouses is a large one and this test cannot be applied. This may be so; but even if so, this leaves some 1,600 individual businesses which are yet interested and will be seriously hurt by the plan proposed, if Congress permits it to be carried out.

I do not personally know conditions in reference to warehousing throughout the entire South. I do know personally conditions and warehousing in certain parts of the South.

I know these conditions in Louisiana. I have personally visited some of these warehouses, with the knowledge at the time of the visit that this matter could again come to the attention of the House of Representatives. I have been there at the time the rush season is on, seen the farmers coming in with their bales of cotton representing their entire year's crop. They bring it in trucks drawn by motors and in wagons drawn by horses and mules. There is especially the little farmer who has only two or three bales of cotton. He brings it personally and talks to the warehouseman. He wants to know generally about the amount and grade of the current crop. He wants certain information about the Government program for the next year, if it has been announced, or about the Commodity Credit Corporation loans. He watches the unloading and the storing of the cotton and, it may be, assists in this work. He is not content until he personally sees just where the cotton is being stored and where he expects it to remain until it is finally sold.

These little warehouses, during the cotton season, stay open until late at night to serve the local farmer coming in. It stays open late Saturday afternoon and even Saturday night. The people know that the farmer with his cotton wants to have it ginned and placed in the warehouses at one and the same time.

It may be that he will not come to town again for weeks. He is probably trying to do his shopping and the laying in of his supplies at the same time. He does all of these things in this little town and makes no plans to go farther from his home.

There is a genuine need for the little warehouseman in each local community of the cotton-growing South. He renders a personal and unpaid-for service. He has the confidence of the farmer and is certainly conveniently available for him.

In these warehouses throughout the South the overhead runs almost the same from day to day save during the season, when it is necessary to remain open long hours and increase the personnel. During the normal months the overhead remains practically the same, month by month. The Commodity Credit cotton is stored in this little warehouse; and they tell me that to a large extent it takes care of this continuing overhead, permitting the warehouseman to pass on to the farmer with his newly grown and newly ginned cotton some of the advantages of this storage. And the farmer does enjoy a lower rate for housing his cotton than ever at any other time in the history of the South.

They have said that his low rate is brought to the farmer and to the Commodity Credit Corporation as a result of the efforts of the Corporation in continually beating it down. It may be that this is the case; but regardless of the reasons, the farmer does enjoy the lowest storage rates in the history of the cotton business. It certainly is interesting to know that he enjoys lower rates, far lower rates, than he enjoyed before the Commodity Credit Corporation came into the picture and when competition remained free and uninterrupted.

The best interest of the country as a whole is served by working with the little interior warehouses. There are almost 1,700 of them; and they form an integral part of the cotton industry of the Nation. They may be crippled, if this bill is passed. They may be driven in self defense to consolidate. In some instances they may be forced out of business. In other instances they may be compelled to raise rates upon the transient cotton which will immediately reach the farmer. The wise, the wholesome policy of this Nation is to encourage them and assist them, especially when it appears that no saving can be effectuated by the concentration of the cotton in the few large warehouses of the ports. From the standpoint of the ports, those will grow which aid and cooperate with the interior, helping to build it up and develop the section of the Nation which they directly serve.

Our Relations With Latin America—The Betrayers of the Good Neighbors—Our Officials Analyzed

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

Mr. COFFEE of Washington. Mr. Speaker, too little attention has been given to the obvious weaknesses of our good-neighbor program. With Hitler's shadow ominous over Latin America, it is high time to scrutinize the men and agencies in charge of our Government's cultural, commercial, and defense relations. We need more speed, honesty, and intelligent planning. We must get more action and results. The American people are not being informed of the real issues and dangers in Western Hemisphere defense by the men now handling or mishandling it. Pan Americanism is in danger of being a big flop.

Some desirable half steps are being taken in New World cooperation for defense with the limited funds appropriated by the Congress. Noted Latin Americans of all professions and students are being brought to the United States to lecture and travel. They will return to report to their countrymen. A few American writers, students, and professors are being sent by the State Department to Hispanic America.

WE SHOULD DRAMATIZE OUR EFFORTS

A better job could be done, however, to dramatize and publicize these steps. For example, our Government is helping Peru establish a bureau of fisheries. For the initial surveys a splendid 80-foot refrigerated purse seiner, the *Pacific Queen*, was chartered with the most complete United States fishing and scientific equipment. This vessel was built in 1939 at Tacoma, Wash., on Puget Sound, which closely resembles the scenic evergreen-forested islands, mountains, and bays of southern Chile.

WE SHOULD EXPAND OUR RADIO EFFORTS

The State Department and Office of Coordination of Commercial and Cultural Relations with Latin America should have on their staffs persons with the imagination and training to capitalize on the news and educational values of such examples of inter-American cooperation. Materials could be prepared for use by the radio, press, libraries, and schools in North and South America. The new Radio and Hispanic Divisions of the Library of Congress could doubtless do much in this direction if they could get the required funds from the Coordination Office. Interest would not be confined to the cities of Peru and Puget Sound. A New World audience of millions could be reached with such stories.

LET US SUPPORT AND PROVIDE ADDITIONAL FINANCING TO EXISTING AGENCIES

The Coordination office was given $3,400,000 from the President's defense fund to spend on cultural and trade relations. Nelson A. Rockefeller has stated that his agency is putting money into various Government and private organizations and searching for worthy groups to finance. One such, I am informed by Charles A. Gauld, a citizen of my State of Washington, who is a specialist on Latin America at the Library of Congress, is the newly established Latin American Economic Institute of Boston. Its scholarly members are scattered from New England to California. The institute has two sound and admirable projects for which it needs funds, preferably from private sources, for obvious reasons. The first is a solid joint economic study of the basis for a democratic cooperative order in this hemisphere to oppose Hitlerism. The second is described by Dr. J. F. Normano, the noted economist and writer on Brazil, as follows:

THE IMPORTANCE OF BRAZIL EMPHASIZED
